25,975. If you bring them from the deep sea in the warm weather, when they are not in a spawning condition, will they quickly be brought into a spawning condition here ?—Not very quickly ; we very seldom see them in a spawning condition here, but still I have seen it.

25,976. In the month of April do you find that any which are brought in spawn in that way ?—No, nor yet in the month of June. I do not think that these deep-sea oysters spawn until the latter end of July.

25,977. Do you know anything of the Dutch oyster-fishing ?—No.

25,978. Do you know whether any of the Dutch boats come upon our grounds during the fence months ?—No.

25,979. You have heard what has been stated with regard to the east countrymen coming here ?—Yes.

25,980. Do you think that is the case ?—I cannot say.

25,981. Do you think that any considerable damage is done to your trade by preventing the fishing of oysters in May and June ?—I think it would be beneficial to us, and to the town generally, if those two months were granted.

25,982. Could you not get enough oysters to lay down in March and April if you had sufficiently extensive ponds ?—No. I think I have already explained that so far as I am personally concerned I have bought every tub of oysters I could get, and yet I do not believe that I have a stock on hand sufficient to last throughout the present month.

25,983. Would it not be worth your while to encourage the fishing by giving a larger price for the oysters ?—I think we give too large a price already.

25,984. But would it not encourage more smacks to engage in the trade if a higher price were offered ? —I do not think it would.

25,985. I understand that there has been a steady increase in the number of smacks following the business since the price has been higher ?—Yes.

25,986. Is that not the way with all these things ? —Yes ; but it would not pay for us to give more for the commodity than we can get by it.

25,987. You think it would not pay you ?—I know it would not.

25,988. At what time of the year do you have the greatest demand for oysters ?—About this time, during April, May, and June.

25,989. Just at the time your supply begins to fall short ?—Yes. In warm weather people eat oysters more than in the cold weather.

25,990. Is there no great demand for oysters in the months of September and October ?—No, the demand is not very great then.

25,991. Then it would be no great loss to you to have those two months cut off from the fishing season and made fence months ?—No.

25,992. But it would be advantageous to you to have May and June added to the open season ?—Yes, very much so.

25,993. Would you willingly give up the fishing in September and October in return for being allowed to fish in May and June ?—Yes, and it would do no injury to the oysters, because there is a great difference in deep-sea oysters and oysters in shallow water.

25,994. (*Mr. Caird.*) Do you think it would be necessary to say September and October—would it not be sufficient to give up September and take the month of May ?—Yes.

25,995. Would you then confine your suggestion to September as the end of the season, and May as the beginning ?—If you will only let us have May, we do not care about your taking away September.

25,996. Do you think that in the month of May a large additional supply of oysters could be brought here if you were allowed to fish in that month ?—Yes.

25,997. As the weather in that month is finer and more favourable for going to the deep sea, would it not be more productive than either of the open months ?—Yes. The weather here is very coarse at times towards the end of the year, and as the days are very short the fishermen can get but very few oysters. Sometimes they will go out one tide, and it will blow so hard the next tide that they can do nothing. Some of them will be barely able to earn enough to obtain for them victuals to eat, and they are exposed to all sorts of weather in the long dark nights at sea, yet they are obliged to be out in order to obtain a livelihood.

25,998. I gather from what you have already said, that in your opinion if you were allowed to fish in the month of May you could considerably increase the supply of oysters for the market without doing any injury to the oyster beds themselves ?—Yes, I do not see that it would do any injury. We are all aware that the oysters do not spawn in the deep-sea in the month of May.

25,999. The oysters have not begun to spawn then ?—No.

The witness withdrew.

SHOREHAM.

G. Dudley.

7 May 1864.

GEORGE DUDLEY called and examined.

26,000. (*Mr. Caird.*) Are you an oyster-fisherman here?—Yes.

26,001. Have you been long engaged in that business?—Yes, I have been at it for the last 30 years, on and off.

26,002. Have you heard the evidence which has been given to us by other men engaged in the same business?—Yes.

26,003. Is there anything you would like to add to the statements they have already made?—I do not know that I have much more to say. I should like to see the month of May granted as a fishing month, and the month of September taken away.

26,004. The month of September made a fence month?—Yes.

26,005. Do you think that that would be beneficial to the fishermen both here and in France?—Yes.

26,006. Do you ever find that the French fishermen are fishing upon the oyster-grounds in the month of May?—No.

26,007. Did you ever hear them say that it would be beneficial to their interests if they were allowed to fish in the month of May?—No; I have been in most of the French ports, but I never heard them say anything about it.

26,008. You never heard them say that it would be an advantage to them to be allowed to get oysters in the month of May?—No.

26,009. Is there anything more you would like to add to what has already been said to us?—No, there is nothing further than that.

26,010. That is the principal point you wish to call our attention to?—Yes.

26,011. That appears to be the general opinion of all the persons engaged in the fishing trade at Shoreham, or connected with it in any way?—Yes, I believe it is.

26,012. There is no other point that they seem to complain of?—No; I have been a long time at it myself and that is all I care about.

26,013. (*Professor Huxley.*) Did you ever see oyster spawn swimming on the top of the sea?—No, I never did.

26,014. Did you ever meet with anybody who had ever seen it?—No, I can't say that I ever did, but I have seen oyster spawn when it was very small.

26,015. Do you think that it ever rises to the surface?—I never saw it, and I never heard of anybody who had seen it. I have seen the spawn when it was only as large as a pin's head, and I should say that that would be almost as soon as it had fallen from the oyster. I have seen it in various rivers and shallow waters.

26,016. But you do not believe that it ever rises to the top of the water?—I never saw it on the top of the water, and in my opinion it does not rise. I think that it settles as soon as it drops. It naturally settles to the bottom, and the more you cleanse the bottom the more likely you will be to preserve it when it does fall.

26,017. (*Mr. Caird.*) You have not found in the course of your experience that any part of the Channel has become fished out?—In my opinion some of the old grounds are getting slight.

26,018. Some of the old grounds in mid-channel?—Yes.

26,019. In your opinion they are becoming fished out?—Yes.

26,020. Are there any particular grounds that you would avoid, because you know that they have been fished out?—Yes, we avoid now what we call the old Kelvidosh grounds, and some of the grounds off the Head.

26,021. Off Beachy Head?—Yes, about 13 or 14 miles off the Head.

26,022. What is the cause of those grounds not being so productive of oysters as they used to be?—I think it is owing to so many vessels having been engaged in catching the oysters there; they have carried them all away.

26,023. Do you think the day will ever come when the same thing will occur with regard to the fishing beds all over the Channel?—That will depend upon what spat there is in the course of the season.

26,024. Have you sometimes good spat and sometimes a bad season for spat?—Yes, it varies a great deal.

26,025. There is a great variation in the spat season?—Yes; we sometimes see 15 or 20 and even 100 of the spat on a spat shell, and at other times we may not see more than one or two.

26,026. Then will a good season bring with it a good crop of fish?—Yes, a great abundance of oysters may come all at once.

26,027. In the course of your experience as an oyster-fisherman have you noticed whether the yield of oysters in the Channel has continued increasing?—There are many more smacks at work in the Channel than there used to be some years ago.

26,028. Does every smack get on the average as many oysters as one used to get when you began fishing?—I do not think that it does in a regular way.

26,029. How long is it since you first went to sea as a fisherman?—23 years ago.

26,030. Then 23 years ago could you catch as many oysters in the course of the season as you can now?—Perhaps not. At that time we did not have the same class of vessels we have now, nor did we work for as many hours.

26,031. Was the class of vessels you had 23 years ago smaller than those you have now?—Yes, and there was not as much work done then as we do now.

26,032. Do you work the larger class of vessels now with the same number of men?—Yes, and we have a different mode of working them.

26,033. Is it a better method of working them?—Yes.

26,034. And is the result of that that you are enabled to bring more fish ashore?—It all depends on the weather. Taking the general run I do not think that they catch as many.

26,035. Do you mean that each boat does not catch as many?—I think that a boat does not catch as many now as it did 10 years ago.

26,036. Has there been a great increase in the number of boats altogether?—Yes, taking them altogether, and counting them from all parts.

26,037. (*Professor Huxley.*) Do you think that if the regulation respecting the throwing back of the small oysters into the sea were observed, that that would keep up a sufficient supply to stock the fishing grounds?—I do not think that we haul up many of the small ones; they are enabled to pass through the ring and the four-inch mesh. They are open to work through that.

26,038. Then how would it be possible to exhaust the beds if that is the case, and if the little ones all go through the mesh would they not all grow into big ones?—Yes.

26,039. Do you not think that the growth of the little ones up to full-grown oysters would make up for the number of full-sized oysters dredged?—No, because we have so many smacks working upon the beds. Two or three years ago we had as many as 200 or 300 smacks here. A good many of them came from Jersey.

26,040. How many years do you think it takes for an oyster to grow to its full size?—It takes about three years for these Channel oysters to become full sized.

26,041. Is that the general opinion here?—Yes, I think it is the general opinion.

26,042. What do you go by in forming that opinion?—The oysters themselves have a kind of ridge on them every year, from which we can form an idea how old they are. Anyone who has been in the habit of watching them will be able readily to judge what their age is. You will see a little score round each shell that tells how much they grow every year. We watch them when they are very little bigger than

G. Dudley.

7 May 1864.

a tallow drop, and it will take three or four or five years to come to a full-sized oyster. We catch them sometimes as soon as ever it is possible to see them, when they are only a little speck not bigger than a pin's head.

26,043. You lay them down here ?—Yes ; it takes I think about three years before they are fit to be sent away to the market. We reckon about four years for a native oyster.

26,044. Do you think that the native oyster takes a longer time to grow than the deep-sea oyster ?—Yes ; we calculate about four years for a native, but I can produce a good oyster on my ground at home in three years.

The witness withdrew.

ROBERT FIELDGATE called and examined. *R. Fieldgate.*

26,045. (*Mr. Caird.*) I believe you are a Custom House officer here ?—Yes.

26,046. Have you received any particular instructions as to the regulation of the oyster fisheries during the fence months ?—Do you mean as to stopping the fishing ?

26,047. Yes, keeping the fishermen from taking their dredges to sea, or anything of that kind ?—Yes, we have received instructions.

26,048. What are they ?—I do not know what they are, but I believe that an order has come down to that effect.

26,049. Have you had occasion to carry it into effect ?—The Coastguard do that. The carrying out of the instructions has not been so much in the hands of the Custom House as of the Coastguard.

26,050. Then you cannot give us any information in regard to the manner in which those instructions have been carried out ?—No.

The witness withdrew.

WILLIAM GOUGH called and examined. *W. Gough*

26,051. (*Mr. Caird.*) Are you an officer of the Customs here ?—I am surveyor of the Customs.

26,052. Have you had any instructions placed in your hands with regard to restricting the oyster-fishing during the fence months ?—No.

26,053. Have you had no orders to carry out from the Customs which are applicable to the fishermen ?—Wehave had no orders to stop the dredges ; but I understand that an order came down from the Board of Trade to the Coastguard in reference to the dredges.

26,054. But there was an order sent to you ?—No, not to us.

26,055. You have received no orders from your department to pay attention to that subject ?—No; our practice has been, when they come in in the last week of April, to allow them to go home with their dredges and warps on board. We did so this time, when we heard that an order had come down from the Board of Trade to stop them, and to take the dredges. They were to take the dredges out of the vessels.

26,056. Was that during the last week in April ?—Yes, or in the first week of May.

26,057. But that is not an order which has come down to you, or which you have had to enforce ?—No, I believe it has been enforced in Newhaven.

The witness withdrew.

JOSEPH FAIRHALL called and examined. *J. Fairhall.*

26,058. (*Mr. Caird.*) I believe you are the Station master here ?—Yes.

26,059. Can you give us any information as to the effect of the restriction upon the fishermen which prevents them from taking their dredges out to sea after the 1st of May ? What has the effect of enforcing that regulation been ?—They have brought them up to the railway station for us to take away instead of taking them in their own boats.

26,060. Have they sent them away to some other part of the coast ?—Yes, we have had six or seven to send away this week.

26,061. What number may have been sent away in this way ?—I cannot tell. I do not know how many they take in each boat,

26,062. Where have they been sent ?—They have been sent to Colchester. They have been sent home to Colchester.

26,063. Do they belong to Colchester people ?—Yes.

26,064. What was the reason they were brought to you ?—They would not allow them to take them out of the harbour, and therefore they brought them to me to have them sent home by rail.

26,065. You do not know that they are going to be put on board the boats again, and used when they get to Colchester ?—No.

26,066. Then have they been sent to Colchester because they belong to Colchester people ?—Yes.

26,067. It does not follow that because they have been sent there they are going to fish on any other part of the coast with them ?—No.

26,068. (*Professor Huxley.*) Then substantially it seems to be a tax upon the fishermen. They have to pay for the conveyance home of their dredges, instead of carrying them with them onboard their boats ?—Yes.

The witness withdrew.

JAMES HEDGETHORN recalled and examined. *J. Hedgethorn*

26,069. (*Mr. Caird.*) I believe you can give me some information with regard to the difficulties the Colchester people have had in sending their dredges home during the fence months ?—Yes, after the season has been over we have been allowed a few days to carry our dredges home with us. This time it was understood that our vessels were to clear from the Custom House for going home. I went to the Custom House officers, and asked for a clearance, but they would not allow a clearance to be given unless all the dredges were put on shore. We then asked if they would allow us a clearance if we put all the dredges on board of one vessel, but they would not even do that.

The witness withdrew, and the inquiry was adjourned to Monday, July 25th, at Edinburgh.

Edinburgh, Monday, 25th July 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

The Hon. BOUVERIE FRANCIS PRIMROSE called and examined.

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

26,070. (*Mr. Caird.*) You are the secretary of the Scotch Fishery Board, I believe?—I am secretary of the Board of British White Herring Fishery. That is the proper title of the Board.

26,071. How long have you been secretary of the Board?—Since the year 1848.

26,072. Then you are intimately acquainted with all its functions and operations?—I think so.

26,073. Will you describe to the Commission the nature of its functions?—Its functions are, in the first place, to supply clearances to herring fishery vessels fishing and curing at sea; to receive notice from curers on shore of their intention to cure; to see to the measures for the delivery of herring as between seller and buyer. There is an established measure, and we have to see to its size. We have also to see to the size of the barrel for British white cured herring; to the quality of the cure; branding the first quality and collecting the fees for the same; attending upon the export of British white cured herring to inspect them and ascertain that they are in proper order before exportation; preventing the use of such nets at the herring fisheries as Parliament has declared to be illegal; protecting the sprat fishermen in their right of boundary; maintaining order at the fishing grounds, and, in connexion therewith, the police regulations for naming the boats and numbering them, &c.; receiving and restoring lost fishery property; building fishery piers and harbours; protecting the spawn of the herring, and the herring fisheries generally, according to the Acts of Parliament; maintaining the herring close time as fixed and appointed by Parliament; furnishing returns and statistics of the herring fisheries of Scotland and the Isle of Man; and aiding in maintaining the Fishery Convention with France. These, I think, comprise the whole of the functions of the Board of Fisheries, or nearly so. They comprise the whole, except the carrying out of these duties in their details as derived from the Acts of Parliament.

26,074. And within what limits of the coasts of Great Britain do you suppose that their functions extend?—The functions of the Board extend over the whole of the coast of Scotland; and, as regards the collection of statistics, over the coast of the Isle of Man; and, in respect of the branding of herrings, over the northern portion of the coast of Northumberland.

26,075. As well as Scotland?—Yes, as well as Scotland.

26,076. Then it includes all Scotland and the northern portion of the coast of Northumberland?—Our function in respect of the branding of herrings extends to the coast of Northumberland, but by the Acts of Parliament our jurisdiction extends over the whole of Great Britain. It so happens, however, that there is nothing on the coast of England for us to do; there is no British white herring fishery there.

26,077. When you say there is no British white herring fishery, will you be good enough to define what you mean by that?—I mean the cure of herrings on the system of the white herring cure.

26,078. Do you mean salting them?—Yes, salting them in barrels.

26,079. You do not mean that there are no herring fisheries on the coast of England?—Certainly not.

26,080. But because the herrings are not cured in the manner you conceive to be under your jurisdiction you suppose that your jurisdiction does not exist?—Perhaps I can explain it better by mentioning what has already occurred. In 1848 a Commission of inquiry was appointed and carried on by Sir John Shaw Lefevre. At that time the Board had eight officers in England, but their duties were found not to be so important or onerous as to require their continuance. They were therefore withdrawn, but as the Acts of Parliament still retained in the wording of the different clauses the terms "British white herring fishery," and as it was possible that a white herring fishery such as existed in former times might be revived there, the Board claimed that their jurisdiction should not be diminished, which was reserved by the Treasury accordingly.

26,081. Where were those eight officers stationed, on what part of the coast of England?—There was one officer at North Sunderland, one officer at Scarborough, one officer at Yarmouth, two in London, one at Bristol, one at Penzance, and one at Whitehaven.

26,082. Were those eight officers under your jurisdiction?—Yes, exclusively.

26,083. And they took their directions and orders entirely from you, and made their returns to you?—Entirely.

26,084. And since the year 1848 have those officers been entirely given up?—Yes.

26,085. And you no longer exercise any jurisdiction or make inquiries on those parts of the coast of England?—None, except about North Sunderland. The Scotch officer stationed at Eyemouth passes along the coast of Northumberland to inspect and brand the herrings which are cured there.

26,086. Was it the duty of those officers to carry out very much the different heads you have mentioned as the functions of the Board at those respective places?—Pretty nearly, only there was not at that time what exists now—a clause about protecting the spawn of the herring, or providing a close time; that has all originated since 1860.

26,087. And since the extinction of these offices in those different parts of England you have had no official inquiry or otherwise as to the progress of the fisheries there?—None.

26,088. You have no official communication with those parts whatever now?—No, none; only that in aiding the fishery Convention with France we communicate with the officers in command of the cruisers on the coasts of Yorkshire and Northumberland.

26,089. Then, practically, your functions now are confined to Scotland and the northern coast of Northumberland, so far as the surveillance of the fisheries is concerned, and are extended to the Isle of Man so far as the collection of statistics is concerned?—Yes.

26,090. These, then, may be held to be the practical limits of your jurisdiction?—Precisely.

26,091. With regard to the funds from which the expenditure for the discharge of those duties is made, whence are they derived?—By votes of Parliament

26,092. By an annual vote of Parliament?—Yes, and also in part from fees received for the branding of herrings.

26,093. Can you tell us the amount received under each head?—*See the detailed return furnished hereto.* (*Appendix.*)

26,094. A portion of your expenditure, as I understand, is devoted to making or improving the harbours for the convenience of the fishermen; is that not so?—Yes; we receive an annual grant by Act of Parliament of 3,000*l.* for that purpose.

26,095. And on what principle do you allot your expenditure?—On the principle that not less than a quarter of the cost of the work is contributed by the party promoting the work; but through the influence of the Board we have got as much as half, and sometimes a proportion between a quarter and a half.

26,096. You are guided, I suppose, in your allotment of the expenditure by the importance of the port as a fishing station?—Yes.

26,097. And the public advantage that would result from the work being done?—Exactly; but in certain cases, when the grant was not being expended,

promoters came forward and asked for works; rather than not expend the grant, we laid it out to such demands though not of the first necessity.

26,098. Have many harbours within the last few years been erected or improved by means of that expenditure?—Yes, a very great number.

26,099. Can you tell us what harbours have been so erected and improved within the last five years?—Within the last five years the number has not been so great.

26,100. Then take the last 10 years?—There is a heavy work being executed at Dunbar under particular circumstances. I have a list of the harbours here that have been assisted.

26,101. Is it a long list?—Yes, it is pretty long.

26,102. Will you be good enough to enumerate the harbours, and what has been done upon them?—In the first instance there was an expenditure upon a pier at Rockfield.

26,103. In what county is that?—In Ross-shire, on the east coast; it appears to have been built and improved at different times between the years 1828 and 1851.

26,104. Is it an important fishing station?—It is very important; it produces excellent herrings, herrings of very fine quality, and the boats could hardly deliver the fish without a pier.

26,105. Has there been a large expenditure upon it?—No, it is not at all a large expenditure.

26,106. What is the next?—Hilton on the coast of Ross-shire.

26,107. When was that done?—Between 1828 and 1855.

26,108. Extending over so long a period as that, are you able to say whether the work consisted of additions and repairs?—There were small additions and repairs.

26,109. Then do you think yourselves bound to keep in repair as well as to improve the harbours?—No, not at all.

26,110. Perhaps you will give us the expenditure in each?—The total expenditure upon Rockfield has been 526*l.* 6*s.* 5*d.*, and the total expenditure upon Hilton has been 291*l.* 7*s.* 6*d.*

26,111. Is that the total expenditure on the part of the Fishery Board, or the total expenditure altogether?—That is the total of all the expenditure together.

26,112. What proportion has come from you?—The proportion paid by the Fishery Board has been in the case of Rockfield 370*l.*, the promoters having paid 155*l.*

26,113. And that expenditure has extended from the year 1828 until 1851?—The first work was done in 1829; that was finished in 1830. Then nothing more was done until the year 1851.

26,114. The works in that case must have been small repairs?—They were very small. I believe the works in 1830 were exceedingly small, but as the fishing extended the works became greater.

26,115. Was a small expenditure of that description not within the reach of the proprietors and people upon whose property those places were situated?—Not in those days; it might be now.

26,116. Then at the present time do you make grants of such small amounts for the assistance of harbours?—We should be glad to do so, but the grant is absorbed by the large works now going on at Dunbar under an Act of Parliament, and also at Anstruther Harbour. Some of those small works are, I must confess, most important to the fishermen.

26,117. Have they been a great advantage to the fisheries?—In some places there would have been no fisheries without them. For instance, at Sarclet on the coast of Caithness, the first expenditure was 2,093*l.* The total expenditure there has been 5,947*l.*, or in round numbers 6,000*l.*

26,118. Has that expenditure provided a harbour large enough for the largest-sized fishing vessels?—It does not take in a single fishing vessel only boats.

26,119. Only fishing boats?—Yes.

26,120. Then it is just a shelter to cover them when there is a heavy sea?—It is both a shelter in that respect, and it also enables them to deliver their fish on an exposed coast.

26,121. It enables them to go alongside the pier?—Yes, and deliver their fish over to the curers to enable the curers to carry on their work.

26,122. Are those open boats?—Yes.

26,123. It is not large enough for decked vessels to go into, and yet in the construction of that harbour you have expended the sum of 6,000*l.*?—Yes; large vessels could not be enabled to go there. It is an exceedingly difficult coast to work upon.

26,124. Will you be good enough to go on with your enumeration?—Then there is Dunglass, in the county of Berwick, upon which 2,600*l.* has been expended; there has also been a considerable expenditure upon Keiss, in the county of Caithness.

26,125. With regard to Dunglass, has that expenditure of 2,600*l.* resulted advantageously?—Yes, very advantageously; the boats could not fish without it.

26,126. Has it given an increased depth of water to the pier for the fishing boats? Can boats go up to the pier when the tide is further out than they could have done before the expenditure was made?—Before the expenditure was made I apprehend there was nothing but an open beach there; now there is a complete shelter within which the boats can lie in safety.

26,127. Is it a pier they would run to at low tide?—There is no harbour anywhere on the coast which they could run to at low tide.

26,128. What is the next?—Perhaps you will allow me to say that in that case the proprietor contributed 745*l.*

26,129. I think the next you mentioned was Keiss, in the county of Caithness?—Yes, upon that there has been expended altogether 1,962*l.* 10*s.* 6*d.*

26,130. Has that also been of advantage?—Of very great advantage. It is within a short distance of Wick, and it is a very important fishing station. Among other advantages of these small harbours is this, that they serve to disperse the boats instead of having them all congregating together at one place on the fishing grounds. When they have these small places to fish from the fishermen spread over various parts of the coast, and catch fish in greater abundance.

26,131. It also affords them increased opportunity for running in in bad weather?—Yes, and not merely that but it enables the whole business of the fishing to be carried on at once. It is of importance for the fish to be delivered, gutted, and cured within 24 hours after they have been caught, therefore a boat cannot go out to fish far away from the place where it delivers its fish. Most of them are engaged by the curers and are under engagement to the curers, and the curers must have a shore station in order to receive the produce of each boat.

26,132. At each of these harbours is there a curing establishment?—Yes, they have led to the erection of curing premises.

26,133. Well, what is the next?—At Cellar Dyke, near Anstruther, 2,359*l.* has been expended.

26,134. If you can refer to any one of these places in which the expenditure has not been of advantage to the interests of the fishermen I should be glad if you would specify it?—I am not aware of any on the east coast. To continue, at Burnmouth there has been an expenditure of 2,043*l.* 14*s.* 6*d.* Now Burnmouth is a place where the fishermen are extremely anxious to have a further extension of their harbour, because since that work was done in 1836, the boats have greatly increased in size, and the fishermen reported to me the other day that they had collected no less than 1,000*l.* of their own money in order to effect some improvement on their harbour.

26,135. In what county is that?—In the county of Berwick; it is very near Eyemouth. Then at Coldingham 2,117*l.* 17*s.* 0*d.* has been expended. There also they want an improvement. They could not fish without that harbour, nor could the Burnmouth men do without what they have got. The Coldingham harbour is too small for the large-sized boats, the boats have increased in size so much of late years.

26,136. Then in consideration of that increased size of the boats do you adopt any different plan with

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864

regard to the improvements you now execute in the fishery harbours?—We endeavour to get more money from the proprietors, but for the last few years the grants have been so very much absorbed by Dunbar, under particular circumstances which I will explain when I come to Dunbar.

26,137. Perhaps you will name the leading places where money has been expended without going through the whole of the expenditure?—Yes, I can do that.

26,138. But perhaps it will save further time if you send in an official list, so that we can put it in the Appendix. (*List supplied by the witness accordingly for the Appendix, together with copy of the Regulations for administering the Grant for Fishery Harbours.*) What is the present state of your expenditure? What operations are you at this moment engaged in with the view of improving the fishery harbours?—For several years past we have been engaged in finishing the works of Dunbar harbour. That was a work that arose out of peculiar circumstances. The sea broke in upon the sea wall there and forced an entrance into the basin of the harbour, and if the harbour had not been immediately repaired the whole of it would have been lost to the fishing community.

26,139. Is it a fishery harbour?—It is for fishing purposes only. By arrangement with the Treasury, when it was pointed out that considerable improvements might be made in the harbour, and that to save the sea wall would involve a very heavy expenditure, as it must be done with granite of great solidity and strength, the provost and town council of Dunbar were empowered by the Treasury to obtain a loan from the Public Works Loan Commissioners to the amount of 20,000*l.* as the proportion which they were to advance towards these works, and on the other hand the Board of Fisheries were to carry them to completion by means of their grant of 3,000*l.* per annum.

26,140. Have you any idea of the amount of liability they have thereby assumed?—The expenditure at present has amounted to 17,000*l.*, and the works are now pretty nearly finished.

26,141. Has 20,000*l.* been expended on the part of the people of Dunbar?—Yes.

26,142. So that nearly 40,000*l.* has been expended altogether?—Yes, nearly 40,000*l.*

26,143. Has the result been beneficial?—The result has been very beneficial indeed. There will now be four feet of water at the entrance.

26,144. At all times of the tide?—Yes.

26,145. Is four feet sufficient for the ordinary-sized boats which frequent that harbour?—It is not absolutely sufficient, but it enables them to get in almost immediately after flood is made, and it enables them to get out at three-quarters ebb.

26,146. This is an annual expenditure for fishery purposes?—Yes, by the Board, but they will expend a larger sum at Anstruther on the opposite side of the Firth of Forth, which will give about seven feet of water there.

26,147. Do the people of Anstruther contribute towards the expenditure?—They are to obtain a loan in the same way from the Public Works Loan Commissioners.

26,148. And are to be aided by the Fishery Board?—The terms are that they are to obtain a loan to the amount of 16,500*l.*, and the Board has then to advance 12,000*l.* by way of gift, and 6,500*l.* by way of loan. That makes 18,500*l.* altogether which the Board will be called upon to advance.

26,149. In making these advances to Dunbar and Anstruther, you have shut yourselves out altogether, in consequence of the annual amount you have received from Government being limited, from making any expenditure upon any other place at the time that expenditure is going on?—No doubt the Board have been shut out already in consequence of the case of Dunbar. Dunbar was the first instance of the kind, and Dunbar was inevitable from the public necessity which existed for saving the harbour. The condition of the sea wall rendered it absolutely necessary that something should be done to save it, and it could only be saved by that large expenditure. I may add that the object was one worth the expenditure.

26,150. During the time the expenditure was going on the Board has not been able to make any other expenditure on the harbours along the coast?—No.

26,151. And you have now undertaken the work you referred to at Anstruther?—Yes.

26,152. That must last also for several years?—Yes.

26,153. And during that time you will find yourselves unable to comply with any demand that may be made on behalf of any other harbours?—That is a question that has been raised by the Treasury. We are under an obligation to do certain things by Act of Parliament, and the Treasury has put this question to the Board: "Would it not be better to allow your "fund to accumulate at the rate of 2,000*l.* per annum "for Anstruther, leaving 1,000*l.* free for other places, "instead of laying out 3,000*l.* at once in getting "Anstruther done?" The Board replied that it would be far better to get the whole work done at Anstruther and then be left clear to take up other works, for this reason, that if the fishermen get a harbour at the entrance of the Firth of Forth, with seven feet of water on the one side and a harbour on the other side of the Firth at Dunbar with four feet of water, these harbours would afford such immense advantages to the fishing interest that they ought, in the existing state of the negotiations and arrangements, to take precedence of anything else upon the coast.

26,154. Then we are to understand that Dunbar and Anstruther are two of the most important fishing harbours on the coast of Scotland?—They are very important for the supply of fresh fish.

26,155. Is there a railway to Anstruther?—There is a railway to both places.

26,156. Have you had urgent demands for an expenditure at other places during the time you have been precluded from entertaining them?—I think Burnmouth is an urgent demand, and Coldingham is an urgent demand. To some extent, however, the fishermen at those places will be benefited by the two harbours of Anstruther and Dunbar. There has been another proposal, and a most valuable one It is to erect a breakwater for a refuge for the fishing-boats on the coast of Banffshire at Craigenroan. It is close to Banffshire, if not actually in that county, but the money was not forthcoming to enable it to be entertained. (*The witness produced and put in Report by Messrs. D. & T. Stevenson, engineers of the Board, upon the proposed breakwater at Craigenroan as a boat harbour of refuge for the coast of Banffshire.*)

26,157. Has there been any application with regard to an expenditure in the harbour at Wick?—No.

26,158. Has it not been entertained by the Board at all, for it is a question that has been often brought before Parliament?—Wick is a peculiar place. The harbour there belongs to a company, the British Fishery Society, who have large funds of their own. The harbour of Pulteneytown entirely belongs to them, and it is by them and the Government that the harbour has been improved. With a large and wealthy company like that, and looking to the immense expenditure required to do anything effective at Wick, the Board could not with its very small annual grant entertain a proposition for assistance there.

26,159. Have you made any expenditure upon the west coast of Scotland similar to that you have made upon the east?—In former years some expenditure was made.

26,160. Is it not as necessary on the west coast as the east?—It is not nearly so necessary there.

26,161. Is that partly because there are not so many fishermen, and partly because the coast is much more sheltered naturally?—Yes.

26,162. With the experience you have had over so many years with regard to the expenditure in fishing harbours, is the result satisfactory to your mind that it has been beneficially made?—Yes, very satisfactory indeed.

26,163. You think it has been of great advantage to the interests of the fishing around the coast?—Yes, of immense advantage.

26,164. And these improvements would not probably have been made if you had been unable to assist the local proprietors?—They never would have been made.

26,165. Is there not a sufficient interest on the part of the local proprietors, or those who are interested in the fisheries, to induce them to do those works themselves without Government assistance?—It is such a very expensive thing to construct harbours or piers on the coast. It is so frightfully expensive that the proprietors would hesitate to embark in such a matter at all, knowing that they would get very little return from it.

26,166. Can you show by statistics of the fishing and returns of the catch of fish whether there has been a considerable increase in those different harbours where the expenditure has been made in consequence of the improved harbour accommodation afforded?—I should think I could; but I have never had my attention directed to the question in that way. Of course returns of the herring fishery, I think, would show something of that kind.

26,167. Can you take any one of those harbours in which an expenditure has been made, and by looking back to returns previous to the expenditure being made, and last year's returns of the same harbour, show us the progress the fishery has made during that time?—I should require to refer to the places themselves. I have not got any data in my office from which I could supply such information.

26,168. Has there been any corresponding expenditure on any of the English harbours for the same object—on the coast of Northumberland, for instance?—There has been none made by this Board.

26,169. I presume that no part of your expenditure goes beyond the limits of Scotland?—None; I do not think the Act will allow it.

26,170. Does the Act specify that it is to be upon the Scotch coast?—Yes, I think it does. There has been at the same time 5,000*l.* given to Ireland.

26,171. 5,000*l.* a year?—Yes.

26,172. Your functions never extended to Ireland, did they?—No. The vote we receive for harbours is is for the encouragement of the fisheries on the sea coast of Scotland. It could not, therefore, be devoted to England or the Isle of Man.

26,173. There have been several Commissions of inquiry, I believe, as to the operation of the Acts regarding the herring fishery in Scotland?—Yes.

26,174. Can you name the various inquiries that have sat within the last 15 years?—There was a Commission of inquiry in 1848, conducted by Sir John Shaw Lefevre, and there was a Commission of inquiry in the year 1856. Sir John Shaw Lefevre reported in 1849.

26,175. Was there any special object in his inquiry?—His inquiry was to consider the utility of the expenditure of the Board of Fisheries, and indeed, of the Board itself.

26,176. Can you put in a copy of that report?—I can only put in a copy bound up with the books belonging to the Board.

26,177. What inquiry was there in 1856?—That was an inquiry of the same kind, conducted by three commissioners—Mr. Bonamy Price, Mr. St. John, and Captain (now Admiral) Sulivan.

26,178. Under what circumstances did that inquiry originate, if the Commission of 1848 reported fully upon the subject?—It originated under these circumstances: Mr. Wilson, who was then Secretary to the Treasury, thought the Board could be dispensed with, and he drew up a minute of the Treasury proposing to carry that into effect. Upon that the Board communicated with Mr. Wilson and drew up a statement pointing out that the Board subsisted by Act of Parliament, and also what the functions of the Board were. When it was ascertained that the Board subsisted by Act of Parliament, and what its functions were, and after a deputation had waited upon Lord Palmerston to explain the case, a Commission of inquiry was appointed.

26,179. What was the result of that Commission?—The commissioners were divided in opinion; two of them, Mr. Price and Mr. St. John, maintained the opinion that the Board and the brand ought to be continued, while Admiral Sulivan was for doing away with the system of the brand, but for increasing the grant for harbours, to be administered by the Board, an increase concurred in by the other two commissioners. Sir John Shaw Lefevre had reported in 1849 the expediency of imposing a fee upon the brand, and the two commissioners considered that that experiment of a fee upon the brand ought to be carried into effect.

26,180. Had it not been carried into effect before?—No; they were of opinion that the fee upon the brand would be a proper compensation for the working of the brand. They also anticipated that it would throw out of branding a large number of barrels of herrings every year, that at least 70,000 barrels of herrings would cease to be branded; they thought too that very probably the imposition of a fee would knock the brand on the head, that the trade were not sufficiently interested in the brand to carry it on with a charge upon it; but instead of that there have been more barrels of herrings branded since the fee than before.

26,181. (*Professor Huxley.*) I think Admiral Sulivan objected to the brand altogether?—Yes.

26,182. (*Mr. Caird.*) Then the result of that second Commission was to a certain extent to confirm the report of 1848?—Yes.

26,183. And then there was another Commission subsequently to 1856, was there not?—Yes, there was a commission in 1862.

26,184. What was the special object of the Commission of 1862?—The object of that Commission was to consider the effect of the Acts of 1860 and 1861.

26,185. It had no reference to the existence of the Fishery Board?—None at all.

26,186. That was the Commission of which Professor Huxley was a member?—Yes.

26,187. Can you tell us something of the operation of the recent fishery Acts of 1860 and 1861?—One of the operations of those Acts upon the west coast has been to prevent herring fishing from the 1st of January to the 31st of May from the Mull of Galloway to the Point of Ardnamurchan, and till the 20th of May north of Ardnamurchan to Cape Wrath. That is the herring close time established by these Acts.

26,188. Do not those Acts apply to the east coast of Scotland?—Not at all, as regards the herring close time established by them.

26,189. They are limited entirely to the west coast?—Yes, as respects the close time fixed by Parliament.

26,190. Are you aware of any complaints that have arisen under the operation of that close time on the west coast?—Complaints have arisen that it prevents the capture of herrings for bait for the cod and ling and other white fisheries.

26,191. That recent legislation had also in view the system of what is called trawling for herrings on the west coast?—Yes, it suppresses that.

26,192. What has been the effect in regard to the mode of fishing called trawling for herrings?—Its effect has been to suppress it.

26,193. Is it entirely suppressed now?—Yes; I think I may say it is entirely suppressed, and the Commission of inquiry of 1862 state distinctly that it is so.

26,194. Have any complaints arisen on the west coast in consequence of that mode of fishing being suppressed?—The persons who used to fish by means of trawling complain very much of its being suppressed.

26,195. Are you able to say whether the suppression of trawling has increased or diminished the supply of fish for the public?—The first year after the Act of 1861 was carried into effect the fishing was uncommonly good, but last year it was not so good.

26,196. Do your returns or the statistical information which you are able to get at enable you to form an accurate opinion as to the take of fish by all methods by which they are caught on the west coast? Do they include trawled-fish?—They would include trawled-fish, but there has been no trawl-fishing.

26,197. Because you have suppressed it. Then at this moment there is no trawling whatever?—There is next to none; it is nearly extinct.

26,198. Was there any large proportion of fish caught by the trawl-nets?—Formerly a very large proportion.

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

26,199. Do you suppose, in consequence of the extinction of that mode of fishing, that there is now, by the single mode of fishing now practised, as large a quantity of fish caught as used to be caught by both modes?—I should think not.

26,200. Have you any knowledge of the fact?—I can hardly say I have an accurate knowledge of the fact. It is so difficult to get returns of the quantity of the fish caught, but I have no doubt in my own mind.

26,201. Do you imagine that all the fish that used to be caught by the system of trawling, are now lost to the public?—Not all, because there has been a great deal more drift-net fishing.

26,202. And has there been an increase on the whole in the take by drift-net fishing since the suppression of trawling?—There was an extraordinary take by the drift-net immediately after the passing of the Act, but that has not been sustained since; and then again a great number of trawlers finding that they could not go on trawling, took to drifting; and others of the trawlers have become part of the crews of the drift-boats: so that the whole cannot be lost.

26,203. Is the law also applied to the sprat-fishing in the Firth of Forth?—The law was brought to bear upon the sprat-fishing from the circumstance that the sprat-net became prohibited, in consequence of no net being allowed to be put into a boat during the herring-fishing which had not a mesh of one inch from knot to knot, nor any seine-net, which is the net by which sprats are taken. Now the sprat-fishing and the herring-fishing go on together, and in that way the sprat-fishing was affected by the law.

26,204. I believe that an amended Act then came into play the next year, by which certain limits were given within which the sprat-net could be used?—Yes; that was done by the Act of 1861.

26,205. Are those limits satisfactory to the sprat-fishers?—They wish them extended, and would like to have them brought a little further out.

26,206. You say that the fishermen themselves are not satisfied with the limits prescribed to them. Are you able to say whether it would be advantageous to the public interests that those limits should be extended?—I should say that it certainly would.

26,207. At present the limit is to the west of a particular line?—Yes, west of a line from Queensferry pier on the south through Bimar beacon to the north.

26,208. How much further to the eastward would you extend the limit?—I would have no limit at all, that is my own opinion.

26,209. Do you think that sprat-fishing could be followed without any prescribed limit whatever and without doing any injury to the herring fishery?—Yes, I think so, as regards the produce of the herring fishery, and as regards the influence and effect it would have upon the herring fishery; but there must be a rigid police to prevent the two sets of nets from coming into collision, because the sprat-net and herring-net could not be worked well close together.

26,210. Would it be practicable to establish such a rigid system of police without great expense?—I think a good deal might be done, but perhaps the easier way is a boundary.

26,211. Are there not some particular parts of the shores of the Firth that are generally found by the fishermen most productive of sprats, within which it is possible to define a better boundary than is at present defined?—The difficulty is in not knowing where the sprats come from. Last winter's fishing in the Firth of Forth opened our eyes to great peculiarities. The winds had been extraordinarily strong from the westward, and the sprats never went up the Firth at all till late in the season, but swarmed into Granton Harbour and Burntisland.

26,212. Neither of those places are within the limits within which sprats could be legally fished for?—No.

26,213. Then by carrying out that law you interfere with the natural law which sends the fish in a different direction?—I should say so, and of course there was a great deal of excitement and difficulty on the subject. In the first place, the authorities of Granton Harbour considered that the fishermen had no right to fish within the area of the walls at all. We were put in this position—they might fish within the area of the walls, as far as we were concerned, if they fished legally. We had nothing to do with guarding the harbour, but we could not allow them to fish with illegal nets.

26,214. In consequence of the state of the law, is it a fact that a large portion of food was thus lost to the public, owing to the impossibility of the fishermen catching it?—Ultimately the fishermen became too strong for us.

26,215. They broke the law, in fact?—We could not help it.

26,216. But that is the fact?—Yes.

26,217. Rather than let the fish escape altogether, the law was broken?—The force we had was not strong enough to put the fishing down. In one case the harbour authorities applied to the guardship for assistance from the gunboats, but the gunboats considered that it was not expedient to interfere.

26,218. Suppose the gunboats had interfered and driven off the fishermen, would not the result have been that to that extent the public would have been deprived of a useful and nutritious article of food?—Last season undoubtedly they would.

26,219. And an article of food which could not have been caught within the bounds prescribed by the law?—None would have been caught there at that time.

26,220. So that if the law had been enforced, there would positively have been a large portion of food lost to the public?—Last season certainly there would.

26,221. What would you recommend as a beneficial change in the present state of the law, as regards sprat-fishing in the Firth of Forth?—I would restore the law to what it was before—that is to say, before the passing of the Acts of 1860 and 1861. I would even go beyond that, because the sprat fishery was not even then free. The original law of 1809 made it compulsory to have a net of one inch from knot to knot at the herring fishery. In consequence of that law no net ought to have been used on the ground except a net of one inch from knot to knot; but as there was this sprat-fishing the Board of Fisheries to a certain degree permitted these nets to pass up the waters for the purpose of catching sprats, understanding that the fishermen were not out for the purpose of catching herrings. That is the way in which the law was worked. I think if arrangements were made to some extent like that of the French Convention Act—that the seine-boats should keep at a certain distance from the drift-net boats, and that there should be a rigid system of numbering the boats and sails, so that offenders would be immediately detected—the water might be left free for both kinds of fishermen.

26,222. Do you think that no other law is necessary than the law of police for preventing the interference of one mode of fishery with the other?—I am of opinion that nothing more is necessary.

26,223. Would you make that apply to the whole coast of Scotland wherever sprats or other smaller fish are caught?—Yes.

26,224. Is there a smelt-fishing here?—There is at Alloa, and it is not interfered with.

26,225. Would not a small net interfere with that fishery?—No.

26,226. With regard to the different functions you mention as appertaining to your Board of Fisheries, I believe the first was giving clearances to herring-fishing vessels?—Yes.

26,227. Did you give clearances to all the vessels employed in fishing all round the coast of Scotland?—Only to those vessels that took on board nets and barrels and salt, for the purpose of curing on board.

26,228. They are all decked vessels?—Yes.

26,229. You did not give clearances for fishing-boats?—No.

26,230. Could not that be done by the Custom House if you did not do it?—I cannot say whether it could be done by the Custom House or not. It scarcely applies to the east coast. There are not many vessels following the system of curing herrings afloat now. They have decreased in number every year.

26,231. What is the second function of your Board?—We receive notices from the curers on shore of their intention to cure.

26,232. What is the public benefit derived from your receiving these notices?—In that way the whole system of curing is brought under the eyes of the officers of the Board. The notice states how much salt is on shore, and then the officer proceeds to the premises and watches the cure.

26,233. Then can no one without giving notice commence a curing establishment?—No one.

26,234. It is placed under the inspection of the law?—Under the inspection of the Board.

26,235. By the law?—Yes.

26,236. Is the Board in any way responsible for the methods used in curing fish?—They are not in the least degree responsible in that respect, but they are responsible for the size of the barrels, and of the cran which is the measure for the fresh fish.

26,237. They do not impose any regulation as to the mode in which the curing shall be effected?—Only as regards obtaining the brand.

26,238. I see you say that you look to the measure used between the seller and the buyer?—Yes.

26,239. Do you enforce the use of any particular kind of measure?—Where the fish are sold by measure the cran must be used.

26,240. But do you not think that the buyers and sellers could protect their own interests in regard to the measures used? What advantage do the public derive from your surveillance in that respect?—There are no disputes of any sort. The fishermen come in with their boats loaded; the curer for whom they fish knows at once the quantity he gets as the fish are measured off by the cran.

26,241. Then it is like a measure stamped with the Imperial seal?—Precisely.

26,242. The same as weights and measures are stamped all over the country?—Yes.

26,243. Do you regulate the barrels in the same way?—Yes.

26,244. With regard to the quality of the cure, is it part of the business of the Board to attend to that?—Before you leave the point of measures I wish to say that the Commission of inquiry appointed in the year 1856 were satisfied that the Board alone could maintain these measures, and that the duty could not be transferred to any other department. They were of opinion that the inspectors of weights and measures could not do the work, owing to the immense number of barrels employed in the fisheries. They came to the conclusion that if the functions of the Board were abolished the barrels would cease to have any standard of measure.

26,245. Then are we to understand that the Board or their officers see that every barrel is of the proper measure and size?—Yes.

26,246. Is it branded to show that it has been examined by them?—Not the barrel.

26,247. Then how can you be satisfied that the same barrels are used?—They are tested when they are full for branding.

26,248. Are all the barrels of herrings branded?—No, not all.

26,249. Then only those for which the fee is paid are branded as having been tested by the Board?—Yes, in that sense; but it is not allowed to cure herrings except in the standard barrel. The barrel must be of a fixed size whether the herrings are branded or not.

26,250. But if you do not impress any stamp upon the barrel to show that it has passed under your inspection, in what way can you be certain that it is the same barrel if it does not subsequently come under the brand?—The only way is this, that the officers are passing through the premises all the time the coopers are making the barrels, and when the barrels are stored in immense numbers in preparation for the fishery they are measured over and over again. It would be more trouble and loss to the owners to change them than to use them.

26,251. With regard to the other functions of the Board, I understand you to say that it is part of the business of the officers of the Board to attend to the quality of the cure?—Yes.

26,252. In what way can they determine the quality of the cure?—By inspection. They see the fish through the whole process. They are constantly moving about the stations during the curing.

26,253. That is, the process of curing in the different curers' establishments?—Yes.

26,254. Then are there grades of brands to show the quality of the fish?—There are two grades of branding.

26,255. Is it a first and a second brand?—There is the Crown full brand which is given to fish full of milt and roe, and the Crown brand which is given to fish wholly spent or mixed full and spent.

26,256. But that relates to the fish itself, and has no reference to the mode of cure?—Yes, the distinction of brands refers chiefly to the fish itself, in the sense of the assortment of the fish.

26,257. Suppose that one man is more skilful in curing his fish than another, how would your officers determine in a case of that sort that one barrel was better than another? Suppose, for instance, that some brought in fish fresher and in a better condition than other fish which had been two or three nights at sea, would you affix the same brand to both barrels of fish?—It would not be branded at all if the fish had been two nights at sea.

26,258. But suppose that one lot of fish comes in fresher than another?—If the fish are not fresh enough for the brand, they would not receive it.

26,259. Still there would be a difference in the quality, and yet the two kinds of fish might receive the same brand?—There may be a slight difference, but never to any great extent.

26,260. Your officers do not brand in any way so as to notify whether the mode of cure itself is better conducted by one curer than another?—They notice it, but if the fish comes up to a proper standard of cure according to the Act of Parliament, then they would brand it.

26,261. If it contained the particular quality of fish you mention, and was packed in the same way, it would as a matter of course receive the Crown full brand or the Crown brand, as the case may be?—Yes, if it fulfilled the conditions on which alone the brand is given.

26,262. Under the system of branding, is it not practically the case that there is no distinction whatever in the quality of the cure by different curers?—Not as regards the application of the brand. The brand is open to all curers alike.

26,263. So that if one man is a more skilful curer than another, that would not be shown in any way by the brand?—No.

26,264. (*Professor Huxley.*) Supposing that the cure had reached the level imposed by the law, the brand would be given?—Yes.

26,265. The degrees of excellence above that level would not be noticed?—No; but on the other hand the superior curer would get this benefit out of the brand that he would have increased facilities for the market given to him.

26,266. But his rival who just comes up to the level of the brand would get that as well?—Yes.

26,267. (*Mr. Caird.*) Is the name of the curer placed upon the barrel?—Yes.

26,268. As well as the Government brand?—Yes. The Government brand is for the foreign trade. The foreign merchants deal almost entirely by the brand, and it is generally believed that they pay for it.

26,269. Are the fees received for branding employed in diminishing the other accounts of the Board?—They are carried by Act of Parliament to the consolidated fund.

26,270. Then they do not come into your accounts?—They do not come into our accounts at all; they are paid by the Board to the Exchequer and carried to the consolidated fund.

26,271. So that substantially they are so much towards diminishing the general cost to the country of this Fishery Board?—Yes.

26,272. What may be the average during the last few years?—I can give you an exact return, year by year. It begins in the year 1859. In that year the return was 2,644*l.* 12*s.* In the year 1860 it was 3,865*l.* 4*s.* 6*d.* In the year 1861 it was 4,422*l.* 9*s.*

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

In the year 1862 it was 5,801*l.* 12*s.* 4*d.* And last year, when the fishing was not so good comparatively, it was 4,618*l.* 16*s.*

26,273. Has the rate remained the same from the commencement until now?—Yes, the rate has remained the same.

26,274. Was it fixed by Act of Parliament?—Yes.

26,275. At what rate?—At 4*d.* per barrel.

26,276. Then that progressive increase would indicate a large progressive increase in the quantity of fish branded?—Yes. Of course the quantity of fish branded must vary with the production from the fisheries.

26,277. (*Professor Huxley.*) It appears from these returns that the country has received from the brand more than it has given you to expend upon your fisheries and harbour works. I understand you to say that the country gives you 3,000*l.* a year?—Yes.

26,278. And your average receipts are much higher than that?—Yes; the total receipts are 21,349*l.*

26,279. That is for four years?—No, for five years.

26,280. And is at the rate of upwards of 4,000*l.* a year?—Yes.

26,281. Then the branding has returned 1,000*l.* a year more than your Fishery Board get for their expenditure on harbours?—Yes. I may say that the opinion of several members of Parliament at the time was that the fee should have gone to the harbours instead of being carried to the consolidated fund.

26,282. (*Mr. Caird.*) The seventh head of the functions of the Fishery Board you state to be preventing the use of illegal nets?—Yes.

26,283. Do you execute that function with much stringency?—Yes, with the greatest possible stringency.

26,284. That is chiefly on the west coast?—Yes.

26,285. Have you had occasion to exercise that function at all on the east coast?—Yes. Occasionally the nets by barking become too small, and the fishermen are warned to lay them aside, partly because a standard of mesh is one of the stipulations of the Convention Act with France, and partly because it is laid down in the Acts of Parliament.

26,286. With regard to the maintaining of order on the fishing grounds, that I suppose means maintaining police regulations?—Yes.

26,287. Is that an onerous duty?—In narrow waters it is a very onerous duty.

26,288. Do you keep a police for that purpose regularly in narrow waters?—We have a shore police on the west coast, and there is a cutter belonging to the Board which can cruise on either of the coasts, and, generally speaking, there are one or two steamers lent to the Board permanently by the Admiralty.

26,289. Do the police form part of your annual expenditure?—Yes.

26,290. I presume that the vessels lent to you by the Admiralty do not come into your expenditure?—Only to the extent of 100*l.* a year paid to the commander as naval superintendent under the Act.

26,291. Another of your functions is receiving and restoring lost fishery property?—Yes.

26,292. Have you much to do with receiving and restoring lost fishery property?—A good deal at Wick.

26,293. When fishery property is found at sea is it brought to your officer?—Yes, to the officer at Wick, or wherever there is a Fishery officer.

26,294. You do not take any means yourselves for finding it? You do not consider that it is part of the business of your cutter to look out for lost fishery property?—If she saw any adrift she would immediately pick it up, or if the fishermen mentioned that they had lost property she would proceed to the spot, and endeavour to recover it. Occasionally a large quantity of nets have been sunk in consequence of the immense quantity of fish in them, or cut away in bad weather. Our vessels have in many instances been able to recover the nets from the sea, and to restore them to their owners.

26,295. I believe we have already inquired into the next portion of your functions. I come now to the 15th, which is aiding and maintaining the Fishery Convention with France. Is that a duty which is of an onerous character?—Yes, it is of a very onerous character, and involves us in great difficulty.

26,296. Have you much to do in that way?—Both British and French vessels are on the coast here in the summer, and we have a great deal of labour imposed on us in communicating with the Admiralty ships and conveying them instructions.

26,297. Are there many French vessels that come on the coast of Scotland?—Yes, a considerable number.

26,298. Do they in any way hamper your fishermen?—They are apt to come in within the boundary prescribed by the Act.

26,269. Under your direction do the cruisers placed at your disposal enforce the regulations for preventing them from coming within the boundary prescribed against them?—Yes. The cruisers have the Act, and the commanders receive instructions on the main points of the Act from the Fishery Board. Any questions they may consider it necessary to put to us are answered here.

26,300. Do the fishermen, if they have any complaints to make, come to you?—Yes; they either come to us, or write.

26,301. The last portion of your functions to which I wish to direct your attention has reference to the statistics of the catch of fish, showing the progress of the fishery within recent years, and coming within the objects of our inquiry as to whether the supply of fish is increasing, stationary, or diminishing. Can you answer the question generally as to the east coast of Scotland whether the supply in recent years is increasing, stationary, or diminishing?—It has been increasing, I should say, certainly.

26,302. Can you give us the figures for any series of years that would indicate the amount of that increase?—Would you wish to restrict the returns you ask for to the east coast?

26,303. If you have them all together we had better take them all together; but if you can give us the east coast and the west coast separately, we should prefer having them in that way, as there are two different sets of legislation applicable to them?—I can give you with complete accuracy the statistics of the cured fish on both coasts.

26,304. Then will you be good enough to do that?—It will take a little time to separate the east from the west coast, but I can give you the gross now.

26,305. Then give us the gross, and perhaps you will be kind enough to prepare a statement showing us the returns for the east and the west coasts separately. I think it would be very useful to put returns of that nature in?—I cannot give you a return of the fresh fish. It is impossible to collect that with sufficient accuracy to depend upon, except at such an immense expense and such an increase of our staff as would hardly be warranted. Do you wish now to go back to an early period?

26,306. To what early period can you go back?—As far as the year 1809 or 1810. That includes England, and gives returns for Great Britain. In that year the total number of barrels cured was 90,185, whilst in the year 1862, for Scotland only, including the Isle of Man, the cure was 830,900 barrels.

26,307. Did that first return include the whole coast of England?—Yes, the whole coast.

26,308. The entire cure within Great Britain?—Yes, for the year 1809-10.

26,309. The total of that year was only 90,000 barrels?—Yes; and in 1862, in Scotland alone, the total was nearly 831,000 barrels.

26,310. Then we may take it from that, that in the course of 50 years there has been an increase in the quantity of fish caught in Scotland alone equal to nine times the quantity of fish caught on the whole coast of Great Britain in the year 1809?—Yes, as regards the cured fish.

26,311. Do you suppose that the proportion of cured fish at this moment, as compared with fresh fish, has not diminished rather than increased within that period in consequence of the greater facilities which are now afforded for sending fresh fish to the market?—The proportion of fresh fish must have increased very much in consequence of the facilities afforded by railways for sending it up to the large

consuming towns in the kingdom. It has very much increased from certain places in the south of Scotland, but not much from the north.

26,312. In the north there are not many railways?—No.

26,313. Wherever railways have been opened up the proportion of fish sent fresh to the market has increased?—Yes; but as regards herrings the proportion sent fresh to market must be limited by distance, inasmuch as you cannot get them into the market fresh from very remote districts.

26,314. Taking the whole of that period of 50 years, and subdividing it into decennial periods, can you give us the return for each 10 years?—Yes, but it would take a little time. (*This decennial return furnished by the witness for the Appendix.*) The export to the continent is one great cause of the increase. The export to the continent has increased enormously.

26,315. How could that be the cause of an increase?—It has occasioned an increase in the cure.

26,316. Do you mean that there is a greater demand and a larger price paid for fish to go to the continent than was formerly the case, and that therefore a new outlet has been found for the fish?—There is a much better market, although I am sorry to say there has not been a new outlet. It all goes to the same markets, or rather the outlets have been diminished. There used to be a great market in the West Indies, but that has been taken away in consequence of the abolition of slavery. The outlets on the continent remain the same, but the demand has increased. There would be a still further increase if the duty upon fish abroad was lowered. If, for instance, Austria would lower her duties to the same amount as Prussia, and if France would also lower her duties, there would then be new outlets, and the exportation would increase enormously.

26,317. Do you think there would be more fish cured than at present, and less fish sent to the market?—There would be more boats and more nets and more fishery, and there would be altogether a greater stimulus given to the fishery.

26,318. In your experience do more boats and more nets mean more fish?—I think on the whole they do.

26,319. Then I suppose you have not found that the sea has shown any indication of being fished out?—No, I do not believe that it is fished out. There are great fluctuations arising from unknown causes, as far as anybody connected with the Fishery Board can explain them; but apart from those fluctuations I do not believe that there is any want of fish in the sea.

26,320. Then it is your opinion, from the experience you have derived from your constant familiarity with the fishery for many years, that with the gradually extending number of boats and fishermen and nets there has been a proportionate increase in the amount of fish caught?—Certainly.

26,321. And as far as you have seen there has been no limit arrived at yet from which you can say there has been any exhaustion shown by the sea in consequence of its being over-fished?—Certainly not.

26,322. Does that apply to any other fish than herrings?—I cannot speak with regard to any other fish.

26,323. Then you have not taken under your cognizance any other description of fish than the herring?—Scarcely any. We take statistics of the cod and ling, but only as regards the cured fish, and that arose out of the system of the bounties.

26,324. With regard to the duty levied by Austria, would it be advantageous to the exportation of fish if it was reduced to that of Prussia? Perhaps in the first instance you will tell me what the duties are in Prussia and Austria?—I think the duty in Prussia is 3*s.* per barrel.

26,325. What is the duty in Austria?—The duty in Austria is about 9*s.* or 10*s.* With the transit duty added it amounts to 15*s.* or 15*s.* 6*d.* The duty alone is upwards of 10*s.* and the carriage is about 5*s.* 6*d.* The duty in France is also prohibitory. It has been reduced, but it is still prohibitory.

26,326. That is the duty in France?—Yes.

26,327. Then in Austria and in France the duty is more than double what it is in Prussia?—Yes, a great deal more than double.

26,328. Has the consequence of that been shown by your tables of exports to operate very much against the export of fish to those countries?—There is no export to those countries to speak of.

26,329. You do not export fish to Austria or France?—No, very little.

26,330. How is it with regard to Spain?—Spain takes no herrings, but she takes cod and ling from Shetland and the north.

26,331. Would they take herrings there but for the Customs regulations?—Being a Roman Catholic country, I should think Spain would take herrings.

26,332. Does the same answer apply to Portugal also?—Yes.

26,333. There is no export to Spain or Portugal?—There may be an export of red herrings, but not of our white cured herrings.

26,334. Then to what countries are your herrings exported?—Our herrings are exported to Prussia Polish Prussia, and Russia.

26,335. Is Russia on the same footing with regard to its duties as Prussia?—I suppose the duties are nearly in the same ratio. Fish are exported from here to St. Petersburg, Riga, Memel, Konigsberg, Bremen, Rotterdam, Belgium, Stettin, and other places.

26,336. (*Professor Huxley.*) Do all the Scotch herrings go to the Russian and central European markets?—Yes, of those that are exported to the continent.

26,337. (*Mr. Caird.*) Is it at all complained of by those who are engaged in the herring-fishing, or in the trade generally, that there should be prohibitory duties in any of the large consuming Catholic countries of Europe?—It is complained of very much.

26,338. Within your knowledge have any representations been made to the Government in order to obtain a relaxation of those duties?—Very frequent representations have been made both by the Board and by the trade.

26,339. Have those representations never been followed by any action on the part of the Government?—I believe that the Foreign Office wrote to our ministers abroad, and have received a sort of undertaking on the part of Austria that her rate of duties shall be considered next year when arrangements have to be entered into with Prussia, and it is hoped that they will be considered with a view to reduction.

26,340. With regard to France, has anything been done there?—There were representations made by the Government to France, and in the new Commercial Treaty with France there was a reduction of the duty to some small extent, but it was not sufficient to enable a trade to be carried on. I believe it is the object of France by means of her own fisheries to maintain her navy.

26,341. Can you say whether, within your own knowledge, any of the methods of fishing practised on the Scotch coast involve a wasteful destruction of fish or spawn?—It has been stated that beam-trawling involves a wasteful destruction of fish and spawn.

26,342. Have you any knowledge of that yourself? Have you observed any wasteful destruction of fish or spawn by any mode of fishing which has been carried on under your jurisdiction?—No; such observations as we have made with regard to spawn would rather disprove that assertion. I have two reports here which were made by Dr. Allman in reference to a small piece of ground where beam-trawling has been interdicted. It is a piece of ground about three miles square. The experiments and investigations carried out by him decidedly disprove the theory.

26,343. They disprove the allegation that injury is done by means of beam-trawling?—Yes.

26,344. Can you give us the facts as shown by that investigation; can you state in substance what was the result?—We employed divers to examine the ground, and search it over for spawn; with great difficulty they found a small quantity, but since the regulation prohibiting beam-trawling has subsisted the spawn does not appear to have been deposited there in the way in which it was represented to exist before,

EDINBURGH.
Hon.
A. F. Primrose.
25 July 1864.

I may add that the ground has been very closely searched by us at different times.

26,345. During the different seasons of the year?—Yes, and it has not been found that the spawn has been laid down there in the quantities that were described before, but still some was got. The spawn indicated vitality after being brought up with the dredge and exposed to the air. It was carried away from the ground to Dr. Allman's house in Edinburgh and yet it vivified, and the conclusion arrived at was that if it was allowed to be thrown back into the sea, as it would be by the shaking of the nets after being taken by the trawl, no injury to it would follow.

26,346. Was that the result of several experiments?—Yes.

26,347. And the spawn all vivified in the way you mention?—Yes, a great portion of it.

26,348. Who was the gentleman who conducted the experiments?—Dr. Allman, professor of natural history in Edinburgh.

26,349. And the result of those experiments was to lead to the conclusion that even although the spawn were dislodged and dropped again into the sea, no great injury would be done?—That is the result he has come to.

26,350. Over what period did his investigations extend?—His first report was made towards the end of the year 1861. There was another report made in June 1862. (*Copies of these reports were produced and handed in by the witness.*)

26,351. Had that report any reference to a second investigation?—Yes.

26,352. A second investigation upon the same ground?—Yes, and in the meantime there had been divers sent down.

26,353. Was that done in order to see the state of the bottom?—Yes, and to try to get spawn.

26,354. Did you meet with very little success in getting spawn?—We did not meet with much success upon the ground where beam-trawling had been interdicted, but more spawn was obtained about the Isle of May; it was found more abundant on the west and east sides of that island than on the prohibited patch off Pittenweem.

26,355. Is the ground a soft bottom?—I believe the commander of the cutter will be able to describe that better than I can.

26,356. Then I gather from your answers that you cannot say there is any existing mode of fishing practised upon this coast which involves a wasteful destruction of spawn or fish?—There is no mode of fishing practised here which involves a wasteful destruction of spawn. The wasteful destruction of fish is a more difficult point to speak upon There are modes of fishing practised by which the fishermen take great quantities of young fish, but I do not know whether that is a wasteful destruction of fish or not.

26,357. But as a fact there are modes of fishing practised by which considerable quantities of young fish are taken?—Yes, but I cannot say whether that is wasteful or not.

26,358. Do you suppose that any legislative restrictions could be framed which would increase the supply of fish?—As regards legislative proceedings for increasing the supply of fish, I regard them with great doubt myself, and I may say with great dislike; but in giving that answer I wish it to be understood that I am only representing my own opinions, and not those of the Board.

26,359. I am only asking you for your individual opinion now?—My individual opinion is decidedly opposed to legislative restrictions.

26,360. Are there any legislative restrictions that operate injuriously at this moment?—Yes, I think so.

26,361. What are they?—I think the existence of a herring close-time operates injuriously to the supply of fish.

26,362. Is there any good reason why there should be a close-time on the west coast of Scotland and not on the east coast?—I know of none.

26,363. What was the impelling cause of regulations of that exceptional description?—I believe the regulation was established at the strong desire of the fishermen themselves, but I never could find out why a close-time was imposed. I believe that the Commission mention in their report that they found the close-time to be a most popular thing on the west coast.

26,364. (*Professor Huxley.*) The answers we have had from you explain the jurisdiction and functions of the Board; we have had a great deal of information from you coming under those heads, but we have not heard much as to the organization of the Board itself. Will you now be so good as to tell us under what Act the Board of Fisheries is constituted?—It was constituted by the 48th George 3. c. 110.

26,365. In what year was that passed?—In the year 1808.

26,366. Is that the only Act under which you perform your functions?—No, there are several other Acts.

26,367. As far as regards your general jurisdiction, and so forth, are there any other subsequent Acts which modify the range and organization of the Board?—They do not modify the jurisdiction or range of the Board, but they do its organization. For instance, one of the Acts increases the number of commissioners, but it does not substantially alter the organization of the Board.

26,368. Does the organization of the Board remain the same as it did in the year 1808, with the exception that the number of commissioners has been increased?—Yes, but there have been some details of duties added.

26,369. What was the organization of the Board under the first Act? Of whom was it made to consist—of what number of persons?—It was made to consist of seven persons. Formerly there was what was called the Board of Trustees for Manufactures and Fisheries in Scotland. That Board existed previously to 1809, and consisted of 21 persons.

26,370. Was it a public body?—It was a public body which had existed since the Union, and which received a grant of 2,000*l.* per annum.

26,371. Was it mentioned in the treaty of union?—I do not think it was, but the Board arose out of the circumstance that under the treaty of union malt duties were imposed in Scotland, and in return for that a perpetual annuity was to be paid to Scotland of 2,000*l.* for the improvement of its manufactures and fisheries. Of that sum of 2,000*l.*, about 1,000*l.* was paid to the fisheries and 1,000*l.* to the manufactures.

26,372. In 1809 was that society suppressed?—No, it continues to the present day.

26,373. Does the Board of Fisheries take upon itself the functions of that society?—No. The Board of Fisheries is independent of the society altogether.

26,374. Quite independent?—Yes.

26,375. The Board of Fisheries cannot be regarded as having had transferred to it the rights of that society?—Not in the least; but when that society found that a separate Board was going to be established by Parliament they ceased to lay out any of their money on the fisheries.

26,376–7. I presume the society of which you now speak was something like the Royal Dublin Society in Ireland?—It is obligatory by the Act that the seven commissioners originally forming the Board of Fisheries should be elected out of that society, and the number of members of the society was increased to 28 in order to provide these seven commissioners. The body of which I speak originally consisted of 21. In 1809 it was increased to 28, from which seven commissioners were appointed to the Board of Fisheries. They were nominated by letters patent under the Crown.

26,378. Under the commission what officers were constituted by the Act?—Under these commissioners there were fishery officers, who by Act of Parliament must be coopers by trade.

26,379. How many of these fishery officers were constituted?—There must have been a considerable number, and they were gradually increased.

26,380. Was the number limited by the Act of Parliament?—No, not at all.

26,381. Had the seven commissioners the power of appointing any number of fishery officers they liked?

—They had the power of nominating. The Treasury appoint.

26,382. And there was no limit to the number?—No, except the necessity for their services.

26,383. Was the secretary nominated by the commissioners?—The commissioners are empowered to appoint a secretary, clerks, and other officers to do the duty of the head office, and they present to the Treasury the names of coopers by trade fit to carry on the outdoor duties of fishery officers.

26,384. Then there is no practical limit to the number of officers who may be appointed?—No.

26,385. Was anything said as to the salaries of the officers or the amount of money to be granted?—That is all provided by the Treasury.

26,386–7. Then is there no limit fixed by the Act?—None at all.

26,388. The commissioners are not paid?—No.

26,389. The only persons paid are the secretary and the officers?—Yes.

26,390. Are the fishery officers still obliged to be coopers?—Yes, all the fishery officers must be coopers.

26,391. For example, you have cutters acting under the orders of the Fishery Board; the commander of each of these cutters must not be a cooper, must he?—He must have been a fishery officer until the Act of 1860.

26,392. Is it a matter of fact that before the year 1860 the commander of the cutter was a cooper?—Until close on to the year 1860 the commander of the cutter was a fishery officer.

26,393. He had as a fishery officer been a cooper to begin with?—Yes, I suppose so; but he had been employed upon the sea as mate in the excise service during the years 1808, 1809, and 1810. Before he got the command of the fishery cutter he must have been a cooper.

26,394. Do you construe the word "cooper" rather elastically?—No, I construe it strictly.

26,395. The secretary is not obliged to be a cooper, is he?—No.

26,396. Were all the other persons paid by the Fishery Board obliged to be coopers?—No, the clerks were not.

26,397. But all the officers called fishery officers must be coopers?—Yes.

26,398. And the commanders of the vessels must be fishery officers?—The Board has only one vessel, and the original commander of it was for 50 years in the service of the Board, which would bring him very nearly down to 1860.

26,399. Did any subsequent Act modify that regulation?—Yes. The Act of 1860 modified that regulation. The Act of 1860 gives power to appoint superintendents of fisheries, who shall have all the powers conferred on naval superintendents appointed by the original Act.

26,400. Then can you appoint persons who were not coopers under that Act?—Yes, but not to superintend the curing of herrings and branding the barrels, which duties are specially excepted by the Act, and therefore remain exclusively reserved to the fishery officers under the original Act of 1808.

26,401. What officers have you now under the control of the Fishery Board?—In the first place the secretary.

26,402. And then the clerks of the office?—Yes.

26,403. And what next?—If you take the outdoor establishment, there is the general inspector and assistant inspector, and 26 fishery officers; that makes 28 altogether. Then there is the commander of the cutter, who is a fishery superintendent, and his mate, who is also a fishery superintendent. They take a complement of men on board and send out guard boats. Then in addition to that staff there is a sergeant of police on the Ayrshire coast who is also a fishery superintendent. There is another on the Argyllshire coast who is also a fishery superintendent, and who has under him nine fishery constables.

26,404. Is that principally for carrying out the Act of 1860?—Yes, these sergeants of police and fishery constables never existed before.

26,405. Is that the whole of your establishment?—No, there are the engineers of the Board, who have a retaining salary from the Board, and who are paid by fees for the work they perform.

26,406. Are they employed on the works which have been carried out?—Yes, the engineers are exclusively employed when the works are being carried out. They have also harbour inspectors.

26,407. What vote do you have for meeting the expense of that organization?—One year with another, including the vote of 3,000*l.* for harbours, the total vote made to us is about 14,000*l.* or perhaps 15,000*l.* a-year.

26,408. Has that remained about the same since the first establishment of the Board in 1809, or has it greatly increased?—It has diminished I think.

26,409. What was the grant in 1809?—Perhaps it was not so much in that year, that being the first year. The officers were not then appointed.

26,410. Then take 1812, or say 1814, that is 50 years ago?—The expense was about 12,000*l.* then, but at that time we had no police to pay. At that time we did not get a direct vote; it was paid to us out of the Excise.

26,411. Still you can ascertain what sum was expended?—Yes.

26,412. Will you send us in a return of the average expense in every 10 years?—Yes. (*This return furnished by the witness for the Appendix.*)

26,413. Under your Act of constitution what was your jurisdiction?—Great Britain.

26,414. The whole of Great Britain excluding Ireland?—Yes, excluding Ireland.

26,415. And the Isle of Man?—No, we had the Isle of Man added into our jurisdiction in 1821 by the Act 1st and 2nd Geo. IV. cap. 79.

26,416. Have you the precise terms of the Act conferring jurisdiction over the whole of Great Britain?—I think I had better read the preamble of the original Act, 48th Geo. III. cap. 110:—"Whereas the "improvement of the British white-herring fisheries is an object of most essential importance to the "wealth and commercial prosperity as well as to the "naval strength of this kingdom, and for the attainment of which it is expedient that more effectual "regulations should be made in order to secure attention to curing and salting;" and so it goes on and speaks, as do several subsequent Acts, of the fisheries as British fisheries, and of the vessels as owned in Great Britain and manned in Great Britain, and as to be superintended over upon the coasts and in the bays of Great Britain.

26,417. Then that Act limits your functions and jurisdiction entirely to the white-herring fishery?—Entirely to the white-herring fishery.

26,418. It gives you no power to meddle with the cod or long-line fishing?—None whatever. Nor does any Act give us power to meddle with them, but we had the power of punching dried cod, ling, tusk, and hake, because there was a bounty upon them.

26,419. Was that power given to you by a subsequent Act of Parliament?—Yes.

26,420. What was the date of the Act which thus enlarged your power?—It was the Act 1st George IV., cap. 103, passed in 1820, which gave power to pay bounties for the cod.

26,421. Does that Act give you power to make regulations?—Only in respect to the bounties.

26,422. Does not the first Act?—No.

26,423. What does the first Act empower you to do?—To see to the curing of herrings. It gave us also naval superintendents to protect the fishermen from their enemies (you must remember that that was war time) and at the same time to go on board and inspect the registries of fishing vessels. It further gives bounties for deep-sea fishing and compels the fishing vessels to go to Shetland at certain times of the year and not to begin fishing till the 24th of June. It also gives the naval superintendents power to maintain order on the fishery grounds. The fishery officers have the same powers given to them as are given to the naval superintendents, but the chief functions of the fishery officers are for the curing of the herrings and the collection of relative statistics.

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

26,424. Does the Act prescribe any particular method of curing the herrings?—There are certain things prescribed upon which alone the herrings could receive the bounty.

26,425. What is the nature of those regulations?—In the first place the officer sees that the barrel contains 32 gallons, English wine measure, that the herrings are properly gutted, cured, and packed, and he then brands them as evidence that those herrings had been brought before him and had passed inspection. The brand originally denoted that the owner was entitled to receive the bounty from the Excise.

26,426. Does that Act make any regulations about the size of the mesh of herring nets?—The 12th section of that Act does.

26,427. Does it prescribe that the inch mesh shall be used?—I imagine that this Act is the first Act that so prescribes it. I have never been able to find out any other.

26,428. Does that Act merely empower you to grant a bounty under certain conditions, or does it enable you to interfere with persons catching herrings in any other way? For instance, could you prevent persons catching herrings with any other kind of net? Suppose they said, "We don't want your bounty, but "we want to catch herrings for ourselves," could they catch herrings with any net they pleased?—Certainly not. They were restricted to nets with meshes of one inch.

26,429. Does it make it penal to use any net except a net having an inch mesh?—They might use the seine-net or any other net, provided it had a mesh of one inch from knot to knot.

26,430. They might catch herrings in any way?—Yes, in any way they liked, but they might not use any net with a mesh that was prohibited. Perhaps I had better read the clause:—"And be it further enacted, "that from and after the 1st day of June 1809 no "person shall use on any river or loch or at sea in or "on the coast of Great Britain any herring-net, or "any trawl-net, drag-net, or any other sea net for "the taking of herrings which hath a mesh of less "than one inch from knot to knot, or any false or "double bottom cod or pouch, or shall put any other "net though of lawful size behind the others to "destroy the small fish; and that any person offending "herein shall forfeit every such net as aforesaid and "the sum of 40*l.* for every such offence; and it shall "be lawful for the commissioners for the herring "fisheries to be appointed pursuant to this Act to "cause every such net to be burnt."

26,431. That relates to the whole coast of Great Britain?—Yes.

26,432. And it is the first Act that limits the size of the mesh?—It is the first Act as far as I know. The great object of this Act was to enable the British fishermen to contend with the Dutch, and I imagine that the Dutch fishermen had that regulation.

26,433. Is it your impression that these regulations were passed on account of any falling off in the supply of fish, or to enable our herrings to compete with the Dutch herrings?—I think they were passed with the double object. The chief object I believe was to enable our herrings to compete with the Dutch; but there was also the common idea that the herrings came in-shore to spawn, and that to destroy the young fish would lessen the produce every succeeding year. It was regarded as a matter of the greatest consequence in those days to let the young fish grow, and it is thought so at the present time by a great body of the fishermen.

26,434. Then there may have been two motives in establishing the inch mesh, one to secure the sorting of the fish, and the other to allow the escape of the small fish?—The general tenor of the Act seems to indicate that the sorting of the fish must have been a motive. The other motive, to facilitate the escape of small fish, is declared in the Act.

26,435. When the nets are fishing in-shore?—It says nothing about in-shore, and nothing is said in regard to the Dutch fishermen or in regard to the curing of the fish. It certainly looks as if the chief object of the clause was to secure the preservation of the fish.

26,436. The Act gave you no power over any other kind of fishery than the herring fishery?—None.

26,437. It gave you no power of interfering with the long-line fishermen?—No.

26,438. Have you had any power given you since to interfere with them or to make regulations for them?—We have had no power given to us to interfere with the long-line fishermen.

26,439. Did that Act empower you to do anything with regard to the pilchard-fishing?—Nothing.

26,440. When the Board was first established were the fishery officers scattered over the whole of the coast of Great Britain?—Yes.

26,441. What did they do, since at very few parts of the coast excepting in Scotland this mode of curing fish took place?—I believe that it did at an early period, owing to the bounties that were given. The fish in those times were cured in order to obtain the bounties.

26,442. But did that mode of curing take place in the Bristol Channel for example?—I think so.

26,443. Used there to be curing houses there?—I believe that there used to be an officer at Bristol whose duty it was also to see to the export of herrings. The fishery officers at that time were stationed at the chief points of export.

26,444. Are you aware of any subsequent Act which gives you larger powers, except those with regard to bounty? Was there any Act which gave you more extensive powers than were conferred upon you by the original Act?—Yes, the Act of 1860 does.

26,445. That Act has reference to the west coast of Scotland?—No, it has reference to the whole coast of Scotland.

26,446. What further powers does it give to you?—It gives the Fishery Board power to interfere with other fishings for the protection of the herring-fishing.

26,447. Will you be good enough to read the particular section which thus enlarges your powers?—It is the fifth section of the Act, but both the fifth and sixth sections give enlarged powers. The fifth section says, "The commissioners may from "time to time make such regulations as they shall "think fit for the more effectual government, manage-"ment, and protection of the herring fisheries on the "coast of Scotland, and for the preservation of order "among the persons engaged therein; and any person "who commits any breach or contravention of any "such regulations shall be liable to have his boat "detained by the superintendent or any person acting "under his orders, or by any officer of the fishery, or "by order of any sheriff, justice, or magistrate having "jurisdiction under this Act, and shall be liable to a "penalty of not less than 5*l.* and not exceeding 20*l.* "for every such offence." You see the clause gives them power to make "such regulations as they shall "think fit," and then the sixth section particularly applies not to the herring fisheries but to other fisheries. It says, "The commissioners may on appli-"cation made to them, and after such inquiry as they "shall think necessary, by regulations to be made "by them from time to time prohibit, on the coasts "of Scotland and within such limits, and for such "periods as they may think fit, the use of any trawl, "drag, or beam net which in the opinion of the said "commissioners is injurious to the spawn or other-"wise to the herring fishery; and any person who "commits any breach or contravention of any such "regulations shall be liable to a penalty of not less "than 5*l.* and not exceeding 20*l.* for every such "offence, provided that this provision shall not in any "way affect any of the prohibitions or requirements "of any of the recited Acts in so far as relates to "fishing for herrings." Now that clause I take it empowers the commissioners to interfere with beam-trawling for codfish.

26,448. Or for soles?—Yes, or anything, if the Board choose to exercise the power.

26,449. With respect to the functions of the Board, there is a large class of these functions which may be called entirely regulative?—Yes, entirely.

26,450. Police functions, with regard to the enforcement of the Act?—Yes.

26,451. Do you consider yourselves bound to enforce the Convention between England and France?—Certainly, so far as the force and the circumstances under which that force is lent to the Board admit of; but it is impossible that a man-of-war or an officer in command of a man-of-war can take orders from a civil board. They are only put in communication with the Board.

26,452. Let me put a case to you so that my meaning may be quite clear. For example, here is an article—the 24th, which says, "Trawl-fishing is forbidden in all "places where there are boats engaged in herring or "mackerel drift-net fishing." I give this merely as an example. Suppose that I made a complaint before the Board that persons were engaged in trawling upon the east coast of Scotland while herring-fishing was going on—would the Board feel themselves empowered to act under the Convention with France?—Undoubtedly, to the extent of communicating with the naval superintendent and drawing his attention to the matter, provided that the French were at the time fishing upon the coast, so as to bring the Act of Convention into operation as an available Act.

26,453. What would be done then?—I presume that the naval superintendent would act according to his own discretion.

26,454. Have you any reason to believe that he would act at all? Is the opinion of the law officers of the Crown as to the validity of this Convention in the Scotch seas so clear that the naval superintendent would consider it his duty to act?—I do not know that they ever have hesitated to act. But there is a great doubt as to the scope of the Act. Anyone who reads the title of the Act must feel a certain doubt, but it never has been disputed by the French.

26,455. Has it been acted upon?—How do you mean acted upon?

26,456. Are you aware of any instance in which the captain of a man-of-war has interfered, such, for instance, as in the case I referred to just now—has he prevented trawl-fishing on the Scotch coast while herring-fishing was going on?—I do not know that he has prohibited trawl-fishing, but he has taken fishing-vessels into port for a breach of the Convention. There have been instances in which he has taken vessels in tow, brought them into port, and brought the fishermen before the magistrates.

26,457. On what part of the coast has that occurred?—It has occurred at Berwick over and over again, and at Dunbar and various places.

26,458. Then by the decisions of the courts here you have settled the question that the Scotch seas are "between England and France?"—That has been settled over and over again. French fishermen have been fined 10*l.* for fishing on Sunday at Dunbar. The officer in command of a French cruiser complained, I believe, of the excess of this fine.

26,459. You are aware that a question as to the limits within which the Convention applies has been raised?—Yes.

26,460. But in Scotland you consider it to be settled, and act upon the Convention as it stands?—The French claimed the right to fish three miles from the shore of the main land inside the Fern islands, and the naval officers in charge considered that the distance should be three miles from the outside of the Fern islands. The question was referred to the Judge-Advocate-General, upon reports from me and from Captain Strange of Her Majesty's ship "Archer" to the Admiralty, and the opinion of the Judge-Advocate was that the boundary should be three miles from the outside of the Fern islands.

26,461. Then you do consider that you are empowered to carry out the conditions of the Convention?—Certainly.

26,462. And that it is the duty of the Fishery Board to do so?—Yes, as far as their means allow them.

26,463. Has there been any Act of Parliament passed subsequent to the first Act which limits your jurisdiction?—Not that I am aware.

26,464. Then your jurisdiction extends throughout the whole coast at present?—Yes. As regards the Convention Act we act as an aiding Board; it is the Board of Trade that are appointed to carry out that Act.

26,465. Then is it your business to call the attention of the proper authorities to breaches of the convention?—Certainly. The Board here is placed in communication with the Board of Trade and also with the Admiralty upon this Act.

26,466. As your jurisdiction has not been curtailed, any breaches of the law occurring on the Scotch coast are properly speaking under your notice, and you are bound to take cognizance of them?—Well, hardly; the Convention has been a sort of appendage tacked on to the Fishery Board. The Convention Act was passed long after the original Act constituting the Board, and as the Board was found subsisting here the Admiralty felt it to be expedient for their officers to be put into communication with us, we having had a good deal of experience in regard to the local fisheries.

26,467. But the jurisdiction of your Board extends over the whole coast?—It would be impossible for us to take up the English Channel in that way with only the force we have now.

26,468. It is very important for us, in endeavouring to understand what is practically the state of the law respecting fisheries, to inquire what your jurisdiction is, and how far you are disposed to carry it out. Your Act of Parliament appears to give you jurisdiction over the whole coasts of Great Britain?—Some of the Acts do, but the Convention Act is not one of those Acts.

26,469. But if your original Act gives you power to act under the Convention, and to enforce it in one part of the district, surely it must give you power to enforce it in another?—I do not know that it does give us that power; I will explain exactly the state of the Convention Act, because it is somewhat peculiar. In the first place, the Board of Trade is empowered to employ certain persons nominated for the purpose to carry out the Convention Act. When the Convention Act was passed it appeared desirable to the Fishery Board that as the French frequented the east coast of Scotland very much, the fishery officers should receive commissions from the Board of Trade in order to enable them to carry out the Convention. The Fishery Board therefore applied for a commission to be given to each fishery officer; of course a shore officer is fully engaged in superintendence of curing, and cannot do much in carrying out the Convention but still he can communicate with any of Her Majesty's ships on the coast, especially as we have a naval superintendent appointed under the original Act to look after the herring fishery. This superintendent being a naval officer, and looking after the fisheries, he has his separate commission to carry out the Convention Act.

26,470. Then your officers do not carry out the Convention Act as being your officers, but upon a special warrant from the Board of Trade?—Yes.

26,471. Strictly speaking, as the Board of Fisheries, you know nothing about the Convention?—No, we are only an aiding body to give intelligence, and by means of the cruisers put in communication with us, carry out the provisions of the Convention.

26,472. Then in point of fact the Board of Trade has recognized the Convention as binding and effective on the coast of Scotland?—Yes, by giving commissions to the fishery officers.

26,473. And the Board of Trade has obtained convictions on the coast of Scotland?—Yes.

26,474. Then in that case the obtaining these convictions was not your act, but that of the Board of Trade?—Yes, it is the officers in command of the cruisers who enforce the Act and obtain the convictions.

26,475. The reason why I press you upon this matter is this—we have been making a number of inquiries on the south and east coasts of England, and there we find that this Convention with France is purely a dead letter; it has never been enforced, nobody troubles himself about the regulations contained in it, and the Board of Trade and all the

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

official authorities seem to have their own reasons for not enforcing the regulations?—Possibly.

26,476. What I want to get at is why the Scotch Board of Fisheries are of a different opinion and enforce the provisions of the Act; why you in the northern half of the kingdom act differently from the authorities in the southern half. If you are all acting together under the Board of Trade it is evident that this Convention Act is carried out by the Board of Trade in one way on the coast of Scotland, and in another on the coast of England, yet in each case you exercise your power under the same Act and under the same Convention?—I cannot speak about that; I know that on the coast of Northumberland the Convention is said to be a dead letter, but I believe that that is saying too much. Not a single season has passed that French vessels fishing off the coast of Northumberland have not been towed into port and fined. I believe that full vigilance has been applied to that part of the coast. I am not prepared to say that the efficiency of the mode in which the Convention is carried out may not rest with the officers in command of the cruisers; no doubt to discharge their duties properly they would have to exercise extreme vigilance, and those officers who are active and fond of fishery service would find the duty by no means a light one. I know that the commander of the "Victoria" cutter, Mr. Smith, became quite obnoxious to the French in consequence of the number of French fishing vessels he seized; at the same time it may happen that a cruiser may lie in port, and not discharge her duty at all. It rests much with the officer in command.

26,477. We learned in Northumberland that there had been some activity displayed, but in our inquiries further south we found that there had been none, and it appeared as if the activity of the officer was coterminous with the Fishery Board of Scotland. You say now that the Fishery Board has no jurisdiction, but only sets the Board of Trade in motion, so that, at your instance, it would appear the Board of Trade acts in the northern half of the kingdom, and in that case why should it not act in a similar manner in the southern half?—The Board of Fisheries consider it their duty to carry out this Act. They are bound to do so. That is the principle which is acted upon, and whether the duty be right or wrong, it is a duty to be done, and they must do it.

26,478. But you can only get this duty done by acting upon the Board of Trade?—No, we scarcely communicate with the Board of Trade at all, and never upon the details of duty connected with the Act.

26,479. Then how is it that the duty is done?—In this way. We know perfectly well that if our cruisers are not on the coast the French will do an enormous deal of damage to the British fishermen. Therefore early in the season we point this out to the Admiralty, and we ask what is going to be done in order to carry out the Convention. The Admiralty write back to say that they mean to send such and such ships down, and to put their commanders in communication with the Board. Upon the ships arriving the officers in command report their arrival to me, and I put myself in communication with them, and having constant intelligence coming to me as to the state of the fisheries and coast, I send information and instructions to them, which I get them to act upon.

26,480. Suppose that a breach of the Convention takes place—who is the prosecutor?—The commander of the cruiser who takes the offender in.

26,481. Does he lodge an information before a magistrate?—Yes; he will take the fishing boat in; he will tow her in, and have the fishermen up before the magistrates at once.

26,482. Does he simply produce the Act to the magistrates?—Yes; I have pointed out to them the alternative of detaining a French vessel for two or three months, seized for breaking the law, which they have power to do instead of fining the crew. I have reported upon this matter to the Admiralty, and asked their opinion upon it.

26,483. The great point I want to get at is this—I learn from you that you do not consider the power of the Board of Trade lends the slightest additional force to the Convention?—Not at all here, as an active power.

26,484. So that if the Convention is lawfully operative on the coast of Scotland, it ought to be operative on the south and the east coast of England as well?—I always understood that it was. I have heard the commanders of cruisers state that they have carried it out on the south coast of England and in the English Channel. If you go to Greenock and happen to fall in with Captain Sicklemore, you may obtain some information from him upon this subject. I believe that he had charge of the southern coast, and I have heard him say that he enforced the regulations of the Convention Act there. You will obtain the same information from Lieutenant Parkes if you see him.

26,485. Then I gather from your answers that you find it perfectly possible in consequence of the existence of the Board of Fisheries here to get all these Acts carried out?—I do not say that the whole of the regulations contained in them are carried out. The Convention Act is a very difficult Act.

26,486. But practically you carry it out?—We carry it out as much as we can; but with such a lot of French boats fishing off the coast there is no doubt that some of them will occasionally break the law and escape.

26,487. I understood from a passage in one of the later Acts you read that you have a full and rather an extensive power of making byelaws?—Yes, we have a very extensive power.

26,488. In fact there seems to be very little practical limit to the power given you in that Act?—It is limited by the words "any trawl, drag, or beam net." It does not apply to line-fishing.

26,489. Suppose it was the pleasure of the Board to pass a number of regulations similar to the Convention, it seems to be empowered to have those regulations enforced according to that passage of the Act of Parliament?—If it appeared to be necessary for the protection of the herring fishery, I suppose by the 5th clause of the Act of 1860 they would have the power to make such regulations.

26,490. Then the Board of Fisheries has power by that Act of Parliament to pass regulations almost coextensive with this Convention?—We could not pass any regulations that would alter the provisions of the Act; for instance, we could not permit seining for herrings.

26,491. But it would allow you to make very positive and stringent regulations?—It is something like Don Quixote's helmet, it has not been tested yet.

26,492. But the power is very broad?—Yes.

26,493. Has the Board the power or not of enforcing byelaws on the south coast of England?—Do you mean the provisions of the Convention.

26,494. No, I mean any byelaw it may choose to make?—The Act giving them power to make byelaws is limited to Scotland.

26,495. To Scotland exclusively?—Yes.

26,496. Have you no powers under it generally?—No, the word "Scotland" is expressly introduced throughout the Act.

26,497. But still within Scotland it gives you very extensive powers?—Yes, very extensive indeed.

26,498. You are aware that there have been very great disputes as to the power of the Convention, as to where it applies, and so forth?—Yes.

26,499. Suppose it was decided that it does not apply to Scotland, would the Fishery Board have power to pass byelaws of its own and to enforce them?—No, I apprehend it would not. I imagine that anything of the sort as regards a foreign power must be limited by the territorial boundary of Great Britain.

26,500. I did not mean byelaws with regard to foreigners alone, but regulations affecting the fisheries?—Then I should say yes, as regards the home herring fisheries.

26,501. So that so far as relates to the home fisheries the Fishery Board has sufficient powers to enable

them to enact and enforce byelaws without the necessity of a further application to Parliament?—It could enact them, but enforcing them is another thing; besides it would be necessary to increase the establishment of the Board.

26,502. I am not speaking of the practical point, but simply of the power which the Board possesses under this Act?—No doubt it has the power.

26,503. Has the Fishery Board under the same Act any power of relaxing existing regulations?—They have no power of relaxing any regulations except those which they make themselves.

26,504. But how was it with regard to the sprats, I believe that the Board relaxed their regulations in that case?—No, they did not.

26,505. Did they not, by allowing the sprat fishermen to work outside the limits within which they had confined the sprat-fishing?—They seized several of the boats and fined the crews heavily.

26,506. But was there not subsequently a relaxation?—There was not a relaxation exactly, but it got so hot at last that it was considered best to move a little out of the way.

26,507. (*Mr. Caird.*) But there was a change in the law, was there not?—No.

26,508. There was a subsequent Act passed in the following year which made certain limits within which the small-mesh net might be used?—There was that degree of change in the law, but the sprat-fishing was not positively interdicted before, it was only interdicted by deduction.

26,509. (*Professor Huxley.*) But did not the Board of Fisheries of its own motion allow the sprat fishermen to work outside the prescribed limits with their nets?—Previous to the passing of the Act of 1860 the Lord Advocate interfered and obtained a liberation.

26,510. Was that on the motion of the Board of Fisheries?—No, it was not on the motion of the Board of Fisheries; it was on his own motion. It was before the Act of 1860, and that was the peculiarity of the case, viz., that it was before the Act of 1860; it was under a revival by the Board of the Act 14 & 15 Vict. c. 26.

26,511. You are aware that very great difficulties and disturbances took place in Loch Fyne which were attributed to the Board not enforcing the Act of 1851—the 14 & 15 Vict. c. 26?—The Sheriff Substitute of Argyll in the summer of 1859 complained to the Lord Advocate that the Board by not enforcing this Act were bringing on riots of a serious kind at the herring fishery in Loch Fyne. The Lord Advocate, as the guardian of the public peace, wrote a letter of remonstrance to the Board upon the subject. The Act, having been condemned by the Commission of Inquiry of 1856, had fallen into abeyance, but the Board upon receiving this letter from the Lord Advocate felt compelled to revive the Act, and it was revived accordingly. The Act being a General Act for all herring fisheries in Scotland, its revival brought it into operation at the Firth of Forth winter herring fishery of 1859–60, whereby it bore heavily upon the sprat-fishing going on there simultaneously, which it threatened to suppress. The Lord Advocate then interfered on behalf of the sprat fishermen, and desired the Fishery Board to cease to press them so heavily, and to return the sprat-nets which had been seized, upon the understanding that his lordship would introduce a bill into Parliament in the session of 1860 of a liberative kind.

26,512. But did the Board do that?—It felt obliged to do it when the Lord Advocate ordered it.

26,513. Has the Lord Advocate any power over the fisheries?—We act in accordance with his Lordship's advice.

26,514. (*Mr. Caird.*) He represents the executive government in point of fact?—Yes. His Lordship also consulted the Home Office, and the Home Office wrote a letter to say that liberation of the sprat-fishing should be given in view of a possible change of the law, and stating that the Board of Fisheries might do what the Board of Trade had done, namely, temporarily suspend the operation of the law until Parliament had an opportunity of re-considering the Act.

26,515. (*Professor Huxley.*) You would feel in a case of that nature—when under pressure—that you had power to relax the regulations until you could obtain a change of the law?—Precisely so. In 1860, Parliament considered the question, but instead of liberating made the Act more stringent than before.

26,516. But you do feel that in a case of emergency you have the power of relaxing the regulations and applying to Parliament to bear you out afterwards?—Properly speaking the Board has not that power at all; but they are the more prevented from assuming it as respects the Act of 1860 and the Act of 1861 by being most peculiarly circumstanced as towards those Acts. It must be borne in mind that the 14th and 15th Vict. cap. 26, which was the Act of 1851, and the first suppressive Act against trawling for herrings, had been relaxed by the Board, and the opinion of Parliament invited upon this relaxation by a liberative Bill in 1860. Parliament, however, had rejected this liberation, and instead of accepting the bill had converted it into an Act (the Act of 1860), with provisions more stringent than those of 1851. With such a decision by Parliament, it must be very doubtful whether the Board could take power to introduce relaxation upon the Act of 1860; and as regards the Act of 1861, it was even still more stringent than the Act of 1860, and was passed expressly to supply the deficiencies in stringency of that Act.

26,517. In point of fact you were coerced by the Lord Advocate or by the higher powers?—Yes, to some extent.

26,518. (*Mr. Caird.*) The executive government took it into their own hands to relax the law, relying upon Parliament to relieve them from the responsibility they had incurred?—Yes. It was a very difficult matter for the Board to know what it was right for them to do under the circumstances.

26,519. You took your orders from those who were responsible for the peace of the country?—I wish it had been orders. The disagreeable part of the matter was that it was advice, and not orders. The Board did not wish to be put in the position of being compelled to revive the Act of 1851 in one part of the country and to liberate it in another; but they did so on the faith of the whole being liberated by an Act in 1860, instead of which the Act was made more stringent. I do not think they would go through the same process a second time.

26,520. (*Professor Huxley.*) Would the Board not feel itself empowered to relax a regulation under which distress had been occasioned until it could obtain power to do so by an Act of Parliament?—I think they would do nothing to liberate from the Acts of 1860 and 1861, unless they were compelled. Because of the peculiar circumstances under which those Acts were passed.

26,521. You do not feel yourselves to be in the position of redressers of grievances as well as makers of laws. You would not take up a case of distress arising from legislation, but you would represent it to the Government?—We certainly should have taken up such a case previous to the passing of the Acts of 1860 and 1861.

26,522. I ask you this particularly on account of a case which doubtless must have come to the knowledge of the Fishery Board. You are acquainted with the report of the Royal Commission upon the operation of the Acts relating to trawling for herrings?—Yes.

26,523. In the report of that Commission there is an official letter from Mr. Frazer the Sheriff Substitute of the Isle of Skye?—Yes.

26,524. In that letter there are strong passages with regard to the operation of the existing Acts of 1860 and 1861 in reference to the people of Skye—as for example this: "Whatever may be thought of the "views of the Skye people as to the effect of the "close-time upon the fishing, there can be no doubt "of the disadvantages and hardships which that restric- "tion imposes upon themselves. Speaking generally, "the herring fishery in summer and autumn was "looked to in this country for the money which it

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

"produced, and the fishing in winter for the food "which it afforded; and the importance of a winter "fishing to a people whose food resources are so "scanty and precarious in bad years as this to the "people of Skye cannot easily be over-estimated. "The present close-time deprives the people of this "resource. Nor is this the only evil effect. The "long-line fishing for cod, ling, &c., is in some "parts of Skye an important branch of industry, and "to extend and foster it is a matter of acknowledged "public interest. In most parts of Skye, where not "prosecuted for sale, this kind of fishing is resorted "to for food. Now I believe that herrings though "not the only are the best bait for this fishing, and "that it is in the winter and spring months that it is "most successfully pursued. What the effect is upon "this fishing, whether regarded as a branch of indus-"try to be encouraged or a source of food to be "preserved, of a law which makes it penal to catch "or use a herring for bait from the 1st of January to "the 20th of May, must be obvious." There are a number of other forcible passages of the same kind. There is this one, for instance: "I have entered into "these details because it appears to me that the ques-"tion as to the maintenance of a close-time in the "herring fishery seems of graver importance when "regarded in connexion with the food prospects of "the people. I have already adverted to the views "of the people of Skye with regard to the expediency "of the close-time, and to the feeling with which they "have hitherto submitted to its enforcement; but I "must add that the Act is also regarded as unjust, "because it restricts the people on the west coast of "Scotland, while the people on the east coast are left "unrestricted, and they complain that they were pre-"vented last winter from taking herrings for food to "their families and for bait for their long-lines at "the very time when their neighbours in Caithness "were fishing for sale and getting a high price for "their fish." This report I presume would come in a certain sense officially before the Board?—The Report of the Royal Commission upon trawling for herrings has never come officially before the Board except at the instance of the Board, who themselves asked for copies of it. It never has been sent to the Board.

26,525. You are aware that this complaint does not come from the commissioners but from the Sheriff Substitute of the Isle of Skye?—Yes.

26,526. It is difficult to imagine a more powerful representation of the evils of the present state of the law than this. There is indeed a stronger passage contained in this letter in which the Sheriff Substitute says: "I have no reason to believe that any one case "occurred during the period referred to of death from "starvation, and it would I think be erroneous to "attribute the excess of mortality exclusively to "deficiency of food and fuel operating indirectly; "but I cannot doubt that to a considerable extent "the excess of mortality was connected with that "deficiency." In fact the highest official in Skye says that the existing regulations are not only unjust but that they are the cause of an increased mortality in the island. Is that a statement on which the Fishery Board would feel called upon to act?—If it was addressed to them officially they certainly would, but it was not addressed to them.

26,527. But in consequence of the want of that form would the Fishery Board not think it proper to inquire into the assertions contained in that letter? The winter of 1863-64 must have passed by under similar circumstances. Would you allow another winter to pass over without making some inquiry?—If you had asked me that in 1859 I should have answered you at once that inquiry would have been made, but I cannot separate the circumstance referred to from the two Acts of 1860 and 1861 which have since been passed.

26,528. But what would the Board do?—The Board is not in the same position as it was before the passing of those Acts, and it would be necessary to have regard to the whole of the circumstances which occurred in relation thereto.

26,529. Before 1859, if such a document as that had been published, coming from the highest official in the island of Skye, would the Fishery Board have considered it right to look into the matter, and if the facts turned out to be as they were stated would they have made representations to the Government?—If such a representation had been made to them previous to the year 1859, there would have been a meeting of the Board formally to consider the matter, but they would not have proceeded to deal with it unless the Lord Advocate, or, in the absence of the Lord Advocate, the Solicitor-General, had been present to advise them what they were to do.

26,530. Then they would have thought it their duty to consider it?—Yes.

26,531. But they have not considered it now?—The complaints have never been laid before the Board. May I go on to explain?

26,532. Yes, certainly.—The Board previous to the year 1860 having allowed the Act of 1851 prohibiting trawling to fall into abeyance because its abolition had been recommended by a Commission, and because the extreme hostility against trawling had abated, were brought to task because it happened that in the years 1858 and 1859 the fish passed high up Loch Fyne, and the trawlers brought on riots. Then the sprat-fishing occurred in the winter in the Firth of Forth, and serious riots became imminent there. The strongest police force only could have kept the peace, accompanied by the presence of cruisers, and the Board were assured that a liberative measure would be introduced if they relaxed the regulations. The law, however, being against relaxation, they placed themselves in communication with the Lord Advocate, and the draft of a bill was prepared, founded on the knowledge and information possessed by the Board, and to a considerable extent founded upon a bill prepared with great consideration by my predecessor as far back as 1846 or 1847. Every clause in the proposed bill was to be liberative, so far even as to liberate the inch mesh from knot to knot, and it was upon the experience of the Board that that bill was introduced into Parliament.

26,533. (*Mr. Caird.*) In what year was that?—In 1860, but the bill itself was completely changed by Parliament.

26,534. (*Professor Huxley.*) It was changed in committee, was it not?—It was changed altogether in committee, but not without the Board protesting against the change. I, as secretary, wrote a protest against the change, which was afterwards recognized by the Board.

26,535. You are aware I presume at whose instance it was changed?—No, I know nothing of the proceedings of Parliament.

26,536. (*Mr. Caird.*) Where did your protest go to?—It was sent to everybody. It was sent to all the leading towns in England and Scotland.

26,537. (*Professor Huxley.*) Have you a copy of that protest?—Yes.

26,538. (*Mr. Caird.*) Did you send it to the persons who were in charge of the bill?—Yes, to everybody, and I wrote a special letter to the Lord Advocate. One of the protests was written in a great hurry to anticipate a deputation that was proceeding with herrings to London from Glasgow in order to make strong charges against the Board for not putting down trawling for herrings. That protest had expressions in it not certainly as official as they ought to have been. In point of fact the paper was never revised, but was printed and sent off as rapidly as possible. Here are the two protests which I forwarded. I see that the date of them is April 1860.

26,539. (*Professor Huxley.*) Have you any objection to put them in?—None. (*The witness produced and put them in accordingly.*)

26,540. But in spite of all these representatations the Act was carried through the House?—It was carried through the House, and not only that, but the boundary proposed for the sprat fishermen, which corresponded to the boundary which the Board had established when the Lord Advocate interposed on

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

behalf of these fishermen, was rejected by Parliament, and carried higher up the Firth of Forth, diminishing thereby the area for the sprat-fishing. The Act of 1860 thus passed was handed over to the Board to be carried into effect. The Board's character had been slurred upon in many quarters for not having carried into effect the previous Act of 1851. This Act had just been under the deliberate reconsideration of Parliament, and Parliament had deemed it so insufficiently stringent as to cause the Act of 1860 to be passed; therefore when the Act of 1860 was handed over to the Board to execute, what could the Board do but carry the Act into effect? The immense amount of abuse heaped upon the Board from the west coast and from other parties for letting the Act of 1851 fall into abeyance, must be kept under recollection in considering the obligations put upon the Board to carry out to the letter the Act of 1860. Further, in the winter of 1860 the sprat fishermen of the Firth of Forth, who felt the heavy pressure put upon them by the Act of 1860, brought a case against the Board into the Court of Session in order to test the Act. The court decided against the fishermen, and in giving its decision declared that the provisions of the Act were imperative. Afterwards the interests of these sprat fishermen, who had no boundary given them by the Act of 1860, were taken into consideration by Parliament in 1861, who gave them a boundary within which they were to be free to fish, but added in all other respects to the stringency of the Act of 1860; and this additional Act of 1861 was handed over to the Board to be carried into execution. Can anything be more decided law and instruction to the Board to carry out those Acts through thick and through thin than the passing of them and committing them to the Board in this way? To make this still stronger, previous to the year 1860 there were 15 commissioners of the Board, but the Act of 1860 gave power to appoint five more; of these five, three were selected from members of Parliament to give confidence that its provisions would be carried into effect. Under the concurrence of these circumstances, power may be said to have been taken from the Board of considering complaints against the Acts of 1860 and 1861, at least until those Acts had been long and thoroughly tested. In reference to the position of the Board, as to its instituting inquiries in respect to the operation of these two Acts, there is also the further question of time. The report of the Royal Commission upon trawling, which was not made to the Board, and was received by the Board from the Treasury only incidentally, had not produced conviction or given complete satisfaction to the public, and complaint had been made that the evidence on which it proceeded had not been published with the report, and in May 1863 an address had been moved in the House of Commons for a copy of the minutes of the whole of this evidence. Its production was not accomplished until towards the close of the session of 1863, and coincident with its production the present Sea Fisheries Commission, before which I am giving evidence, was appointed, a Commission which would necessarily have to investigate again the whole matter. The question, however, of the Board making inquiry was considered by the Board in the presence of the Lord Advocate, and the Lord Advocate, knowing the circumstances of the case, the position of the Board, and the different Commissions that had been appointed and were in existence, deemed that it would not be expedient for the Board to enter upon inquiry as to the operation of these Acts. That was in the beginning of this year. The majority of the Board concurred with the Lord Advocate, but one if not more of the members present were of opinion that inquiry ought to be made.

26,541. (*Mr. Caird.*) Do you make an annual report to Parliament?—Yes.

26,542. In that annual report do the Board not feel it its duty to notice circumstances arising such as those you have mentioned in regard to the sprat-fishing, in which they would show the injury sustained by the public in consequence of the present law?—The subject of the annual report has of course become more difficult from the position in which the Board is now placed. It can only contain those things which the Board agree shall appear upon it.

26,543. As I understand, it is part of the duty of the Board to take general cognizance of the state of the fisheries along the coast of Scotland?—Yes.

26,544. If a strong case like this should present itself to you in the course of that inquiry into the state of the fisheries, would you not think it the duty of the Board to report to Parliament, so that Parliament should be informed of its existence, as there is no other official means by which it would know of the case?—But its existence is disputed, and the causes are disputed also.

26,545. But the facts cannot be disputed?—They are disputed.

26,546. (*Professor Huxley.*) But here is the official report from the Sheriff Substitute?—Yes, but I am not prepared to say that everybody agrees with that.

26,547. But it is an official report?—Yes; but on a matter which lies with the Government and not with the Board.

26,548. In a matter affecting the fisheries who would be called upon to take the initiative?—That would depend on the case. The Board might take the initiative if the point was not disputed, and had not, as trawling for herrings has done, created so much excitement both within and without the Board.

26,549. You would not consider the fact disputed that sprats had appeared in Granton Harbour and not within the limits prescribed by law; that is a fact, is it not?—Yes, that is a fact, and it is stated and commented upon in the Board's report of the year.

26,550. Is the law commented upon in the report as one that is injurious to the supply of fish?—The report does not go so far as that.

26,251. Is not attention called to the fact that the law being so the supply of fish has diminished?—That is a disputed fact. The fact that the sprats were in Granton Harbour is mentioned, and the difficulty it created with regard to the superintendence, but that the supply of fish was diminished from so casual an incident in the course of the season is a deduction which the Board are not prepared to make.

26,552. I refer entirely to the statement of the Sheriff Substitute of the island of Skye. He says in so many words, that in consequence of the Skye fishermen not being allowed to catch fish during a certain time they were deprived of the food which they used to have and were starving in consequence. That surely is a matter which admits of no doubt or dispute?—That was a matter which under the circumstances concerned the Home Office and the Lord Advocate, (if it were true), and which belonged to the channels of communication between the Home Office and the Lord Advocate. It was a matter for the Government to deal with and not the Board of Fisheries.

26,553. But is that not the sort of thing that the Board of Fisheries having the enforcement of these regulations would inquire into? Would they not feel themselves called upon to say whether the regulations are expedient regulations or not? Would it not occur to them to say there is no doubt that in this particular locality these regulations operate very hardly indeed? Is it not a point which the Board of Fisheries exercising a superintendence over the fishing population and looking after their welfare would bring under the notice of Parliament?—If it had occurred say some years before, that is, at a time when these Acts of 1860 and 1861 had not been passed under the peculiar circumstances I have described, I have no doubt that notice would have been taken of it.

26,554. Would you have made some inquiry into the matter?—Yes, but there is also this to be considered—if you have executive officers appointed to carry out Acts of Parliament of so stringent a character as these two Acts are, you cannot proceed as a Board to inquire into the operation of the Acts themselves without lowering your authority and power to carry them out, and without introducing that very difficulty and disturbance which was the original cause of the Acts being passed.

EDINBURGH.

Hon. B. F. Primrose.

25 July 1864.

26,555. You consider the natural action of the Board is restricted by these Acts of Parliament?—Precisely. The whole experience of the Board, and they have now had 50 or 60 years' experience, has all tended towards relaxing restrictions and liberalising legislation. I think that is the experience of the public servants of the Board, it is the experience of those officers who are really practically acquainted with the matter.

26,556. It is your own experience?—Yes, and that also of the higher officers of the Board.

26,557. Then the more narrow restrictions which have been imposed of late years have not been established at the suggestion or wish of the Board, but have really been enforced upon them *ab extra*?—Certainly, but then I must state that the opinion of the majority of the practical men engaged in the fisheries is the other way—it is quite in favour of restrictions.

26,558. Do you mean by practical men engaged in the fisheries, fish-curers or fishermen?—I mean both. There is a much greater number of fishermen in favour of restriction than against it, and the fish-curers are also in favour of restriction. The difficulty is to resist the desire for restriction which is felt by the fishermen.

26,559. (*Mr. Caird.*) Is there any desire for restriction on the east coasts?—Yes, an enormous desire for restriction.

26,560. Is there any desire for a close-time on the east coast?—There was a rumour of that kind at Wick. There has been an enormous desire to put down beam-trawling in the interest of the herring fishermen.

26,561. But no restriction has been demanded by the herring fishermen in regard to their own fisheries on the east coast?—There would be an immediate desire for restriction if any other net appeared on the ground except the drift-net.

26,562. (*Professor Huxley*). There are a series of operations performed by the authority of the Board which may be almost called registrative, such as the collection of statistics. Your officers are employed largely in that way, are they not?—Yes.

26,563. They register, as far as they can, the catch of herrings?—Yes.

26,564. What do you think of the utility of these statistics when they are collected together? I suppose, as far as cured herring is concerned, you can have them collected with great accuracy?—Yes.

26,565. Does that apply only to fish that are branded, or to fish that are not branded also?—To both.

26,566. Have you the power of inspecting those that are not branded?—Yes, all cured herrings.

26,567. Can a man cure herrings on the coast of Scotland without their being inspected by some fishery officer?—No. He is obliged to give notice of cure.

26,568. Then it is not a matter of choice with him?—No.

26,569. Then the brand must be put upon his barrels if they are exported at all?—No; he can export as much as he likes unbranded.

26,570. Then what is the good of the inspection? If a man salts fish badly they are still exported?—He would get only a bad price for them.

26,571. But what can the Fishery officer do in the matter?—He can refuse to brand.

26,572. And that is all?—Yes.

26,573. All that the Fishery officers have is simply the power of inspection and refusing the brand?—And of seizing a barrel of herrings if it is not the full size, on account of its being incorrect in measure.

26,574. So that a man cannot export herrings unless the barrels are examined?—No.

26,575. But he can export any trash he likes so long as the barrel is big enough?—The more trash he exports the better pleased we are.

26,576. You cannot prevent him exporting any bad fish he likes?—No, not in the least. We have no wish to do so.

26,577. You think it brings the brand out better in contrast?—Yes.

26,578. Is a man obliged to send you a report of the quantity of fish he exports?—He is obliged to make a return of the quantity of fish he cures.

26,579. Whether he obtains the brand or not?—Yes.

26,580. What do you do if he does not make a return?—There are penalties.

26,581. What are they?—5*l.*, and refusal of the brand.

26,582. Have you no means of getting a return of the quantity of fresh fish?—No.

26,583. So that your returns, although they show the quantity of cured herrings, are of no value as regards the catch of fish?—No; they are only valuable as indicating that if such quantities are cured there must be a large catch.

26,584. That would be a very rough indication?—Yes. The Fishery officers do endeavour to obtain returns of fresh fish, but I have no confidence in their figures; I find they change so very little.

26,585. One of the great points of our inquiry is to ascertain whether the supply of fish is increasing, stationary, or diminishing?—Yes, I am aware of that.

26,586. We wish to know how far the system of collecting statistics is good for that purpose. It would be a matter of vast importance if there could be a register of the quantity of fish caught year by year?—Yes, no doubt it would.

26,587. Your present system is really of no practical good for that purpose?—There is no doubt that it is very imperfect. We tried for one year in Loch Fyne and got returns pretty carefully and accurately, but it was accompanied by great expense. The officers were constantly travelling in summer and doing nothing else but collect the returns.

26,588. But it could be done if it was thought worth while?—It would require a large staff of officers, because the boats all come in at the same time and the fish are hurried away by the cadgers before the officers can get sight of them.

26,589. But if it was thought worth while to go to the expense it could be done and a fair estimate obtained?—I think you would require to compel, under a penalty, every boat to return the quantity of the fish caught by it.

26,590. Even then the return would be somewhat rough?—Yes, but it would be sufficiently accurate. You could not do it, however, without a penalty.

26,591. (*Mr. Caird.*) It could not be indicated by the number of fishermen employed one year with another?—No. The fishermen may be employed and the fish not be there to catch. They are employed for the season.

26,592. Still one year with another, if there was a steady increase in the number of fishermen it would indicate an increase in the quantity of fish caught?—Yes, I think it would.

26,593. Under the usual law of supply and demand?—Yes.

26,594. (*Professor Huxley.*) Supposing we were to address to the Fishery Board an inquiry as to whether the yield of fish, such as the herrings on the Scotch coast, had been increasing, stationary, or diminishing, could you give us any trustworthy information with regard to that matter during the last 10 years?—We could give you a good deal of information by sending the fishery officers round. I don't know that we could give you exact figures.

26,595. But you could give us nothing that would enable us to say with some degree of accuracy whether the quantity of fish had diminished or increased on the average during the last 10 years?—There are points that almost prove it. For instance, the size of the boats has immensely increased.

26,596. Is your statistical organization sufficiently perfect to enable you to help us?—I think not; we could not go back to the past for the fresh fish.

26,597. You have no system of registration with reference to these questions which could be organized without enormous expense?—I do not think the expense would be great if you established a good penalty for not giving information.

26,598. Could you yourselves compel fishermen to make returns?—With better means of communication no doubt we could. With a few more active officers we could draw up forms of returns and write them

out for the fishermen. There might be some difficulty, however, on the west coast, in the Hebrides, and such places.

26,599. It would be an important thing to obtain, if possible, something like definite information as to the quantity of fish caught, so as to enable us to ascertain if there has been a decrease or increase in a series of years?—You could not do that unless you imposed a penalty upon fishermen for not making a return.

26,600. Would there be any great practical hardship in making the fishermen give to the fishery officer a return of the fish they caught each morning?—They don't like to expose their business in that way. In the first place they might have tricked the curer. If they were obliged to make a return of that kind, there is the difficulty in the way that the return might tell too much. I think that to require such returns to be sent would interfere too much with the trade.

26,601. One of the most important points in our inquiry is, that we should ascertain if something cannot be done in order to establish good means of collecting statistics, but you don't seem to think that this is very practicable?—I think it is open to a great deal of difficulty and objection. For instance, if the curers have some five, six, seven, eight, or ten boats, they are all rivals with others in the trade, and each curer is anxious to be supposed at the top of the tree in extent of business.

26,602. They don't want it to be known how much the boats have produced?—They don't wish that at all, nor how many herrings they have got stored, which affects the price of the market. If you had compulsory returns of fresh fish it would be known exactly how many A.'s and how many B.'s boats had brought in, and so on.

26,602*a*. Then it would be a matter of difficulty if not impossibility to organize a system for ascertaining the quantities of fish caught every year?—Yes, I think so, unless the objections to compulsory returns could be removed; but I should be glad if you were to ask that question of any of the fishery officers; their position on the coast must make them well acquainted with the general sentiments on such a subject within their respective districts.

26,603. The other functions of the Board might be described as promotive of the prosperity of the fishing interest, such as building piers and harbours, renewing and restoring property?—Yes.

26,604. The funds of the Board are practically mortgaged for the next five years for the works at Anstruther?—It looks rather like it.

26,605. So that whatever may happen with regard to other ports you will be unable to do anything for them?—I hardly see how we can; the money is pledged to Anstruther, both by an Act having been passed and by communications and promises from the Treasury to the people of Anstruther.

26,606. One anomaly about the Board is this, that the power of expenditure does not seem co-extensive with the power of jurisdiction. No case is known of expenditure on an English port?—No, because the grant is limited to Scotland by the terms of the Act. It says, "for encouraging herring fisheries on the "coast of Scotland."

26,607. So far as I can gather the principle upon which grants are made is very much the same as that of the educational department?—Yes.

26,608. You aid those who help themselves?—Yes.

26,609. Then is there any fixed proportion?—The Act requires one-fourth, but we endeavour to get a third contributed by the places receiving assistance.

26,610. Does that principle work well?—Admirably.

26,611. Does it have the defect complained of by some in the working of the Education Department, the defect of leaving those who are most poverty-stricken and unable to help themselves out altogether?—I don't think so.

26,612. If a poor fishing place could not raise the third required would it not have to go without altogether?—It would have to go without a great work, but a poor village of that kind don't want a great work.

26,613. But if it wanted a breakwater, or anything of that kind, it would hardly be in a position to obtain it. To make a small harbour requires a good deal of money sometimes?—Yes, it does.

26,613*a*. In many cases it would be utterly impossible for a village of that kind to raise the third of the sum required, and in that case would the Board refuse any grant at all?—They must refuse it by the Act.

26,614. Then this vote seems open to the same objection as is raised to the education vote?—It may be so.

26,615. (*Mr. Caird.*) But the poor village might have some lord of the soil who would contribute?—Yes.

26,616. (*Professor Huxley.*) Would he be likely to advance money, because there would be no return made for it?—Undoubtedly that is a difficulty. Much more could be done, if there was not that restriction and if there were more means; but we adopt the excellent principle that each place should do something for itself.

26,617. Have you known cases in which that practical difficulty has arisen, and have such cases come under the notice of the Board?—For instance, I have no doubt that if the Treasury gave us permission to dispense with local contributions and accumulate our funds sufficiently we should have been able to have done something for Craigenroan.

26,618. You cannot set down a work where it is most required because you must get local funds?—That is the case sometimes.

26,619. You said you did not give money to Wick because it was a large fishing place; is Dunbar not a large fishing place also?—It could not raise locally as much money as Wick, nothing like it. It has no British fishery society, or any shareholding company of that sort.

The witness withdrew.

Captain Samuel Macdonald, R.N., called and examined.

26,620. (*Mr. Caird.*) You are commander of the Fishery cutter "Princess Royal"?—I am.

26,621. Have you been many years in that position?—Only for the last six years.

26,622. As commander of the Fishery cutter is it your duty to inspect the state of the fisheries all round the coast of Scotland?—Yes, wherever I may be sent on the coast of Scotland.

26,623. Have you been on the principal fishing stations on the coast of Scotland?—Yes; perhaps not on all of them; as the fishing is going on at the same time I can only be at one at a time.

26,624. But in consecutive years you have visited most of them, I presume?—Yes.

26,625. Have you a practical knowledge of the state of the fishing at those stations?—Yes, to a considerable extent.

26,626. With regard to the modes of fishing practised, is beam-trawling much practised on the east coast of Scotland?—No, it is not; it is very little practised on the east coast of Scotland.

26,627. On what part of the coast is it principally practised?—In St. Andrew's Bay, Largo Bay, and the Firth of Forth.

26,628. Is that all inshore beam-trawling?—Yes, it is all inshore beam-trawling.

26,629. Is there no deep-sea beam-trawling on the coast of Scotland?—None.

26,630. Do none of the English trawling vessels come down deep-sea trawling on this coast?—Occasionally to the mouth of the Firth of Forth.

26,631. That is inshore fishing?—Yes.

26,632. Then there is no deep-sea trawl-fishing?—No; it was once tried by a small vessel fitted out from Leith, but it was found that it did not succeed.

26,633. The English vessels do not come so far north?—A few have been here, but they fished only at the mouth of the Forth, and that was all inshore fishing

EDINBURGH.

Capt. S. Macdonald. R.N.

25 July 1864.

26,634. Has that inshore trawling been increasing within recent years?—It only commenced within very recent years.

26,635. Since its commencement has it been found a profitable business?—I do not think it is a profitable business to the fishermen themselves, it is on such a small scale.

26,636. Is it principally carried on by local fishermen?—Yes, at Buckhaven and St. Monance.

26,637. Is the mode of fishing by the beam-trawl the same as that adopted by the deep-sea trawlers on the English coast?—It is the same principle, but a smaller trawl suitable only for boats.

26,638. Are they undecked boats?—Yes, undecked boats.

26,639. What kind of fish do they catch with these beam-trawls?—Plaice, principally; they get a few turbot sometimes.

26,640. Does it form a very large proportion of the whole catch on these fishing stations?—No, it forms only a very trifling proportion.

26,641. Are you aware whether it has injured the line-fishing along the coast?—I have not had sufficient experience to say whether it has injured the line-fishing or not.

26,642. Has it been complained of?—It is complained of, and must be injurious when carried on upon the same ground.

26,643. Is it carried on on the same ground?—It has been at Pittenweem.

26,644. Has there been any restriction placed over it?—Yes.

26,645. What has been done?—The fluke-hole at Pittenweem has been protected for the last two years.

26,646. By order of the Fishery Board?—Yes.

26,647. Do they act on any legislative authority which empowers them to do that?—They have made a byelaw of their own with regard to the fluke-hole.

26,648. Have they prohibited trawling altogether in regard to the fluke-hole?—Yes.

26,649. Has it been followed by any increase in the fishing of the long-line fishermen?—The time has been rather short to prove that by any experience as yet.

26,650. You were cognizant of Dr. Allman's experiments in that fluke-hole with regard to the spawn?—I was there, but not with Dr. Allman.

26,651. Did you see what experiments he carried on?—I think I saw the experiments to which he referred.

26,652. Have you any knowledge of the fact that the spawn is destroyed?—I have seen small quantities of spawn on the trawls at Pittenweem.

26,653. Is it injurious to the brood of fish; can you speak positively in regard to that?—I cannot say anything with regard to it, except from my own opinion; the experiment has only been initiated about two years.

26,654. There is no other beam-trawling practised on the coast of Scotland except that inshore trawling?—No; in some places on the west coast, for instance, off Greenock, and about Ayr, Whiting Bay, and Arran, it is practised in the bays where the fish come to spawn.

26,655. Has trawling inshore proved injurious to the supply of fish on the whole in those places?—For the time it would rather increase the supply by taking fish that would not have been taken by the hook and line, but its ultimate tendency is to destroy those fisheries because the ground is limited.

26,656. Have you found that to be the case?—It was very successful for the first few days when it was commenced, but it gradually fell off until it got down to nothing.

26,656*a*. Neither with the trawl, nor with the line?—No, because as the space is very limited the fish cannot accumulate from other grounds.

26,657. What are the different modes of line-fishing which are practised around the coast of Scotland?—Long-line and small-line fishing.

26,658. What parts of the coast are most productive of fish with the long-line?—Shetland and the Lewis islands.

26,659. Is that on banks some distance out at sea?—Generally on banks, but also along the shore.

26,660. Are there no long-line banks to the south of Shetland on the east coast?—Yes, both on the south and west sides of Shetland there are banks.

26,661. Yes, but I mean down on the east coast of Scotland?—Yes, there are a good many long-line banks off the Frith of Forth, here.

26,662. Are they line-fished?—Yes.

26,663. Extensively fished?—Yes.

26,664. Are those banks ever trawled?—Not to my knowledge.

26,665. Has the supply of fish on those banks by the use of the long-line been increasing, stationary, or diminishing within recent years?—I cannot say of my own knowledge, but the fishermen state that they have to go further seaward now for fish.

26,666. Are there more fishermen employed in that particular line of business now than there were formerly?—I think they are rather increasing than otherwise.

26,667. Has there been no marked change in the number?—I am not aware of any.

26,668. I think you mentioned small lines, are they used near the coast?—Yes, they are used for catching small fish, such as haddock and whiting.

26,669. Is a large quantity of the haddock caught on the east coast of Scotland chiefly caught by small lines?—Yes.

26,670. Are they not also caught by the beam-trawl when the trawl is used?—Very rarely; they can take a few off Pittenweem.

26,671. Do you know anything of the bait used by the line-fishermen, is there usually a good supply?—I believe that they are mussels chiefly.

26,672. Are there mussel beds on the coast?—Yes, but they have some difficulty in obtaining mussels.

26,673. Is that an increasing difficulty?—The mussels must be diminishing as they are taken from the bed.

26,674. Is there any complaint on the subject of bait of that kind?—I have heard no particular complaint.

26,675. Is there a large number of fishermen employed now in the small-line fishing on the coast of Scotland?—Yes, there is a large number of the poorer class of fishermen.

26,676. Is there a larger number than the number of those engaged in the long-line fishing?—I believe that most of the fishermen are employed in the long-line fishing.

26,677. Do you know whether the catch of fish by the small line is increasing or diminishing?—I should say it is not increasing.

26,678. Do you imagine that the action of the steamboats in going along the coast has any effect on the supply of fish in-shore?—I think it has a certain effect in such waters as the Firth of Forth or the Clyde; I think it has had a great effect there.

26,679. What effect has it had?—It has frightened and scared away the herrings.

26,680. Has it had any effect upon any other fish?—I think not; the herring and mackerel are more of a surface fish.

26,681. Is there any complaint among the small-line fishermen that the supply of fish they have been in the habit of obtaining is decreasing?—I believe their only complaint is that they have to go further seaward for them.

26,682. But I am speaking of the small-line fishermen?—The same thing applies to the small-line fishermen also.

26,683. Do they attribute that decrease to any particular circumstance?—No, unless it is trawling.

26,684. Is there anything else that you have heard of?—I am not aware.

26,685. They do not speak of having been injured by the traffic of the steamers?—Not the whiting or haddock fishery. I do not think that that has been injured by the traffic of the steamers.

29,686. Then to what do you attribute it that they have to go further to sea?—In estuaries like the

Firth of Forth the haddocks will get fished out in the course of time, or will get very greatly diminished in numbers.

26,687. What kind of nets do they use for catching skate, turbot, and halibut?—They use a net with a mesh sufficiently large to take those fish.

26,688. Is it a net made for the purpose specially?—Yes.

26,689. Is it anchored or set in any peculiar manner?—It must be anchored along the bottom like a trammel.

26,690. Is the catch by means of those nets increasing?—I think it is increasing. On the west coast there have been some considerable catches of all sorts of fish by nets of that kind.

26,691. Is there any complaint about those nets not having continued to be productive on the east coast?—It has been very little followed on the east coast.

26,692. Is there any good sole-fishing on the east coast here?—There is very little; there is only one spot in the Forth.

26,693. In the Firth of Forth?—Yes.

26,694. Is there a good mackerel-fishing?—The mackerel-fishing of Scotland may be said to be *nil;* it is very trifling indeed.

26,695. The herring-fishing is the great source of wealth to the fishermen of Scotland?—Yes, the herring fisheries are the great Scotch fisheries, and also the cod and ling in Shetland and the Hebrides.

26,696. Is there any regulation in regard to the drift-net fishing complained of by the fishermen as injurious to their trade?—I am not aware of any complaints of the fishermen on the east coast with regard to the legal nets; there are complaints in the winter of trawl nets.

26,697. What are they?—With regard to the operations of the trawlers in fishing for sprats, and coming continually among the drift fishermen.

26,698. Is that the only complaint they make?—Yes.

26,699. Is that limited to particular parts of the coast?—Yes, to the Firth of Forth.

96,700. To no other parts of the coast?—No, we have occasionally the French interfering with the fisheries on the other parts of the coast.

26,701. Is there any restriction which can be adopted which in your opinion would add to the supply of herrings on the east coast of Scotland?—I think that considerable quantities of young herrings are destroyed every year among the sprats, but that is inevitable so long as sprat-fishing is found necessary.

26,702. Are those young herrings which are destroyed sent to market with the sprats?—Yes.

26,703. Then they become food for the people to that extent?—Yes.

26,704. They are not entirely lost?—No.

26,705. With regard to sprat-fishing, have you observed or not whether the recent boundary line enacted by Act of Parliament has operated injuriously to the supply of sprats for the market?—I think it was the best compromise you could have had between the drift-net and the sprat-net fishermen.

26,706. Do you think that ought to be adhered to strictly; have no circumstances arisen since that Act was passed which in your opinion would justify Parliament in re-considering the question?—I think it might be liberated still more.

26,707. You speak of it as a compromise between the two interests?—It was a compromise; I looked upon it as a compromise.

26,708. A compromise with what?—A compromise between the drift-net fishermen and the sprat-net fishermen. The drift-net fishermen could fish above the ferries if they liked, whereas the sprat-net fishermen could only come to the ferries and no lower.

26,709. Do you think the boundary ought to be extended?—In such a case as last year when the sprats did not go up, it should be extended, or you would prohibit the sprat-fishing altogether, but you could not permit sprat-fishing on the same ground with drift-net fishing.

26,710. Are they two modes of fishing that cannot be carried on together?—Yes.

26,711. In a narrow estuary like the upper part of the Firth of Forth, in what way would the two modes of fishing be injurious the one to the other?—For instance, if a shoal of herrings is discovered in the Bay of Aberdour, the circle-net fishermen go with eight or 10 boats or more and the consequence is that the driftmen are obliged to be off.

26,712. Why?—The circle made with the sprat-net would take in part of their nets and everything within it.

26,713. Then would he not damage his own net as well as the net of the drift fishermen?—Probably he would, but he would destroy the drift-net fishing completely.

26,714. Yes, but it would be injurious to himself also?—Yes.

26,715. Then would he not endeavour to avoid that?—He would endeavour to avoid it as much as possible.

26,716. Then in such a case as last year where considerable loss was sustained from the fact that the sprats did not go within the legislative limits, how could you without altering the Act of Parliament provide against the recurrence of such an evil?—We cannot; it is almost certain to recur again this year.

26,717. Do you not think it desirable that some alteration should be made?—I think it would be necessary to have an alteration under such circumstances.

26,718. Do you think that the present limit ought to be extended?—I think it might fairly be extended, and protection be given to the drift-net fishermen from the operation of the trawlers at the same time.

26,719. Is there any limit within which, on an average number of years, you could ensure the sprats being found?—Last year was an exceptional year, but I think the original boundary that was fixed in the Firth of Forth seems to be ample for the sprat fishermen.

26,720. Would you recommend that the original boundary should be again resorted to?—I think that there should be a boundary somewhere.

26,721. Was the original boundary a good boundary?—It seemed a fair one for both parties.

26,722. Is there a good lobster fishery here on the coast of Scotland?—No, not on the east coast.

26,723. Is there on the west coast?—Yes.

26,724. On what part of the west coast?—On the whole of the west coast from the Mull of Cantire to Cape Wrath.

26,725. Is it much practised?—Yes.

26,726. Is it found to be profitable?—Yes.

26,727. Is it increasing in its yield?—I believe it is.

26,728. Has no injury been done by over-fishing the lobsters on that coast?—Lobsters may be over-fished.

26,728*a*. But practically has that occurred?—I do not know that it has, but they allow the fish to accumulate for two or three seasons.

26,729. Is the number of boats employed in the lobster fishery increasing on the west coast?—Yes, I believe it is.

26,730. How are the lobsters which are caught there sent to the market?—By steamers.

29,731. Are they fished throughout the year or only during certain seasons?—Only during certain seasons.

26,732. Is there any legislative prohibiton?—I believe there is an old Act.

26,733. Is it recognized or enforced by anybody?—I believe it is not.

26,734. Then why do the fishermen leave off at some seasons?—They find that the fish are not in good condition.

26,735. The lobsters are not in good condition?—No.

26,736. Is there a good crab-fishing on the west coast?—There is very little crab-fishing on the west coast. That is principally carried on on the east coast.

26,737. Is there much crab-fishing on the east coast?—Yes, a good deal.

26,738. Does it extend to Shetland and the Orkneys?—It does not.

EDINBURGH.

Capt. S. Macdonald, R.N.

25 July 1864.

26,739. Where is the site of the best cod and ling fisheries in Scotland?—Shetland is the best.

26,740. Are they extensive there?—Yes, very extensive.

26,741. Is the fishery increasing and also the number of fishermen?—I have not been on the coast of Shetland for a number of years, but in Lewis it is steadily increasing.

26,742. Is that of cod and ling?—Yes.

26,743. Are those cod and ling salted or sent fresh to the market?—They are all salted.

26,744. Is there a large supply of cod and ling got from the Lewis?—Yes, a very large supply.

26,745. Have you any returns which will show us the quantity salted and sent to the market?—I have not, but there are hundreds of tons sent away.

26,746. With regard to the oyster fisheries on the Scotch coast, are they extensive?—The oyster beds are extensive, but the fishery is not practised. It is extraordinary how little is done in regard to catching oysters on the west coast.

26,747. Are there extensive beds known to exist which are not fished?—There is hardly a loch on the west coast that does not contain immense quantities.

26,748. And are they not fished?—No, they are not.

26,749. Would they be excellent oysters?—Yes.

26,750. Then to what do you attribute the fact that they are not fished?—I should say it is owing to want of enterprise on the part of the people.

26,751. Is there any difficulty in sending them to market?—Not in the Isle of Skye. Those who complain of having been starving might have sent them to market and have made a handsome living out of them.

26,752. There are known to be large oyster beds?—Yes, splendid beds.

26,753. Does anybody fish those beds?—Nobody. I have gone and filled a boat repeatedly from them.

26,754. Are they easily fished?—Quite easily.

26,755. And the oysters are of good quality when caught?—They are of very excellent quality.

26,756. Have the people there no dredges, or means of fishing them?—I believe that very few of them ever saw a dredge.

26,757. Is there no person who has sufficient enterprise to introduce the system of dredging?—All I can say is, that it has not been taken up.

26,758. And no fishermen from a distance have thought it worth while to prosecute the fishery?—No, they have not.

26,759. Then it appears that there is a large dormant fishery of oysters on the west coast of Scotland which might be called into play?—Yes.

26,760. Will you tell us of your own knowledge the locality in which those unfished oysters are to be found?—I have often dredged a boat load in Loch Snizort.

26,761. Is it chiefly in the lochs that they are to be found?—Yes, and they are superior oysters from the fact that they taste the fresh-water.

26,762. Is it the case that you might use a dredge in many of the lochs on the west coast and be pretty sure of finding oysters?—Yes.

26,763. In sufficient abundance to pay the fishermen for the expense of their tackle and labour?—The expense would be very trifling.

26,764. And you think that during the time when complaints were made that in consequence of a close time for herrings on the west coast the fishermen could get no fish from the sea they might have followed this oyster-fishing with advantage to themselves?—Decidedly.

26,765. Could they have done it with the boats they fish the herring with?—Yes.

26,766. All they want is the dredge?—Yes, and they want the energy.

26,767. With regard to close-time in the west, have you practically observed any advantage arising from the establishment of a close-time or any necessity for having established that system?—On the contrary, I think it is a disadvantage. North of Ardnamurchan it becomes a question with regard to the cod and ling fisheries.

26,768. Do you mean on account of the difficulty of getting bait for the cod and ling fisheries?—Yes, in fact you cannot get bait at all.

26,769. But looking at it as a question whether the observance of a close-time tends to diminish the supply of herrings, what is your opinion with regard to it?—It diminishes the supply decidedly.

26,770. Does it act differently on the west coast from the east coast?—They have no close-time at all on the east coast.

26,771. Then that very fact would make it appear that it does not diminish the supply on the east coast. Is there any difference in the nature of the two coasts that would account for the difference?—I think the close-time diminishes the supply wherever it is enforced.

26,772. But in what way; how do you account for it?—Because the people are prohibited from fishing in the winter when fishing would otherwise take place.

26,773. And fish might be taken without diminishing the supply?—Yes.

26,774. And it would not cause any diminution at other times of the year?—It would not cause any diminution in the open sea. Perhaps there might be a diminution in the Firth of Clyde.

26,775. And do you think it an absolute loss that any close-time should be established?—Yes.

26,776. (*Professor Huxley.*) With regard to the taking of oysters in the Isle of Skye, it is quite true that the dredge costs very little, but you are doubtless aware that the Skye fishermen are excessively poor. Might they not find it difficult to procure the means even to buy a dredge?—I do not think so.

26,777. They are not so poor as that?—No.

26,778. In Skye itself do you think there would be any market sufficient for the sale of these oysters?—I do, when they have regular steam communication with Glasgow and Greenock.

26,779. Is that sufficiently frequent, and the trade sufficient always to make it a paying concern?—They send large quantities of whelks by the same mode of conveyance.

26,780. Is that for bait?—No, for consumption.

26,781. Where are they obtained?—They are collected on the coast of Skye. All the steamers take away large quantities of them in sacks.

26,782. And you think that oysters might be carried in the same way and be more profitable?—Yes.

26,783. Is it generally known in Skye that they exist?—Yes, they get oysters in Skye almost every day in the year and they are very fine too.

26,784. Do the fishermen know anything about dredging; have they any notion of the use of a dredge?—No they have not.

25,785. Is there no one then sufficiently public spirited to teach them the use of a dredge?—The oysters are never disturbed at all except by a yacht or a cutter going in.

26,786. When the people there see you taking those things do they not seem inclined to bestir themselves and get some themselves?—If they were so disposed they would have done so long before this.

26,787. Then you ascribe it to sluggishness on the part of the people?—Yes, to want of energy; there is no limit to the fisheries on the coast of Skye itself, even for herrings.

26,788. As regards the injury done to the drift-net men by the seines as compared with that which the drift-net men can do to the seines, it arises very much I suppose from the fact that the seiners do not scruple to cut the buoys and destroy the nets of the drift-men, if they are in their way?—Yes.

26,789. Whereas the drift-net men have nothing to cut and cannot retaliate?—Yes.

26,790. So that even if they were disposed the drift-net men could not do the same amount of damage to the seine men as the seiners could do to the drifters?—No, the drift-men are a superior class of fishermen; there is only a poor class of men engaged in seining

in the Firth of Forth; they are not genuine fishermen in fact.

26,791. You were speaking of the fishing on the banks of the Forth, do you know what parts the fishermen come from?—From Newhaven, Fisherrow, Dunbar, Anstruther, St. Monance, and other places.

26,792. Have you heard any complaint of a falling off in the white fish?—I have not heard any complaint of an important character.

26,793. Between here and Berwick-on-Tweed have you heard any special complaint?—The only complaint I have heard is that they have to go further seaward for their fish.

26,794. What depth of water is on the oyster beds in Skye?—In many places they are dry at low water, so that any person who feels disposed could go and pick them. In Loch Snizort they are not dry; they are in four, five, or six fathoms of water.

26,795. Do not the people themselves eat oysters here?—They do not appear to care about them or to notice them.

26,796. What ports on the east coast will fairly represent the fishing interests on the east coast of Scotland?—Beginning southward there are Berwick, Burnmouth, Eyemouth, Dunbar and Fisherrow; there is also a large body of fishermen at Newhaven, although I see very few of them here to-day. Then there is Anstruther on the opposite coast, Buckhaven and Ferryden. Then Stonehaven is an important fishing place, but the fishermen all come from a distance to it. At Aberdeen there is a much smaller fishery. Then there are Peterhead, Frazerburgh, Banff, Buckie, Burghead, and Cromarty.

26,797. Is there much fishing there?—Occasionally, there are a number of boats that rendezvous there.

26,798. Well, what next?—Helmsdale, Lybster, and Wick.

26,799. Is Lybster separate from Wick?—Yes, it is.

26,800. But it is very close by?—It is no great distance away, but the whole of that coast is very important. You will find a large number of boats in each of those places. Wick is the principal.

26,801. (*Mr. Caird.*) But are not the interests of those places exactly alike; for instance, is not the information that we should get at Dunbar the same as we should get at Eyemouth, and at Fisherrow?—No; I think it might differ materially.

26,802. Are they not prosecuting the same kind of fishing, and getting the same kinds of fish?—Yes; generally.

26,803. And would not the experience of the fishermen of Dunbar be the same as that of the fishermen of Eyemouth?—No doubt the fishermen of Dunbar frequently fish at Eyemouth also.

26,804. Then why could we not get at the same facts by visiting one of those places only?—I think it is an important thing that you should visit the stations I have mentioned, but that will be for you to judge. It is an important question altogether, and you will find great differences of opinion as you go along.

26,805. (*Professor Huxley.*) Now we have got as far as the whole of the northern end of Scotland, how is it as regards the Orkneys, is there more than one place to visit there?—I think you should visit both the north and south islands. There is at least one important place in each, if not two. In the north there is South Ronaldsha and Burra; then at Stronsa and Westra, there are important cod-fishing stations.

26,806. What is the state of fishing in the Shetland Islands?—You would find the whole of the people in all the islands entirely engaged in it.

26,807. But what are a few of the principal stations?—There is Lerwick and Scalloway; Lerwick is the most important town. Then there is Valesham which is quite close to it.

26,808. (*Mr. Caird.*) On the north coast of Scotland is there any place until you come to Lewis?—There was a very extensive fishery at Thurso 20 years ago, between Thurso and Cape Wrath.

26,809, Is there any point between Thurso and Cape Wrath worth visiting?—No.

26,810. What fishery was there at Thurso?—Herring fishery, and there is no reason why it should not be carried on now. When I came from Lewis herrings were more abundant than at any part of the season. The fishermen dropped fishing them there, not because there was any want of herrings, but because they wanted to go to Wick.

26,811. Then I presume there is nothing in the Pentland Firth until you come to Stornoway in the Hebrides?—No.

26,812. And what next?—There is Gairloch and Portree in the Isle of Skye. Then if you thought of visiting the Hebrides further south, Barra would be the principal place. Perhaps you might also go to Oban.

26,813. Is there anything down the west coast of Ross-shire?—There is Loch Broom; that is a very important fishing station.

26,814. (*Professor Huxley.*) Is there anything there now?—There is no scarcity of herrings on the coast, but they do not take it in the lochs.

26,815. (*Mr. Caird.*) Is there much fishing carried on at Oban?—There is no great fishing carried on in Oban, but it is a central place at which you would derive great information. The fishing places are small and very far apart from Skye.

26,816. Is there anything between Oban and Campbeltown?—Nothing worth mentioning.

26,817. Is the fishing at Campbeltown important?—Yes, that is a tremendous fishing place.

26,818. That will bring us as far as Loch Fyne?—Yes, your natural course would be to go from Tarbert.

26,819. Is there any fishing on the Ayrshire coast?—You would go first from Tarbert and Inverary on the north of the Clyde. The next place will be Largs; that is rather unimportant. Then there are a few fishing boats at Saltcoats.

26,820. We only want to know where the principal fishing interest is situated?—Dunnare, on the Ayrshire coast is the next place; then Ballantrae. The boats are also increasing about Girvan; and in Loch Ryan there are a few oyster fishermen.

26,821. Is there anything else?—There are a few fishermen in the Bay of Luce.

26,822. Is there much fishing in the Solway?—I have never been further up than Whithorn.

26,823. Do you know anything about the coast of the Isle of Man?—Yes, a very important fishery is carried on there.

26,824. Where?—At Peel. They begin the season there, then go round by Port St. Mary, and towards the autumn finish at Douglas.

The witness withdrew.

JAMES METHUEN called and examined.

J. Methuen.

26,825. (*Mr. Caird.*) You are an extensive fish-curer in Leith?—Yes.

26,826. Have you had a large experience of the fishing trade on the coast of Scotland?—Chiefly of herrings.

26,827. Can you tell us of your own knowledge whether the quantity of herrings caught at the present time, as compared with the quantity caught in previous years, is increasing, stationary, or diminishing?—It is on the increase.

26,828. Has it been a steady and progressive increase?—Yes.

26,829. Has there been a considerable increase?—Yes, a very considerable increase; but the number of boats and the amount of netting has increased also.

26,830. Is it within your experience that the more the sea is fished for herrings the more it yields?—No; I think that the boats many years ago, even with fewer nets, caught more fish.

EDINBURGH.
J. Methuen.
25 July 1864.

26,831. You mean that they caught more fish individually?—Yes.

26,832. But the aggregate now is constantly on the increase?—Yes.

26,833. Is there any legislative restriction or otherwise as to the mode of fishing for herring within your knowledge which is injurious to the supply of fish?—There is nothing but the trawling.

26,834. What kind of trawling do you mean? There are two kinds. There is the beam-trawling and the circle-net trawling for sprats?—I mean both the circle-nets for sprats, and the beam-trawling.

26,835. Does the beam-trawling interfere with the herring fishery?—Yes, the beam-trawling destroys the spawn; they trawl it up in a heap.

26,836. But if the supply is constantly on the increase they do not appear to have done much damage?—Not much, but the shoals differ very much.

26,837. But on the whole there has been a steady and progressive increase?—Yes.

26,838. So that there cannot have been much injury done by the destruction of spawn?—Upon some places on the coast the supply of fish increases one year and then decreases another.

26,839. For the same reason that there is a steady and progressive increase in the yield of herrings, it would appear that there can be no serious injury done by the sprat-fishing to the supply of herrings?—There is a great number of young herrings taken with the sprats.

26,840. But these young herrings are of course sent to the market?—Yes. I have often seen more than half of the catch consisting of young herrings.

26,841. Is it not within a very limited area of the whole fishing boundary that sprats are fished with herrings?—It is only in the Firth of Forth and near Inverness.

26,842. That is a very limited portion of the whole fishing ground?—Yes.

26,843. Upon the other parts of the fishing ground is any injury done by any modes of fishing now practised?—I do not know that there is.

26,844. Have you any knowledge of the west coast fishery?—Yes.

26,845. Can you speak at all of the advantage or disadvantage of having a close-time for the herring-fishing on the west coast?—I believe that the close time interferes with the cod and ling fishery in the island of Lewis.

26,846. Do you mean as regards the supply of bait?—Yes.

26,847. Has there been any perceptible difference in the supply of cod and ling?—I do not think there has.

26,848. Then how does it interfere with it?—There has been a want of bait although the fishing has not decreased. In many places there have been great complaints in regard to the want of bait.

26,849. But you have not found that there has been a smaller supply of fish in consequence?—I think not, if I may judge from the statistics which I have seen.

26,850. Do you think it possible that there would have been an increase if there had been an easier mode of obtaining bait?—Yes; I do think so. The herring bait is the very best that can be got for catching cod and ling.

26,851. Does the enforcement of a close-time put the fishermen to greater trouble and expense than formerly to obtain bait?—Undoubtedly it does.

26,852. Is the cod and ling fishery an important one on the coast of Scotland?—Yes it is very important indeed in Shetland and Lewis.

26,853. Is there a large quantity of cod and ling caught there?—Yes, a very large quantity.

26,854. What is the quantity caught?—At least 400 or 500 tons at each island.

26,855. At each island?—Yes, Lewis and Shetland.

26,856. And that is something like 800 tons altogether?—Yes, fully that or more.

26,857. Is there any legislation that could be adopted that in your opinion would be beneficial to the fisheries?—In regard to the close-time I think that north of Ardnamurchan Point it would be better that the fishing was restricted.

26,858. Do you mean that there should be no close-time?—No, that there should be a close-time, but not so long as it is at present.

26,859. Why do you think there should be a close-time at all?—The herring-fishing on the Lewis islands commences now about the 20th of May, and at that time the herrings are immature.

26,860. But are they not equally immature at that time on the east coast?—They are not fished on the east coast then.

26,861. Do they not appear on the east coast then?—They do, but fishing for them is not prosecuted.

26,862. Would it be prosecuted at the Lewis?—Before a close-time was established the fishermen used to commence about the 1st of May or the last week in April, and then the herrings were found to be so immature that they were almost unfit for food. That was the original cause of the close-time being adopted, namely, to prevent herring-fishing before the 20th of May.

26,863. Are the herrings not in condition at the same time on the east and west coasts?—Not exactly, they seem to be a very different herring on the west coast. They are a much finer herring and a richer.

26,864. Is that the reason why you think there should be a close-time there and none on the east coast?—No, that is not the reason.

26,865. Then what is the reason?—Because they catch the fish when they are immature.

26,866. Can they not catch them when they are immature on the east coast?—They have never tried to do so. It has never been prosecuted on the east coast before the 1st of July.

26,867. Why is it tried on the west coast and not tried on the east coast?—The herrings come in earlier on the west coast.

26,868. The herrings are there?—Yes, they come in earlier.

26,869. Do you know anything about the oyster fisheries?—Only very little.

26,870. Are you acquainted with the lobster fisheries?—No.

26,871. Do you know anything about the catch of flat-fish, skate, turbot, and so on?—I know very little about it.

26,872. Is the fishing at present a flourishing trade on the coast of Scotland?—Yes, I think it is.

26,873. Both for the fish-curers and the fishermen?—Yes.

26,874. And is it an increasing trade?—Yes, but we want more markets on the Continent.

26,875. Would the operation of more markets on the Continent be to increase the price of fish to the people at home?—Yes, it would increase the price to the fishermen in the first place.

26,876. It would increase the profits of the fishermen?—Yes, in 1862, when we had a very large catch, we could not find a market for the whole of the fish we had.

26,877. Is there an increasing proportion of the whole fish caught including herring and the other fish now sent fresh to the market as compared with other years?—Undoubtedly there is a great deal more sent fresh to the market on account of the railways.

26,878. Is that proportion constantly altering through the opening out of new facilities by means of railways to more distant parts of the kingdom?—Yes.

26,879. Then if the returns of the Fishery Board show that there has been a constant and progressive increase in the quantity of cured fish, while we know that the facilities for the transmission of fresh fish are continually increasing, would not the obvious inference be that the total catch of fish of all kinds is greatly on the increase?—Yes, but there has also been an increase in the number of boats and quantity of netting used.

26,880. But that must be the obvious inference from the facts which come under our knowledge?—Yes.

26,881. Has the price of fish very much increased within recent years?—Yes, very much.

26,882. How much has the price increased?—It is now nearly double.

26,883. Is the price of cured herring greater than it was 10 years ago?—Yes.

26,884. What is the difference; I want the average price, not taking an exceptional year?—I think it is from about 6*s.* to 7*s.* a barrel.

26,885. How much per cent. may that be on the price of the fish?—About 40 or 50 per cent.

26,886. That is upon the cured fish?—Yes, upon the cured fish. The fresh fish of course bring more than double.

26,887. There is an increase of more than 100 per cent. upon the fresh fish?—Yes, and upon the cured fish of about 40 or 50 per cent.

26,888. And that increase has naturally drawn a larger number of people into the business?—Yes.

26,889. Are we to take it that the fishing trade now on the coast of Scotland is a flourishing trade?—Yes, it is a flourishing trade.

26,890. Does that apply to all kinds of fish that are caught on the coast?—I do not know anything about any other fish except herring, cod, and ling; the other fish all go away fresh.

26,891. You do not export fresh fish to foreign countries?—No.

26,892. Are there no fish sold direct out of our own boats to those foreign fishing boats which come along our coast?—Not now.

26,893. Was that ever the case?—Yes. I believe the fish have been sold in that way to the French and Belgian vessels.

26,894. (*Professor Huxley.*) Comparing the catch of herrings on the east and west coast, is there a larger proportion sent fresh to the market from the west or from the east coast?—I should say from the east coast.

26,895. There is a larger quantity of fish sent fresh to the market from the east coast?—Yes.

26,896. Is there a larger proportion cured on the west coast?—In proportion the catch on the east coast is much larger than the catch on the west coast.

26,897. But out of the total on each coast is there a larger proportion cured on the east coast or the west coast?—I think the larger proportion is cured on the east coast.

26,898. Then the larger proportion of fresh fish goes from the west coast?—Yes, in comparison with the quantity caught.

26,899. You were speaking just now of the difference between the east and west coast herrings?—Yes.

26,900. Does that arise from the fact that the east coast herrings are caught full, and that the west coast herrings are not full; the Loch Fyne herrings for instance are young fish?—Yes.

26,901. Does the difference arise from that?—No, they are a different quality of fish; they are much richer and not so large.

26,902. Do you mean that the fish have more fat in them when they are full and afterwards?—They have been catching maties half full lately.

26,903. Were they fat?—Not as fat as they are on the west coast.

26,904. Is the close-time of any advantage to the curers or to the buyers of fish?—It has proved so since the operation of a close-time.

26,905. How does it work?—Since the close-time the catch has increased very much in the Lewis. I do not know much about Loch Fyne, but in Lewis it has increased very much.

26,906. I do not speak of the catch, but is it of convenience to the curer to have a close-time when no herrings are caught on the west coast?—The consequence is that we do not get as many immature fish, —fish that ought to be thrown away.

26,907. If the immature fish that are caught, or were formerly caught in the close-time are not fit for food, how do they find any market?— They are simply caught because the fishermen are engaged from the beginning of the fishing season, namely, from the 1st of May until the 10th of July.

26,908. Why do curers engage them at a time when they cannot get good fish?—They depend upon the good fish that comes in afterwards to make up the difference; but the effect was to give them a less price in general for the whole catch.

26,909. What advantage can they obtain from getting men to catch bad fish?—The fishermen would begin at that time.

26,910. I suppose the demand for labour was in advance of the supply, and the curers were obliged to come to the terms dictated to them by the fishermen?—It was not that altogether; but if one fisherman commenced they all commenced, so that one should have no advantage over the other.

26,911. What advantage could one have over another in catching unsaleable fish, if the fish were really unsaleable?—There was a great loss upon the fish they caught then; but the fishermen would not engage unless they engaged from the beginning of the season.

26,912. Then the fishermen had command of the labour market and dictated their own terms?—That was so; but they got less for their fish over the whole catch. If they got any large quantity of fish during the first few weeks it was generally so small that it was thrown away.

26,913. The fishermen did in effect dictate their own terms?—Yes.

26,914. Then the curers came to the Government to ask for restrictions to prevent the fishermen dictating their own terms for their own labour?—We considered that the fish were lost and destroyed.

26,915. In point of fact, the working of this close-time operates as a regulation of industry as between curer and fisherman?—It does, looking at it in that light.

26,916. And it must be very convenient to have that?—It has proved very successful during the last three years.

26,917. (*Mr. Caird.*) What is your opinion as to the advantage or disadvantage of having a Government brand placed upon your herrings when they are cured?—It is a very great advantage in the continental market. The bill of lading of a cargo of full-Crown herrings is transferable, like a banker's draft, from one party to another, in the interior of Germany, and that helps to sell the fish.

26,918. Then you think it is an advantage quite worth paying for?—Undoubtedly.

26,919. And you have no desire to see it done away with?—No, certainly not.

26,920. But has it not the effect of making a uniform level of the capacity of the fish-curers?—Not altogether; every fish-curer has his own brand on the barrel besides the official brand.

26,921. But would not the full Crown brand be sufficient to sell the fish?—Yes; but there is a difference in the cure at times.

26,922. Would not the curer's name itself, if there were no brand, come to be a guarantee with regard to the quality of the fish?—It might; but the buyers would have no confidence in it. They cannot turn out the herrings in order to examine them.

26,923. Is there so close a surveillance kept by the inspectors here as to enable them to determine, with accuracy, whether the fish have been well cured or not?—Yes; at every fishing station the Fishery officer goes through the yards when they are curing the fish. He thus becomes acquainted with the quality of the fish, and he sees the cure.

26,924. Does he object to the fish if they are not in a proper state to be cured?—Yes.

26,925. Are the fish often rejected by the Fishery officer?—Yes, especially if they have been long in the boat before being brought ashore.

26,926. What becomes of them then?—They get the single Crown brand if they are properly cured although they are not full fish. If they have been

EDINBURGH.

J. Methuen.

25 July 1864.

too long in the boat, and are not in a fresh state when cured, they remain unbranded.

26,927. Are you aware whether there are any curers who object to the continuance of this system of branding herrings?—Yes, a good many of them do, but it is chiefly those who send their fish to Ireland and to other markets, and who do not send them to the continental markets.

26,928. Is the brand not held to be of much importance except on the continent?—No.

26,929. Then it is only of advantage with regard to the sale of fish on the Continent?—Chiefly so.

26,930. (*Professor Huxley.*) Supposing the brand were removed, of course you would like the name of your house to be a guarantee for the goods you turn out?—Yes.

26,931. Then would it not be to your interest to have a sufficient mode of inspection yourself; would it not be to your interest to reject the bad barrels of herrings, and not allow your name to be placed upon them?—That might be done, but the people who buy of me cannot depend upon that.

26,932. In other branches the buyer depends very much upon the name of the merchants who send him the goods. In wine, for example, the name of a particular merchant is as good as a Government brand; do you not think it would be worth while for the herring merchants to exercise a careful and proper supervision over the curing of the fish, and in that case do you not suppose that your name would be as good as a Government brand?—We take all the care we can, but after all there would be great difficulty in the matter.

26,933. Could not your servants take the same pains and care which the Government inspector takes?—But there is a great deal done by the officer in looking after the workpeople at the station.

26,934. Do you think that the inspection by the Government officer is more efficient than any inspection that could be exercised by your own people?—Yes, the workpeople are frightened when the Fishery officers come round, they are so very particular; and each packer has his own mark on the barrel, together with the date, and when the officer examines the herrings in order to brand them, if he finds that any of the packers have packed them wrong or intermixed the fish, then of course he can turn the whole of the herrings out of all the barrels bearing upon them that packer's number, and he gets no pay.

26,935. But however wrongly a packer may have done the work the inspector cannot punish him, the punishment falls upon you?—Yes; the fish are rejected.

26,936. And your remedy in the long run is exactly that which you would have if you had no Government inspector, namely, you would discharge your servant?—Yes.

26,937. So that the practical working of the thing comes in the long run to what it would be, supposing there was no Government inspection, that is to say, if the packer through carelessness sent bad goods abroad and the merchant complained, you would discharge the packer?—Yes.

26,938. Under the present system you have the same amount of responsibility, but the person to find out the fault is the Government officer instead of your own?—Yes; but the Government officer is neutral between the buyer and seller, and the Germans have more confidence in buying herrings branded by a neutral person than if they were under our own brand. We believe that it would hurt the trade very much to take away the brand, especially as the chief market is in Germany.

26,939. But do you think that the same practice is applicable to other branches of trade; for instance, should there be a Government brand in the case of a man who exports sugar abroad or any other article?—I do not think so. That would be sampled quite easily, but unless you turn out the herrings and examine the whole of them it would be impossible to ascertain whether they had been improperly cured or not.

26,940. We have sometimes heard of the "foots" of a cask of sugar, and I have been told that that is as hard to find out as bad herrings?—The herrings in the middle of a barrel might be mixed or injured, many things might occur to them, and you could not get at them without turning the whole barrel out.

26,941. You are probably aware that in many trades adulteration is practised?—Yes.

26,942. And that in the long run what gives a man a large sale for his goods is the veracity with which he does his work, and the value of his goods?—Yes.

26,943. Then why should herring-curers require a certain aid from the Government which no other trade has?—The fisheries have flourished exceedingly since they had the superintendence of the Board of Fisheries over the cure. The Dutch fishermen now have not one-tenth of the markets they used to have in Germany. They supplied nearly all the markets until we got the brand.

26,944. The only question with us is a matter of principle, namely, whether one branch of commerce should demand a Government guarantee rather than another, and I wished to ascertain whether there were any circumstances with regard to the fish trade which made it proper for Government to guarantee the goods of fish merchants, whereas they do not guarantee those coming from other merchants?—I think the great point for consideration is the difficulty of detecting badly cured fish.

26,945. Do you think that whenever there is much difficulty in detecting a fraud that Government should step in and give a guarantee?—No, no doubt the object with regard to fish was to encourage the fishing on the coast.

26,946. In fact the brand partakes of the nature of a bounty?—Yes, something of that sort.

The witness withdrew.

T. Wilson.

THOMAS WILSON called and examined.

26,947. (*Mr. Caird.*) You have been for a long time a fisherman at Newhaven, and have held the office of box-master to the fishermen's society there?—Yes.

26,948. And therefore you know pretty well the sentiments of the fishermen in Newhaven generally?—Yes.

26,949. What kind of fishing is principally followed in Newhaven?—The herring and haddock-fishing.

26,950. Is the supply of herring increasing or diminishing?—I think the supply is diminishing.

26,951. Are the number of people employed and the number of boats increasing or diminishing?—Increasing.

26,952. Do you think the whole quantity of fish obtained by the increased number of men and boats is less than it used to be with a smaller number of boats and men?—Yes, according to the fleet of nets and number of men employed.

26,953. Is it not paying them as well?—Yes, because the price is much better. In former years the price was much lower, but the quantity of fish caught was much larger.

26,954. A smaller quantity brings as much profit as was derived from the larger quantity taken formerly?—Yes.

26,955. Upon what part of the coast do the Newhaven fishermen principally fish?—Off Dunbar and Eyemouth.

26,956. Do they go to fish outside?—Yes.

26,957. Do they not fish in the Firth?—Yes, in the winter season.

26,958. Is there any particular kind of fishing which has more diminished than another?—In the winter season there are not so many haddocks caught. I believe that cod and herring are not so large in quantity.

26,959. Are you positive of that?—I am quite sure.

26,960. Then what do you attribute the falling off to?—It is owing to the weather; sometimes the weather is more boisterous than at others, and the boats cannot get out to sea in order to catch fish.

26,961. The weather is not more boisterous on the average than it was formerly?—It is not so much more boisterous, but of course when the boats cannot get out to sea they cannot get near the fishing ground.

26,962. But that is not more the case than it was in former years?—No.

26,963. Have you not larger and better boats now?—Yes.

26,964. Boats that are more fit to go out to sea?—Yes.

26,965. Then that will be rather to your advantage than to your disadvantage?—Yes; we prosecute the fishing more down the Firth now than we did formerly. We go until the end of May. From the 1st of September until the month of October we go down for the haddock-fishing.

26,966. Is the supply of haddocks increasing or diminishing?—It is increasing.

26,967. Are they as good in quality as they were?—I think so.

26,968. Are more men employed in catching them than there were formerly?—Yes.

26,969. Are they caught in the same mode as they were formerly?—Yes.

26,970. Is the total supply of fish brought into Newhaven on the increase or otherwise?—By the number of boats employed in catching fish, I should say the supply is on the increase.

26,971. You refer now to the haddock-fishing?—Yes.

26,972. There are more boats employed in catching them than there were formerly, and in consequence the supply to the public is larger?—Yes.

26,973. In regard to the herring-fishing, is that so also?—Yes, just in the same way, owing to the larger number of boats and the increased quantity of netting employed.

26,974. Is there any mode of fishing at present practised which is destructive of the spawn or injurious to the fishing generally?—I think beam-trawls are injurious to the fishing generally.

26,975. Is the practice of beam-trawling followed where you are in the habit of resorting for the purpose of fishing?—Yes, as far east as Bass Rock.

26,976. Is it followed there?—Yes.

26,977. What kind of fish has diminished?—The haddocks particularly.

26,978. The haddocks have been driven more out to sea you suppose?—Yes, I think that in consequence of taking up the spawn the fish have gone away off the ground.

26,979. Do the beam-trawlers continue to follow their trade there?—There was only one there this season, but last year there were six from the month of May until the end of September.

26,980. Do your boats go further to sea in consequence?—Yes.

26,981. Is that the cause of it?—They say so.

26,982. Have you anything to do with the oyster fisheries?—Yes.

26,983. Is there an extensive oyster bed in the Firth of Forth?—Yes.

26,984. Is there only one bed in the Firth?—There are beds of oysters extending from the north of Cramond down as far as Inchkeith belonging to the Duke of Buccleuch.

26,985. Are there beds on a great part of the Firth of Forth?—Not that I know of.

26,986. Where do you say the beds extend; from Cramond to where?—From Cramond to Inchkeith.

26,987. That extends over several miles?—Yes.

26,988. Is that the principal ground for oysters?—Yes.

26,989. Is it fished under certain restrictions?—Yes.

26,990. What are they?—They are kept off from fishing at certain periods, stones or clay are not allowed to be put on the ground, and the fishermen are not allowed to take up the brood.

26,991. Do the owners of the beds maintain a police for the purpose of enforcing these regulations?—No.

26,992. Then in which way are they enforced?——We protect the bed ourselves.

26,993. Do you pay so much for the privilege of fishing?—Yes.

26,994. Does every boat pay so much?—Yes.

26,995. Has that payment been a constant and regular payment for some years, or has it increased of late years?—I believe the payment has been made more than 200 years back.

26,996. Has it been the same for that time?—It has been more and less. Some years it has been as high as 1*l.* a man, and now it is down to 4*s.* a man.

26,997. Then it is reduced now compared with what it was formerly?—Yes.

26,998. Has that reduction taken place in consequence of the beds having been less productive?—No, I think not.

26,999. Then what was the cause?—Because we would not sell the oyster scarps to the English people. The English people went to law with us and lost, and then the oyster beds returned again to us and we have protected them ever since.

27,000. Then do you get them at a lower rent?—Yes.

27,001. You are left entirely to protect them according to the regulations that you yourselves establish?—Yes.

27,002. Is there a certain body of fishermen who are alone allowed to fish there?—Yes.

27,003. Are they a guild or privileged body?—Yes.

27,004. Who are they?—They are a society of fishermen belonging to Newhaven.

27,005. They have established regulations to protect the fishing on their own account?—Yes.

27,006. Do these regulations include any particular season of the year when there is a close-time?—Yes, from the end of April till the month of September.

27,007. During the warm months of the year?—Yes.

27,008. You have found from long experience that those are the months which it is best to maintain as close-months?—I think if the beds remained close until the 20th of September it would be better for us. I think that the spawn then is very young, and that it would be a great improvement if the beds were not touched so soon.

27,009. Would you continue the open season longer than the month of May?—If the oysters were required for the English market I would allow them to go on fishing for a fortnight or so into the month of May.

27,010. Has the number of people fishing on these beds increased of late years?—Yes.

27,011. Then have the beds been more closely fished?—Yes.

27,012. And a larger number of oysters taken from them?—Yes.

27,013. Without there being any apparent diminution in the supply?—The supply varies a little.

27,014. The only restrictions are the establishment of a close-time and the prevention of throwing mud or stuff of that sort upon the beds?—Yes.

27,015. Have you any mode of cleaning the beds?—Yes.

27,016. What do you do?—When we take up any dirt or weeds we never throw it back again.

27,017. You don't adopt any means for putting spat on the ground?—No, we never did; we never required to do so.

27,018. Do not the seasons vary somewhat in the production of oysters?—Sometimes they are more

EDINBURGH.

T. Wilson.

25 July 1864.

plentiful than at others. If there is a cold season the spawn is not so plentiful, but if we have a warm season the spawn is a great deal better.

27,019. But on the whole is it an increasing supply?—Yes.

27,020. Have you any lobster-fishing in the Firth of Forth?—Yes.

27,021. Is it a valuable fishing?—It has fallen off a great deal.

27,022. Is there any crab-fishing?—Yes, there is an extensive crab-fishing all through the month of May.

27,023. Do you follow the sprat-fishing?—I have been at it, but not for a number of years.

27,024. Are there many people in Newhaven who are interested in it?—Yes.

27,025. Do they complain of the limits within which it can be prosecuted according to law?—The proper limit is Queensferry; they hold that to be the proper place. They don't complain of any falling off in the sprat-fishing, but the limits might be extended both for the benefit of the fishermen and the public.

27,026. Is it the case sometimes that in consequence of the state of the weather they don't get beyond the Ferry?—Yes.

27,027. And if the limit is enforced there would be no sprats caught?—No.

27,028. Would that be a great loss to the community?—Yes, and to the public at large.

27,029. (*Professor Huxley.*) Do you catch herrings in the month of February?—Yes.

27,030. In what condition are they in the month of February?—They are full but not fat.

27,031. They are full fish?—Yes.

27,032–3. In what condition are the herrings you are catching now, when will they be full?—About the month of August.

27,034. So that you regularly get full fish in the months of August and February?—Yes.

27,034*a*. Is there any difference between the two kinds of fish?—Yes.

27,035. What is the difference?—The one is fatter and the other is drier.

27,036. Could you tell the one from the other by looking at them?—I think I could.

27,037. Do you catch them in the same places?—No.

27,038. Where do you catch the February fish?—In the Firth of Forth above Inchkeith.

27,039. Do you not catch them outside?—No.

27,040. Is that because you don't go or because they are not there?—It is because we have no time to go.

27,041. Are they large herrings or small herrings?—At some seasons they are large and some seasons they are very small.

27,042. Are they as big as the herrings you catch outside at this time?—Yes, generally.

27,043. Do the herrings now come up into the Firth or do they lie outside?—The fishermen have to go far out to sea for them, down to Mar Bank and the Cove, which is a good distance off.

27,044. Do they commonly come into the Firth in August?—They generally come up towards the shore then.

27,045. Do they come as high as Inchkeith?—Yes, about there.

27,046. Do you practise the long-line fishing?—Yes.

27,047. Is it practised in the winter time?—Yes.

27,048. Are you able to get plenty of bait?—Yes. We have a most beautiful ground here, on the south bank towards the west. There is nothing but a solid bed of bait; the ground is covered with it.

27,049. Do you send that bait southward to the Northumberland coast?—No.

27,050. Do not vessels come and fetch it from the north-east coast of England?—No, none of the boats get it except boats belonging to Newhaven.

27,051. Is there a right of fishing for mussels?—Yes.

The witness withdrew.

W. Bisset.

WILLIAM BISSET called and examined.

27,052. (*Mr. Caird.*) You are a fisherman at Newhaven?—Yes.

27,053. Have you had long experience there as a fisherman?—Yes, I have had 30 or 40 years experience.

27,054. Chiefly in the herring and haddock fishery?—Chiefly in the herring fishery.

27,055. Do you agree with the previous witnesses that the general supply of herrings is increasing?—Well, the number of boats engaged in fishing is increasing, but the number of fish to each boat has not been as good as it was some years back; taking the average of six years back, there has been a falling off.

27,056. But does not the quantity vary from year to year?—Yes, very greatly.

27,057. With regard to the haddock-fishing, is the catch of haddock generally increasing or diminishing?—Taking the winter and summer it has been very good.

27,058. Is the number of people employed at it increasing?—Yes; the winter fishing is very good, but now the spring boats go further off seaward.

27,059. Is there any mode of fishing practised which in your opinion in any way interferes with or is injurious to the supply of haddocks?—We complain greatly about trawling because we consider that it disturbs the ground.

27,060. Do you mean the beam-trawling in the bays?—Yes.

27,061. Have you yourself found that that has really diminished the supply of haddock?—Yes, ever since they have been working at it. In some pieces of water where the depth is shallow they have swept up all the fish in the trawl. Lobsters and cod-fish have been falling off, and I consider that it is owing to the constant trawling taking away the supply of food for those fish. In the fall we used to have a good deal of ground-fish, and in the winter a good deal of winter herrings. We have often to depend upon that for bait, and if we cannot get a supply at that time of the year it is a serious matter for us.

27,062. Do you consider that the supply of food for these fish is injured by beam-trawling?—Yes.

27,063. Do you think that the spawn is injured also?—Yes, we have observed that ourselves. The herrings used to spawn at Inchkeith, when the trawlers went there and destroyed the young herrings; we saw that ourselves.

27,064. In what way did you observe it?—We have been going over the ground when the spawn was red.

27,065. Is that when you were engaged dredging for oysters?—Yes.

27,066. Did you take any of it out?—Yes.

27,067. What did you do with it?—Threw it overboard immediately.

27,068. Do you think it was killed?—Yes, no doubt it would die.

27,069. Would the spawn die?—Yes, I think it would die, but if taken up from the outside, from a quantity gathered together, it might live and bring forth.

27,070. Are you ever interfered with by the French fishermen?—They keep a distance off us here; there is more spread of ground here than at Eyemouth.

27,071. Practically, they don't do you much harm?—Not here, but down at Berwick they come and destroy the nets very much.

27,072. Would you desire to have any legislative restrictions for regulating your mode of fishing;

would you like a law passed to say how you should fish, or would you prefer to follow the mode which you at present adopt?—There was an early fishing this last year or two in the Firth of Forth which has not existed before, and it is increasing every year, and very likely it will bring on some change sooner or later. We are now taking a great number of fish which if they were allowed to remain in the sea would come in again much improved at another season of the year, and then be caught by the boats.

27,073. Are they caught now and sent to the market?—Yes.

27,074. Are they good marketable fish?—They are mixed fish, and very young.

27,074*a*. Still they are sold?—Yes.

27,075. They are not thrown away?—No.

27,075*a*. Is there a large fishing of that kind?—The encouragement the boats have had during the last two years has occasioned an increase in the number of the boats, and every year they are going out earlier.

27,076. Do you think that the early fishing has been injurious to the subsequent fishing?—Last year this fishing entirely failed, and we blame the spring fishing for it. There is another injury we have to lament, and that is putting nets down before sunset.

27,076*a*. Is there no regulation with regard to that?—No; none whatever.

27,077. Does anybody enforce the regulations to prevent the shooting of nets before sunset?—No; no one at all.

27,078. There is such a regulation but nobody enforces it?—There used to be such a regulation and I believe it is carried out on the west coast. We have heard of it here but we never saw it enforced.

27,079. Nobody takes any notice of the time at which you shoot your nets?—No.

27,080. You may shoot them in the middle of the day if you choose?—Yes; we shoot them 20 minutes before sunset often.

27,081. Do the fish sink when they find the water disturbed by the nets?—It stops the fish from rising.

27,082. From rising up to the surface?—Yes; from the number of boats with nets set in the water, and the clearness of the water, the fish will not rise.

27,083. Do you think it would be important to enforce the regulation that nets should not be shot until after sunset?—Yes.

27,084. It is the practice to shoot them before sunset?—Yes; when the herring boats come home filled with herrings they are anxious to get near the same place again the next night, and sometimes they succeed on the same ground in finding fish.

27,085. Do you think it would be of much advantage to have a man-of-war or something of that kind to prevent you from shooting your nets before sunset?—Yes; a signal gun should be fired.

27,086. Would that not have the effect of making the fish sink and prevent them from rising?—I don't think that one gun would have much effect, but there is a grievance of that kind at Dunbar. They complain very much of the exercising of large guns by the volunteers; they say it disturbs the herring-fishing.

27,087. Has it been put a stop to?—They are trying to do so.

27,088. They think it injures the herring?—Yes, the fish are easily disturbed; even the men speaking together in a boat will disturb them.

27,089. Are you aware that there is a regulation to this effect contained in the Convention "It is for-"bidden to herring drift-net fishing boats to shoot "their nets earlier in the day than half-an-hour before "sunset except in places where it is customary to "carry on drift-net fishing by daylight"? Do you think if that regulation were strictly enforced it would be for the benefit of the herring-fishery?—Decidedly so.

27,090. (*Professor Huxley.*) Do you fish with ground herring-nets at any season of the year?—Yes.

27,091. Is that much done?—No; only for a short time of the year. It would not do but in the month of September.

27,092. That is when the fish are full of spawn—when, in point of fact, they go down to the bottom to spawn?—Yes.

27,093. You sink your nets by weighting them?—Yes, and when the tide turns the net turns with it.

27,094. That brings up the herring when they are actually spawning?—Yes.

27,095. Do you get much spawn with them?—No; we don't get much spawn.

27,096. It does not fasten to the nets so much then?—No.

27,097. Do you use trammel nets?—No, they are not used at all by the Newhaven men, nor in any case except by the Loch Fyne men, and in the winter time by the Aberdour men.

27,098. Don't you use trammel nets for skate and turbot?—No.

27,099. Do you use them at all for crabs?—They have small nets on the ground for that; the trammels cross each other.

27,100. With what kind of net do you catch crabs?—It is a net made for the purpose.

27,101. What is the size of the mesh of the crab-nets?—It is about two and half to three inches.

27,102. Is it hung quite loose?—Yes.

27,103. Do the crabs get entangled in it?—Yes.

27,104. Do the fishermen catch many in that way?—Yes.

27,105. Is there any mackerel-fishing here?—None except with hooks.

27,106. They don't use nets for catching mackerel?—No.

27,107. (*Mr. Caird.*) Are you likely to be deprived of the beach upon which you were formerly in the habit of hauling your boats up?—No, not entirely, but we are anxious to have the convenience of getting a better road in conjunction with the road prepared for the public. There is a branch line now formed, and it is desirable to have a good road.

27,108. Does the branch recently constructed to Leith by the Caledonian Railway Company limit the accommodation given to the boats?—No, it does not infringe upon us at all.

27,109. (*Professor Huxley.*) When you go out drift-net fishing for herrings do you have lights in your boats?—Yes.

27,110. What sort of lights?—One of those red, green, and white lights. We use the white light when we are riding with our nets, and another description of light when we are sailing.

27,111. Do you have one light or two in each boat; did you ever hear of this regulation: "In order "that boats fishing with drift-nets may be easily "recognised at night, the masters of these boats shall "hoist on one of their masts two lights, one over the "other, three feet apart. These lights shall be kept "up during all the time their nets shall be in the sea "between sunset and sunrise?"—No.

27,112. You don't do that?—No.

27,113. Nobody ever told you to do it?—No.

27,114. Did anybody ever come into your boats and tell you to do it?—No. Sometimes in the case of a snow-storm, in order to save both life and property, we may hoist two lights, but not under any regulation of that kind. The lights are small, and in a case of difficulty they may perhaps put up another one for the sake of safety.

27,115. The Fishery Board cruiser has never told you to carry lights of that kind?—No. I believe there are notices to that effect, but we never see them here. It is, however, very rarely that an accident occurs. The men here are much engaged on deck in working the boats, and the fishing-nets are never out of their hands.

27,116. But, as a matter of fact, you don't light your boats in that way?—No.

27,117. What is the size of the mesh you use for the herring nets?—Generally 32, 33, or 34 meshes to the yard. We have three sizes just now, and we use them according to the size of the fish and the stock of nets we have on hand.

EDINBURGH.

W. Bisset.

25 July 1884.

27,118. Are your nets ever examined ?—Yes, the winter nets are examined more particularly.

27,119. Do you set brat-nets here ?—No.

27,120. You don't use them here ?—No.

27,121. Do you set trammel nets at all ?—No, except herring-nets in the bays.

27,122. Are you not allowed to do so ?—It is not so much that, but we have different occupations.

27,123. Have you a vane at the mast-head of your boats ?—No.

27,124. You have none at all ?—No.

27,125. Did you ever hear of this regulation : "For "the purpose of distinguishing by day drift-net fishing boats from trawl-boats both shall carry at the "mast head vanes which shall be at least eight inches "in height and two feet in length"?—No.

27,126. You have not got vanes eight inches in height and two feet in length ?—No.

27,127. Do you know anybody who has ?—No.

27,128. Are you aware that you may be fined for not carrying them?—No.

27,129. When do you go dredging for oysters ?—In the month of September.

27,130. What time of day ; is it during the day or always at night ?—In the morning. Sometimes a man will go out early in the morning in order to get some for the market.

27,131. Do you ever dredge at night ?—No, it is all done in the morning.

27,132. Have you an oyster-gauge ?—Yes.

27,133. What is the size of it?—It is not so much used with regard to the size of oysters, but it is an agreed gauge to insure the oysters being taken about the same size. It is a piece of brass so that a man can tell by a look at the oyster in his hand if it is the proper size.

27,134. Does anybody examine your boats ?—Yes.

27,135. If you have small oysters, what is done with them ?—They are taken out.

27,136. Is the person who has taken them fined ?—They tried that, but it did not seem to be an effectual cure either. We were rather put about in that way. The fishermen had an idea that paying a certain rent for the ground they had liberty to take what they liked. They took their own liberty with the oysters on the scarps and sold large or small. It would require great strength to enforce any regulations as to the size at which they should be sold.

27,137. (*Mr. Caird.*) Is there any matter with regard to the interests of the Newhaven fishermen that you desire to bring before us ?—Yes.

27,138. What is it ?—We want a harbour.

27,139. What do you wish a harbour for ?—We think it would increase the accommodation and give safety to the larger boats here.

27,140. Are you willing to pay a proportion of the expense yourselves ?—Yes.

27,141. What expense would be necessary for the purpose of making a harbour for the fishermen here ?—It is the cheapest yet we have had by way of estimate.

27,142. How much would it cost ?—About 5000*l.*

27,143. How much would you be ready to contribute yourselves ?—We have not given it a name yet, but we should be ready to do something.

27,144. Would it be by subscription among the fishermen ?—Yes, and elsewhere.

27,145. It would not be raised by tolls you would levy for the use of the harbour ?—No, we could not get tolls levied on a harbour of that kind.

27,146. Would you raise one-fourth of the sum you require ?—I think so.

27,147. You would be ready to do that ?—Yes, along with the assistance we should receive.

27,148. Have you long wanted a harbour ?—Yes, we have never had one.

27,149. Have you ever applied for one ?—Yes, we have been very anxious to have one that we may share the comfort that boats belonging to Eyemouth and the large boats possess. In the winter season in the fall of the year there is special want here of harbour accommodation. In the conduct of the fishing for three months from September they go up by the turn of the Firth round Stromberness, and when it is blowing very hard they are often obliged to refit the damage done to the boats. There is also a loss of life sometimes. The boats of a better quality and larger size can go down there, and we are anxious to receive the same advantages.

27,150. Is it within your power to take advantage of the harbour of Granton ?—Yes, but in the winter season we have to go away to Leith, and if the wind is north-west we are placed in a position that we cannot get in.

27,151. You are speaking of Leith Harbour ?—Yes.

27,151*a*. But I am speaking of Granton ?—We cannot get liberty at Granton. We are confined too much to one particular spot, we have no access to the spots we would require there. Looking at the matter in every sense, what we want is a harbour of our own. The greatest blessing we could have ever since we have been fishermen is a fishing harbour.

27,152. Have you ever made an application to the Fishery Board on that subject ?—We did in former years, but we have never been able to meet with any readiness on the part of the Fishery Board to accede to our wishes. There was a difference of opinion as to the spot, some wanted it on one side and some on another.

27,153. Would the Fishery Board have been ready to meet you if you had been agreed ?—Yes, I think they would. This year we made an application but we were too late, they told us that all the money was appropriated.

The witness withdrew.

J. Anderson.

JOHN ANDERSON called and examined.

27,154. (*Mr. Caird.*) You are a fishmonger in Edinburgh ?—Yes.

27,155. Have you been long engaged in that trade here ?—Yes, for 35 years.

27,156. Then you have a good knowledge of the general supply of fish in Edinburgh ?—Yes.

27,157. And with regard to any other part of the coast, have you a good knowledge of the supply of fish ?—Yes, we get them from various places, from Hull, Scarborough, Whitehaven, Aberdeen, and elsewhere.

27,158. Has the quantity of fish consumed in Edinburgh been much on the increase in recent years ?—I have seen very little difference.

27,159. Do you supply fish to the interior towns of the country from Edinburgh ?—Yes, a great deal goes away by train to various towns.

27,160. That does not pass through your hands at all ?—Yes, it does.

27,161. You see what goes probably ?—Yes, there is a great quantity sent away.

27,162. Is it increasing in quantity ?—Yes, to all parts of Scotland.

27,163. Is the supply of fish altogether from Scotland increasing ?—Yes, it is increasing every day.

27,164. Does that answer relate to all sorts of fish ?—Yes.

27,165. Then that indicates an increased catch of fish all over Scotland ?—There is not an increased catch of fish.

27,166. Where do they come from then ?—They are taken from the Edinburgh and Glasgow markets. What were formerly cured are now going away fresh.

27,167. But from the returns of the Fishery Board there is an increased quantity of cured fish ?—There was a good catch last year, but a great quantity is now going away fresh.

27,168. Has there been a constantly increasing quantity going fresh into the interior of the country?—Yes, and the increase will continue daily.

27,169. Is there any particular kind of fish that has increased or diminished in its supply in recent years?—It fluctuates very much. In good weather they can get plenty, only they have to go a little further for them. All kinds of fish are going out of the Firth, and garvies, herrings, and white fish altogether.

27,170. What is the reason of that?—It has been going on decreasing for the last 25 years. In consequence of the immense quantities of moss coming down, places that were dry some years ago have now some five feet of sludge covering them. This year the banks where the fish used to spawn down towards Queensferry are covered; and I believe that is the cause of the garvies having set in for Granton.

27,171. If the garvies go up above the Ferry would not that indicate that the moss has disappeared?—You will find very few where the moss is; if it is blowing very hard you get plenty.

27,172. Where does the moss come from?—From Blair Drummond and Cardross. There are two or three acres of moss to go away yet. About six or eight miles beyond Stirling it has entirely destroyed the salmon-fishing.

27,173. It has destroyed the salmon-fishing?—Yes.

27,174. Is there as good a rental from it as formerly?—The rental is good, but the price in the market is higher.

27,175. There is not the same quantity of fish caught?—Not by a long way.

27,176. Have you heard any others attribute the decreased supply to the moss that has been coming down?—Yes, many hundreds. It destroys all kind of brood up the river. When it comes into the river it is in large lumps, but they get smaller and smaller, and spread all over. Some of the banks are 8 or 9 feet deep in solid sludge, and that covers the banks where the garvies and herrings used to spawn.

27,176*a*. Is it not a fact that the catch of garvies and herrings is some years better and some years worse?—That depends upon the elements.

27,177. But it is a fact?—Yes.

27,178. Does the moss not disappear altogether?—No, it lies in the river.

27,179. And remains there?—Yes.

27,180. But if there are gales of wind it is driven further off?—Yes.

27,181. Then it does not remain there; not constantly?—It may go backwards and forwards, but it will not disappear altogether.

27,182. Still it has been found to go away to the extent of three feet in one gale of wind?—Yes.

27,183. Does that apply to any part of the coast except Queensferry?—All up the Forth.

27,184. Has it not affected the oyster-beds?—There are no oyster-beds above Queensferry to speak of; I believe it has destroyed an oyster-bed that used to belong to Lord Auckland. There is nothing there now and shoals of fish have been destroyed entirely.

27,185. (*Professor Huxley.*) Has not the moss been coming down there for centuries?—No; it has only been for the last five or six years. There are steam engines used now for the purpose of getting it away.

27,186. Has this resulted from clearing the ground?—Yes; from clearing the ground. They have cleared about 2,000 acres. They are throwing the moss into the river and are destroying it entirely with it.

27,187. How long will it be before it comes to an end?—I think they intend to carry it on for some 70 or 80 years yet.

27,188. For how many years has it been going on?—I believe for 60 years. The heaviest works began 25 years ago, and they have been very extensive within the last four or five years. They have had two large engines going at Blair Drummond. They started with a water-wheel, but now they have got two large steam-engines.

27,189. You think the water is continually poisoned with it?—At times even an animal could not drink it.

27,190. Does it discolour it?—Yes; it makes it just like ink. We cannot fish in the water and have been obliged to give it up. Our meshes although they are from three and-a-half to four inches are entirely closed up with it, there is so much of it.

27,191. (*Mr. Caird.*) Is the influence of that moss being felt further and further down the Firth?—I have no doubt that it will be felt.

27,192. But it has not yet passed the Ferry?—No.

27,193. It is all above the Ferry?—Yes, as yet.

27,194. You said that all the fish were disappearing out of the Firth by degrees?—My opinion is, that long ago they would go beyond Queensferry to spawn on the ground where the moss now is, but now the moss sends them more down the Firth. That is the cause of the garvies not stopping where they were in the habit of stopping in former years. Last year we failed to catch any of them because we could not get near them. They went away past our nets altogether for several miles down. We commenced to fish them from September till March, and for three months we got nothing owing to the moss.

27,195. (*Professor Huxley.*) Can you suggest any remedy for that?—Nothing but stopping the moss. They got an Act in 1856 to stop it but they did not put it in force. You see it is the higher powers who are carrying it on. The Fishery Board are really the parties who are carrying it on, and so we can't get any redress. I threatened last year to interdict them. There was a great hue and cry raised, and they got me to quash it.

27,196. (*Mr. Caird.*) Does anybody but yourself believe in this?—All the fishermen connected with the salmon fisheries do.

27,197. Has it been agitated in the public papers?—Yes, several times.

27,198. Has it ever been mentioned in Parliament?—I think not; I have written to the Lord-Advocate and other members of Parliament, but it has had very little effect.

27,199. There are very few gentlemen connected with the Blair Drummond moss in Parliament?—There is Mr. Gibson of Galbraith and eight or 10 gentlemen all influential persons.

27,200. (*Professor Huxley.*) Have you brought the matter formally under the notice of the Fishery Board?—No; the Fishery Board don't incline in that way, they don't interfere with salmon or sparlings. The effect of this moss will be to cause the garvies to come down more among the rocks than before.

27,201. Do you get any large supply of soles in the Edinburgh market?—There are not a great number in the Firth. They engaged a steamer last year for six months, and I think if it had been properly managed there would have been a steady supply. There are great quantities of plaice and soles in the Firth.

27,202. How did they get them?—By trawling.

27,203. Is there any other mode except by trawling?—A few are caught by the line but that is an insignificant supply.

27,204. Is there any great demand for them here?—Yes.

27,205. Do you import them from Hull?—From Whitehaven and Scarborough. There are a few from Hull but they are not so good.

27,206. How is the market supplied with oysters?—We have had Skye oysters. The gentleman who gave his evidence just now is altogether wrong as to the supply to be got there, but I have had the experience of parties who have been there. There are oysters to be got all round Scotland, but they are in small quantities, black in colour, and are strong tasted.

27,207. They are not oysters that will take the market?—They have been tried in Glasgow often; they have been tried in England, but English people will not take them.

EDINBURGH.

J. Anderson.

25 July 1864.

27,208. Then there will not be any market for them?—There would be a small market for them. They have been often tried in the Glasgow, Liverpool, Manchester, and London markets.

27,209. Have you examined the Skye oysters?—Yes.

27,210. But you don't find them answer?—No, they don't take.

27,211. (*Mr. Caird.*) Where was it that the steamer you spoke of trawled, was it in the deep sea or the bays?—Close in-shore, off Aberdour Bay, off Berwick and Dunbar.

27,212. Did she never try trawling in the deep sea?—I believe they have tried it off St. Andrew's bay.

27,213. Is that close in-shore?—Yes.

27,214. They have not tried trawling outside?—There are plenty of fine banks on which they could trawl.

27,215. But it has not been practised?—No. There were 13 trawls off St. Monance one year; but they were stopped by the Board of Fisheries. They did not try the deep-sea fishing because they could not go out and be in in time for the fresh market.

27,216. But they manage to do that in Yorkshire?—They lie off very close there.

27,217. They go out for 30, 40, or 50 miles?—Not in the summer; they keep in then. They take ice with them now, I believe.

27,218. Why don't you do that in the winter?—The boats we have would not do; we have no decked vessels; they are all open boats.

27,219. And you have not thought it worth while to get larger boats?—No.

27,220. The 13 vessels that were trawling off St. Monance were engaged in trawling the Fluke-hole?—Yes.

27,221. Were they trawling there at the time the herring spawn was being deposited?—They fished there immediately afterwards.

27,222. And yet quantities of flat-fish were found there afterwards?—Yes.

27,223. Are you aware whether the flat-fish were full of herring spawn?—Yes.

27,224. Was it a common thing?—I have seen them quite full.

27,225. Have you seen herring spawn in the turbot?—Yes.

27,226. And in soles?—Not so much in soles.

27,227. In plaice?—Yes, a tolerable quantity in plaice, and also in brill; when we cleaned them out we saw it.

27,228. Did you get much spawn in your trawl?—Sometimes a good deal, but it was quite dead.

27,229. If you took away so much fish there, the fish you took away would be of great advantage to the spawning grounds?—The greatest enemies to the spawn, no doubt, are the fish themselves. The more we take away the less spawn they can eat.

27,230. Is the quantity of spawn scraped up by the trawl at all considerable compared to that destroyed by the fish?—The quantity of fish left would eat double the quantity in a day.

27,231. Some of the spawn brought up was tried to be brought to life again but it did not succeed?—No.

27,232. Professor Allman had some hatched, had he not?—We got it from the deep sea, and not from the trawlers.

27,233. Was it because it was damaged by the trawls that it did not come to life?—I think so. When they are fishing for herrings at the time the fish are in the act of spawning they do great injury; the fish are quite weak then, and as they draw them up over the gunwale of the boat, immense quantities of spawn fall over in a solid lump; I don't look upon that as live spawn at all. I don't think that the fish spawn upon the soft ground, but upon hard ground, and the trawl will not trawl upon hard ground, but only upon soft.

The witness withdrew.

LAURENCE LAMB called and examined.

L. Lamb.

27,234. (*Professor Huxley.*) You are an inspector of fisheries?—Yes.

27,235. You have been for a great many years acquainted with the fishing on the coast?—Yes.

27,236. In your opinion is it practicable to obtain sound statistics with regard to the fisheries?—I believe there are such at present as regards the herring fishery, and that they are got with almost the greatest accuracy possible.

27,237. Do you think that the value of these returns is very great?—I do as regards giving an approximation to the total quantity caught.

27,238. Do you think that you can depend upon these returns as representing the total catch?—They cannot be held to be mathematically correct.

27,239. But for practical purposes they are?—Yes.

27,240. The mode of collecting them is so far sound and correct that you can depend upon it for showing whether the fisheries are stationary, increasing, or diminishing?—Yes.

27,241. Do you think that that system could be extended to the long-line fishing?—It would require some consideration; I think it could be done, but it would require additional men.

27,242. Suppose it were thought desirable to organize a system of collecting fishery statistics all over the country, could it be done from your knowledge of the way in which the fisheries are carried on?—It could be done if the expense were not a consideration.

27,243. Do you think it would be a very costly process?—The way to do it with the greatest economy would be to get the returns from the boats.

27,244. But you heard one of the witnesses state the difficulties which were in the way of doing that?—No doubt there are difficulties, but in any way that could be adopted there are difficulties. That would be the most accurate way, and in that case there would require to be officers stationed within reach of all the boats fishing upon certain parts of the coast.

27,245. You know the organization of the Customs and Revenue, could it be done by that means, or through the officers of the Coastguard?—I am not thoroughly acquainted with that organization, but I don't think they are much acquainted with fishery matters. I believe there would be a necessity for enforcing a penalty of some sort in order to entitle the officer to demand the returns.

27,246. You don't think the returns would be given willingly?—There would not always be unwillingness; there might be in some cases, and it would be to overcome that unwillingness that it would be necessary to have a penalty.

The witness withdrew, and the inquiry was adjourned until the 26th July, at Dunbar.

Dunbar, Haddingtonshire, Tuesday, 26th July 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

DUNBAR.

J. Murray.

26 July 1864.

JOHN MURRAY called and examined.

27,247. (*Mr. Caird.*) You are a fisherman here?—I belong to North Berwick.

27,248. Do you know the fishery interest upon this coast?—I know a good deal about it.

27,249. Have you been all your life a fisherman and engaged in the trade?—I have been for 26 years a fisherman.

27,250. What are the principal kinds of fish that are caught off this coast?—There is the white-fishing and the herring-fishing. It is haddocks, cod, and herrings chiefly.

27,251. Within the number of years over which your experience extends, can you tell us whether the catch of the different kinds of fish has gone on increasing, has remained stationary, or has decreased?—It has been diminishing very much in the Firth of Forth.

27,252. Within the Firth?—Yes, within the bounds of the Firth of Forth.

27,253. Has it along the whole of the coast?—On the northern and southern sides from St. Abbs Head to Montrose, which constitutes the Firth of Forth, they have been diminishing for a great number of years back.

27,254. Will you specify the kinds of fish which have been diminishing?—Herrings and haddocks. Codfish also has diminished greatly for a number of years back.

27,255. Do you mean that the quantity taken by each boat has diminished or the total quantity taken by all the boats put together?—The take on the whole has diminished greatly.

27,256. Has there been any increase in the number of boats and men engaged in the fisheries within recent years?—Yes, there has been a great increase.

27,257. And is that increase still going on?—Yes, it is going on still. There has not been as much increase this year as there was some years previously, on account of the continuation of the bad fishings which we have had for the last three or four years past.

27,258. In consequence of bad fishing?—Yes.

27,259. In consequence of that, for three or four years past there have been fewer boats?—Yes, they have come to a head apparently.

27,260. But still there are some new boats this year?—I see very few of them.

27,261. And the opinion you have expressed applies to all the different kinds of fish caught off this coast?—Yes, to all the different kinds.

27,262. Can you attribute the diminution in the catch of fish to any reason within your knowledge?—I think that trawling has been one great means of causing the decrease in the fish.

27,263. Where is the trawling you refer to practised?—Both on the northern side and along the shores and down the middle of the Firth.

27,264. In the Firth and along the shore?—Yes, everywhere where there is smooth ground, so that they can get the trawls to go.

27,265. Has the practice of trawling increased of recent years?—No. This year I think it has decreased. We have had no English vessels down trawling this year.

27,266. Were the English vessels in the habit of coming here to trawl?—We have had as many as six for the last five years back.

27,267. Were they all of them decked vessels?—Yes.

27,268. Of what size?—Perhaps from 50 to 60 tons.

27,269. Did they trawl inshore?—They trawled within a mile and a quarter of the shore sometimes.

27,270. During what season of the year did they come?—They generally came down about the end of April or the 1st of June, and continued here until August or the end of September.

27,271. They came in the summer season, in the warm weather?—Yes.

27,272. They did not come here in the winter time at all?—There was one to the westward trawling for the 12 months round, but that was a steam trawler.

27,273. Did she come from England?—I do not know. She belonged to Leith, but before the skipper got the steam trawler he had a sailing vessel which went the whole 12 months round.

27,274. Is the steam trawler still employed?—No, she has knocked off.

27,275. Was it not found to be remunerative?—No, it did not pay.

27,276. Is trawling not so paying as it was?—I do not think it is paying so well, or they would not have dropped it. There was a vessel that came down from England this season, and we told the people who were with her the great injuries we had sustained by the trawling system along the coast. We said that we would not submit to it, and we would not allow him to persist in trawling where our herring nets and long-lines were. After we had made that statement to him he went away and he never came back again.

27,277. Have you had no other English visitor this year?—No, none but him.

27,278. Is there any deep-sea trawling off your shore?—They go down right through the middle of the Firth.

27,279. But is there any trawling in the offing?—Yes, they go as far off as the Mar Bank.

27,280. How far is that off?—About 25 miles.

27,281. Does it do you an injury?—Yes, it does.

27,282. Have you any facts by which you can show that it injures you?—I can speak of the injury done by trawling inshore.

27,283. I fully understand that you believe the inshore trawling has injured you?—Yes.

27,284. But what proof have you that the trawling 25 miles off injures you?—The herring goes down and deposits her spawn at places in the deep sea. We do not exactly know where they are but we have no doubt that they do it. It is very likely that they do it on those banks where the trawlers go, because there it is as shallow water as in any part of the Firth of Forth, and to destroy the spawn as they do in the Firth of Forth must be injurious to the fishing.

27,285. Then it is from suspicion alone and not from any definite knowledge that you speak?—I have no doubt that in the Firth they take up the spawn.

57,286. Did you ever see the trawlers take up the spawn?—There are witnesses here who can prove it. There is a man in the room who has seen it done.

27,287. There is a man here who can prove it?—Yes, I have heard the statement made by an individual who said he had seen it trawled up in great quantities.

27,288. Is there anybody here now who has seen it?—I cannot say.

27,289. There is at any rate no proof that you know of, of spawn being dragged up in the offing 25 miles off, on the fishing grounds to which you referred?—I have no evidence of the kind.

27,290. You say that it is the herring spawn that is destroyed?—Yes.

27,291. Have the herring fisheries off Dunbar decreased within recent years?—Yes, very much.

DUNBAR.
J. Murray.
26 July 1864.

27,292. Has it been a progressive decrease?—They have greatly decreased for some three or four years back.

27,293. Are you aware that there is a regular record kept by the Fishery Board of all the herrings cured?—Perfectly.

27,294. And if that record shows that an increased quantity of herrings have been cured how will you reconcile that with the opinion you express that the quantity has fallen off?—Here there have been 300 boats engaged in the fisheries for a number of years back, and it could be testified by the whole of the skippers here that they have not caught for the last four or five years past one half as much as they did for the four or five years previously.

27,295. How many boats are there engaged in the herring fishery between North Berwick and the Tweed?—I cannot exactly say.

27,296. I thought you said there were 300 boats?—That is in Dunbar Harbour.

27,297. Do they belong to Dunbar?—No, they come from the whole of the Firth of Forth, from Bowness down.

27,298. They resort to Dunbar Harbour?—Yes, this is their head quarters.

27,299. And south of the Firth as far as Berwick how many will there be?—There will be nothing short of 500, taking in Berwick and Eyemouth.

27,300. From St. Abb's head?—Yes, from Dunbar west.

27,301. How many men are there to each boat?—Five.

27,302. Then there are considerably more than 2,000 men engaged in the fishing business along this coast?—Yes, including Buckhaven; but not the Pittenween people.

27,303. Their boats come here?—They are all intermixed.

27,304. They come into Dunbar Harbour?—Yes, as soon as the fish come upon the ground.

27,305. Do you speak the opinion of all the fishermen who come to Dunbar Harbour when you tell us that the quantity of fish has been diminishing regularly?—I think I do.

27,306. Is this a great curing place for fish?—We cure a great quantity here.

27,307. What proportion of the herrings that are caught and brought into Dunbar are cured, and what proportion is sent fresh to the market; is there one-half?—No, not one-third is cured. More than one-half goes fresh.

27,308. Is the proportion every year of those sent fresh to the market increasing compared to the proportion of those that are cured?—I cannot say that.

27,309. Do you think you sell more fish now every year than you used to do?—Yes, more than three years back.

27,310. The price has been good has it not?—Yes, very good.

27,311. If the steam trawler has been withdrawn from trawling in the Firth that will in some degree have removed the objection you entertained to trawling?—Very much. That was a very great grievance to the whole of the fishermen.

27,312. Was she the most destructive of them all?—Yes, we considered so, because she went day and night up and down.

27,313. Did she get a great quantity of fish?—Yes; but there is a certain place off North Berwick where the herrings have come annually for a number of years and deposited their spawn. The vessels engaged in trawling have come every day and thrown overboard as much as a ton and a half of dead fish over the very ground where the herrings deposit their spawn, and the consequence has been that there has been no herring-fishing there since 1860 on that ground.

27,314. Has the steam trawler been employed on this coast since 1860?—It was employed before that I think. There were trawlers before then who came every day and brought to an anchor inside the rock.

27,315. Was the steam trawler in the habit of passing through the shoals of herrings?—Yes.

27,316. She paid no regard to that?—She paid no regard to it whatever. She destroyed some of the fishermen's nets. Several times she injured the fishermen's nets.

27,317. Was there no fishery police; did not the cutter or a gun-boat interfere to prevent that vessel disturbing the herring shoals or injuring the herring nets?—No one ever interfered with her that we knew of.

27,318. Did you never complain to the Fishery Board?—No, but we complained to the skipper himself sometimes, and he gave us the worst of usage. He said he had as good a right to go on fishing there as we had to prosecute our fishing.

27,319. But here is an article contained in the Convention Act between this country and France, which is the law of the country: "Trawl-boats shall always "keep at a distance of at least three miles from all "boats fishing for herrings or mackerel with drift-nets." Were you aware of that being the law?—Yes.

27,320. And are you quite sure that the vessel to which you referred did not keep at a distance of three miles from the boats fishing for herrings?—I am quite sure of it; she was not a quarter of a mile off sometimes.

27,321. Then why, knowing the law, did you not endeavour to enforce it against the men who were infringing it?—I went down several times to Mr. Woodrow and we sent a deputation to Mr. Primrose.

27,322. What was the result of the deputation?—He gave us no satisfaction. He did not think that the Act referred to inlets or bays, or something of that sort.

27,323. Wherever they may be they must keep three miles off. In the preceding article the Convention says: "Trawl-fishing is forbidden in all places where there are boats engaged in herring or mackerel drift-net fishing. There are two distinct enactments referring to that very point, and you were entitled to complain of the infringement of the law and to have obtained a remedy?—We went twice up to the Board of Fisheries upon that very point.

27,324. The vessel has now ceased to come, not in consequence of your complaints, but because she ceased to make a profit?—It was not paying; the shareholders have not got one shilling in the pound from it.

27,325. And the trawling by other vessels has not been practised with the same injury this year as usual? No, there have been none here but the one I spoke of, and he went away.

27,326. Are there no local trawlers at all?—On the Fifeshire side there are some, but not on the southern side.

27,327. Then if there has been no trawling this season, have you noticed any advantage resulting to your fishing from the absence of the trawling?—We have been engaged in the white-fishing for the last three months, and since the trawlers came we never had white-fishing until this season.

27,328. Have you had a better white-fishing this season than usual?—It has been very good and when they were on the ground, if the fish came on the ground to-day and they trawled to-night we should get no fish to-morrow. We have now been working on the same ground for the last five or six weeks and there has been no decrease in the quantity of fish we can catch.

27,329. Is it long-line fishing to which you refer?—Yes, long-line fishing.

27,330. Do you fish on the smooth or on the rough ground?—We fish according as the fish is on the ground, but chiefly on the smooth ground.

27,331. The trawlers do not trawl on rough ground?—No.

27,332. When they were trawling on the smooth ground, did you fish on the rough ground?—No, on the smooth ground.

27,333. Did they do you any injury?—Yes.

27,334. What injury did they do?—They went over our lines and several lost them entirely.

27,335. Do you go far off the shore to your long-line fishing?—Three or four miles off and sometimes further. We go a great deal further when we go with the large boats. Some of them have gone 60 or 70 miles this season.

27,336. Has there been a better result from fishing 60 or 70 miles off this season than usual?—There are some at present at the deep-sea fishing. They have not been in the habit of going that distance regularly. They have only gone this season.

27,337. Is this the first season they have gone?—Yes, to that great distance.

27,338. You are making a good season now then?—Yes, the white-fishing has been good.

27,339. Has the quality of the fish been as good as usual—the haddocks and so on?—Yes, they have been very good.

27,340. Is the quality you are getting just now as good as it used to be in your best seasons?—We have dropped the white-fishing now and are prosecuting the herring-fishing.

27,341. But during the time you did follow it was it as good on the whole as it had been formerly when you had a good fishing?—Yes, it was equally as good.

27,342. Then trawling has done no permanent injury to your fishing, because it has immediately recovered itself?—I do not know what the permanent result may be, but at the time it was practised it was injurious.

27,343. But now that it has been withdrawn you find that the fish have returned to you?—Yes, and we want to have it abolished if possible from the Firth of Forth entirely.

27,344. Your herring-fishing here is all drift-net fishing?—Yes, but we have ground-fishing too at the latter end of the year, when the herrings take to the ground?—We generally ground our nets then.

27,345. Have you more than one herring-fishing season here?—Yes.

27,346. How many?—Two.

27,347. What are they?—From the latter end of December.

27,348. When is the first season?—We commence now.

27,349. In the middle of July?—Yes. The 1st or 7th or 8th, some of them commence and they continue until the middle of September.

27,350. Is that your best fishing?—Yes.

27,351. And in the winter, at the latter end of September, you commence herring-fishing again and continue up to the 1st of April?—Yes.

27,352. In what condition are the fish respectively? Is the best quality got in July or in the December and January fishing?—The best fish are got about the middle of August.

27,353. Is the quality of the winter fishing very good?—It is very good about the month of January.

27,354. And is the quantity considerable then?—No, it has not been very much for these last two years. There have been very little got for the last two years.

27,355. Have you any reason by which you can account for that?—The weather has been strong and we could not prosecute the fishing to the same extent; and I do not think that the fish were as plentiful as they were previously.

27,356. Has the winter fishing been long in existence here?—Yes, for a long time.

27,357. Both of these seasons are the usual seasons you have had for many years for fishing herrings?—Yes.

27,358. Is there a much larger proportion of all the herrings caught here caught in the summer?—Yes, the proportion is much greater then than in the winter. There are more boats that can prosecute it.

27,359. Are you disturbed at all by the French fishing boats coming among your nets?—Not this way.

27,360. You have no complaints of the kind to make?—No, they have not been here for some years back, perhaps for the last 15 years.

27,361. Are there any restrictions on your fishing which you think injurious to the fishing; does anybody interfere with you?—No, except the Irish boats from the west coast.

27,362. No authority interferes with you to make you do this or that?—No.

27,363. Does anybody regulate the time at which you are to shoot your nets?—No.

27,364. Is it advisable that there should be some restriction of that kind?—We think it would be very beneficial.

27,365. And when do you shoot your nets?—It is sometimes three-quarters of an hour before sunset and sometimes an hour.

27,366. The law is this: "It is forbidden to herring "drift-net fishing-boats to shoot their nets earlier in "the day than half-an-hour before sunset, except in "places where it is customary to carry on the drift-"net fishing by daylight." You see it says you are not to shoot your nets till half-an-hour before sunset?—Yes.

27,367. Except in places where it is customary to carry on the drift-net fishing by daylight?—Yes.

27,368. I believe it is not customary here to carry on drift-net fishing by daylight?—No.

27,369. Yet you do not strictly observe this law?—No, it is not observed.

27,370. Do you think it would be of advantage to the fishing interest here if it was observed?—Very much so I think. Often some of the men have gone out to shoot their nets before sunset, and the consequence has been that they have seen no fish that night. When the herrings come inshore we are all anxious to get out and get a good berth.

27,371. Is there no Fishery cutter to cruise off here and see that you observe these regulations?—I have seen him come down here, but he never interferes with anything of the kind.

27,372. Have you been anxious to have any interference?—I think it would be very advisable for the protection of the fishing, but I do not think it has been asked for.

27,373. Nobody has asked him to interfere?—I do not think so.

27,374. What is the injurious effect of your fishing too long before sunset?—We think it darkens the water for so many boats to be setting down their nets on the spot, and we generally think that the herrings do not rise from the ground when the nets are too soon set, especially in shallow water.

27,375. And if they had been set a little later, do you think the herrings would have risen without your disturbing or preventing them?—Yes.

27,376. You spoke just now of fishing with ground-nets?—Yes.

27,377. When do you do that?—Towards the end of the summer fishing.

27,378. How do you practise it?—We drop anchors at each end of the net.

27,379. And you sink the nets?—Yes; we let the nets go the ground.

27,380. Do you expect to catch the fish then before they rise?—Yes. They will not rise sometimes, and we get 60, 70, or 80 crans, where we should not have got 100 fish if we had gone over them.

27,381. In what condition are they at that time?—They are in very good condition.

27,382. Are they spawning?—No doubt. They are lying on the ground to deposit their spawn at that time of the year.

27,383-4. (*Professor Huxley.*) What time of the year do you get spawning herrings in the way you mention?—Most of them in September; I have seen them in the middle of August.

27,385. Do you get any spawning herrings at the early part of the year?—There are very few about this time.

DUNBAR.
J. Murray.
26 July 1864.

27,386. But do you get them in February?—Yes, at the latter end of February.

27,387. Do they spawn in abundance then?—Yes.

27,388. Is it the same kind of herring that spawns at both times of the year?—That becomes a question. It is one I cannot give an answer to.

27,389. Have you observed any difference between them?—There is not a great deal. We cannot distinguish a great deal of difference.

27,390. (*Mr. Caird.*) Do you fish at the same period of the evening with the ground-net as with the drift-net?—No, in the daytime.

27,391. In the daytime?—Day and night sometimes.

27,392. Do you think that the fact of your fishing during the day may not have some effect on the fishing at night?—I have no doubt of it.

27,393. What is the description of long-lines which you use on this coast; have you more than one kind of long line?—We have the cod-line and the haddock-line.

27,394. What is the difference between the cod-line and the haddock-line?—On the haddock-line we have 48 score of hooks a man, and on the cod-line we have only something like 10 score of hooks a man. The one is much heavier than the other.

27,395. The cod-hooks are the heaviest?—Yes.

27,396. Do you use the same kind of bait on both lines?—No.

27,397. What kind of bait do you use?—We use mussels for the small lines and herrings or fish of any kind for the cod-lines.

27,398. Do you catch herrings for bait at certain times?—Yes.

27,399. Is there a plentiful supply of mussels for bait to be found on this coast?—It is not very plentiful.

27,400. Where do you get it?—It comes from Leith sometimes; we have also got it from Glasgow and Greenock.

27,401. Is there an immense bank between Leith and Cramond?—Yes.

27,402. It is almost inexhaustible we were told yesterday?—Yes, and we get the bait sent down.

27,403. Have you noticed any difference in the quality of the trawled haddock and the line haddock?—Yes.

27,404. Which is the best?—The line haddock; the trawled haddocks are scarcely fit for use. The scales are all off them as if they had been in a fish's mouth and dissolved.

27,405. Are the cod of as fine quality and as large size as they were here formerly?—They have diminished both in quantity and quality, because the trawlers took up the whole of their food, and they had nothing to live upon on these shores; they took up with the trawl all the shell-fish that the cod came to feed upon.

27,406. What did they do with the shell-fish?—They turned them overboard, and sometimes sent them to the Edinburgh market.

27,407. They would go to the bottom again if they were thrown overboard?—But they turn them overboard inshore.

27,408. Do you get any turbot here?—Turbot is very scarce.

27,409. Do you get any soles?—There are no soles caught by the line.

27,410. Then how do they catch soles?—By the trawl.

27,411. Then your fishermen do not catch them?—No.

27,412. Is there no sole-fishing here at all?—No.

27,413. Are there plenty of soles to be caught?—No, they are very scarce.

27,414. Are there any mackerel?—Yes.

27,415. Is there a good mackerel-fishing here?—We never use the net for mackerel, we generally use the line. They are very plentiful about the month of September.

27,416. Are there any shell-fish caught here—crabs and lobsters?—Yes, they are very plentiful.

27,417. Which is most plentiful?—The crab.

27,418. Is the crab-fishing a profitable fishing for the fishermen?—Yes, they get a good livelihood out of it.

27,419. Is there a large fishing carried on?—Yes, it is somewhat extensive.

27,420. Do you know whether it is increasing or diminishing in quantity?—I should say that it is increasing, but I am told that it is diminishing.

27,421. Perhaps you do not know much about it personally?—I can only speak for our own place, North Berwick; but I am told that it is decreasing here.

27,422. Is the crab fishery increasing in North Berwick?—Yes; the quantity they catch is increasing, but there are more men and more boats engaged in it.

27,423. Is there a large number of men engaged in it?—There are about 60 men in the place, and every one is engaged in it.

27,424. In what season is it followed?—After we drop this fishing we commence immediately and continue till we go to the winter herring-fishing; then we commence again in April, and continue till we come to this fishing again.

27,425. Do you not consider the proper season for the fish to be in condition when you are fishing for crabs; is there not a season?—Sometimes the spawn is in the crab, but we never take any of them when they are in that condition. When they cast their shell we put them overboard, but we take none but the black ones.

27,426. Is there a good lobster fishery?—It is only very moderate. It has not been very large.

27,427. Is it improving or diminishing?—It is diminishing I think about North Berwick on account of there being more men employed in taking them.

27,428. Are there any oyster-beds here?—None.

27,429. Is there nothing along the outside coast at all?—No.

27,430. Is there nothing in the Firth below Inchkeith?—At Cockairney and Prestonpans there are some.

27,431. Are they a good deal fished?—I think they are towards that direction.

27,432. I think you said you use herrings for bait on your cod-lines?—Yes.

27,433. Do you use any means in particular for catching the herrings you employ for bait, or do you catch them by means of the drift-nets?—Only by the drift-nets.

27,434. You have no particular kind of line for catching herrings for bait?—No, we never use the line for herrings.

27,435. Have you ever heard of a line called the "dandy" line—where is it used?—The people about Dunbar use the dandy line.

The witness withdrew.

T. Eason.

THOMAS EASON called and examined.

27,436. (*Mr. Caird.*) You have heard the evidence of the last witness?—Yes.

27,437. Is it your opinion that the quantity of fish caught off this coast is increasing or diminishing?—It has diminished for these three or four years past—both the herrings and the haddocks along our coast. They have diminished along North Berwick and even down to Dunbar up to this season.

27,438. Are there more men and boats engaged in the fisheries this season than there used to be?—There are not many more boats in North Berwick. There are 10 or 11 here, but not many more.

27,439. Does the number keep pretty stationary?—Yes. There may be a few more, but the boats have not increased very much.

27,440. Have the men been making as good a living of it as usual?—For the last three or four years it has been very moderate indeed.

27,441. Is there any particular kind of fishing that is less productive than others have been in that time?—Both the haddock and herring, and the cod-fishing, have been less productive.

27,442. Has the price continued good?—Yes.

27,443. Has it improved?—It rises and falls just much about the same.

27,444. And what do you think has been the cause of the diminution of the fish; is it because there are more people engaged in it than can find a profitable employment?—I have not heard any complaints among ourselves about the number of people employed in it. With regard to the cod-fishing, we were generally employed in the cod-fishing about the months of November and December before we commenced the herring-fishing. We generally went up to Newhaven for herrings for bait, and we got from three to five score cod on an average. Sometimes we got as high as 9 and 10 score, and they were good-sized cod. That was previous to the last four years back.

27,445. What happened then?—The trawlers came then, and since the trawlers came we have got none.

27,446. Did the trawlers begin to come about four years ago?—Yes; a good many of them. There were six or eight trawling occasionally. There was a regular stationed trawler about two years previous to that. He carried on trawling all the year round.

27,447. Was that the steam-trawler?—No, it was a smack. It was about two or three years before they got the steam-trawler.

27,448. Then you got a steam-trawler?—Yes; then the steam-trawler came, and he along with the Hull trawlers carried on trawling all the summer season. They generally came throughout the year, and they went down along the grounds which were the feeding beds where the cod fed.

27,449. That is in the night?—Yes; where they got great quantities of craw-fish. That is the name we generally give them. They get them in the cod of the trawl, and I have seen them bring in many hundredweights of them and throw them on to the beach.

27,450. Many hundredweights of the craw-fish?—Yes. Since these trawlers came the cod-fishing has been so unremunerative that it has not been tried. We seldom try it now.

27,451. Did the trawlers go on the same ground which you have been in the habit of fishing with your lines?—Yes, they generally went out and in. Sometimes they went out for two or three miles, and sometimes to a longer distance from the shore.

27,452. They went, upon the grounds which you were in the habit of fishing?—Yes, on the same grounds.

27,453. But they have discontinued this year?—Yes, they have not come back this year.

27,454. What has been the reason of that?—Our good fishing time has to come on yet.

27,455. How has the haddock-fishing been?—It has been very good this year. It has been not nearly so good for the last four years past.

27,456. Then this has been the best fishing for four years?—Yes.

27,457. Do you think that is in consequence of the trawl-vessels having removed?—Yes, we do think so indeed.

27,458. With regard to the herring-fishing, have you the same complaint to make, that the shoals are not as strong as they used to be?—Yes.

27,459. What is the cause of that?—We do not know of a more effectual plan that could be adopted to keep the herrings off the coast than for these trawlers to go along the coast.

27,460. Do you agree with the last witness that the trawlers come on the same ground among the herring-fishing boats?—Yes.

27,461. They have paid no regard to the herring-fishing being going on there?—No.

27,462. You have never thought it necessary to complain, or you have made very little complaint?—Yes, we were always making complaints, and a deputation was sent up to Edinburgh.

27,463. But I understood that you got no redress?—No.

27,464. Have you been herring-fishing this year?—Yes.

27,465. Have you had any trawlers among you since you began?—No. We generally come down in Dunbar Bay towards the first of the season, but we get the herrings further up in the month of August.

27,466. Do you find that the harbour of Dunbar has been much improved by the expenditure which has been made upon it for the convenience of the fishermen?—Yes, very much so.

27,467. Are you allowed to resort to the harbour without paying dues?—We pay a licence duty.

27,468. To whom do you pay it?—To the town of Dunbar.

27,469. Do you pay it for each boat?—Yes, for each boat.

27,470. For the whole season?—Yes, for ten crans.

27,471. What is the duty?—Ten shillings for the licence, one and sixpence for the lights, and one and threepence for anchorage.

27,472. These sums are paid for each boat?—Yes.

27,473. How many boats pay it?—300, I should suppose, or more.

27,474. Do the Newhaven boats and the Buckhaven boats pay it?—Yes.

27,475. Has it enabled you, coming from some distance, to practise your fishery with greater success from the fact that you can come here with ease?—Yes, that is a great advantage to us.

27,476. Is it of great advantage to all the fishermen on the coast?—Yes, it gives us a much greater advantage than we had formerly.

27,477. Then is this made the head-quarters of the fishing during the season?—Yes, for the mackerel-fishing, but if the herrings are to be got more up the Firth then they generally resort to North Berwick, but they come to Dunbar for better prices.

27,478. Is the harbour easily run to in case of a gale or anything that obliges you to leave the sea?—Yes, now it is.

27,479. Can you get into it at low tide?—No, I think not.

27,480. Is it finished yet?—No, it is not finished.

27,481. Do you ever run into Anstruther Harbour?—Occasionally; but very seldom.

27,482. There is not so good a market there I suppose?—Yes, the market is very good. If the herrings are got on the Fifeshire side we generally go there.

27,483. Would it be of advantage to the fishermen to have an easily accessible harbour at Anstruther?—It would be of great advantage to the fishermen in the winter fishing.

27,484. It would be of great advantage if you could have a harbour on each side of the Firth, which you could take to when the wind suited?—Very much so.

27,485. (*Professor Huxley.*) What is the tonnage of the boats you use in your fishery?—They average about 15 tons here.

27,486. Are they decked boats or only half-decked?—Half-decked.

27,487. What does a boat of that sort, with all her fittings, cost?—From 100*l.* to 150*l.*

27,488. With her sails and gear?—Yes, from 100*l.* to 150*l.*; but it depends, of course, upon the size. They run from 36 feet to 45 feet. A boat of 45 feet will cost about 175*l.*

27,489. Do you use the same boats for the herring and for the line-fishing?—Yes; but we generally approve of the larger boats for going to the deep-sea fishing.

DUNBAR.
T. Eason.
26 July 1864.

27,490. What is the length of your fleet of nets?—About 600 fathoms.

27,491. For each boat?—Yes; less or more.

27,492. What is the size of the mesh?—About 22 to the yard generally; but some of the fleets will be about 800 fathoms long.

27,493. The mesh of your net is 22 to the yard?—Yes, generally.

27,494. Does anybody look after the size of the mesh?—No, not here.

27,495. Nobody at all?—No.

27,496. There is no Fishery officer here?—Yes; but the size of the mesh is never called in question here.

27,497. I suppose that you never care to use a smaller mesh?—When there are smaller fish we generally use the smallest mesh we have.

27,498. What is the smallest mesh you have?—36 to the yard.

27,499. Do you make no nets smaller than that?—No, we have none smaller than that.

27,500. Why do you not make your nets smaller than that?—That is as small as a herring is to be got.

27,501. Do you know of any law against your making your nets smaller than that?—There formerly was a law, but I do not know whether it be in force now or not.

27,502. Do you light your boats in any particular way at night?—Yes; we generally have a light up at night.

27,503. Have you one light or two?—Only one; but we generally carry a torch.

27,504. You light that when you see a vessel or a steamer approaching?—Yes.

27,505. Did you ever hear of this regulation: "In "order that boats fishing with drifting-nets may be "easily recognized at night the masters of those boats "shall hoist on one of their masts two lights, one "over the other, three feet apart; these lights shall "be kept up during all time their nets shall be in the "sea between sunset and sunrise?" Did you ever hear of that?—I never heard of that regulation.

27,506. Do you carry any vane at all?—No, none.

27,507. You have no vane?—No.

27,508. Did you never hear of any regulation that you should carry a particular kind of vane?—No.

27,509. Did you ever hear of this regulation: "For "the purpose of distinguishing by day drift-net fishing "boats from trawl-boats, both shall carry at the mast-"head vanes which shall be at least eight inches in "height and two feet in length." Did you ever hear of that?—No.

27,510. You heard what the previous witness said about shooting nets before sunrise?—Yes.

27,511. Did you ever hear of the regulation that was read about that?—No, I never heard of that regulation.

27,512. The cruiser has never called your attention to it?—No, never.

27,513. How is it about shooting your nets on a Sunday, do you ever do that?—No. There are a few boats that prosecute the fishing on a Sunday evening.

27,514. There are some that do?—Yes.

27,515. Does anybody ever meddle with them?—No, I think not.

27,516. Do the trawlers do you any harm by getting foul of you?—They have done harm to some boats, but not to mine.

27,517. Is it within your own knowledge that they have done injury to some boats?—Yes; there is one man here whose nets they cut.

27,518. Is he here now?—Yes.

27,519. Did you ever hear of this regulation: "Trawl-boats shall always be at a distance of at least "three miles from all boats fishing for herrings or "mackerel with drift-nets?"—Never, until I went to Mr. Woodrow, and he showed a small book with a few regulations in it, and there was in that book a regulation similar to the one you have read. He was quite surprised that it was not attended to, and that no notice was taken of it.

27,520. Did you point that out to the Fishery Board when your deputation went to Edinburgh?—Yes.

27,521. What did they say?—It is just two years ago now, and we have got no positive answer.

27,522. The Fishery Board would not act?—No.

27,523. When they were called upon?—No. I think it was about the month of November or December, because the steam trawler was still carrying on the trawling at the time. It was before the winter fishing commenced that we went to Mr. Woodrow to see what could be done.

27,524. How long is that ago?—I think it was in the year 1862.

27,525. Did you go with the deputation?—Yes.

27,526. You went yourself?—Yes, I think it was in the month of November.

27,527. Whom did you see there?—We saw Mr. Primrose, and we were before the Lord Advocate at one time.

27,528. Do you recollect what reply you had—you were one of the deputation yourself?—Yes.

27,529. What did you state to the Lord Advocate?—We told him the principal cause of our complaint was the trawling of the small fry up the Firth.

27,530. Up the Firth?—We complain against the large trawlers, but our principal objection was to the small trawlers which were the foundation of the entire destruction.

27,531. But you did also complain of the large trawlers as well?—Yes.

27,532. Did you complain of their interfering with the working of your drift-nets?—Yes.

27,533. What reply did you receive?—His lordship said that he could not make us any statement until the Commission had completed their inquiry and made their report. At that time he had not seen it, but he said that when it was handed in he would send it, and tell us what it was that those gentlemen said.

27,534. What Commission do you refer to?—Colonel Maxwell's Commission.

27,535. That is the Commission of which I was a member?—Yes.

27,536. By the trawling you are talking about now, you mean beam-trawling?—No, I refer to the circle-trawling.

27,537. Has there been none on the coast here?—No, it is up the Firth.

27,538. The steam-trawling you complain of is not circle-trawling?—No.

27,539. Did you go to the Lord Advocate to complain of the steam-trawling?—Yes, partly, and also of the circle-trawling.

27,540. It is circle-trawling you are talking about, and not beam-trawling?—Yes, that does us the greatest injury.

27,541. You complained of that too?—Yes.

27,542. What kind of fishing is it—will you state; is it by means of a small seine?—Yes, they shoot the net in a sort of half circle; they haul in both ends, and they haul in with the fish tons of small fry; it makes an extraordinary destruction.

27,543. Was that fishing for sprats or garvies?—Yes.

27,544. They were fishing for garvies?—Yes, but it was almost all herrings that they got.

27,545. And you consider that destruction of herrings injures your fishing out here?—Yes, particularly the winter fishing. It does not injure the summer fishing, but it does the winter fishing very much.

27,546. You are quite clear that with respect to the trawling outside, the Lord Advocate said he could do nothing at present?—Not at that time.

27,547. Do you agree with the other witness as to the harm done by the beam-trawling outside?—I agree in everything he has stated as almost every man here does, I believe.

27,548. What remedy would you propose?—Altogether suppression of the circle-trawling.

27,549. You would put down circle-trawling altogether?—Yes.

27,550. Is that inside the Firth?—Yes, and we shall never get a good fishing again, such as we had, unless it be suppressed.

27,551. Would you also suppress the beam-trawl?—Yes, in the Firth of Forth.

27,552. You would not allow it to go on at all?—No.

27,553. Not in the open sea?—No; one of the witnesses spoke of the haddock-fishing; now I do not see that we have anything else to blame for having to go such long distances for haddocks every year than trawling. We have gone from 20, 30, and 40 and up to 70 miles for haddocks upon no other account than that the food has been taken off. In a few years it will be beyond where we can bring them to market that we shall be able to obtain them.

27,554. Do you think that that is the fault of the beam-trawlers?—Yes, I do think so.

27,555. Would you have beam-trawling put down altogether then?—Yes.

27,556. (*Mr. Caird.*) You say the use of the circle-nets is very injurious to you in your fishing down here and that has been within recent years. It has been carried on within the last 20 or 30 years to a great extent. When did you begin to find that it was seriously injuring your fishing here?—As soon as it commenced, and we petitioned against it.

27,557. That is 20 or 30 years ago?—Yes.

27,558. Then these serious injuries are not of recent date at all?—It has destroyed the herrings in the Firth of Forth. We used to have the best of fishings up at Burntisland and Queensferry; now they only come to the Isle of May.

27,559. Were there as many people engaged in the fishing 30 or 40 years ago as now?—No.

27,560. Were there the half of them?—There were fully more than half in the winter time, and they made much better fishings.

27,561. For each boat?—Yes.

27,562. Was the whole quantity of fish caught then as much as it is now?—I do not think it.

27,563. Then it would appear that the circle-net fishing has not destroyed the fish in the Firth of Forth?—There are many more boats engaged now.

27,564. But still there are more fish caught now?—There has not been so much these last three or four years.

27,565. This circle-net fishing for garvies has been in existence quite as long as you remember?—Yes.

27,566. It was in existence when you became a fisherman at first?—Yes.

27,567. And it has been continued ever since?—Yes, more or less.

27,568. It has been rather restricted of late, has it not?—I do not think it has; last winter the fishing was as bad as ever it was.

27,569. But was it not restricted by law?—It was restricted and they drew a boundary line. They were not to fish within certain points, but it was ridiculous to draw a boundary line above the water when they could not draw one below the water to prevent the herrings mixing with the sprats.

27,570. But if there were a boundary line would not there be a large extent of the Firth left untouched by the circle-nets? Would not that be so?—I do not know.

27,571. When that law was in force did the quantity of fish in the Firth increase?—No.

27,572. That would rather be against your statement then?—There were really no restrictions; although the steamers were there, they never restricted the trawlers. In point of fact they trawled in most of these parts, and the small herrings got where the steamer was riding in Granton Harbour.

27,573. Your complaint is principally against the circle-nets?—Yes.

27,574. You do not think that so much damage is done by the beam-trawlers?—Yes, I think they do damage, but the root and foundation of the matter is circle-trawling.

27,575. Has not damage been done to the haddocks as well as the herrings?—Yes.

27,576. Are any haddocks caught with the circle-nets?—No.

27,577. On the whole, taking your experience over so many years, can you say whether the quality of the haddocks and of the other fish is as good now as it used to be?—I do not see any difference in the quality.

27,578. Do they come at the same seasons?—Yes, but we do not get the same quantity of haddocks in the Firth of Forth that we were in the habit of getting formerly.

27,579. But I understand that now the beam-trawlers have removed, the haddocks have returned again in as great abundance as before?—That may be so on the Berwick shore, but it has not been the case along the Fifeshire shores.

27,580. Do you fish on the Fifeshire coast?—I come from Buckhaven.

27,581. Do you yourself ever go far out to sea to fish?—I have not been far out for some years.

27,582. Have you any complaint to make of interference by any Fishery officer, or any man-of-war, which in any way prevents you from fishing in the way you consider best?—No, I only think that the law should be more stringent than it is in regard to putting down the circle-trawling.

27,583. That seems to be your great complaint?—Yes.

27,584. Is there any other matter you complain of?—Only the beam-trawl.

The witness withdrew.

ROBERT SMITH called and examined. *R. Smith.*

27,585. (*Mr. Caird.*) You are a fisherman here?—Yes.

27,586. You have been long familiar with the different kinds of fishing carried on off the coast of Dunbar?—Yes.

27,587. What is the most valuable fishing?—Generally the haddock-fishing is the most constant.

27,588. Is there more got out of the herring-fishing?—I cannot say. The haddock-fishing is carried on for a greater length of time.

27,589. For a greater number of months in the year?—Yes.

27,590. Are the same boats employed in the herring-fishing as in the haddock-fishing?—Yes.

27,591. The same boats and the same men?—Yes, except when we come inshore, and then we use small boats called yawls.

27,592. What time do you practise fishing?—In the summer time, from the month of April up to this time.

27,593. Do you find that in the warm months the fish come inshore?—Yes.

27,594. And in the cold months they go into deeper water?—Yes, you will scarcely find a haddock in the winter season in this bay.

27,595. Is that the case in the Firth of Forth?—I believe it is.

27,596. Do they change according to the temperature?—Yes, according to the season.

27,597. Have you found in your experience that the quantity of cod taken here is increasing or diminishing?—It has greatly diminished.

27,598. To what do you attribute that?—Why they have taken up and gone off the coast. We can-

DUNBAR.
R. Smith.
26 July 1864.

not see them, and they appear to me to have gone out of our reach.

27,599. What has occasioned that?—It is partly owing to want of food, I think.

27,600. Have you any idea what is the cause of the want of food?—If it is taken up in the trawls that must be the reason, I think.

27,601. Do you think the trawlers fish the bottom so very closely that they take up all the food?—I have no doubt that they take up a good quantity of it.

27,602. Do they bring it ashore?—They have done so. There have been no trawlers along the shore here, only at North Berwick.

27,603. Then you speak of what you have heard, and not of what you have seen?—We see nothing of the kind here, but we see trawlers in the offing on the grounds.

27,604. How far off are they here?—About six miles.

27,605. Do you call that inshore?—No.

27,606. In what depth of water do they fish?—From 52 to 30 fathoms.

27,607. Is that on the same ground you fish with your long-lines?—Yes, off the Bass Rock.

27,608. Is rough ground or smooth ground the best for the long-line fishing?—Smooth ground.

27,609. Then when the trawlers come upon that ground they are more injurious to you?—Yes.

27,610. Do they come much upon that ground?—Yes; they have not done so this season so much as they used to do.

27,611. Have you had a good fishing this year?—It has been very moderate.

27,612. Did you hear the evidence of the previous witnesses who said that they have had a much better season this year?—I believe the North Berwick fishermen are getting as many fish again as we are getting in our bay.

27,613. You don't find the fish in your bay?—No.

27,614. With regard to the cod-fishing, have you any good cod-fishing here?—It is very moderate.

27,615. Is it increasing or diminishing?—It is diminishing greatly.

27,616. Is that further out still?—Yes, it is further out. I remember one winter season 15 years ago when we got eight or 10 score on our small hooks, and now we will not get five in the winter season on all the length of lines we have, and yet we are going 20 miles distance from here after them.

27,617. You have further to go to sea and you get fewer when you do go?—Yes, in the winter season.

27,617*a*. Are there more boats engaged in the fishery than there were in former years?—There are not more that go to the haddock or to the deep-sea fishing. There are rather too few at Dunbar. They are engaged in crab-fishing in the winter and in the spring.

27,618. Is there a large crab-fishing here?—Yes, it is largeish along the south side.

27,619. Are there many boats engaged in it?—About 32 at Dunbar.

27,620. Is the catch of crabs decreasing or increasing?—From my own experience I should say that they have diminished within the last five years. We have scarcely been able to make a living by them, in point of fact we have had to drop it altogether.

27,621. Was that because it was unremunerative? Yes.

27,622. Are the prices good?—The prices are about the same.

27,623. But the quantity you can get has diminished?—Yes.

27,624. Have the boats which are employed in that fishing much increased?—Not for the last five years.

27,625. Have you any lobster fishery?—No, except that we catch one or two sometimes in our crab creels.

27,626. The crab creels are chiefly planted for lobsters?—The lobsters will scarcely come in upon fresh bait. Within the last 20 years we have scarcely had any lobsters on this coast at all.

27,627. Was there formerly a good lobster-fishing?—Yes, very good. Some of the boats got five or six score a day. They sent them to the London market. Smacks were in the habit of coming here 15 or 20 years ago and taking them away from the fishermen to the London market.

27,628. Is there any oyster-fishing here?—No.

27,629. Has the herring-fishing at Dunbar been improving?—Not within the last three years back.

27,630. The proportion of herrings sent away fresh to the market is increasing every year?—More go away fresh than have been salted for these three years back.

27,631. Do they pay better fresh?—Undoubtedly; but sometimes they have not paid the merchants; they have been sent too fresh.

27,632. Do you strictly observe the regulations as to the time at which you should shoot your nets for herring?—The nets should not be shot until the sun is just taking the water.

27,633. Does anybody fish them in the daytime?—Yes, at times they go to the ground towards the end of the summer season in the daytime.

27,634. Towards the end of the summer season?—Yes; from September. That is the time allowed by the town here. It is under an old Act.

27,635. Does the town give regulations as to the mode in which the herring shall be fished?—No, it just states the time.

27,636. Who states it?—The council I think.

27,637. Does the council issue any law or byelaw or regulations as to the mode in which the fishing is to be followed on this coast?—No.

27,638. Then how does it state a time?—It is just an Act they have among themselves.

37,639. Do they put the bell through the town to state the time at which the fishermen are to put out their nets?—I have scarcely seen a notice with regard to the matter.

27,640. Then how do you know there is a time stated at all?—I know they have it in some of their old Acts, but they never carry them out.

27,641. Is it a necessary thing that at the end of the summer season you should fish with ground-nets instead of drift-nets?—I think so when we cannot get them to float upon the water, and therefore cannot obtain them by driving with our nets.

27,642. At such times you sink your nets and anchor them?—Yes.

27,643. Are the fish you find there in a different condition from those you catch in the drift-nets?—They generally go there and spawn.

27,644. Do you think that you cause great destruction when they are in that spawning state?—I cannot say.

27,645. May you not cause more destruction by that mode of fishing than by most of the other modes of which you complain?—I can scarcely answer that question.

27,646. You consider that a mode of fishing beneficial to yourselves?—Yes.

27,647. You never anchor your nets until the herrings are on the ground for the purpose of spawning?—Sometimes they are not spawning when we shoot our nets. Sometimes we may fish among them for a couple of weeks together and get good fish before they move away. One season about five or six years ago they just rose up to the surface of the water as the sun was going down, and they made a perfect fool of us by going down again directly we put our nets out. It was not until we got our nets upon the ground that we got any from them.

27,648. Did they come to the surface when you set your nets upon the ground?—When we put them on the surface they came up and the nets floated among them, but they would not take them. Then they went down again to the ground and the boats would be chasing them to make them go into the nets. Yet they would get none until they put their nets to the bottom and set them there.

27,649. When you did that you were enabled to catch the fish?—Yes.

DUNBAR.

R. Smith.

26 July 1864.

27,650. If there had been any regulation to prevent you from grounding your nets you would not have been able to get them ?—No ; there would have been great scarcity.

27,651. If you were told that it destroys the future brood of the fish when you take them in that state in spawn would that prevent you from fishing them ?—I have no doubt that to take anything when it is going to cast its young is an injury.

27,652. But you don't stop upon that account ?—No ; but we are not sure when they are going to spawn. We can only fish for the herrings where they are. We could not take you if you were out of the room, and so it is with the herrings.

27,653. What you mean is, that the herrings may leave and that if you don't catch them when they are upon the ground you can't catch them at all ?—Just so.

27,653*a*. Then you catch them whether they are in condition or not ?—We take them when they are spent, and in that state we do not do much harm to the brood.

27,654. But you do catch them at the very moment you believe that you do great injury to the brood ?—If you are going to argue that point why you may as well stop fishing altogether.

27,655. I put the question for this reason—you complain that other people injure the brood in other places. Now it is necessary to find out if you are careful of the brood yourselves ; that is the point. Do you regard that question at all in prosecuting your fishing operations ?—No doubt of it.

27,656. You do not ?—Yes, we do.

27,657. You would not fish if you knew the fish were about to spawn ?—But we have got fish three weeks before they spawned.

27,658. (*Professor Huxley.*) Are they all full fish then ?—They are full now.

27,658*a*. (*Mr. Caird.*) If you were prevented by law from catching fish when they are full and when the brood is likely to be injured, would it not put a stop very much to your profitable fishing? Would not that be so ?—Yes ; undoubtedly.

27,659. The fish are then in very good condition for consumption by man ?—Yes ; at least the merchants all along the coast are keener to get them just before they spawn. They like them better then than at any other period for curing.

27,659*a*. Is there anybody who ever interferes with you at all in order to see that the mesh of your net is of the proper legal size ?—No, I have had no nets examined since I became a fisherman, 23 years ago.

27,660. Does nobody come to see at what time you shoot your nets, or whether you adhere to the law in that respect ?—No.

27,661. No fishing-vessel or man-of-war comes in to see whether you obey the requisitions of the law on those points ?—No, we have had no restrictions of that kind enforced.

27,662. You have nothing of that kind to complain of ?—No.

27,662*a*. The Fishery Board in no way interferes with you ?—No.

27,663. Are there curing establishments here for the curing of herrings ?—Yes.

27,664. Is the Fishery brand put upon the barrels here ?—Yes ; the Fishery officer stationed at Eyemouth comes here occasionally.

27,665. Does he brand the herrings ?—Yes.

27,666. Have you no Fishery officer stationed here altogether ?—No.

27,667. Are the herrings which are put in barrels branded under the inspection of the Fishery officer all the time they are being cured ?—He examines a barrel here and there belonging to every merchant.

27,668. How many barrels have you cured here in the course of the season ?—I can hardly tell you that.

27,669. Have you cured some thousands of barrels ?—Yes.

27,670. Is the Fishery officer not here all the time that is going on ?—No.

27,671. Then are the barrels made up, the herrings salted, headed up and finished off before the Fishery officer comes near them ?—No ; he comes here in his rounds and examines them. There may be so many hundred packed up before he comes, and he examines one or two of them.

27,672. If he finds those sufficient does he pass the whole ?—Yes.

27,673. Does he generally open the barrel ?—Yes, in order to ascertain if the herrings are properly cured.

27,674. He examines a few sample barrels out of the lot ?—Yes.

27,675. Being satisfied with that he puts the full Crown brand upon them ?—Yes.

27,676. Then there is no real inspection of every barrel ?—No, that would cause a great deal of trouble.

27,677. Does that inspection as far as it goes insure that the cure is carefully done ?—They just take the merchants' word for it. It is the merchant or his foreman who looks after such things.

27,678. (*Professor Huxley.*) Do you set trammel-nets here ?—No.

27,679. Do you know what they are ?—Yes.

27,680-1. Do you catch any turbot here in brat-nets ?—Yes.

27,682. Are they much caught ?—No, we generally put the nets out at this season when the herrings are on the coast ; they generally follow the herrings.

27,683. Is there any considerable fishery for turbot here ?—Not much ; about five or six boats.

27,684. Do you get more cod or haddock with one particular net than another ?—If we had north, north-east, or easterly winds there would be more fishing.

27,685. There would be then more of cod and everything else ?—Yes.

27,686. You do not notice any difference outside ?—No, not in the offing.

27,687-8. Is there any oyster-fishing about here ?—No.

27,689. You heard those regulations which I read to the last witness ?—Yes.

27,690. Did you ever hear of them before ?—No.

27,691. Nobody takes the trouble to look if your lights are right ?—No.

27,692. Have you got any vanes ?—No.

27,693. Have you ever had any damage done to your drift-nets by the trawlers ?—No.

27,694. Do you think that damage is often done by them ?—Yes.

27,695. Have you known people whose nets have been damaged by the trawlers ?—Yes, there are men that I know who have suffered.

The witness withdrew.

JOHN THOMSON called and examined.

J. Thomson.

27,696. (*Mr. Caird.*) You are a fisherman at Buckhaven ?—Yes.

27,697. You have heard the evidence given to-day ?—Yes.

27,698. Do you agree with it ?—Yes.

27,699. Have you nothing to add to it ?—No.

The witness withdrew.

DUNBAR.

D. Thomson.

26 July 1864.

DAVID THOMSON called and examined.

27,700. (*Mr. Caird.*) You are a fish-curer, Mr. Thomson?—Yes.

27,701. Is there a large proportion of the herring caught here cured?—No, it is very small.

27,702. Can you give us any idea what proportion of the herrings caught here are cured?—In former years when the fishing was good about two-thirds were cured, but for the last three years there has scarcely been any. I don't think any have been branded for the last three years.

27,703. Is there very little cured now?—There has not been much since the falling off in the fishing.

27,704. Is not that partly caused by the fact that there is a ready demand for fresh fish?—Yes, the quantity being small, it is scarcely adequate to supply the fresh market.

27,705. Is it not more profitable to send fish to the fresh market?—I am not so sure of that.

27,706. Would not that naturally be the case?—It was supposed to be so, but in many cases it did not turn out to be so.

27,707. Then you have had very little curing lately?—Yes, for the last three years.

27,708. How many were cured here last year?—Perhaps about 200 or 300 barrels.

27,709. The Fishery officer does not reside here?—No. This is in his district as well as Berwick-upon-Tweed. I believe he resides at Eyemouth.

27,710. Does he inspect the cure at these different stations?—Yes.

27,711. Then he cannot be present when the barrels of fish are being cured and packed?—Occasionally he may, accidentally.

27,712. But there may be large quantities put up without his inspecting them?—Yes, large quantities without his immediate inspection.

27,713. Might some of them be in an unfit state for curing?—Yes.

27,714. And he would not be able to detect them?—Very possibly he might.

27,715. How?—He has liberty to open 10 barrels out of every 100, and if the fish are imperfectly cured it would be impossible for him not to detect it in opening 50 out of 500 barrels.

27,716. If he got one bad barrel, would he condemn the lot?—Yes, he has it in his power to do so.

27,717. Do you know any instance in which that has been done?—I cannot refer to any particular instance which has been brought under my notice, but I know he has the power.

27,718. Does he often condemn fish?—I have seen him condemn several when he found two or three barrels cured in an improper manner.

27,719. His inspection is such as to insure that the herrings which receive the brand are really worthy of it?—Yes, I think it is.

27,720. Do you think that the effect of that inspection is such that it insures that a better quality of herrings is prepared and sent to the foreign markets?—Yes.

27,721. Would not the self interest of the curer be a sufficient motive to induce him to prepare a good article?—It might after a few years if the brand were taken away, but it would cause a revolution in the trade if the brand were abolished.

27,722. Is that because foreigners are in the habit of relying upon the brand?—Yes; it is a guarantee to them.

27,723. Would they not equally rely on the name of a good curer?—They might after a few years.

27,724. Then as a curer you prefer to have the brand and to pay for it?—Yes.

27,725. Do you think that it gives you an advantage in the foreign market worth the cost of it?—Yes, I have no trouble with my herrings. The Crown brand testifies as to their character.

27,726. It in no way misleads the foreigner?—No.

27,727. If by accident out of 500 barrels one barrel should be bad, and the Fishery officer should not discover it and it should receive the full brand, would not the foreigner in that case suffer?—Yes; and the curer would be a sufferer in the end, because he would not be trusted any more.

27,728. But would the curer be known?—The curer's name is on the barrel and the place of cure as well.

27,729. As well as the brand?—Yes, and the Fishery officer's initials.

27,730. Then every barrel must have upon it the curer's name?—Yes, and the date when the fish are cured must be put upon the barrel. It is dated on the bottom. Before they are put down to be exported the date is put upon them with a scarving iron on the bilge, something in this way:- "T. G. B., T. F., gutted, full."

27,731. The curer's name being on the barrel if one turns out bad is he not a sufferer in consequence?—Yes.

27,732. So that notwithstanding the brand he is not covered from injury?—The broker guarantees the article he presents.

27,733. Do you buy other kinds of fish as well as herrings?—Not much. Of sprats I buy a large quantity.

27,734. Up the Firth?—Yes.

27,735. Is it at Queensferry you buy them?—No, at Newhaven.

27,736. Have the late alteration in the law at all affected the catch of sprats?—I should think so.

27,737. Have the limits within which the law fixes the right of fishing for sprats caused a diminution in the quantity caught?—Yes.

27,738. If the limits had been strictly adhered to would there have been any sprats caught at all last year?—Not any that would have been of use.

27,739. Have you ever observed a large proportion of young herrings mixed up with the sprats?—Occasionally there is a mixture, but if we have a good sprat-fishing there are no herrings. In point of fact, we won't take them if we can avoid it.

27,740. You prefer all sprats?—Yes, sprats being a superior fish while the herrings are in that state.

27,741. In following that business you have frequent opportunities of speaking with the sprat fishers?—Yes.

27,742. Do they complain of being limited within a certain boundary?—Yes, they do complain very much. Last year there was a deal of sprats off Burntisland, but the fishermen were strictly watched and driven away, and the consequence was that they were compelled to take young herring.

27,743. In consequence of the present state of the law they were obliged to leave ground where there was good fish, and come upon ground where there was inferior fish?—Yes, where there was fish that would not realize a good price anywhere.

27,744. Is that sprat fishery an important interest?—Yes, a very large quantity are caught in the Firth.

27,745. Can you tell us what the quantity is?—I think the Fishery officer told me somewhere about three years ago that the value of the quantity of fish caught at Newhaven, Queensferry, and Burntisland, amounted to somewhere about 25,800*l.*

27,746. 25,800*l.*?—Yes, about 15,000*l.* to the fishermen, and 10,000*l.* to railways.

27,747. Has that decreased?—Oh yes, considerably.

27,748. Entirely by the operation of that restrictive law?—I cannot say entirely, because some years we have had more than others, but that has had a great deal to do with it.

27,749. Do you think that the two kinds of fishing, namely, herring-fishing and sprat-fishing, might be followed without injury to each other by regulations preventing the boats from mixing?—I think the best regulation for sprat-fishing would be for the fishermen to be conscientious and not take herrings.

27,750. But you cannot trust the consciences of men when their interest is deeply engaged. It is

DUNBAR.

D. Thomson.

26 July 1864.

necessary for the protection of their neighbours that you should have some regulations established?——Yes.

27,751. Could not regulations of a police character be established so as to prevent one fishing from injuring the other, and enable both to be carried on at the same time?—I don't know. The only way is not to allow young herrings and herring fry to be sold, and if you stop the sale of them the fishermen would not care about catching them.

27,752. Are they all caught mixed occasionally?—They are; that cannot be avoided.

27,753. Then you could not separate them when you were going to sell them?—In many cases the sprats are in one place and the herrings in another, one on one side of the Firth and the other on the other.

27,754. (*Professor Huxley.*) You are altogether in favour of the branding system?—I am.

The witness withdrew.

J. Murray.

JOHN MURRAY recalled and examined.

27,755. (*Mr. Caird.*) I believe you are anxious to make some observations with regard to the sprat-fishing?—Yes. It is seldom that there has been any sprat-fishing beneath that boundary line to which Mr. Thomson refers and in which they were prohibited from prosecuting the fishing. There has been very little fishing there ever since I knew the fishing.

27,756. But they did fish there this year, or rather last winter?—I believe they did, but that is ground on which the sprat-fishing is seldom prosecuted. It is generally carried on up the Firth.

27,757. Are you engaged in the sprat-fishing?—No.

27,758. Have you fished upon the grounds where the sprats are caught?—I have been upon them.

27,759. Then are you as competent to give an opinion as the men who have followed it for a livelihood?—I have not been so long at it but I can tell quite as much about it as they can.

The witness withdrew, and the inquiry was adjourned until July the 27th, at Eyemouth.

Eyemouth, Berwickshire, Wednesday, 27th July 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

EYEMOUTH.

P. Wilson.

27 July 1864.

PETER WILSON called and examined.

27,760. (*Mr. Caird.*) You are the Fishery officer here?—Yes.

27,761. Have you been stationed here for some time?—Since February last.

27,762. Had you any previous experience of the fisheries on this coast?—Not on this coast.

27,763. Upon what part of the coast?—On the north-east coast, down as far as Dungness, and on the west coast.

27,764. How far does your superintendence now extend?—From North Berwick to Holy Island.

27,765. Is that the southern point to which the Fishery Board extend their jurisdiction?—It is.

27,766. How many different fishing stations have you under your superintendence?—13.

27,767. And what is the nature of your duties?—My principal duty is a general superintendence over the fisheries, taking in the returns of the fishing and branding the herrings when they are cured.

27,768. At each of those 13 fishing stations are there curing establishments?—Yes, there are curing establishments at each of them.

27,769. Are the curing establishments chiefly or wholly for the curing of herrings?—They are, I may say, wholly for the curing of herrings, but most of them cure haddocks as well.

27,770. You do not exercise a superintendence over the cure of haddocks?—No.

27,771. There is no brand for the haddocks?—No.

27,772. It is exclusively for herrings?—Entirely.

27,773. Does the process of curing go on at different seasons of the year, both in regard to the summer and winter fishing?—Yes, in the Firth of Forth, but it is not much practised down here.

27,774. It is only for the summer fishing that the curing goes on?—Yes; all the other fish are smoked for bloaters or sent fresh to the market.

27,775. Do you think there is much advantage in the use of the brand?—I am of that opinion.

27,776. Are you able, as Inspecting officer, to gain such an experience of the process of curing as enables you with confidence to affix the full Crown brand to certain barrels as being of that quality?—Yes.

27,777. You do not see the whole of the curing process effected?—No, not the whole; we have a sample of the whole parcel of herrings, perhaps 10 barrels out of 100, which we take as a sample of the rest. We take them wherever we choose from the parcel. We begin at either end, and can go for any distance down the lot. If we find those we examine all right, we take it for granted that the whole of the barrels submitted to us are correct. We seldom fail in discovering anything that is wrong.

27,778. You make an examination before you brand the whole lot?—Yes, we make a rigid examination.

27,779. Do you open any of the barrels?—Yes, and we press the barrel to see if it is sufficiently filled. We then examine the quality of the fish to see that they are all full. Then if we are fully satisfied on those points we brand the herrings. There are a number of things directed to be done by the Fishery Board which assist us in our duties. The curers have to put the name of each packer at the bottom of the barrel and the number. A curer having 10 packers, we should take number one, and if that number was all right we should probably not examine any one of number one's barrels again, but brand all the others as being right.

27,780. So that there is a personal check, as it were, upon the packers?—Certainly. The name and the number are put on the bottom of the barrel, and every individual packer can be discovered in that way, as well as the quality of the work.

27,781. During the time the herring-fishery is going on does it not keep you very much engaged to undertake the whole business of 13 stations?—Yes, but there is not a great deal of branding in this district.

27,782. Is there not a great curing of herrings here?—No, a large portion of the fish is sent fresh to the market and red.

27,783. The red herrings are not branded?—No.

27,784. The brand is used chiefly for the export trade?—Entirely.

27,785. Can you give us any statistics with regard to the quantity of herrings cured within any recent number of years along the different stations?—The whole stations are embraced in one district.

27,786. Does the return for Eyemouth include returns for the whole?—There is no separate return for the different stations.

27,787. Does your return for Eyemouth include the whole of the 13 stations?—No, they give you what is cured.

27,788. You can give us the whole cure?—Yes, for instance in 1855 there were 51,853 barrels cured and 52,690 crans were sold fresh in bulk.

27,789. Then there are returns of the fresh as well as of the cured fish?—Yes, we get it from the railway station.

EYEMOUTH.

P. Wilson.

27 July 1864.

27,790. How much is a cran?—It contains rather more than a barrel; it is the standard measure.

27,791. Do you think that these two quantities include the whole bulk of the herrings that are caught?—I believe they do.

27,792. May there not be a good deal sold for consumption in the neighbourhood that does not pass over the railway?—An approximation of that is added to the quantity.

27,793. And you include the whole catch of fish?—Yes.

27,794. Can you give us a succession of years?—Yes.

—	Barrels cured.	Crans sent fresh.
1855	51,853	52,690
1856	47,235	44,882
1857	53,346	31,649
1858	58,708	23,783
1859	41,707	24,883
1860	44,948	30,514
1861	64,873	33,096
1862	51,729	22,888
1863	36,647	22,078
Total	451,046	286,463

That is the return for the whole district.

27,795. Then the proportion sent fresh to market would seem to be rather on the decrease than on the increase?—It has been so since railways have been opened out in the north.

27,796. Do you think it is because greater railway facilities have been opened further north in Scotland and larger quantities are sent greater distances into the fresh markets from those places?—That has chiefly been the cause. The curers are very reluctant now to send fresh herrings to market; they have not the same chance of getting rid of them as they had.

27,797. It does not pay them as well as it did formerly?—No.

27,798. That is because there is a larger competition from everywhere?—Yes, there is now a competition from Peterhead, Stonehaven, and Montrose. I saw it mentioned last week that herrings had been to the markets of the south fresh from those places. A few years ago there was no such thing.

27,799. The total quantity seems to be very much the same on an average; taking one year with another there seems to be no great increase or decline?—The last two years have been considered a short fishing.

27,800. The last year was a short fishing but the fishing for 1861 and 1862 seems to have been very fair; the fishing for 1861 was the best?—Yes.

27,801. Has the price of herrings within recent years altered much?—Yes, it has altered a good deal but it has been on the increase, I think.

27,802. It has been increasing?—Yes.

27,803. Have you got a return of the prices?—From Eyemouth alone the average price I find in 1855 was 14*s.* per cran.

27,804. Is that for cured herrings?—In 1856 it was 19*s.*; in 1857, 21*s.* 3*d.*; in 1858, 22*s.*; in 1859 20*s.*; in 1860, 22*s.* 8*d.*; in 1861, 22*s.* 8*d.*; in 1862, 21*s.* 7*d.*; for last year I cannot find any record of the average price.

27,805. That is an increase of 33 per cent. since 1855?—Yes.

27,806. That is per cran?—Yes, for the fish sent fresh that is the average price, but sometimes the actual price may be as high as 40*s.*

27,807. Can you give us a return of the prices obtained by the curers?—We cannot give you any idea of the returns of the curers; they keep those returns to themselves.

27,808. You do not know whether the price of cured herrings has progressed in the same ratio?—No, it depends on the catch in the North. The Wick herring-fishing seems to regulate the market. A cran of fresh fish makes a barrel of herrings cured, and the returns which I can give you refer alone to the Eyemouth fishing.

27,809. Is there any observation you desire to make with regard to the present state of the herring fishery on this coast?—I have not been sufficiently long at this station to know anything in particular with regard to it. The fishermen and the curers will be able to give you better information than I can.

27,810. With regard to the quantity of red herrings that are cured, they are not included in the returns at all?—They are not included as cured in the returns.

27,811. I think those branded only were included?—We do not brand any of that quality, but the returns included the whole, both gutted and ungutted, and the crans together, containing those which go away fresh and which merely have a sprinkling of salt over them.

27,812. Can you give us any facts with regard to the catch of haddocks on the same stations?—There are no records by which I can give any account of it.

27,813. Are there no means by which you can arrive at a conclusion with regard to the catch of any other kinds of fish except herrings?—No.

27,814. Is there a valuable haddock-fishing here?—Yes, very; there is a very valuable haddock-fishing practised. It is carried on to a great extent and with more success than in any place to which I have been, both as to the number of boats and the fishing materials. They are very industrious here.

27,815. Are the men and boats on the increase?—Yes, greatly.

27,816. Is the catch on the increase also?—This year I believe there has been a very large catch.

27,817. Has any complaint been made to you by the fishermen as inspector of fish here with regard to any injury they have sustained from any mode of fishing practised?—No, I have not heard any complaint; this coast is not suited for trawling and the trawlers do not come here. The fishermen are very apprehensive of trawling here and are afraid of it, but I have had no complaint that it has actually occurred upon this coast.

27,818. What important fishing is there besides the haddock-fishing?—There is the cod-fishing, but it is not of very great extent.

27,819. Is there any turbot-fishing?—Not much.

27,820. Is there a lobster fishery?—Yes.

27,821. Is it valuable?—It is principally fished by the old men who are not able to go to the deep-sea fishing. I believe it is not of much importance.

27,822. Is there a good crab-fishing?—It is not very good, it seems better along this coast.

27,823. Are there any salmon caught along this coast?—Not here, there are a good many caught five miles south of this.

27,824. Is there any difficulty with regard to getting bait here for the line fishermen?—There is no difficulty at present at all; it comes from Boston Deeps. A great quantity of mussels is used here for bait.

27,825. They do not get them from the Firth of Forth?—No, I do not know that there is any large quantity there. I think from 1,600 to 1,800 or 2,000 tons of mussels are used here. There are 34 boats, and each boat will use about 40 tons of mussels every year.

27,826. There are 34 boats engaged in the haddock-fishing?—Yes.

27,827. And they have about seven men in each?—Yes.

27,828. They all belong to Eyemouth?—Yes.

27,829. How many boats are there altogether in the 13 fishing stations which you have under your superintendence?—I cannot tell you without referring to the fishery returns.

27,830. There are returns which will show that?—Yes, in the office.

27,831. Do you know what markets are chiefly supplied with fish from this place?—The Glasgow

market with smoked haddocks, and the English and Edinburgh markets with fresh herrings.

27,832. (*Prof. Huxley.*) Do you consider it part of your duty to enforce the Convention? Does the Fishery Board of Edinburgh call upon you to do that?—No; but we report to the Fishery Board any encroachment by the French vessels, and the secretary immediately dispatches a vessel to inquire into the matter. We have no power to do that ourselves.

27,833. Is it your duty to report to the Fishery Board?—Yes. Mr. Primrose gives me strict orders to report to him the moment any French vessel appears upon the coast, and every morning to inquire of the fishermen.

27,834. Then action is taken under the Convention?—Yes.

27,835. Are your instructions to call the attention of the Fishery Board to any other breach of the Convention?—No other breach of the Convention has occurred.

27,836. If one of the herring people were to shoot his nets more than half an hour before sunset, would you feel bound to take notice of that?—No, we should not.

27,837. But that is a breach of the Convention?—Yes; but we believe that the Act does not so completely apply to Scotland as all that.

27,838. Surely, if the Fishery Board has power to enforce one portion of the Convention Act, it is empowered to enforce it all?—Perhaps so.

27,839. Have you any instructions on this point?—My instructions are simply to report any encroachment or departure from the Act by the French fishermen to the secretary.

27,840. Have you observed the herring men shooting their nets half an hour before sunset?—Yes; I report everything to the Board.

27,841. Then you would report that?—Yes.

27,842. Are you aware whether any of the fishing boats here carry any particular kind of vane at their masthead?—No; they have no vane at all.

27,843. Have you ever felt it your duty to report that to the Fishery Board?—No.

27,844. Perhaps you are not aware that it is a breach of the Convention?—No.

27,845. Do they light their boats in any particular way?—Yes.

27,846. In what way do they light them?—I only know that they do light them. We have to report what comes under our observation, but we have no cutter or means of going to sea.

27,847. Sometimes the fishing takes place near the land, and then you could observe how the boats were lighted?—Not at night; and these things occur at night.

27,848. You could see, surely, if a boat carried one light or two?—Yes.

27,849. If the boats were only lighted with one light, would you report it to the Fishery Board?—I think not. All along the north coast the boats act more under the Fishery Board than under the Convention Act.

27,850. It is quite clear that you are instructed to report to the Fishery Board certain breaches of the Convention?—Yes.

27,851. Then we desire to learn what kind of breaches it is that you report?—Only if the French vessels interfere with the fishery or destroy the fishermen's nets, then we send a report to Mr. Primrose, and he sends his cruisers down.

27,852. If the men went out to fish on the Sunday, would you report it to the Fishery Board?—No; the Fishery Board take no cognizance of men's consciences, they leave them to act in that matter as they please.

27,853. But here is an article of the Convention: "Herring fishermen being within the fishery limits of either country shall comply with the laws and regulations of the said country respecting the prohibition of fishing on the Sabbath day." That is a definite statement, is it not?—Yes.

27,854. Have you been instructed to act upon it?—No, it is rather otherwise; I imagine the Board have no desire to stir on that question.

27,855. Do you examine the meshes of the nets?—Yes.

27,856. Would you report to the Fishery Board if you found the mesh too small in size?—Yes.

27,857. You would report to the Board if you found it under 36 to the yard?—Yes, but the meshes in a great measure in some of the stations here are under that size.

27,858. Is it not your business to inspect them?—Yes, but I only came here recently; the instruction is under the old Act; and it has been very much in disuse.

27,859. I understood you to say that you suspected the fishermen of being in great fear of the trawlers, although none of them have made their appearance?—None of them have been here that I am aware of.

27,860. If they were to come among the herring boats, would you consider that you were empowered to report it to the Board?—Yes; for the benefit of the fisheries I should report to the Board everything bearing upon that subject.

27,861. Are you aware that it is contrary to the Convention that trawlers should come among the boats fishing here?—Yes, I am aware of that, and we have the Convention Act in the office.

27,862. And you would call the attention of the Board to it?—Yes.

27,863. Have you any special instructions?—We have no instructions specially; but Mr. Primrose says he cannot be too well informed upon the subject, and we are to write about everything and report to the Board what takes place in every form, leaving the Board themselves to discriminate in regard to what they are to do.

27,864. Have you had any complaint of the trawl-boats getting foul of the herring nets?—I have had none here; this is my first season.

27,865. Are we to understand that you do not feel it your business to take cognizance here of anything that occurs at sea?—No; I should report anything that came to my knowledge, and then the cruisers themselves at sea would settle the matter.

27,866. Are there any cruisers off this coast?—Yes, there are two gunboats at Berwick. I have been put in communication with them, and Mr. Primrose has instructed me to communicate with one of them.

27,867. Does she cruise off the coast here?—Yes.

27,868. Does she send boats up and down?—Yes.

27,869. Or does she go up and down herself?—She goes up and down herself. The commander comes on shore here and asks for information whether any damage has been done. Mr. Primrose is very particular in getting all the information he can, but after supplying the information, we, his officers, leave the proper authorities to deal with the matter.

27,870. Your special instruction with regard to the Convention is to inform him if any breach is committed by French vessels?—Yes.

27,871. You are not specially instructed to report with regard to any other breach of the Convention?—No, that is the particular thing.

27,872. Are all the barrels that are branded necessarily exported?—They may not be exported, but there are very few herrings sent out from the east coast that are not branded.

27,873. Is it in any way possible for barrels containing full Crown-branded herrings to be emptied and filled again with herrings of another quality?—It is quite possible.

27,874. Is there no means of checking that?—No, but we keep our eyes open, and being constantly moving about we see what is doing. I have seen barrels sent from Edinburgh and returned again with that year's brand upon them. Moving about the stations we see pretty nearly everything that occurs.

EYEMOUTH.

P. Wilson.

27 July 1864.

27,875. But it is possible for a barrel to be filled with genuine full-branded herrings, and to be emptied and filled up again with herrings of an inferior description?—Yes, the curer's stations are quite enclosed and barred off, but there are very few curers who would do such a thing.

27,876. That is another matter?—Yes.

27,877. It is quite possible to do it?—Yes.

The witness withdrew.

R. Cormack.

ROBERT CORMACK called and examined.

27,878. (*Mr. Caird.*) Your are a fish-curer here?—Yes.

27,879. Have you been long engaged in that business?—For 48 years; I was a fisherman for 20 years.

27,880. Has the quantity of herrings cured here been increasing or diminishing in the course of your experience?—It has been rather increasing in some years.

27,881. It has fluctuated, I suppose?—Yes.

27,882. Has the number of people employed here in the fishing been on the increase?—Yes.

27,883. And has that increased number not obtained upon the average an increased quantity of fish?—In some seasons there has been a considerable increase.

27,884. On the whole do you think that a greater quantity of fish comes into Eyemouth than in former years?—Yes.

27,885. It has become a more important fishing station?—Yes.

27,886. And you send a greater quantity of fish to the market?—Yes.

27,887. Does that apply to all the different kinds of fish caught here?—Yes.

27,888. Are you a buyer of other kinds of fish as well as herring?—Yes.

27,889. Do you cure herrings also?—Yes.

27,890. Has there been an increase in the quantity of haddock caught within recent years?—During this last season there has been the heaviest catch of haddock since ever they made their market here.

27,891-2. In all your long acquaintance with this place that has been the heaviest catch?—Yes, along the coast on both sides between Anstruther and Berwick there has never been such a weighty catch as was caught from the month of July to September.

27,893. Is there a large proportion of those haddocks cured?—Yes, the greatest proportion.

27,894. Is it made into Finnan haddock?—Yes.

27,895. And where is it chiefly sent to?—Only to Glasgow.

27,897. Can you give us an idea of the quantity cured this last season?—No, I cannot.

27,898. Have you no idea at all?—No.

27,899. You have no notion how much money has been spent in the purchase of these fish and given to the fishermen?—No, I cannot tell you that.

27,900. Will it amount to many thousand pounds?—Yes.

27,901. Then you cannot tell approximately how much money is gained by the fishermen from the haddock fishery here?—No, I cannot give that.

27,902. Has this, which has been so successful a year of haddock-fishing, induced any increased number of people to engage in the fishing?—There are several who have gone to it, but all the fishermen follow the different fishings in their seasons. Perhaps there may come a season of haddock-fishing, then of herring-fishing. The herring-fishing boats are increasing every year.

27,903. Are they increasing more than the haddock-fishing boats?—Yes.

27,904. But are we to understand that this is the first year for some years that you have had a very good haddock-fishing?—Yes, it has been very good, but this is the weightiest haddock-fishing we ever had.

27,905. Had there been any falling off in the haddock fishery before?—There has been in some seasons.

27,906. But there has been no progressive or marked falling off?—No, sometimes there has been a bad season in consequence of extraordinary weather; that has caused the catch of fish to be less.

27,907. Were there so many fish this year off the coast that if there had been a greatly increased number of boats there would have been a greatly increased take of fish?—Yes.

27,908. Then there is no sign of the sea having been fished out?—No, there is no appearance of that, not if the fishermen go to the right place.

27,909. You have no complaints to make here with regard to trawling?—They cannot come here on our banks, but if they did commence to trawl, the whole of the fishermen would have to lay their lines ashore; the trawling and the white-fishing could not go on together.

27,910. You think that is what they would do?—Yes.

27,911. But they have had no occasion to do that?—No, they never tried trawling here.

27,912. Is the bottom here suitable for trawling?—I believe that part of it is.

27,913. Is it a soft bottom?—Yes, even part of that ground where they catch the haddocks.

27,914. But the English trawl-vessels never came down here?—No.

27,915. What distance from the shore does the best fishing take place?—Some seasons it is nearer at hand than at others. Sometimes the boats may have to go ten miles off, at others 15 miles, and perhaps, 20 miles. They lie some seasons much nearer the shore than at others.

27,916. They are not gradually going further and further from the shore?—No, they come in and go away again and then return.

27,917. There has been no marked change of that description?—Not that I am aware of.

27,918. Then if you were told that year after year the fish go further and further from the shore, you would say that is not according to your experience?—I have heard such remarks made, but so far as my experience goes, the fact is to the contrary. I have seen the fish never come in-shore at all, and since that time I have seen them come in as close as ever they did before, and there appears to be plenty of them.

27,919. Is there any extensive cod fishery here?—For some years the fishery has been very thin.

27,920. Is the cod fishery followed by the same fishermen who go for the haddock?—Yes.

27,921. Are they caught by the same lines?—Yes.

27,922. Are there no special cod-lines?—Yes they make cod-lines.

27,923. Are there many turbot caught here?—No, there are very few turbot caught here.

27,924. Are any soles caught?—They get soles occasionally, but they are very scarce here.

27,925. Are they fished for at all here?—No, there is no regular fishery for them.

27,926. They are not caught by the line?—No, it is very rarely that we see any caught in that way.

27,927. Do you in your business consider that the system of branding is advantageous to you?—Yes.

27,928. You consider that it is well worth paying for?—Yes.

27,929. What advantage do you think it gives you?—When we get our article made ready, we sell it abroad, and we could not sell it abroad unless it had the brand.

27,930. Is your own name on the barrel as well?—Yes.

27,931. If you had a good reputation as a curer, would the fish not sell just as well without as with the brand?—I think it might sell a great deal better after a year or two's trial.

27,932. Then you think the brand might be done away with after a year or two's trial?—Yes; there might be some difficulty for the first year or two.

27,933. But after that, as soon as your name became known, you think you would have no difficulty in disposing of your fish without the brand?—No; the buyers abroad would then look every year after the name that pleased them best.

27,934. Is not the fact of the brand being put upon every curer's herring, and that it is the same brand, likely to produce an uniformity of quality?—I think so.

27,935. In point of fact one man's skill does not help him against another man's want of skill?—That is so to a certain extent, but still the herrings must be cured sufficiently well to pass the inspection of the Fishery officer.

27,935*a*. Is no great skill required in curing herrings well?—There is no very great skill required.

27,936. Is it not an advantage to get the herrings as fresh as they can be got into the cure?—I think that is the great secret.

27,937. Do not many curers differ in that respect?—I always look to those which I cure myself.

27,938. But is it not the fact that there is a difference in a man's character for pushing the thing forward and getting it done as well as he can?—Perhaps so.

27,939. Some may not be as active as others, and yet the brand when once attached to the herrings would make the result of his inactivity exactly equal to that of the activity of other curers?—If his herrings do not please the Fishery officer they are laid on one side.

27,940. Is there a great difference in the quality of the herrings cured according to the activity displayed in curing them?—One lot of fish may be all cleared up within 12 hours of the time they are brought ashore, while another lot may not be got rid of under such favourable circumstances.

27,941. Is no scale necessary to point out the quality of the cure?—I cannot point out any.

27,942. Then there is nothing in a man's name at all as a curer?—Not if he makes an article to please the purchaser. If a curer were to allow his herrings to go to the same market as his neighbour, and were to put upon it four times the amount of salt it required, while his neighbour only put on just enough, then the one would please and the other would not.

27,943. But if all had got the full Crown brand they would be of the same value in the market?—I am speaking now of herrings wanting the brand. The curer would not get the brand if the herrings were spoiled by having too much salt upon them. I am speaking now of men sending herrings to the market wanting the brand.

27,944. Suppose that you have a careful curer and a careless curer. I suppose that is a thing quite possible?—Yes.

27,945. Is it not likely the careful curer's herrings will be in a better condition for the market than those of the careless curer?—Yes.

27,946. But if they fulfil certain conditions the Fishery officer puts the same brand upon the product of each?—They must come very near the best. The herrings cured by the careless curer must come very near up to the standard of those cured by the careful curer.

27,947. Still there may be a difference, and yet the effect of the brand being placed upon each barrel makes them of equal value?—Yes, it does.

27,948. And do you think that is a good thing?—They must be something very near what they ought to be or the Fishery officer would not pass the fish. If there were only half a stone of salt more than enough they would be condemned. Every barrel would be condemned in that case.

27,949. Can the Fishery officer easily detect if there is half a stone too much of salt?—He can come very near in his judgment with regard to what it ought to be. He begins at the bottom of one barrel, perhaps, and then he will go to another and probably begin at the top, and before he has completed his investigation he will form a good idea as to whether there is too much salt or not.

27,950. Do you think that his inspection makes you more particular in your cure?—Yes.

27,951. Would the interest you yourself have as a curer in making an article that would command the best price, not make you equally careful?—Yes, I should be as careful if there were no brand as if I were making the fish ready for the brand.

27,952. Because in that case if your fish were cured in an inferior manner, the herrings would find no market at all?—No, it would be just the same as with anything else; our haddies would be in precisely the same position.

27,953. (*Prof. Huxley.*) How many years have you been a fisherman?—For the last 50 years.

27,954. And as I judge from what you have stated just now you do not consider that there has been any falling off in the quantity of haddocks caught upon this coast?—Not on the average of seasons.

27,955. And this last year there has been an unusually fine catch?—Yes.

27,956. Do you catch them in the ordinary way with long-lines?—We always catch them in one way.

27,957. Is the ground soft or is it rocky ground?—The largest whiting we take off the smooth ground.

27,958. Is it ground that trawlers could work over?—Yes, where the greatest bulk of the fish is got.

27,959. If they came here would they be working over the very same ground that you are working over now?—Yes.

27,960. Then in that case would they not damage your lines?—They would take them all away, I believe.

27,961. Is that your objection to trawling, or do you think that trawling would injure the fish?—They would take away all the lines with them.

27,962. They would interfere with them?—They would break them all to pieces.

27,963. Have you any knowledge of the fish caught by the trawlers?—Yes, I have seen them at work.

27,964. Are they as good as the fish caught with the hook and line?—No, they are cut to pieces by the nets.

27,965. Would they be as good to cure?—No, one half of them would not take the salt, but they cure plenty of them notwithstanding.

27,966. They are not nearly so good or so valuable as the fish caught with the hook and line?—No, they would not be able to sell one half of them.

27,967. (*Mr. Caird.*) How do you pack your haddocks when they are cured for the market?—We pack them much in the same way as other fish, and send them all over the country; we pack them by the bulk.

27,968. Do you put them in barrels?—Yes, in barrels.

27,969. And do you place your names on the barrels?—Yes.

27,970. Do the haddocks bring a different price according to the quality when they go to the market?—Yes.

27,971. Has the name of each curer a certain value in the market—has it a recognized standing in the market?—There is not much difference.

27,972. Are the haddocks of one curer sometimes better than those of another?—Yes.

27,973. Are they judged by the quality or by the name on the barrel?—They are judged by the quality first, and then by the name afterwards, in order to ascertain who sends them.

27,974. You sell the haddocks by your own name, and not by the assistance of any brand?—No, only with our own name.

27,975. Is there a great variety in the price of haddocks sent some days to the market from the same

EYEMOUTH.

R. Cormack.

27 July 1864.

place?—No, all are very much alike; every one tries to make as much out of them as he can.

27,976. Then the result is a considerable uniformity?—Yes, very near.

27,977. In what way are the haddocks cured?—They are dressed; they then lie for a quarter of an hour or twenty minutes in a pickle; they are then hung up and dried.

27,978. Are they smoked?—They are just the least bit dried now.

27,979. Dried in the air?—No, with wood.

27,980. They are dried with wood smoke?—Yes.

27,981. How long does the process occupy?—From 12 o'clock at night for three, four, or five hours.

27,982. They are then fit to send to the market at once?—Yes.

27,983. Then they must be very fresh when they are sent away?—They are fresh when they are sent to Glasgow; they get them there next morning.

27,984. How long will they keep?—Three, four, or five days, or longer in the winter season.

27,985. There is not much salt put upon them?—Not much, and it is a very sweet salt.

27,986. Do they bring a better price than if they were sold fresh?—Yes, we send very few away fresh, scarcely any.

27,987. You cannot tell us the quantity of the cured haddock altogether that is sent to the market?—No.

27,988. How many haddock boats are there?—Thirty-four, I think.

27,989. Have you a certain number of those boats?—I have had three this last season.

27,990. What do you pay to each boat?—It varies. I pay weekly, sometimes 10*l.* a week a boat, and some of them may make 20*l.* in a week.

27,991. You cannot tell us what you pay altogether in a season for a boat?—No, I cannot.

27,992. Perhaps you would rather not choose to tell?—I should have no objection to do so; it would not interfere with our business in any way. I believe there is one man here who got 63*l.* for his share; there would be six men in the boat, and that would be six times 63*l.*

27,993. Each man in one boat got 63*l.*?—Yes.

27,994. For the season's fishing?—Yes.

27,995. Of how many months would that consist?—From September until the end of May.

27,996. And then he has the herring-fishing besides?—Yes, the herring-fishing commences after that.

27,997. Would that be about the fair average for the whole of the fishermen in this place?—Well, it would be very near it.

27,998. And there are six men in a boat?—Yes; there are seven in some, and six in others.

27,999. Have you any idea how much you give to each boat engaged in the herring fishery?—No; we do not engage here; we purchase every day.

28,000. How many boats are there engaged in the fishing?—Somewhere over a hundred; I believe there are 112 altogether.

28,001. Are they the same boats that engage in the haddock-fishing?—No.

28,002. Are they a different kind of boat?—Yes, they are smaller boats.

28,003. Do they carry as many men?—No, they have fewer men.

28,004. How many?—There are from four to five men in the herring boats.

28,005. And have you no idea how much, on the average, each herring boat will make in the course of a season?—No, I cannot say. Some seasons it would be quite little—20*l.* a man, perhaps, and at other seasons 30*l.* a man.

28,006. Is there a winter herring-fishing?—No, there is very little then; it is a mere trifle. Some go a little in the spring, but very rarely.

The witness withdrew.

J. Johnson.

JOHN JOHNSON called and examined.

28,007. (*Mr. Caird.*) Are you a fish-curer here?—Yes.

28,008. Do you cure both herrings and haddocks?—Yes.

28,009. Which of the two fisheries yields the most to the fishermen here?—I cannot exactly say. I suppose the haddock-fishing will yield as much as the herring-fishing. I think, on the whole, that the haddock-fishing will be the most valuable.

28,010. It extends over a greater period of time?—Yes.

28,011. Do you agree with the previous witness that the haddock-fishing for the last year has been unusually good?—Yes.

28,012. Has it been one of the best fishings you have ever experienced?—Yes, it has been the best of all my time.

28,013. The best?—Yes.

28,014. And with regard to the herring fishery, you heard the evidence of the Fishery Inspector?—Yes.

28,015. Do you agree with him that it fluctuates, but that, on the whole, it keeps pretty steadily at an average amount?—Yes, that is very much about it.

28,016. Do you find the brand a useful thing?—Yes, it is very useful as far as regards the foreign merchants. That is the principal thing which, I think, it is good for; it enables foreigners to purchase without coming to examine the fish on the spot.

28,017. The proportion of the herrings cured here seems to be on the increase as compared with that sent fresh to the market?—Yes, it is, seemingly.

28,018. Why is that? Can you give any account of it?—Cured herrings have been bringing a very good price for some years back.

28.019. Is that cured herrings for export?—Yes.

28,020. Does it pay better, on the aggregate, to cure them and export them than to send them fresh to the market?—That is the only reason that can be given for it, I think.

28,021. Do you desire that this system of branding should be continued?—I am quite willing that it should be continued.

28,022. Do you prefer that it should be continued?—Well, as far as regards the foreign merchants, I think we can do our business quicker when the herrings are branded than if there were no brand.

28,023. Suppose it were decided that there should be no longer a brand, but that the merchants should sell their goods as other merchants do, namely, according to the character and reputation of the curers, would it be any injury permanently to your business?—There would be no permanent injury, but it would require a short time to elapse in order that the names of the different curers might get established and known to the merchants.

25,024. If they were once established, would they not carry a weight with them which would give to one curer a better price than to another?—I have no doubt of that. I think we have had a proof of that in the haddock market in Glasgow.

28,025. You have found that to be the case in Glasgow?—Yes.

28,026. Namely, that one curer, from the superior skill and care which he exercises in the cure of his fish, can obtain a higher price for his fish than another?—There is no doubt of that; and if at any time one curer has not got them in as good order as another, he cannot get a price. There is not a great deal of difference. Most fishermen know very well how to cure fish, and on the average there is not much difference in price.

28,027. Still, if it were left to yourselves without a brand, there would be a constantly impelling motive

to every curer to do his best?—There is no doubt of that.

28,028. Would not the name of the curer be as valuable to the merchant with regard to the state of the cure as the information given by the use of the brand?—We require to be very particular now for the brand.

28,029. That is in order to escape the detection which would follow carelessness on the part of the Fishery officer?—Yes, but the Fishery officers themselves are very particular. They seem very well up to their business.

28,030. Can you give us any idea of the quantity or value of the haddocks which go to Glasgow market from here?—No.

28,031. Speaking of the last year as being the best fishery which you remember, can you say that there was a third more fish caught than in any other year that you recollect?—There might be.

28,032. Would there be one half more caught?—No, I think you may take it at about one third.

28,033. Did it affect the price in the Glasgow market?—Yes.

28,034. Did it lower the price?—Yes, considerably.

28,035. Do you get a much better price by curing the haddock in that way, than by sending them fresh to the market?—The market could not take them all fresh.

28,036. Do you mean that they would not be fresh, that they would become stale before they would be sold?—There are too many for the market. The English market takes very few haddock, and if they are rather small they do not care for them at all. It is principally Glasgow that we send to. The only portion we send fresh is when we are in good time for the railway. The great bulk is smoked.

28,037. Has the Glasgow market long been the best market for smoked haddock?—Yes, for a good many years.

28,038. Has the price remained stationary for a good many years, or is it increasing or diminishing?—Of late years it has been very steady.

28,039. But last year, on account of the large supply, was there any decrease?—The price depends very greatly upon the quantity sent in. If a large quantity goes in of course it brings less money.

28,040. Have you been in Glasgow market to see the fish sold?—I have been there.

28,041. Does a large quantity come from other quarters to compete with yours?—Yes.

29,042. Has there been a general increase from other quarters as well as from this place?—Yes, I think there has.

28,043–4. (*Professor Huxley.*) Do you send many of your haddocks abroad?—None.

28,045. So that your haddocks, as it were, go to a more familiar market than the herrings do?—Yes.

28,046. The people know more about you in your haddock market?—Yes.

28,047. Is there any spring herring fishery here?—There have been some herrings caught here in the spring, but not very often.

28,048. There is no regular fishing for herrings in the spring?—No.

The witness withdrew.

William Spears called and examined.

28,049. (*Mr. Caird.*) Have you long been a fisherman?—Yes.

28,050. Have you been engaged in all the different kinds of fishing followed on this shore?—Yes.

28,051. Do you agree with the previous witnesses that there has never been a better season for haddocks than the late one?—Yes.

28,052. Within all your experience?—Yes.

28,053. You never saw so many haddocks at any other season?—No, not so many as there have been this year.

28,054. And if there had been a great number more boats there would have been a great number more fish taken?—Yes.

28,055. Has there been any noticeable change in the size of the haddocks of recent years?—They differ very greatly; some run large and some small. Some years all are large altogether, and in other years they are mixed, the small with the large.

28,056. What was their character this last year?—They were pretty large.

28,057. As large as they have been on the average in previous years?—Some days they were very large. It depends on how you fall in with them.

28,058. How far off the shore did you get your best fishing?—We found the best fishing about 30 miles off the shore.

28,059. Thirty miles off?—Yes, but the best fish we get from 15 to 20 miles off.

28,060. You mean the best quality of fish?—Yes.

28,061. Is there a great difference in the quality according to the place in which they are caught?—Yes.

28,062. Is the best quality got off a soft bottom?—In some seasons of the year, but we generally get the best haddocks from the hard bottom.

28,063. Are the greatest number found on the soft bottom?—Yes, generally.

28,064. There is no trawling off this shore?—Very little; it was tried for a few days.

28,065. Have the English trawlers come as far as this?—Yes.

28,066. But you have nothing to complain of with regard to their operations?—Not in regard to the English trawlers.

28,067. Have you anything else to complain of?—There has been no trawling off the Firth lately. I believe they have turned over a great deal of ground there, but they have dropped it now.

28,068. None of the trawlers come here?—No.

28,069. You have no complaint to make at the present time?—No.

28,070. Do you know whether any complaint is made on the opposite shore?—No, but if they were to go over the grounds they would do a great deal of harm.

28,071. You mean by destroying your lines?—Yes.

28,072. Did you find the haddock-fishing a paying thing last year?—Yes, if the weather was good. Sometimes it is very stormy and the boats are prevented from going out for many days. It so happened that we had a good winter and that made a good fishing.

28,073. Are your boats open boats?—No, they are all decked boats.

28,074. Can they keep the sea pretty well?—Yes, first rate.

28,075. What is the tonnage and size of each boat?—They average from 40 to 55 feet.

28,076. In length?—Yes.

28,077. And what tonnage will they be?—From 20 to 30 tons, or rather from 15 to 30 tons.

28,078. What rig are they?—Just fore-and-aft sails.

28,079. Are they smack rigged?—No, lug rigged.

28,080. Are they entirely decked or half decked vessels?—They are all decked over.

28,081. How long will they keep the sea sometimes?—Generally, in the way in which they fish here, if they have any bad weather at all they are back again that night.

28,082. Do they set their lines and bring them in again within the same 12 hours?—Yes, but it depends on the weather. It may be 12 hours, and sometimes it may be 20; it depends altogether on contrary winds.

EYEMOUTH.

W. Spears.

27 July 1864.

28,083. But it is seldom longer than that?—It is seldom longer, without they carry away their mast or get damaged.

28,084. Is the harbour here a harbour they can run for at low water?—No, it is a very poor harbour at low water, there is no water then at all.

28,085. For how many hours can you enter the harbour?—At half tide, three hours' flood for the large boats, especially if there is any surf.

28,086. Is there much loss of life amongst the fishermen here?—No, we have been very fortunate for a good many years; there have been very few boats lost in my time.

28,087. Have you a lifeboat here?—No.

28,088. Is the herring-fishing a paying business for the fishermen?—It is very fluctuating. Some seasons some of the boats get a good fishing and it pays well, while at other seasons some of the boats' crews get very little, and it pays scarcely anything. It is awfully fluctuating.

28,089. There is nothing to interfere with your fishing?—No.

28,090. The Frenchmen do not interfere with you?—Not much, but at Berwick Bay they go into the very rocks and shoot their nets.

28,091. Does nobody interfere with them?—I am sorry to say that the gunboats look very little after them.

28,092. Are there gunboats there?—Yes, there were two last year.

28,093. Did they not go out when they saw the French boats?—Only very little.

28,094. Were the French boats fishing within three miles of the shore?—They were within half a mile of the shore.

28,095. Is the lobster fishery valuable?—No, it is not.

28,096. Is the crab fishery?—There are a good many crabs, but there are not many people who prosecute it here. It is the haddock-fishing that is the main fishing in the winter time.

28,097. Is there any oyster fishery followed off here?—No.

28,098. Do you ever fish soles?—No, we never fish soles; we may get a chance one, but very seldom.

28,099. Have you any difficulty here in regard to getting bait for your haddock fishery?—Yes, we have great difficulty sometimes. The bait is all wearing out on this coast.

28,100. Where do you get it from?—All from Boston.

28,101. Does it cost you much?—It is very expensive.

28,102. Is it brought here by rail or by vessel?—Generally by vessel in the winter time when it will keep. In the summer time we cannot bring it by vessel, and then it comes all round by rail.

28,103. When you bring down a cargo, do you put it somewhere in the water where you can lift it again?—Yes, we divide it amongst the boats, and each man has a spot of ground upon which he can put it down.

28,104. Has the price of your bait increased of late years?—It has not increased so much when we get it by vessel, but it is very expensive to obtain it by train.

28,105. It has not become a source of greater expense in the prosecution of your fishing than it was formerly?—Yes, we used to get plenty of bait round about our own shore at one time.

28,106. Have you used it all up?—Yes, it is all done now. There is not as much about the rocks as would serve for a boat to go out for two weeks in the season.

28,107. And in former times there was plenty?—Yes, there was plenty. We were in the habit of getting it from Holy Island a few years ago.

28,108. Was the bait you got there mussels?—Yes, but the ground was so small that the boats which came there soon carried it away altogether.

28,109. Do you never get any from the Firth of Forth?—Some years we did, but it has all run out. It is so small now that we cannot use it.

28,110. Have you tried it?—Yes.

28,111. We were told that the upper part of the Firth abounded in mussels?—That may be so, but they are of so small a character that they are not sufficient for us to use.

28,112. They are not so good as the mussels you get from Boston?—No; one of the Boston mussels will do for a hook and sometimes for two or three; those in the Firth are very small and when they are thin they will not easily grow large.

28,113. Did you get your mussels from Argyleshire formerly?—Yes.

28,114. From the Clyde?—Yes, a great many came from the Clyde, but the dredges in deepening the Clyde covered the mussel banks, and now they are wearing out.

28,115. They are not getting many there now?—No.

28,116. But practically you get as many as you want from Boston?—Yes.

28,117. The want of bait has not injured your fishing?—No. Sometimes it comes very irregularly and keeps people from working.

28,118. How much a ton do you pay for it?—35*s.* when it is brought by the train.

28,119. How much do you pay for it when it is brought by vessels?—We generally pay 25*s.* when it is brought by vessel.

28,120. Then, of course, it is to your interest to get as much by vessel as possible?—Yes.

28,121. Can you tell us any mode by which you would be able to get a better supply than by the present system?—I think there are a good many mussels on Boston scarps now, but they are using them up awfully for manure. If that place runs short we shall be in a very bad state.

28,122. Do you fish mackerel here?—Not regularly; sometimes we get a few with our lines, but not many.

28,123. It is not an important fishery here?—No.

28,124. Do you get any fine cod here?—Sometimes, but they are falling off. I have seen very fine cod here.

28,125. Do you find the haddock a very valuable fishery?—Yes.

28,126. You do not prosecute the cod fishery for itself?—No, through the season the haddock fishery pays best.

28,127. But if there were a demand for cod, they are to be had here if you went to look for them?—They are very scarce.

28,128. Are they scarcer than they were in former times?—Yes, there is not now one half or one fourth on the ground that there was formerly.

28,129. What is the cause of that?—I cannot say. Perhaps they have taken another turn, or they do not frequent us so much. I think that a great number of the young take the bait, and the consequence is that the fishermen are killing all the young. There are so many of them that take the hook that there are very few left to grow large now.

28,130. Are many taken immature?—Yes, an awful lot.

28,131. On the haddock lines?—Yes.

28,132. Is a large proportion of your catch when you are fishing for haddock immature cod?—Yes, a very great many; we get scores and hundreds some days.

28,133. There is no help for that, I suppose?—No; there is no help for it.

28,134. What do you do with them?—If they are large enough they go with the large haddock, and if they are small they are sold for a small price.

28,135. Do the curers cure them in the same way?—Yes.

28,136. Then they become like haddocks?—Yes, but they sell for one half of the value. I should wish to make a statement about the garvies which they

have been catching in the Firth of Forth. I entertain an objection to it altogether; the garvies are nearly all herrings.

28,137. Have you ever been engaged in garvie-fishing?—I have been where they have been caught, but I have never killed them.

28,138. Then what opportunity have you had for ascertaining that they are nearly all herrings?—I know them quite well.

28,139. Are you in a position to know what is going on there?—I was fishing at the herring-fishing up the Firth of Forth for two or three years, and I saw a good deal of it going on.

28,140. Do you think that garvie-fishing is destructive of the herrings?—Yes, I think it is ruining the coast altogether.

28,141. How can that be when the quantity keeps upon a uniform average?—Yes, but look at the quantity they catch of those young herrings.

28,142. Do you not fish the herrings themselves when they are full of spawn?—Yes.

28,143. Do you not think that you destroy the brood to a great extent in that way?—Yes, a great deal.

28,144. Would not one full herring produce in brood a large quantity of those young herrings which are taken along with the garvies?—Yes.

28,145. What would one boat's catch of full herrings in one night yield of young brood?—I cannot say; a good many.

28,146. Then you destroy them yourselves?—Yes but it is different when they get to a certain size.

28,147. Do you not destroy a much greater number before the fish spawn than are destroyed afterwards?—Yes, that is quite true; but we could not get herrings without. But there are as many small ones brought on shore in this garvie-fishing some days as would make a fishing altogether.

28,148. (*Professor Huxley.*) What length of lines have you to each boat; I mean your long-lines?—Generally we have 800 hooks to each man.

28,149. That will be 4,800 altogether?—Yes.

28,150. You have six men in a boat?—Yes, from six to seven men.

28,151. The hooks are about a fathom apart?—Not quite a fathom.

28,152. You have something like 4,000 fathoms in a line, I suppose?—Yes.

28,153. Do you use longer lines now to a boat than you did formerly?—Yes; when we went first we never had more than 600 hooks to each man.

28,154. How many years ago is that?—Perhaps 12 or 14 years ago.

28,155. Did you go out further then than you do now?—We had small boats then, but sometimes we went out nearly as far as we do now; we had, however, to watch the weather.

28,156. The boats were not as well built as they are now?—They were very good boats for their size. They were boats of about 32 feet.

28,157. The small ones?—Yes.

28,158. What will a long-line cost now with its fittings and boat?—The boats which go regularly now to the haddock-fishing will cost from 200*l.* to 300*l.*

28,159. A boat will cost that with its lines?—No, that is just the boat ready for the sea.

28,160. How much would the cost be if you add the lines to it?—The lines are not such a very great expense; perhaps they would cost 20*l.* the line.

28,161. What did the boats you used 14 or 15 years ago cost?—40*l.* to 50*l.*, perhaps 60*l.*

28,162. Then you have got six times as much capital invested now in your boats as you had then?—No.

28,163. If they cost 200*l.* or 300*l.* now, and only 40*l.* or 50*l.* then, that must be so?—Yes, but look at the fine boats they have now; they have cutters to go in now instead of boats.

28,164. The value of your boats altogether must be six or seven times as great as it was?—Yes, but these boats do not keep themselves up.

28,165. But that is the fact, is it not?—Yes.

28,166. It is a fact that you have got all that amount more money in your boats than you had?—Yes, that is quite right.

28,167. Is it the same thing with the herrings, or do you fish herrings in the same way as you did in former years?—Just the same. The boats are about the same, but the nets cost a great deal of money.

28,168. Were the fleets of nets as long 20 or 30 years ago as they are now?—At that time they were about half as long as they are now.

28,169. So that you have twice as much more in your herring boats as you formerly had?—Yes.

28,170. Then all that has come out of the fishing?—It must all have come out of the sea.

28,171. Then you have not done so badly for the last 20 years?—No.

28,172. (*Mr. Caird.*) Have you as many of those large boats as you have of the small?—No. When we go after the herrings two or three fishermen go together, and they take in landsmen to fill up their boats. In the winter time the landsmen will not do; they must be all fishermen then.

28,173. (*Prof. Huxley.*) Do you see herrings here in the spring time?—Not many; but a few years ago we saw plenty.

28,174. Did you fish them then?—Yes.

28,175. Was it about February?—Yes, February and March.

28,176. What condition were they in then?—They were mateys, just about spawning.

The witness withdrew.

William Dougall called and examined.

28,177. (*Mr. Caird.*) I believe you have been a fisherman here for a good many years?—Yes, for 35 years.

28,178. Then you have full knowledge and experience with regard to the different kinds of fishing practised on this coast?—Yes.

28,179. Do you agree with the evidence of the previous witnesses?—Yes, I agree very much in what has been stated.

28,180. Do you agree in the statement that the haddock-fishing this season has been unprecedently good?—Yes, it has been very good indeed. I don't know if ever there was such a fishing as there has been this year.

28,181. Have you any complaint which you wish to bring before us in regard to anything which you consider injurious to your fishing here?—Nothing in regard to the haddock-fishing, except that I think it is injurious to carry away the mussels for manure.

28,182. That is in Boston Deeps?—Yes. If that is done, we shall have to give up the haddock-fishing altogether.

28,183. That would be the case if it were carried on to such an extent as to put an end to the mussel beds; but you have not found mussels increasing very much in price?—No.

28,184. It is only the apprehension you have that such a thing might occur?—Yes; there are a great number of ships taking them away.

28,185. How do you know that?—The men who come from there tell us so. They got up a petition to the Fishery Board stating that something must be done, or else all the mussels would soon be taken away.

28,186. Did you do that?—There was something done about it.

28,187. Did you make a representation to the Fishery Board on the matter?—I don't know that it was regularly carried out; there was some mistake

EYEMOUTH.

W. Dougall.

27 July 1864.

about it, but the men who came here with ships said the beds were being rapidly destroyed.

28,188. Lots of craft come here with mussels?—Yes; they told us that, and said unless we made out something of that kind the beds would soon be destroyed.

28,189. Is there anything else you would like to bring before us?—Sometimes we are very much annoyed by the trammel nets. They have buoys which extend half a mile out into the sea. Sometimes the herrings come close inshore within half a mile, and these buoys tear away our nets.

28,190. What are those nets used for?—For salmon.

28,191. Are they used along this shore between this and Berwick?—Yes.

28,192. Have they been long in use?—Yes, for some years—for a good while now.

28,193. Do they do more injury than they did formerly?—They are extending them further out into the sea.

28,194. When did they begin to put them further out into the sea?—Last year or the year before.

28,195. How do they destroy the nets?—They have buoys in order to keep the nets right out, and our nets come right against those buoys.

28,196. When they are drifting?—Yes; it tears the nets, and sometimes we lose them altogether.

28,197. Is there a serious loss experienced in that way?—Yes, we have had some very serious losses.

28,198. How do you propose to remedy it?—There is no other remedy than to keep their nets closer to the shore.

28,199. Do they catch a good many more salmon further out in the sea?—Yes.

28,200. Then you could only improve the one fishing by putting down the other?—That is the only way. It is very hurtful to our fishing.

28,201. Does it really do you much damage?—Yes; we are afraid to go inshore, although the herrings may be there. We cannot shoot our nets for the buoys.

28,202. (*Professor Huxley.*) Did you ever hear of this regulation, to which you could have appealed:—"It is forbidden to set or anchor nets or any other "fishing implement in any place where mackerel or "drift-net fishing is going on"? Did you know of that? It is part of the Convention Act. Did you make a complaint to the Board of Fisheries on the subject?—I think there was a complaint made, but I don't know how it ended.

28,203. (*Mr. Caird.*) You ought to be more particular in the complaints you make. You cannot expect the Fishery Board to remedy evils they never heard of.—The Fishery officer should look after these matters.

28,204. Is there anything else which you desire to mention to us?—These are the chief things I know anything about.

28,205. (*Professor Huxley.*) Do you ever use cobles here?—Yes, they use them in piloting ships.

28,206. Do you use them for fishing?—Not often; they use them for fishing on the rocks sometimes.

28,207. Do you not go out to sea with them?—No.

The witness withdrew.

R. Renton.

ROBERT RENTON called and examined.

28,208. (*Mr. Caird.*) You are a fisherman here?—Yes.

28,209. What is it that you wish to say to us?—I wish to make a remark about Frenchmen putting down their anchors at the time the boats are drifting with their nets inshore.

28,210. What do they do?—They break the nets. A good many of our men have had their nets broken in the middle.

28,211. Was that within the three mile limit?—Yes, about half a mile from the shore.

28,212. They come to anchor?—Yes.

28,213. Do they put out their nets?—No; they first drop their anchors, and when we are drifting along they will often take out a knife and cut the nets and let them go.

28,214. Does that happen often?—It is not so often, nor is it desirable that it should be. It would be very hurtful to us.

28,215. Did you mention it to any of the gunboats?—No, I never did; they never came across me.

28,216. Unless you take the trouble to speak about these things other persons will not be in a position to look after them.—The men who suffered would most likely mention it to the gunboats.

28,217. Is there any other point you wish to mention?—No, that was the only thing I had to tell.

28,218. Do you agree generally with the evidence that has been given to us to-day?—Yes; I think they have given you a very fair account.

The witness withdrew.

G. Dixon.

GEORGE DIXON called and examined.

28,219. (*Mr. Caird.*) Are you a fisherman here?—No.

28,220. Then what are you?—A fish-curer.

28,221. You wish to make a statement to us?—Yes.

28,222. What is it you wish to say?—There are some of the boats which are in the habit of going on the Sabbath night setting their nets. I believe that according to the Act that ought to be put a stop to.

28,223. (*Professor Huxley.*) The article of the Convention is this: "Herring fishermen being within the "fishery limits of either country, shall comply with "the laws and regulations of the said country re-"specting the prohibition of fishing on the Sabbath "day." You see that if there be any law prohibiting fishing on the Sabbath day, that article would be effective so far as the Convention operates?—Just so.

The witness withdrew.

P. Wilson.

PETER WILSON recalled and examined.

28,224. (*Mr. Caird.*) In 1856 what number of boats were there engaged in the different kinds of fishing on the 13 different stations over which your inspection extends?—There were in 1856, 518 boats, of 6,194 tons, the total value of which was 16,556*l.* There were 811 men resident, and 651 hired for the fishing, the total number being 1,462.

28,225. Would you give us the corresponding figures for 1860?—In 1860 there were 611 boats, of 7,043 tons, the total value of which was 21,987*l.* There were 846 resident men, and 716 men hired, making a total of 1,562.

28,226. Can you give us the corresponding figures for 1863?—Yes. In 1863 there were 699 boats, of 8,119 tons, the estimated value of which was 26,464*l.* There were 909 resident fishermen, and 924 hired men, making a total of 1,833.

28,227. That is a considerable progress?—Yes; the fishing has been progressing very much in value and in the size of the boats.

28,228. The people are anxious to obtain a better harbour here?—Yes; it is considered that nearly double the number of boats would fish from this harbour if it were improved. There is no point of land so accessible from the north, and there would certainly be a great increase of boats coming to the harbour if it were improved so as to be capable of receiving them.

The witness withdrew.

EYEMOUTH.

D. M. Home.

27 July 1864.

DAVID MILNE HOME, of Wedderburn, called and examined.

28,229. (*Mr. Caird.*) You are a proprietor of land in the neighbourhood of Eyemouth?—Yes, and Superior also of the town.

28,230. Is the harbour a good fishery harbour?—It is very insufficient for the number of boats that belong to and frequent it. There are about 200 boats at this moment in the harbour. There is no room for many of them, so that they have to lie outside of the harbour.

28,231. Is it not the principal haddock fishery station on this coast?—Yes, south of the Firth of Forth.

28,232. Have you received no assistance for improving your harbour from the funds of the Fishery Board?—Not a shilling.

28,233. Have you ever made application for assistance?—No, and I think that one reason is this: there is a Harbour Trust here, and one condition of the Fishery Board is that all harbour dues shall be given up in the event of any assistance being given by the Fishery Board in repairing the harbour.

28,234. Then if assistance had been granted the Fishery Board would have superseded the Harbour Trust?—Yes.

28,234*a*. And they do not desire to comply with such a condition as that?—I don't know that it has been formally thought of. It has twice been given to Burnmouth and Coldingham in the immediate neighbourhood, but there are no harbour dues there. I think that the condition upon which assistance has been given to Dunbar is that the harbour dues should all be given up.

28,235. Are the harbour dues paid by the fishermen there—are they charged upon the fishermen?—No, that is a peculiarity here.

28,236. The fishing boats do not pay harbour dues?—No; boats belonging to or frequenting this place do not.

28,237. Then if you made an application to the Fishery Board, as far as fishing boats are concerned you might comply with that condition?—Yes, but there are ships that frequent this harbour.

28,238. Do they insist on dues levied upon ships being given up too?—I speak from vague information, but I understand that they require all dues to be given up.

28,239. Do you think the people here would be willing to comply as far as the fishing boats are concerned?—Yes.

28,240. Do you think it would be desirable for the interests of the fishermen and of the fisheries that some expenditure should be undertaken for harbour purposes?—Yes, we are most anxious that something should be done. They want by excavating to get three feet more water than they have now; and they wish also to take the pier 100 yards further out. There is an old pier which was built by Smeaton in 1780 or 1790, which they would like to take further out, and they are of opinion that that would afford immense accommodation to the whole of the coast.

28,241. Would it increase the accommodation without a very large outlay of money?—I don't know that.

28,241*a*. Has any estimate been formed of the cost?—No, none that I know of.

28,242. Then you have no idea of the cost of providing the additional accommodation which you say is required?—I suppose 10,000*l*.; they don't wish such a harbour as at Dunbar, where they can run to at all times of the tide, but merely a pier to protect them from easterly gales.

28,243. Have you felt it a hardship that the public funds which are devoted for the improvement of the fishery harbours should have been mortgaged altogether for the harbours at Dunbar and Anstruther?—We are not jealous of our neighbours, but we should like to have a share of the public money for the improvement of this harbour, being the most important harbour on this fishing coast. Such a feeling has often been expressed by the fishermen here. The government and the Fishery Board have already laid out large sums at Dunbar, but nothing has been expended upon the harbour here.

28,244. They are now about to lay out large sums at Anstruther which will prevent them having any money at their disposal for many years to come?—Yes.

28,245. Do you intend to make any improvement yourselves?—The Harbour Trust unfortunately is in very embarrassed circumstances. They are owing a large debt of 2,000*l*., and they have quite enough to do to pay the interest upon their debt. This used to be a very important harbour before the railway was constructed. There was then a corn market here, and a great deal of traffic in other respects, but since the North British Railway was completed the trade has almost entirely deserted us.

28,246. Was it a harbour for the export of the produce of the country as well as a fishery harbour?—Yes.

28,247. It is now chiefly, if not altogether, a fishery harbour?—It is altogether a fishery harbour.

The witness withdrew, and the inquiry was adjourned until July the 28th at Anstruther.

Anstruther, Fifeshire, Thursday, 28th July 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

ANSTRUTHER.

T. Fowler.

28 July 1864.

THOMAS FOWLER called and examined.

28,248. (*Mr. Caird.*) You are a fisherman here?—Yes.

28,249. How long have you been engaged in that business?—I have been a fisherman very nearly 30 years.

28,250. Are you well acquainted with all the different modes of fishing practised on this coast?—Yes, at least I have been for more than 25 years at the fishing.

28,251. From your experience as a fisherman over so long a period, is it your opinion that the supply of fish in Anstruther is increasing, stationary, or diminishing?—It has been diminishing during the last three years, and for the last two years back it has been diminishing a great deal.

28,252. Is there any particular kind of fish that has diminished more than another?—The herrings have diminished for the last two years, the white-fishing has increased a good deal.

28,253. By white-fishing do you mean specially the haddock-fishing?—Yes.

28,254. Do you refer to anything else besides haddock?—Yes, large fish have increased during the last two years.

ANSTRUTHER.

T. Fowler.

28 July 1864.

28,255. Cod and ling ?—Yes.

28,255*a*. They have increased within the last two years ?—Yes.

28,256. When did that increase begin ?—It is now three or four years since they commenced the fishing with great lines.

28,257. Do you mean the long-lines ?—Yes, great lines with large hooks.

28,258. Do you think that it was the introduction of those great lines that caused the fish to increase ?—Yes, the fishermen went further to sea to get the fish.

28,259. Then do you attribute the increase to an improved mode of fishing ?—Yes.

28,259*a*. You find that by improved modes of fishing you can get more fish ?—Yes.

28,260. In your opinion, with the exception of herrings, is there any kind of fish that has diminished in the total supply ?—I do not think so.

28,261. Has there been a great increase in the haddocks ?—There has been this last season, but to some extent I attribute that also to the further distance we have to go out.

28,262. Do you go out further than you did before ?—Yes.

28,263. Have you done so this year ?—Yes.

28,264. Were haddocks not found as near the coast as usual this year ?—No.

28,265. But still you have found them in great abundance ?—Yes.

28,266. Was the quality as good as it was at any other time ?—Yes, quite as good as ever it was, and there were more in numbers caught in this quarter than I ever remember.

28,267. Has the number of fishermen increased ?—Yes, they have doubled in number in the course of the last 20 years.

28,268. Is the price of fish increasing or diminishing ?—It is increasing a great deal.

28,269. Then it must be a prosperous trade at present ?—Yes, as far as the white-fishing is concerned.

28,269*a*. At this moment the haddock-fishing is in a flourishing condition ?—Yes.

28,270. That exhausts the question of the haddock fishery. With regard to the cod and ling fishery, is it improving ?—It has not improved greatly, but it has been better for the last two years.

28,271. Is there any special class of fishermen who turn their attention particularly to cod and ling ?—No. At certain seasons of the year the fishermen go with the great lines I have mentioned for six weeks or so.

28,272. Are they different lines from those which are used for catching the haddock ?—Yes.

28,273. And they practise that fishery only for six weeks in the season ?—Yes.

28,274. When is it that they follow it ?—They begin in the month of March and it lasts until about the middle of April.

28,275. Where do they take these fish; on what banks are the cod and ling found in the greatest abundance ?—They get the herring bait at that season, and it is then that they catch the largest fish.

28,276. It is worth their while at that time to follow that fishing ?—Yes.

28,277. Is the haddock fishery pursued with the same exertion at that time ?—They are always trying it more or less, but the large fish they go after generally at that particular time.

28,278. Over how many months in the year does the haddock-fishing extend ?—It extends for three months in the fall of the year, then from the middle of April up to the end of June. That is the whole of the haddock-fishing.

28,279. Will you tell us in what months it is practised ?—In October, November, and December.

28,279*a*. That is in the fall ?—Yes.

28,280. And what other months ?—From the middle of April, the month of May, up to the end of June.

28,281. That would be six months altogether ?—Yes.

28,282. Then, between the end of December and the middle of April what do you do ?—We are then engaged in catching herrings.

28,283. Is that the winter herring-fishing ?—Yes.

28,284. Then towards the last six weeks of that time you seem to catch cod and ling ?—Yes.

28,285. Do the same fishermen who follow the herring and haddock-fishing also turn themselves to the cod and ling ?—Yes, the same men.

28,285*a*. Do they then give up the herring-fishing ?—Yes.

28,286. Perhaps it has ceased at that time to yield as profitably ?—Yes, we follow the fish all their different seasons. We follow the herring-fishing up to about the end of February, and we are again engaged for nearly two months in the winter herring-fishing.

28,287. Do you catch any turbot here ?—We get a good deal from the month of March till the middle of April.

28,288. In what way are they caught ?—They are caught with the great lines.

28,289. Are they the same lines as those with which you catch white fish ?—Do you mean the same lines as those we use for catching cod and ling ?

28,289*a*. Yes ?—No, they are not the same.

28,290. Do you catch any soles ?—No; none in our quarter.

28,291. Are they not fished for at all ?—No.

28,292. Do you know whether they are to be found at all ?—I cannot tell whether there are any such things to be got here or not. If they are caught, they are caught by the trawl.

28,293. They are not otherwise caught ?—No.

28,294. Do you catch any halibut ?—Yes.

28,295. At what time ?—The same time as the cod and ling, for about six weeks.

28,296. Is there a large quantity of cod and ling caught in the season here ?—There is a good deal caught, but I cannot say exactly what the quantity is. For some years there has been a great deal caught.

28,297. Is the quantity of cod and ling increasing or otherwise ?—It is increasing; the price is far better than it was 20 years ago.

28,298. Is a large proportion of the cod and ling caught here cured ?—Yes.

28,298*a*. Are they mostly cured ?—Yes.

28,299. They are not sent fresh to market ?—Some of them are, but not any great quantity.

28,300. With regard to the herring fishery, I suppose your summer fishery is a more profitable one to the fishermen than the winter fishery ?—Yes.

28,301. When does the summer fishery begin ?—About the 20th of July they all go to the herring fishery, but that is rather too early for this place. They are now all fishing at Montrose, Stonehaven, and Arbroath.

28,302. Then as the season comes on do they work further south ?—Yes.

28,303. Do the shoals of fish come further south ?—I cannot say, but this is not an early place for beginning the herring-fishing.

28,304. Has the herring fishery been rather on the decline ?—Yes, it has been rather on the decline for the last two years.

28,305. How is it likely to be this year, from what you have already experienced ?—We have better hopes this season, but it is hard to say; these things are rather a hidden mystery.

28,306. Is there any cause to which you can attribute the decline ?—No.

28,307. There is no cause to which you imagine you can attribute it ?—No, unless it be to the killing of the young herring at the head of the Firth. That is the only cause of the injury done to the fishing that I know of.

28,307*a*. Do you think that that has had any serious effect upon the fishing ?—Yes, there is no question

about it. They have been killing large quantities of young herring at the head of the Firth.

28,308. They kill them along with the sprats—with the garvies?—Yes, but some years they are all small herrings together.

28,309. Have they done it for some years?—They got it stopped some time ago, but they have begun it again since.

28,310. The decline of the herring-fishing here seems to have been coincident with the stopping of the garvie-fishing?—The herrings go up into the Firth in the winter season for shelter, and as the spring and summer advances then they come down.

28,311. Do you think the loss sustained by you in the destruction of the young in the upper part of the Firth has had any serious effect upon your fishing?—Yes.

28,312. Have you not been in the habit of taking herrings that are full of spawn?—We cannot get them until they are full of milt and roe.

28,313. You are quite aware that you destroy a great quantity of the future brood when you take them up in that condition?—Yes, there is no doubt of it.

28,313*a*. You do not find any fault with yourself for doing that?—We cannot get them at all until they are in that condition.

28,314. Have you any interference to complain of on the part of the French fishermen?—They find fault, I believe, down towards the north.

28,315. But not here?—No, not here.

28,316. They do not disturb you within the three-mile limit?—No, we very seldom see them here at all.

28,317. When you are fishing among yourselves do you find that any injury is done by shooting your nets before sunset in clear weather?—No.

28,318. Do the fishermen themselves not complain of each other for damaging the fishing in that way?—Such a complaint may be made sometimes but the herrings here swim with the sun at twelve o'clock in the day if they are full.

28,319. Would they not be disturbed by shooting among them before sunset?—No.

28,320. You are not of opinion then that it is necessary to observe the regulation which prevents nets from being shot until after sunset?—No; if they are full fish nothing disturbs them. When the fish are thin they might be startled, but when they are close inshore in great quantities the shooting of the nets does not disturb them.

28,321. Practically, you do not observe any rule or regulation with regard to the time at which you should shoot your nets?—Not in this quarter.

28,322. Every man shoots his nets just as he likes?—Yes.

28,322*a*. Nobody ever interferes with you?—No.

28,323. Does the Fishery cutter come down and look after you?—Yes, but she never interferes with any of the fishermen as to the shooting of the nets. I never heard that she interfered with their shooting either sooner or later.

28,324. Are you aware that it is against the law to shoot your nets earlier than half an hour before sunset?—I never heard that in this quarter.

28,325. It is one of the articles of the Convention. The article in question is this: "It is forbidden to herring drift-net fishing boats to shoot their nets earlier in the day than half an hour before sunset, except in places where it is customary to carry on drift-net fishing by daylight." It is not customary to carry on drift-net fishing here by daylight?—There are times when they carry it on in the middle of the day in certain places.

28,326. You do not find that that damages your fishing?—No.

28,327. Is that towards the end of the season?—It is about the beginning of August.

28,328. It is the common opinion among the fishermen that no damage is done by shooting nets in broad daylight?—When the herrings are thin it does damage.

28,329. But if they are plentiful it does none?—No.

28,330. Is there any interference at all by the fishery officers, or the gun-boats, or anybody else, which in anyway injures you as fishermen, or of which you have to complain at all?—The gun-boats look after us and see if the boats are numbered and the other regulations in that respect complied with. That is their duty, but it is not necessary for anybody to interfere with the fishing in any way whatsoever.

28,331. At any rate whether necessary or not, nobody does interfere with it?—No, not here.

28,332. And you do not desire that there should be any interference?—I think it is quite right that they should be looking about in order to see if there is anything carried on that ought not to be.

28,333. In what respect ought they to interfere?—The French fishing boats might come in, and we might be run down by them while we were sleeping.

28,334. Do you think there is anything except the French fishing boats that would justify the interference of the authorities?—I cannot say that there is.

28,335. Would you as a fisherman desire to have any interference with your business?—No further than I should like to see it all in very good order.

28,336. Is there any disorder among you?—No, but it might occur.

28,337. But practically there is no police at sea?—No. A good many of those things which ought to be prevented are done in the dark when we cannot tell what is done or who does it.

28,338. Are such things as those generally done by accident?—Sometimes they are done by accident, and at other times there is no doubt that they are done wilfully.

28,339. But that might arise from some feeling of a personal character in which it would be difficult to interfere and against which the people must protect themselves?—Yes, there are three towns which have fishing boats all fishing along with each other.

28,340. Sometimes one town may not have a good feeling towards another?—Yes; that may be so, but I think it would not be very easy to put all these small things right.

28,341. Where do you get your bait for your line-fishing?—It all comes from the Clyde and Port Glasgow.

28,341*a*. Is it all brought here by railway?—Yes, and by steamer from Leith.

28,342. Has the price increased?—No.

28,343. Is it a moderate price?—Yes.

28,344. And you can get as much as you require?—Yes.

28,344*a*. Is there no supply of bait to be had nearer than Port Glasgow?—We get a good deal from Leith and Newhaven.

28,345. Is that of as good a quality as the bait you get from Port Glasgow?—Yes, but it is not often that we can get it there.

28,346. Then you have not suffered for the want of bait?—No, not for a good many years, but we suffered from it some twenty years ago.

28,347. Is there a better supply now than there was 20 years ago?—Yes, we can get plenty now.

28,348. Then you have no complaint to make on that head at all?—No.

28,348*a*. Have you any oyster beds here?—No.

28,349. Have you any lobster-fishing?—Yes, but there are not many got hereabouts.

28,350. It is not a fishery of much importance?—No.

28,351. Is there any crab-fishing?—Yes, a good deal in the middle of the summer.

28,352. Is it a valuable fishing?—There is a good deal got out of it for a month or so; but take it in a general way it is not a valuable fishing.

28,353. Where do you find a market for your crabs and lobsters?—I believe they are all sent to London. They all go to England.

ANSTRUTHER.

T. Fowler.

28 July 1864.

28,354. Are they sent by railway ?—Yes.

28,355. Has the opening of the railway here been very advantageous to the interests of the fishermen ?—It must have been.

28,356. It has improved your market everywhere ?—Yes.

28,357. (*Professor Huxley.*) I understood you to say that you catch herrings in February?—Yes, in the months of January and February we catch them off here.

28,358. In what condition are they then ?—They are full of milt and spawn.

28,359. At what time do they become spent fish ?—Towards the end of February.

28,360. Are they the same kind of herrings that you get in the autumn ?—Yes, I think they are.

28,361. Do you ever notice any difference ?—They are of a smaller size if anything.

28,362. Do you light your herring boats at night ?—Yes.

28,363. How do you light them ?—They have a lantern, and they put it up with a stick.

28,364. Have you two lights ?—Yes.

28,365. Does anybody interfere with you with regard to the lighting of your boats ?—No.

28,366. Does anybody interfere with you in any other respect ?—No.

28,367. Have you any complaint to make of the trawlers here ?—I have heard them complained of, but whether they do any damage or not I cannot say.

28,368. Are there many trawlers working off this part of the coast ?—No.

28,369. Are there any now ?—No, I do not think there are many now. It is prohibited.

28,370. I do not mean circle-net fishing, I mean beam-trawling ?—There have been plenty of beam-trawlers here.

28,371. Are there any beam-trawlers working off this coast now ?—It is all stopped except in St. Andrew's Bay.

28,372. The Fluke hole is off here, is it not?—Yes, a mile and a half to the westward of this.

28,373. The herrings are supposed to spawn there ? Yes, in great quantities.

28,374. Do you sometimes sink your nets there ?—Yes.

28,375. In order to catch them on the ground when they are spawning ?—Yes.

28,376. Trawling has been prohibited there on account of some complaints that were made by the fishermen ?—Yes.

28,377. Was it not the complaint that the trawlers got up the spawn ?—Yes.

28,378. Did the fishermen here complain of that ?—Yes.

28,379. How long is that ago ?—About four years ago ; there have been very great complaints here.

28,380. Are there any persons here who ever saw spawn brought up by the trawlers ?—Yes, I believe so.

28,381. Have you ever had any difficulty with the trawlers in consequence of their getting foul of your nets ?—No, they do not trawl on the nets inshore.

28,382. Is there any mackerel-fishing here ?—No.

28,383. Is there any oyster-fishing ?—No.

28,384. I understood you to say just now that you have taken to fishing with your long-lines further out at sea than you were in the habit of fishing formerly ?—Yes, we have done that for the last three years.

28,385. Was that because you could not catch as many haddocks as before with the old mode of fishing ?—Those are questions I can hardly answer. They got plenty two years ago, and now we go further for them than we used to go.

28,386. Do you get plenty inshore now ?—No.

28,386*a*. There are not as many inshore as there were formerly ?—No.

28,387. (*Mr. Caird.*) Have you had any trawlers off this shore—beam-trawlers ?—Not for a few years.

28,388. Has beam-trawling been stopped ?—Yes.

28,389. Did the steam trawler that came out from Leith ever come off this shore ?—I never saw her trawling here.

28,390. You do not complain of any injury done to you by trawling ?—No, except eight or ten years ago.

28,391. (*Professor Huxley.*) By whose authority was trawling stopped off here ?—I cannot answer that question.

The witness withdrew.

D. Corstophine.

David Corstophine called and examined.

28,392. (*Mr. Caird*). Are you a fisherman here ?—Yes.

28,393. And you are acquainted with all the modes of fishing practised on this coast ?—Yes.

28,394. Is there any kind of fish that in your opinion within late years has decreased in number on this shore ?—I think the haddocks have decreased greatly.

28,394*a*. Decreased ?—Yes inshore.

28,395. But have they decreased within the limits of your fishery ?—No, there have been plenty out at sea when we went there, but they have decreased very much along shore where we used to fish.

28,396. Have you found it necessary to go further to sea within recent years than you did formerly in order to catch haddocks ?—Yes.

28,397. You follow them further out ?—Yes.

28,398. What do you imagine is the cause of that ?—I do not know ; I cannot tell. We think they are shutting up inshore.

28,399. Have you larger boats to enable you to go further out to sea than you were in the habit of going out formerly ?—Yes.

28,400. With those larger boats do you find that you can make a better business by going further to sea ?—Yes.

28,401. When did you begin to introduce these larger boats ?—Five or six years ago, perhaps six.

28,401*a*. Was it just at the time you began to find the haddocks were thinning along the shore ?—Yes.

28,402. You found it necessary to follow them further out to sea ?—Yes.

28,403. And you got a better description of boat in order to do it with ?—Yes.

28,404. Is there any difference in the lines you use ?—We use as much length of line again.

28,405. Are there more men in the boats ?—No, the same number of men.

28,406. Then with larger boats, the same number of men, and better lines, are you making a better fishing now than you were in the habit of making years ago ?—Yes.

28,407. And outside in the places where you now fish do you find a great abundance of haddocks still ?—Yes, there are plenty of haddocks.

28,408. There is no signs of decrease there ?—No, I never saw any.

28,409. Do none of the south country trawlers come so far north as this ?—I never saw any.

28,410. Are there any particular banks that you go to ?—When we are fishing for big fish we try to fall in with the banks.

28,410*a*. You mean when you are fishing for cod and ling ?—Yes.

28,411. But how is it when you are fishing for haddock ?—When we are fishing for haddock we like deep water best.

28,412. How deep is the water ?—From 35 up to 40 fathoms.

28,413. And how far off the shore?—Sometimes between 60 and 70 miles.

28,414. Do you succeed best upon a soft or upon a hard bottom?—Upon a soft bottom.

28,415. Do you get a better quality of fish from a soft bottom?—Yes. We get finer codfish on the hard ground, but not so many of them.

28,416. Do you agree with the previous witness, that there is plenty of bait to be had at a moderate price?—Yes, there is plenty of bait.

28,417. Then you have no complaint to make of any hardship with regard to bait?—Sometimes we have a difficulty in getting it from Glasgow.

28,418. You get it sent to you from the Clyde?—Yes.

28,419. Do you never get any bait from Boston?—No.

28,420. With regard to fishing for cod and ling, has that been an improving or a declining business?—It has improved for some years.

28,421. Is the quality of the fish caught now as good as it was in former times?—Yes, I think so.

28,422. Are the cod as large and fine as they were in former years?—They are very good cod now, but I have seen as good cod when I first went to sea.

28,423. Over how many years does your experience as a fisherman extend?—About 30 years.

28,424. Have you been constantly at it during all that time?—Yes.

28,425. Is there a large proportion of ling caught here?—Yes, there are sometimes good takes.

28,426. And the ling and cod caught here are chiefly cured?—No, most of them go away fresh.

28,426*a*. Of both kinds?—Yes.

28,427. To what markets do they go?—They are principally sent away to the markets in England.

28,428. Then you do not try to keep them alive in your vessels?—No.

28,429. Have you no wells in your fishing boats?—No.

28,430. Then you do not follow that mode of fishing which is sometimes adopted further south?—No, we do not.

28,431. Do you catch any turbot?—Yes, we get plenty of turbot or rather halibut. We have very few turbot.

28,432. Do you catch them all upon the lines?—Yes.

28,433. With regard to the herring-fishing, do you regard the white-fishing or the herring-fishing as the most profitable source of income in your business as a fisherman?—I do not know.

28,434. What brings you in the most money in the course of the season?—I think the white-fishing brings in more some seasons than the herring-fishing.

28,435. Did that fishing formerly pay you better?—Yes, sometimes.

28,436. The herring-fishing fluctuates a good deal from year to year, does it not?—Yes, it fluctuates very much.

28,437. Does it fluctuate much more than the white-fishing?—Yes.

28,438. Are you enabled to say from your experience that the herring-fishing has been rather on the decline here?—Yes, it has been rather on the decline for some years.

28,438*a*. On the whole, is there rather a decline in the quantity of herrings cured here?—I do not know.

28,439. Have the boats increased?—Yes, the boats have increased every year.

28,440. Do you get strangers to come here now to fish along with the people of this coast?—Yes, a good many of them come in the season of the year.

28,441. Do the families of your fishermen generally become fishermen?—Yes, most of them.

28,442. Most of the young men go in the fishing boats?—Yes.

28,443. Then, on the whole, I suppose, it is a prosperous business?—Some are doing very well, and some very little.

28,444. It varies according to the means exercised, and there is also something in good luck?—Yes.

28,445. Have you a larger class of herring boat than you used to have?—Yes, the boats are larger now.

28,446. Do you use the same boats for herrings?—Yes.

28,447. Are they half-decked boats?—They are about two thirds decked.

28,448. Are there no decked boats out from here?—No.

28,449. Is there any great change in your mode of fishing within recent years?—I cannot say that there has been much change. There are a good deal more lines used now than were used formerly. There was not nearly as much gear in a boat when I first went to sea.

28,450. Is there any method of fishing employed by you which involves a wilful destruction of fish?—I cannot see that there is.

28,451. I suppose that all the fish you catch you take ashore and sell for food?—Yes, except what we take for bait.

28,451*a*. That is equally necessary for your business as a fisherman?—Yes.

28,452. Is there any interference with you of any kind that restricts your mode of fishing?—No, I cannot say that there is.

28,453. Nobody meddles with you or prevents you from using your own exertions in the best way you think you are capable of doing?—No, except on the north coast; the Frenchmen hurt us a good deal there. We have been a great deal annoyed by their coming among us.

28,454. Is that for the herring-fishing?—Yes.

28,455. Do they come within the three-mile limit?—They come among our boats.

28,456. And do they not mind what distance they are from the shore?—No.

28,457. Do you complain of that?—Yes.

28,458. Does nobody attend to your complaints?—They hurt our boats and nets sometimes very much.

28,459. Whom do you complain to?—To the Fishery Board.

28,460. Has any action been taken by them?—We have not got any recompense.

28,461. Have you had the gunboats among you looking after the fishermen's interests?—No, not here; but they have been about Stonehaven and Gordon, and thereabouts.

28,462. Do the French fishermen go in there?—Yes, there were many hundred sail of them there last year.

28,463. Do they buy any of the fish from the British fishermen?—No, I do not think they buy much.

28,464. Is there anything you desire to bring before the Commission which, in your opinion, might cause an improvement in the mode of fishing or in the result of the fishing here?—I do not know that there is.

28,464*a*. There is nothing you have to say on that subject?—No.

28,465. What sort of a harbour have you here?—It is a very good harbour, but very shallow water.

28,466. Has it not been proposed to make a large expenditure on it in order to increase the accommodation?—Yes, I believe so.

28,467. Would that be of great advantage to you as fishermen?—Yes, it would be of great advantage to this place.

28,467*a*. And to the whole coast around here?—I believe it would.

28,468. Is the situation such that it will be a central point for all fishermen to run to in case of necessity?—Yes, it will be of very great advantage to many of them. Sometimes they have to lay off for three or four hours, and cannot get in owing to the want of water. It is only at half tide that we can get in.

ANSTRUTHER.

D. Corstophine.

28 July 1864.

28,469. Will the proposed expense enable you to get access to the harbour at low water?—I suppose it will. Some of the boats, at any rate, will have access at low water.

28,470. (*Professor Huxley.*) Did the fishermen here make any application to have the harbour enlarged?—Yes.

28,471. How long is that ago?—Five or six years.

28,472. Did they apply to the Fishery Board?—Yes.

28,473. Were they prepared to raise money themselves for the expenses in the proportion required by the Fishery Board?—Yes.

28,474. What is likely to be the total cost of the improvement here?—35,000*l.*

28,475. Do the fishermen themselves raise any money towards it?—No, but we have been always paying a little.

28,476. You mean that you pay harbour dues?—Yes.

28,477. But do you raise among yourselves any specific sum towards the expense of the new harbour?—No.

28,478. That is obtained by other means?—Yes.

The witness withdrew.

A. Welch.

ALEXANDER WELCH called and examined.

28,479. (*Mr. Caird.*) You are a fish-curer here?—Not here, but at Pittenweem.

28,480. Are there many boats belonging to Pittenweem?—There are about 50 now.

28,481. Is there a large quantity of herrings caught at Pittenweem?—I could not say exactly—sometimes 1,200 or 1,400 barrels in good years, and sometimes only 600 or 700 barrels.

28,482. Is there any quantity of cod and ling cured there?—Yes.

28,483. Are there any haddocks cured also?—Yes.

28,484. Can you tell us whether the quantity of herrings and white fish cured has been increasing or diminishing within recent years?—The herring-fishing within the last three years has greatly fallen off.

28,485. How has it been with the other fishing?—The boats go further to sea. The fishing in-shore for white fish has fallen off the same as the herring-fishing.

28,486. Would the same result follow if the fishermen went further out to sea for the herrings?—That has not been established yet.

28,487. Has it been tried?—Two years since our boats left the Firth in the early part of the season, and went further north, but it is only an experiment yet.

28,488. What is the reason the fish have changed their habits and gone further out to sea?—Nothing but trawling.

28,489. If there any trawling here?—Yes, in the Fluke hole here.

28,489*a*. Off Pittenweem?—Yes.

28,490. Has not that trawling been put a stop to?—Yes, for the last 12 months.

28,491. Has there been any increase in the fishing in consequence?—No.

28,492. Has it made no difference?—It has made no difference this year. The spawn has been spoilt there for the last eight or 10 years.

28,493. Had that system of trawling continued for so long a period in the Fluke hole?—Yes, our fishermen tried to put a stop to it for six or seven years.

28,494. Who followed it?—A few of the St. Monance fishermen.

28,494*a*. And not your own people?—No.

28,495. Was that the small beam-trawl?—Yes, a beam about twenty feet long.

28,496. That is only half the length of those used by the English trawlers?—Yes, perhaps it might be from 20 to 25 feet.

28,497. Do they get many fish with it?—They did for a few of the first days they carried on the trawling when the fish were spawning on the ground, but as soon as they had spawned they went away.

28,498. They gave it up then?—Yes.

28,499. Have you seen them bringing up spawn in their beam-trawl?—Not in the beam-trawl.

28,500. Then how did they bring it up?—We have trawled for the purpose of getting spawn to show it to the Fishery Board at Edinburgh.

28,501. But you did not see the men who were working the beam-trawl get it?—No.

28,502. When you saw the spawn brought up it was obtained by people who went specially for the purpose of getting it?—Yes.

28,503. Did you get much of it up?—Yes.

28,504. What did you do with it?—We took it and showed it to the Board of Fisheries.

28,505. (*Professor Huxley.*) Did you use a dredge to bring it up?—Yes.

28,506. And not the common net?—No.

28,507. Did you ever try to get any up with the trawl?—No.

28,508. What made you to take to a dredge if you thought the trawl was enough to get it up?—The trawl is not enough to get it up. It only spoils it.

28,509. Did you ever try the trawl?—No, I never was trawling.

28,509*a*. You got the spawn you speak of up with the dredge?—Yes.

28,510. Did it come up in large masses?—No, it was perhaps five inches thick. It came up in small pieces; it came up broken.

28,511. Was it fixed to the bottom?—It seems the herrings deposit it some inches thick themselves, and then they put shells on the top of the spawn to keep it from floating away. Towards the bottom it is mud, gravel, and small stones.

28,512. Do you think the herrings put the shells on the top of the spawn as a protection?—I have no doubt of it.

28,513. What sort of shells were they—were they whelk shells?—They were small broken shells.

28,514. Was there anything sticking in the spawn?—Small stones.

28,514*a*. And nothing else?—No,

28,515. Then how did you know which was the top, and which was the bottom when it came up?—We found it was covered with mud below, the other side having been swept clean by the tide going over it,

28,516. Then it was only a judgment on your own part as to which was the bottom and which was the top. Did any of that spawn come to life afterwards?—No, it could not come to life.

28,517. Some of it was taken to Professor Allman?—I went over with it. Professor Allman was in Ireland when I went. I have seen the statement recently made to this Commission by Mr. Primrose, that some of it was taken to Professor Allman from Pittenweem, and that if it had been taken in water it would have lived.

28,518. Can you tell me how long it was out of the water?—No.

28,519. Can you give us no information about it at all but that it was taken and was not likely to come to life again?—I know what took place in regard to it. It was in a state of decomposition the next day and had a strong rushy smell.

28,520. (*Mr. Caird.*) Are there any observations you wish to make to us with regard to the objects of our inquiry?—At Pittenweem they complain very much of the taking of spawn by the trawlers. They take away the shells too and the wood and other things to which the spawn might adhere, and the consequence is that all the beds have been spoilt, and and will remain so for a few years to come.

ANSTRUTHER.

A. Welch.

28 July 1864.

28,521. Don't they throw the shells over again?—No, they trawl away and take the spawn, and shells, and everything.

28,522. But are they not all tumbled into the sea again?—Yes.

28,523. Then what is the nature of the complaint the fishermen make about the shells being removed; what harm do they imagine arises from it?—Because if they take all the shells away it leaves the fish no place to spawn upon. They have often to spawn in mud, and the consequence is that the spawn does not come to life.

28,524. They imagine that the spawning ground is injured in that way?—Yes.

28,525. Is there anything further in regard to the fishing at Pittenweem that you desire to bring before us?—No, nothing in particular.

28,526. Is there no interference on the part of the authorities which disturbs or injures the fishing here?—No.

(The witness withdrew.)

JOHN TODD called and examined.

J. Todd.

28,527. (*Mr. Caird.*) You are a fish-curer at Anstruther?—Yes.

28,528. Have you been long acquainted with the fishery business here?—Yes, for 25 years and more.

28,529. Has the quantity of fish cured—speaking in the first place of herrings—been on the increase or decrease of recent years?—It has decreased within the last two or three years.

28,530. Has there been a larger proportion sent fresh to the market?—Yes.

28,531. Does that account for the decrease?—No, the decrease is independent of all that.

28,531*a*. There has been a decrease independent of that for the last two years?—Yes.

28,532. But the decrease which would be shown by the returns of the fish cured would not be an accurate representation of the actual decrease, inasmuch as a larger proportion is sent to the market?—No, it would not.

28,533. Has the price increased?—Yes, considerably.

28,534. Has the number of people employed in the herring-fishing increased?—Do you mean the people on shore or the fishermen?

28,535. I mean everybody connected with it?—It has decreased for the last year or two because the fishing has fallen off and they have not been so much wanted.

28,536. With regard to the other kinds of fish, have they increased or decreased? You are a buyer of other kinds of fish as well as of the herring, are you not?—Yes.

28,537. Do you cure cod?—Yes.

28,538. Cod, ling, and haddock?—Yes.

28,539. Do you make Finnon haddocks of them?—Yes.

28,539*a*. They are smoked haddocks?—Yes.

28,540. Is a large proportion of the haddocks cured in that way?—Almost all of them; very few are sent away fresh.

28,541. Is the curing the most profitable?—Yes; an occasional box may go away fresh but the greater part of them are smoked.

28,542. Has the quantity increased of recent years?—The fisheries have been more productive this summer than for many years past.

28,543. You heard what the fishermen stated about their being obliged to go further out to sea than they were in the habit of going in former years?—Yes.

28,544. Are you aware that that is the fact?—Yes.

28,545. Does that arise from the fact that they have better boats and lines, and that they find it now more advantageous to go further to sea?—I believe they can make it more profitable.

28,546. Do they get a larger quantity of fish?—Yes.

28,547. Is the quality better?—The quality is not better.

28,548. Is it much about the same?—The fish are not so large. The fish get out on the soft ground, and they are caught in greater numbers. They are sold by number, but the best fish are found on the hard ground.

28,549. The fishermen like to get into the deep water?—Yes.

28,550. That is because they can get more fish there?—Yes.

28,551. Does your experience extend over more than 20 years?—Yes.

28,552. Is there a larger quantity brought into this place for cure than there was 20 years ago?—I can answer better with regard to 10 years ago.

28,553. Is there more than there was 10 ago?—Yes.

28,554. In fact, there has been a progressive increase?—The quantity this year has been unusually large. It has varied for some years, but this year it has been unusually large. I think years ago they got more fish on the same quantity of line than they do now; you must bear in mind that they go now with double the amount of line, but they don't get double the amount of fish.

28,555. Can you give us any reason for the fish having changed their ground?—No, I cannot state what the reason of that is.

28,556. But you believe it is the case that they have changed their ground?—I don't think there are so many inshore as there were formerly.

28,557. With regard to the cod and ling fishery here, has it been improving?—I think it has rather decreased the last year or two, but the fishermen at Anstruther don't prosecute the cod and ling fishing as much as the St. Monance fishermen.

28,558. Is there any reason for that?—No.

28,559. Is there a large quantity of cod and ling cured here?—Not a large quantity. There were more fish cured four, five, or six years ago than there are now.

28,560. More cod and ling?—Yes.

28,561. You are referring now specially to those fish?—Yes.

28,562. Does that arise partly from sending cod and ling away fresh to the market?—Yes, a good deal is sent away fresh now.

28,563. More than formerly?—Yes, since the railways were established.

28,564. Has the price of cod and ling increased?—Yes, very much. I have paid only 3*d*. for what I have since paid as much as 1*s*. 6*d*.

28,565. Do the fishermen get a large share of that increase?—They get it all.

28,566. Then do the fish-curers make a bad business of it?—They go up to the last halfpenny.

28,567. Which are the principal markets?—Glasgow for smoked fish, London for pickled cod, and England generally for other fish.

28,568. What is pickled cod?—It is cured in barrels and sent to London.

28,569. Has the fact that there has been a larger demand for fish during Lent had anything to do with your increased energy in fishing for them?—Yes; the fish are in the best condition at that time.

28,570. Do you purchase shellfish?—No, I do nothing in the way of purchasing shellfish.

28,571. Is there any point you would like to bring before us which within your knowledge affects the fishing business here?—I don't know that there is.

28,572. Do you think that the improvement in the harbour which has been suggested will be of advantage to the interests of the fishermen?—I think it will.

28,573. Will it increase the quantity of fish coming here?—Yes.

28,574. It will make it a more central point?—Yes. We have sometimes very bad weather here,

ANSTRUTHER.

J. Todd.

28 July 1864.

and the consequence has frequently been that the boats could not get away. They will now have deeper water.

28,575. It would be much better for them if they could get out or in at any time?—Yes.

28,576. Perhaps the expenditure will effect that?—Yes.

28,577. That is the principal object of the expenditure?—Yes, to accommodate the fishing boats.

28,578. Will the result of such an expenditure be to bring a good many of the boats to this port from neighbouring fishing towns?—Yes, I think it will.

28,579. Will it be likely to damage the interests of the other ports?—It will draw a few of the fishing boats away from them.

28,580. (*Prof. Huxley.*) Do you cure for the brand?—Yes.

28,581. Do you cure a considerable quantity of herrings?—Yes, a few thousand barrels of fish.

28,582. Where do they go?—Chiefly to Stettin, Hamburgh, and the German markets.

28,583. Do you like the branding system?—No; I think if every man stood on his own brand he would pay more attention to the cure.

28,583*a*. You think if you were left to yourselves you would get on just as well?—Yes.

28,584. Does the brand tend to diminish the price of herrings to the careful and industrious curer?—It brings every one to the same level, and if the herrings come up to the mark at all, they get just as high a price for third-class as for first-class herrings.

28,585. Whereas if every man were left to his own exertions to establish his name he would get paid according to his merits?—Yes.

28,586. The practical effect of the brand is to equalize prices beyond a certain limit?—Yes.

28,587. Do you think that a hardship upon a careful man?—Yes.

28,588. Do you think it would cause any particular disturbance in the market if the brand were done away with?—It would make a little disturbance, no doubt, for a time.

28,589. Would the market soon recover itself?—Yes.

28,590. Are the greater part of the curers here of that opinion?—Yes; but there is a difference of opinion among them.

28,591. There is no brand for the haddocks?—No, nor for the herrings that are sent to London.

28,592. The best article brings the best price, and the buyers there, being good judges of the quality of the fish, a man's name goes for something?—Yes; but the fish that are branded are sold without being looked at, while ours would not be sold without being scrutinized pretty closely.

28,593. You are of opinion that the system which works so well in the case of the haddock would do as well in the foreign as in the home market?—Yes.

28,594. But it may be that the difference is occasioned in the case of one being the home market and the other the foreign?—The foreigners are pretty "kittle" to deal with. I have known as many disputes about branded fish as if they were unbranded.

28,595. You have known disputes?—Yes, I have been involved in them more than once myself.

28,596. Has not the name of the curer some effect notwithstanding the brand?—Yes, it has a certain effect.

28,597. But not as much as it would otherwise have?—No.

28,598. Is there not some practical convenience felt on the Continent from the fact that the warrants issued for branded herrings pass almost as money?—Yes, that does make a difference. A man will sell any amount of branded herrings, whereas if they had not the brand they would not be sold without the purchaser seeing the article.

28,599. You have certain documents certifying that a man possesses a certain amount of full Crown-branded herrings?—When he ships the herrings it is specified whether they are full Crown-branded or unbranded. A foreign merchant if they have the full Crown brand will take them, and they will pass from hand to hand.

28,600. Will the bill of lading serve the purpose of a dock warrant?—Yes.

28,601. It will pass from hand to hand?—Yes.

28,602. As if so much money?—Yes; a bill of lading for 300 barrels will pass from one to another for its value.

28,603. That is a convenience which might cease if there was no brand?—It would be more the individual that would regulate the thing after that.

28,604. Do you think if a man had a bill of lading for a certain number of barrels of herring with a particular man's brand, that that would answer the purpose?—Where the curer was well known it might.

28,605. Would it afford the same convenience in the course of time?—Not for a time, until the brand established a merchant's name. After that, I think there would be no difference in regard to fish as compared with butter or any other article of trade.

28,606. (*Mr. Caird.*) If there was no brand, would not the necessities of the foreign buyer compel him to take fish upon some character or another?—Yes.

28,607. At the very first, when your fish were sent over without the brand, the foreign merchants must necessarily take them without it?—We would not get money so readily upon them.

28,608. Even for one year there would not be any great difficulty in the matter?—No, I think not. They would go all unbranded, and would be sold in some way.

28,609. Those which go now unbranded are in that difficulty?—Yes.

28,610. Some go unbranded?—In some places they don't care for the brand.

28,611. All the fish caught on the west coast of Scotland go unbranded?—Yes.

28,612. Do they go abroad?—Yes, to the Russian and German markets.

28,613. Do they command the market without difficulty?—They are sold in those markets according to their quality.

28,614. Do they sell as good as branded fish in the same markets?—There may be a difference of 1*s.* or 1*s.* 6*d.* per barrel sometimes, but they generally sell quite as good.

28,615. (*Prof. Huxley.*) They pay 4*d.* a barrel for the brand?—Yes. The foreigner sometimes comes here, and wants branded herrings; and unless you can show him that they are branded he does not know the quality, and will not buy them.

28,616–7. Then the fact is, that the Government brand operates, to a certain extent, in deterring foreigners from buying herrings of any other description?—Yes.

28,618. Do you think that the readiness to pay the sum charged for the brand is to be ascribed to that cause?—Yes.

28,619. The fact that the Government puts the brand upon herrings gives an artificial stimulus to the desire for the brand?—It makes the article of a certain value, and people can count to a certain extent upon it.

28,620. (*Mr. Caird.*) You said there was a difference of opinion among the curers with regard to the brand?—Yes.

28,621. Are the majority of curers upon this coast of your opinion?—Some of them think that the brand saves a great deal of trouble, and that if there were no brand the fish would have to be examined here, whereas they can get the money for them at once so long as they have the Crown brand.

28,622. Is that the only reason for which they advocate the Crown brand?—Yes.

28,623. Is there a Fishery officer here?—Yes.

28,623*a*. Is there any other place under his inspection?—Yes, the stations extend from Buckhaven round to St. Andrew's.

ANSTRUTHER.

J. Todd.

23 July 1864.

28,624. Are herrings cured there?—Yes, herrings are cured at all those stations. At Pittenweem, St. Monance, Anstruther, and other places, he goes to inspect the fish, and puts the brand on them if he thinks them worthy; one day at Anstruther, another at St. Monance, and another at Pittenweem.

28,625. Does he make a strict examination of them?—Yes; he may open 8 or 10 out of every 100 barrels, and if he finds them all right then he brands the lot, but if he finds one or two of them faulty he may probably reject the whole.

28,626. Would you, as a curer, bestow the same care upon your cure if there was no such inspection, having to rely upon your character instead of the Government brand?—If it was in our hands we should look sharper. We do the best we can now, because the Fishery officer is rather particular.

28,627. But do you not think that your own interest would be quite as strong a motive as the fact that the herrings have to undergo the inspection of the Fishery officer?—Yes, the merchants would be quite as good judges as the Fishery officer, although he may be a good judge too.

28,628. (*Prof. Huxley.*) What other branch of exportation is there here?—There is no other export trade here except fish.

28,628*a*. None except fish?—No.

28,629. (*Mr. Caird.*) Where do you get your salt from?—From Liverpool chiefly, and there is a little Spanish also.

28,630. (*Prof. Huxley.*) You are pretty well acquainted with all the fishermen here?—Yes.

28,631. Did you ever hear whether any of them volunteered into the navy?—Yes, a good many of them have.

28,632. Is that commonly the case?—Yes. Do you mean in the standing navy?

28,633. I mean do they go on board ship, not into the coast volunteers?—No.

28,633*a*. Do they go on board men-of-war?—No.

28,634. They join the coast volunteers?—Yes, that is a common thing, very few of them volunteer into the regular navy.

28,635. Do many of them join the merchant service?—No; they generally stick by the fishing.

28,636. The population must have increased a good deal of late years?—Yes.

28,637. And they all contrive to get a living?—Yes; the fish sell better now than when there was a small number of fishermen.

28,638. Is there anything so peculiar about the fishing trade that it should receive a support from Government which other trades do not get?—I think myself that it ought to stand on its own legs like all other trades.

28,639. In point of fact it is only the least valuable portion of the fishing trade here that does get support. The long-line fishing gets no sort of encouragement?—No.

28,640. Nor the haddock-fishing?—It is just the herrings. The winter fishing gets no encouragement; it is only the summer fishing.

28,641. (*Mr. Caird.*). Are any herrings cured in the winter time?—All of them are made bloaters for the London market at that time.

28,642. There are none of them cured for foreign export?—No.

28,643. (*Prof. Huxley.*) Which do the fishermen get most from, the herrings or the white fish?—The white fish they get every day; the herrings are only a chance thing. The white fish is what they generally pretty much look to. It is the more general thing. They can depend upon it more.

28,644. After all it would seem that the encouragement afforded by the brand system is not to the fishermen, but only to the curer?—Yes, to the curers; it has nothing to do with the fishermen.

28,645-6. It is, in point of fact, an interference between the curer and the man he sells his fish to?—Yes.

The witness withdrew.

H. Macintosh.

HUGH MACINTOSH called and examined.

28,647. (*Mr. Caird.*) You hold some official station in connexion with the harbour works here?—I am clerk to the Harbour Commissioners.

28,648. What is the object of that Commission?—They are incorporated by an Act of Parliament passed in 1850.

28,649. For what purpose?—For the purpose of extending and improving the present harbour.

28,650. As a fishery harbour?—Yes, chiefly as a fishery harbour; but it would accommodate the coasting trade if the projected plans were carried out.

28,651. Do you contemplate a large expenditure upon the harbour?—Yes, 35,000*l*. is the estimated cost.

28,652. Have you had plans made?—Yes, they are all ready for advertising.

28,653. Do you propose to commence shortly?—Yes, as soon as we have the funds.

28,654. How do you raise them?—From the Fishery Board and by means of a loan from the Public Loan Commissioners.

28,655. Is that upon security of any kind?—The harbour belongs to the burgh of East Anstruther, and their revenue, which amounts to between 800*l*. and 1,000*l*., they have handed over to the Commissioners. The sums which have to be borrowed will be borrowed upon the security of the revenues of the harbour.

28,656. Upon the credit of that 800*l*. or 1,000*l*.?—Yes, but we expect the revenue will increase.

28,657. Are these dues levied from vessels carrying on the export or import trade, independent altogether of the fishery interests?—They are levied upon vessels frequenting the port as well as upon our own boats.

28,658. Do the fishing boats pay dues?—The fishing boats pay 6*d*. every time they come in, and there is also a tax upon the fishing boats themselves.

28,659. Is that a common thing?—It is a common thing according to the Burgh Act.

28,660. It is a common thing here?—Yes.

28,661. Is it a common thing in connexion with other harbours?—The same thing, I believe, is done at Pittenweem.

28,662. Is it under an old Act?—Yes, the Harbours Act of 1853.

28,663. Were there any dues levied upon the fishermen previous to that time?—No, they had the use of the harbour perfectly free before that Act passed.

28,664. What, upon the average, does it amount to upon each boat in the course of the year?—I am not sure at present what the average amount of dues upon each boat is.

28,665. You don't know what is paid by each boat?—Sixpence each time they come in, each time they enter the harbour; and there is also a penny upon each cran of herrings landed.

28,666. The whole revenue collected amounts to between 800*l*. and 1,000*l*. a year?—Yes.

28,667. Is that all paid by the fishermen?—No; that is the whole revenue of the harbour.

28,658. It is chiefly paid by the fishermen—No; there are certain other sums which come into the column.

28,669. What proportion do the fishermen pay?—From 300*l*. to 400*l*.

28,670. They pay about one half of the whole sum?—Yes. I think one witness stated that his class did not contribute to the revenue.

28,671. He was not aware of the fact that they really did?—No, he was not aware of it.

28,672. Perhaps he forgot the fact at the time?—It is so nevertheless.

ANSTRUTHER.

H. Macintosh.

23 July 1864.

28,673. They do contribute?—Yes.

28,674. Then it is a tax upon the fishermen?—Yes. to the extent of 300*l.* to 400*l.* a year. I may say however that they volunteered to pay it themselves.

28,675. In what way did they volunteer?—The fishermen volunteered that they would pay 6*d.* every time they came into the harbour for a new harbour.

28,675*a*. Did they not pay it before?—They volunteered to pay it when we were discussing the question and we got it put into our new Act of Parliament.

28,676. What is the date of your new Act?—1860.

28,677. Is the mortgage upon that revenue held to be sufficient security by the Public Loan Commissioners for making that advance?—There is other security they look to. The sum to be advanced by the Loan Commissioners is 16,500*l.* The rest we get in the shape of a grant from the Fishery Board.

28,677*a*. The sum advanced by the Loan Commissioners you would pay in annual instalments to be spread over a number of years?—Yes.

28,678. Do you pay any part of the sum which the Fishery Board is to advance?—Yes, we pay 4,500*l.*, which we raise by loan at four per cent.

28,678*a*. Then 12,000*l.* is a grant?—Yes.

28,679. Do you expect to have your revenue much increased when you have your harbour constructed, by bringing fishermen from other quarters?—Not only by that, but by increasing the coasting trade. I may mention that when we were discussing this point several years ago the fishermen then had an impression that the class of boats would grow much larger if they had this deep-water harbour accommodation. They were of opinion that in that case they would get decked boats and go further out to sea.

28,679*a*. Then they look at it as a future advantage to themselves?—Yes, they look at it as necessary to be done.

28,680. But if the expenditure is made solely at Anstruther, would it not limit the advantages entirely to the people of Anstruther; if there is no expenditure except at Anstruther to insure deep water for heavy boats, that would be an advantage solely to those boats which frequent Anstruther?—We expect that boats will come from other places to take advantage of the harbour here.

28,681. Is it a good point in the Firth for the fishermen?—The curers are chiefly resident here.

28,682. What will be the depth of water in the new harbour at low water?—Mr. Primrose in his examination mentioned seven feet, but the engineer told me that it would be nine feet at the lowest spring tides.

28,682*a*. Would seven feet at low water admit the large class of fishing boats at any time of the tide?—Yes, it is all deepened up to a certain point, so that it will take them in.

28,683. (*Prof. Huxley.*) The regulation of the Fishery Board under which the Harbour Trustees apply the money is that the local body shall supply one third of the expenditure; how is that managed here? You say the cost of the works will be 35,000*l.*?—Yes, that is the estimate we have.

28,684. Then you borrow a certain sum from the Public Loan Commissioners?—Yes, 16,500*l.*

28,685. How is the interest of that to be paid?—It is to be paid from the revenues of the harbour.

28,686. So that, in fact, all the town finds here is the revenue of the harbour; that is the entire local contribution towards the works?—Yes.

28,686*a*. You speak of a revenue of about 1,000*l.*?—That is what it is at present, but we expect that it will increase very much.

28,687. Then at the present moment the contribution of the town does not amount to the interest of the total expenditure at three per cent.?—The interest of the loan is to be three and a quarter per cent.

28,687*a*. But in point of fact, what you contribute does not amount to the interest of the whole sum?—Not of the total expenditure; the town council have given up their harbour, which is so much a year.

28,688. Will the sum raised by loan have to be paid up completely?—Yes. There is a provision in the Act for a sinking fund, and we have not the slightest doubt it will be paid.

28,688*a*. Still it will come out of the harbour dues?—Yes, we have not the slightest doubt of its being paid. There is an absolute necessity for the thing being done, and done soon. The Act I referred to was the Pier and Harbour Act of 1863. The fishermen paid on their fishing boats 182*l.* in 1863, and 328*l.* of fish rates.

28,689. That was in 1863?—Yes, the return is August 1863.

28,690. How much is that altogether?—Upwards of 500*l.*

28,690*a*. That is fully half of the revenue?—Yes. I find that Pittenweem is under the Anstruther Act.

28,691. Pittenweem will be included in the advantages conferred by the construction of the harbour?—Yes, and the whole of the fishermen in the Firth will be also included.

The witness withdrew.

W. Gillis.

William Gillis called and examined.

28,711. (*Mr. Caird.*) You are the Fishery officer here?—Yes.

28,712. Have you been long stationed here?—For two years.

28,713. Have you under your inspection a considerable length of coast?—From Buckhaven to St. Andrew's inclusive.

28,714. How many stations have you?—About five.

28,715. Have you in your possession any statistics which would show us the progress which has been made at these five stations?—Yes.

28,716. Can you give us a comparative statement of the number of boats, the number of men, the value of the boats, and the quantity of fish cured, from 1855 to to the present year?—Yes; I can only give you what is cured altogether, I cannot distinguish the different stations.

28,717. All we require is the total amount. You are about to read the figures at all the different stations over which your superintendence extends?—Yes. The return is as follows:

Year.	Number of Boats.	Value.	Number of Men.
		£	
1855	519	21,599	1,993
1856	560	23,216	2,189
1857	588	24,182	2,306
1858	607	23,969	2,349
1859	688	26,014	2,536
1860	717	26,017	2,579
1861	733	27,574	2,710
1862	725	28,957	2,814
1863	727	29,277	2,845

28,718. That is your last return?—Yes.

28,719. What returns of fish can you give us during those years?—I can give you statistics with regard

to the herring, the cod, and the ling, from the year 1855. In the first place I will give you the cod and the ling:—

Year.	Number of Fish cured.
1855	98,392
1856	125,595
1857	65,421
1858	84,351
1859	85,321
1860	91,823
1861	39,739
1862	67,989
1863	69,152

28,720. In addition to that there is a large quantity that goes away fresh which is not estimated among the cured fish; you cannot give us any correct estimate of that?—No.

28,721. What else can you give us?—I can give you an estimate of the quantity that goes away fresh.

28,722. Is that an estimate merely?—Yes.

28,723. Has it been progressive?—Yes, of late years.

28,724. Have you any record of the quantity of Finnon haddock sent away?—No.

28,725. Have you no record of that at all?—No record has been kept.

28,726. Then will you now give us a statement of the cured herrings?—It is as follows:—

Year.	Number of Barrels.
1855	22,907
1856	22,344½
1857	35,640
1858	15,472
1859	37,831
1860	94,965¾
1861	64,760
1862	44,293
1863	23,006

The witness withdrew, and the inquiry was adjourned to Broughty Ferry on the same day.

Broughty Ferry, Forfarshire, Thursday, 28th July 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

DAVID COBB called and examined.

28,692*a*. (*Mr. Caird.*) You are very well acquainted with the fishing interest in the mouth of the Tay?—Well, I cannot say I know much about the practical part of it, but I know what they generally carry on in the fishing way.

28,693. Are there many men employed here in sea fishing?—I made up a list lately for the lifeboat people, and there were then about 108 men and sea-going boys who went during the winter time.

28,694. What different kinds of fishing do they practise here?—Haddock-fishing and herring-fishing, and fishing in the river occasionally for flounders, codlings, and small fish.

28,694*a*. Do they get any garvies here in the river?—They get what they call small herrings.

28,695. Do they get any large quantity of them?—Only occasionally. I have heard them state that they only come once in seven years, or about that time, to any amount.

28,696. Is there any sparling fishery here?—No, there is no sparling fishery.

28,697. Are no sparlings caught here?—There are some up the water among the reeds, but none at Broughty Ferry.

28,698. Is the flounder fishery a very valuable one here?—They sometimes catch a good many, but then they do not get a large price for them.

28,698*a*. What way do they catch them?—With lines.

28,698*b*. Do you know whether the haddock fishery has been a productive one of late years here?—I have heard the fishermen complain much that it has fallen off.

28,699. Has it fallen off during this year; do you know whether it has been in that condition this season?—Yes it has been so, at all events inshore.

28,700. Do the boats not go far to sea here?—They have to go far out to sea before they can catch them in any quantity.

28,701. Then they do go far to sea?—Yes, sometimes 80 or 90 miles from the Ferry.

28,701*a*. Have they had a good fishing here this last season?—Really I cannot state that.

28,702. Are the fishermen generally in prosperous circumstances?—As far as the haddock-fishing is concerned I imagine that they merely make a living.

28,703. Is the herring fishery more valuable to them?—Of course it is.

28,704. Has it been progressing in yield, or is it falling off?—It varies very much. There is always a difference according to the season. Last year they had very little fishing. There was a very small drift.

28,704*a*. How has it been this year?—As yet they have not been complaining this year, but this is only the second week of the fishery.

28,705. Is it promising fairly?—I have heard no complaint. I think they say there is a good appearance of herrings, but I am simply speaking from hearsay.

28,706. Do you know whether the number of men and boats engaged in the fishery here is increasing?—I think it is; there are more boats, and they are larger boats.

28,707. The boats have increased in size?—Yes.

28,708. Are there many fish cured here?—None now.

28,708*a*. They are all sent fresh to market?—They are sent fresh to market. Formerly, until last year, they sold their cod to a fish curer here, and this year they have sold them to cadgers; but whether those cadgers partly cure them or not I do not know.

28,709. Do you smoke the haddocks here?—No.

28,710. Do you send them all fresh to the market?—Yes.

28,711. Are there any soles caught here?—No, there may be a sole caught occasionally, but that is all.

28,712. Is there any complaint with regard to trawling off this coast?—Yes, there are great complaints of that.

28,713. Who trawls here?—The people from the Firth, I believe. The fishermen complain greatly of their trawling in St. Andrew's Bay. They used to fish for half the year here, but did not find it necessary to go

BROUGHTY FERRY.

D. Cobb.

28 July 1864.

far out before the trawlers came, and they blame them for frightening away the fish.

28,714. Are these trawl-vessels employed at the present time?—Just now they are employed at the herring fishery I believe.

28,715. Did they trawl during last season?—Yes; some years ago our fishermen got a living by fishing in St. Andrew's Bay, but they cannot do that now.

28,716. You are speaking of the line-fishermen?—Yes.

28,717. Are they now obliged to go far out?—Yes, there is nothing to be found in St. Andrew's Bay.

28,718. And they attribute that to the trawl fishermen having frightened away the fish?—Yes, and to their having disturbed the food.

28,719. And also to their having destroyed the spawn?—Yes, they think they have destroyed the spawn of the herrings too. I remember Mr. Primrose being here on one occasion, and he did not think that that was very likely.

28,720. He did not think that they had destroyed the spawn?—No.

28,721. But the fishermen think that they destroyed the food by trawling?—Yes, to use their own words, it is just like sending cattle into a ploughed field, where they would not remain continually turning up the soil and finding nothing for them to eat. I have heard them make that remark.

28,722. Do you know whether the fishermen have been procuring a better class of boats of late years?—I think they have.

28,723. Larger and finer boats?—Larger and better boats, and half-decked.

28,724. That enables them to go further out to sea?—Yes, it is more profitable for them.

28,725. Do they get a better fishing now by going further to sea than they were in the habit of getting nearer inshore?—I cannot answer that question. It is not long since I came to this place. I have only been here 13 years. I know nothing of their ways previous to that time. I know that they have not fished constantly in St. Andrew's Bay since I have been here.

28,726. (*Professor Huxley.*) Is there any circle-net fishing here in the Firth, I mean seining?—I do not know what seining is.

28,727. Have you never heard of any circle-net fishing?—No.

28,728. Do they use any small trammels in the Firth?—I never saw any.

28,729. Is your business connected with the fishing?—No.

28,730. But you take an interest in the fishermen?—Yes sometimes they take my advice in matters not ; o ted with the fishing.

28,731. Are there any oysters at this part of the mouth of the Tay?—None that I ever heard of.

28,732. (*Mr. Caird.*) Are there no oyster beds?—No.

28,733. (*Professor Huxley.*) Is there any crab-fishing or lobster-fishing?—The fishermen do not fish for them here.

28,734. They do not set pots?—No. There is a small place down here at Westhaven where the fishermen fish for crabs.

28,735. Is that any considerable fishery?—No, not much.

28,736. (*Mr. Caird.*) Is there any difficulty in getting bait here?—Sometimes there is, I believe.

28,737. Where do they get it?—They get mussels in the river. The fishermen have been annoyed by people trying to prevent them from hauling up their boats in front of the beach; they charge them for doing so and the men object.

28,738. Who charges them?—The proprietors of the property facing the sea.

28,739. Have they not been in the habit of hauling up their boats there from time immemorial?—Yes.

28,740. Has any one a right to prevent it?—I hardly think so; but I think there has been some encroachment on the rights of the Woods and Forests.

28,741. Is the foreshore claimed by the Woods and Forests?—I rather think it belongs to them, but I do not know whether they claim it.

28,742. The Woods and Forests have not interfered with them?—No; but the proprietors of the houses in a street running up adjacent to the river have done so, and they have charged the fishermen for hauling up their boats in front of those houses. They say they obstruct the view, and the fishermen are very much annoyed in consequence.

28,743. (*Professor Huxley.*) Have you heard any complaints with regard to catching young herrings in the winter time here in the Tay?—The Fishery officer sometimes tries to prevent them from fishing with small nets.

28,744. Do they attempt to fish with nets of a small mesh?—I do not know anything about the nets, but I have heard that stated.

The witness withdrew.

G. Ross.

GEORGE ROSS called and examined.

28,745. (*Mr. Caird.*) Have you long been a fisherman here?—I have been all my lifetime a fisherman.

28,746. What kind of fish is it that you chiefly catch?—Haddocks, cod, and flounders.

28,747. The haddocks and cod you catch out at sea?—Yes.

28,748. The flounders you get in the river?—In St. Andrew's Bay.

28,749. Do you know if there has been any increase in the number of men and boats employed in the fishery of late years?—Yes, there has been a great deal of increase.

28,750. Can you tell us how much?—I should say one-third since this time eight years ago.

28,751. They have increased one-third?—Yes.

28,752. Are the boats larger?—Yes.

28,753. And they have longer lines and more of them, and so on?—Yes.

28,754. What has been your experience in regard to the quantity of fish caught here; has it been increasing or diminishing of recent years?—It has diminished inshore in the bays for a number of years. There is not much fishing in St. Andrew's Bay now.

28,755. For what kind of fish?—Haddock, cod, and flounders.

28,756. All sorts of fish?—They cannot get the same fishing now that they were in the habit of getting in former years.

28,757. What is the cause of that?—I do not know.

28,758. Have you no idea at all in your own mind?—I think the fish have been disturbed. I think the fishing would be the same if the ground was the same as it was in former times.

28,759. What has been the reason of that; have you got larger boats and do you go further out to sea for the fish?—Yes, we follow them up.

28,760. Do you get more fish further at sea than you were in the habit of getting inshore?—No, we could get more fish inshore 30 years ago than we can get out at sea now.

28,761. Has this last season been a good season for haddocks?—Yes, but we have to go far out to sea for them.

28,762. It has been a good deal more trouble and cost to you in obtaining them?—Yes, and more risk as well.

28,763. If the boats and men have increased one-third in eight years, that looks as though it was a business that was paying?—I think it is safe to say that, but the fish do not come in as they did in my

younger days; for many years we had no occasion to go the length of the Bell Rock after them.

28,764. Then now must you go a long way outside of the Bell Rock?—Yes.

28,765. Do you go into deeper water than that you were in the habit of frequenting years ago?—Yes, it is deeper of course the further out you go.

28,766. Is there much difference in the depth of water where the haddocks are found now compared with what it was where you used to find them?—Sometimes in St. Andrew's Bay we could catch fish along the shore in what we call the Pool, in two or three fathoms of water. There is not such a thing to be seen there now, and I believe the boats have not been there for a number of years.

28,767. But are you not able to give any reason for the change that has taken place in that way?—No, I could not say for certain what the cause of the change has been.

28,768. Have you been engaged in fishing for cod and ling also?—Yes, all sorts.

28,769. Is the quantity of the cod and ling you can catch increasing or diminishing?—There are none at all to be got now in St. Andrew's Bay, summer or winter.

28,770. In former times were there cod and ling in St. Andrew's Bay?—Yes, there was plenty of all sorts.

28,771. Did you get soles there?—Yes.

28,772. Did you take them with a hook?—Yes.

28,773. Do you get any soles at all now?—We never had a line shot for them.

28,774. Outside do you get them?—No, there are none outside, and they have been fishing on the banks on the sandy ground.

28,775. Do you get any turbot or hallibut?—We may get one occasionally, but they are very [illegible]—We

28,776. Has the fishing for herrings [illegible] rare fish. or decreasing?—The herring-fishing [illegible] been improving ing very much this last year or [illegible] has been improving two.

28,777. Do you get the herrings close inshore?—Yes, we get them inshore now instead of going to the Bell Rock.

28,778. Is there any lobster fishery here?—No.

28,779. Is there any crab fishery?—No, nothing of the kind.

28,780. Are there any oysters?—No.

28,781. Do you get sparlings?—Yes, there are plenty of sparlings but they are not here, they are down by the Spit water.

28,782. Is that not an object which you follow as a fisherman?—No, we use only the line and the net—the herring net and the long-line.

28,783. Is your business as a fisherman as profitable as it was 20 years ago?—It is because the fish are more valuable than they were 20 years ago. They are not as plentiful, however.

28,784. You do not get as many fish, but they are more valuable and bring a higher price?—There are a good many fish taken out at sea when you go the length. But where we were in the habit of using 800 hooks the fishermen now use 1,600. They have what we call a double branch; instead of one line they have two.

28,785-6. What you were in the habit of using 800 hooks for you now find it necessary to use 1,600?—Yes, taking it in a general way that is so.

28,787. Speaking as a fisherman knowing what the quantity of fish is that comes on shore, do you think it is greater than it was in former years—I mean the whole quantity?—I do not think it is nor "nigh hand" to it.

28,788. Have you any difficulty in getting bait here?—No, there is plenty in Loch Gare. There are plenty of mussels in the river here. If it was not for the bait there would be no fishing at all. The banks along the river are somewhat dangerous.

28,789. What banks?—The banks of the Tay. You have to go some miles down the river before you can get fishing at all.

28,790. Then is the advantage of having bait here the inducement to come here?—Yes, and Dundee being so "nigh hand" or it would never have been a fishing ground.

28,791. (*Professor Huxley.*) What time do you catch your herrings here?—In the winter season, but only in small quantities.

28,792. What boats have you engaged?—Every man here is engaged and they have two or three herring-nets each. There are no boats engaged here by the merchants.

28,793. What time of the year do you catch the herrings?—The herring-fishing begins in September and October.

28,794. When are they full?—The herrings do you mean?

28,795. Yes; when do you get full fish?—Before Christmas.

28,796. And when are they spent?—They are spent again in February.

28,797. Do you get any autumn fishing about this time?—No, the water is too clear for them at this season.

28,798. Do not you get any herrings here at all now?—No.

28,799. There are none in the river?—No.

28,800. Is it a large herring or a small herring that you get in the river?—It was a large herring that we got last winter.

28,801. Is it of the same size as the other herrings?—Yes, but rather larger if anything.

28,802. You do not get any at all about this time?—No, a person never thinks of looking for any at this season of the year.

28,803. Is that because you are engaged in other kinds of fishing?—If we could see them or find them we should take them at any time.

28,804. Do you get no sign of them—have you no birds?—I have seen times when we could have skippered them up easily, lots of them.

28,805. At what time of the year?—Just now, but they are only like needles.

28,806. Do you think they spawn in July?—No, they spawn in the winter season.

28,807. Only in the winter season?—In the dead of winter. They spawn in the month of February.

28,808. You do not think they ever spawn here in August or September?—No, it is very rarely that that is the case. I do not think I ever saw it. I never saw a spent herring until the winter season of the year.

28,809. All your herrings are caught in the river?—Yes.

28,810. You do not go outside to catch them?—No.

28,811. (*Mr. Caird.*) Is there anything you would like to add to the evidence you have already given?—We think that the herrings here are peculiar to this part, and that they never go out of it. They live in the fresh water.

28,812. Do you think they are a different quality of herring to those which are caught out at sea?—I believe they are.

28,813. Do they taste differently from the sea herrings?—They have a little different flavour. They are more agreeable for eating and they are white also in the flesh. We think they are bred and fed in the river, and that they do not go to sea at all.

28,814. Have you any complaints to make with regard to the place where you are in the habit of hauling up your boats; does anybody oppose your using the shore for the purpose of hauling up your boats?—If they like to quarrel with us they can. No doubt if they could get the fishermen put out altogether they would.

28,815. Do you haul your boats up now in the same place that you have always been in the habit of hauling them up?—Yes.

28,816. The same place that you have been in the habit of hauling them up ever since you can remember?—Yes.

BROUGHTY FERRY.

G. Ross.

28 July 1864.

BROUGHTY FERRY.

G. Ross.

28 July 1864.

28,817. And your fathers before you ?—Yes.

28,818. Was any objection ever made to it ?—No, never before lately. The yawls used to be hauled up on the brae.

28,819. Has anybody told you that they would prosecute you if you hauled up your boats there ?—Yes, every time we haul them up they say they will, and they have obliged us to haul up our boats the breadth of a street from their doors.

28,820. Is that in the place where you have been in the habit of hauling up your boats ?—Yes.

28,821. Have you assented to their objection and foreborne from hauling up your boats there?—No.

28,822. Then you still haul them up there ?—Yes.

28,823. Then they have not prevented you, or taken the law of you ?—No.

28,824. They have only threatened it ?—Yes, and they are always threatening.

28,825. They have not taken out a summons ?—No ; they have threatened to take out summonses if we dared to haul them up before their doors.

28,826. Have you given up so hauling them in consequence ?—Yes, we were forced to do that.

28,827. Where did you go then ?—Only a little further off.

28,828. Have you ever made any representations to the Fishery Board upon the matter ?—No more [illegible] that they have threatened to prosecute us ; but [illegible] have always been threatening us in that way. I [illegible] to the trawling boats which may say with regard [illegible] allowed to continue the come here, that if they are [illegible]

men will not be able to get their bread, and they cannot go far out to sea at the time these trawlers are at work.

28,829. (*Professor Huxley.*) You are talking now of St. Andrews' Bay ?—Yes. The trawlers carry away the long-lines ; we cannot get a line shot for them.

28,830. What trawlers are they ?—From the Firth of Forth. From St. Andrews and Pittenweem.

28,831. Are there many of them ?—There are about a score of them, and the men cannot go now to get fish in the winter time and obtain a living by it. I have seen the fish coming inshore as natural as life. The haddocks used to come in the bay of St. Andrews in the winter. Now there is no such thing to be seen. There used to be very good cod, and ling, and skate. Now there is no such thing.

28,832. Has trawling been going on all the time ?—Yes.

28,833. Has trawling been going on for the last eight or ten years ?—Yes.

28,834. Do you think this has been occasioned by the trawling ?—I could not say that it has ; but the boats have now to go ten miles this side of the Bell Rock ; they consider that they cannot catch fish nearer inshore. The trawlers also break the shoal of the fish if they do come in.

28,835. Do you think the boats going far to sea prevent the fish from coming in then ?—Yes.

28,836. Both the white fish and the herring ?—Yes ; but the trawl-boats are the greatest annoyance to the fishermen at Broughty Ferry.

The witness withdrew, and the inquiry was adjourned until July 29, at Stonehaven.

Stonehaven, Kincardineshire, Friday, 29th July 1864.

PRESENT :

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

STONEHAVEN.

A. Lepper.

29 July 1864.

ALEXANDER LEPPER called and examined.

28,837. (*Mr. Caird.*) Have you long been engaged in the fishing here ?—I have been long engaged in the herring-fishing.

28,838. Is there no white-fishing here ?—We go white-fishing 5 miles to the northward of this.

28,839. You understand all about white-fishing here ?—Yes, we make a practice of it all the year through.

28,840. And you have done so for many years?—Yes.

28,841. With regard to the herring-fishing, is the yield of herrings as good as it used to be ?—Some years it is, but it is not a regular thing. A year or two ago there was as good a fishing here as ever I saw, but last year it went very deficient again.

28,842. Have the herring shoals in any way changed their position along the coast ?—They do not come as close inshore as they did in former times, say 30 or 40 years back. At that time they came close in, but they have not done so lately.

28,843. Can you assign any reason for that?—I think it is because there is such a large number of boats at work now, and such fleets of Frenchmen and Dutchmen. They catch the shoals in the offing and break them up.

28,844. Does that prevent the shoals coming in near the shore as they were in the habit of doing formerly ?—Yes.

28,845. Is there any other reason that you can assign for the fact that the fish do not come as close inshore except that which you have just mentioned ?—No, none.

28,846. By going out further to sea do you find as good shoals as you used to find inshore ?—No, I think not.

28,847. Has the number of people engaged in the herring fishery increased much of late years ?—Yes, they have increased for some years back.

28,848. Are they going on increasing ?—Yes, they are at this moment more numerous than ever they were.

28,849. Have you two seasons for herring-fishing here, or only one ?—Two.

28,850. A summer and winter fishing ?—Yes ; we prosecuted the winter fishing very successfully this last year.

28,851. Which yields the most ?—The [illegible] fishing carried on at this time.

28,852. Is there a great difference between the two ?—Yes.

28,853. Are they fishing now ?—Yes.

28,854. This is your best fishing ?—Yes.

28,855. Are they mostly full fish that are caught at this time ?—Yes.

28,856. Are they cured ?—Yes.

28,857. Are the fish caught in the winter fishing sent fresh to the market ?—Yes, I suppose so.

28,858. With an increase of boats has there also been an increase in the size of the boats compared with what the size was formerly ?—Yes, they are much larger boats now; they are as large again as they used to be.

28,859. Have they a larger fleet of nets ?—We have double the quantity of boats; they are double the size, and they carry double the number of nets.

28,860. Then are the fishermen making more money than ever they were ?—I suppose it is just about such like. They get more money at times but they are put to a greater expenditure.

28,861. Is there any complaint of your being interfered with in any way, whilst engaged in the herring fishery, by Frenchmen or other foreigners ?—Two years ago we were very much annoyed by them and last year also.

28,862. Have they come here in any number?—Not yet. Two have only been in the bay yet.

28,863. Do they fish on the same ground that you fish?—Yes, alongside of us.

28,864. Within the three-mile limit?—Two years ago they did.

28,865. Does anybody come here to see that they keep beyond the limit?—No. Their own ships come alongside occasionally, but perhaps they will not catch them at the time they are there. It is all night-work.

28,866. They come here among you and fish in the same place?—Yes, they come alongside of us; but if our gear gets mixed in with theirs we having a smaller vessel and lighter material are sure to go to the wall. Our gear will break all to pieces.

28,867. Is much injury done in that way?—Yes.

28,868. Have you made a complaint of that to the Fishery Board?—No, not I.

28,869. Have any of the fishermen here complained?—I heard that they did, but I cannot say if it is true or not.

28,870. Have you sustained any serious damage from them?—Some have lost a good deal of nets by them.

28,871. Is there any other thing that you have reason to complain of with regard to the prosecution of your herring fishery?—No, I know of nothing more.

28,872. Do you make any rule among yourselves or does anybody see that there is a rule enforced with regard to the time at which you shoot your nets?—There is no fixed time for shooting them.

28,873. Do you shoot them at your own pleasure?—Yes, either at 12 o'clock in the day or 12 o'clock at night.

28,874. Do you think it is injurious to the interests of the fishermen to shoot them in broad daylight?—I cannot say. I have not found out the secret yet.

28,875. Have you not found out that the herrings will not rise if you shoot your nets in broad daylight?—I do not think it makes any odds.

28,876. It makes no difference?—No.

28,877. Then if there is a law that restricts you from shooting your nets till half-an-hour before sunset do you think that that is injurious to you?—No, I am certain it would be of advantage. Last night we shot about seven o'clock and were hauling away until nine, when we got foul of an anchor and jammed up. Some six or eight boats had to haul up their nets in consequence. If the nets had not been shot before sunset we might have been regularly drifting on without getting jammed at all.

28,878. How was it that the nets got jammed?—They were too long swimming before the herrings rose.

28,879. I thought you said just now that there was no advantage in shooting at any particular time and that you might shoot at broad daylight if you chose?—I thought you meant with regard to the rising of the fish.

28,880. No, I asked if it was to your interest as a fisherman?—It makes all the odds if we can get clear of our neighbours. If we get foul of each other of course we are injured.

28,881. But that has nothing to do with shooting them at sunset. Your objection is to having the nets a certain time in the water?—We shall never get any good herring-fishing until the nets are prevented from being in the water an hour before sunset.

28,882. Would you think it for your interest as fishermen, the law being that you should not shoot your nets until half an hour before sunset, that that law should be strictly enforced?—I think it would do much good.

28,883. What is the reason you come to that conclusion?—I think it would keep every man clear of his neighbour for about two hours at the first part of the night.

28,884. They would not then have shot their nets until two hours before the herrings began to rise?—Last night they were shot three or four hours before the herrings rose, and by that time they had all become jammed. If they had only been shot about 20 minutes before the herrings rose, so as to get clear, they would have been all right.

28,885. Towards the end of the summer fishing, do you fish by means of ground-nets?—No; they are all drift-nets.

28,886. Do you never alter your mode of fishing?—No; some may alter them a little, but they are all left swinging. When once they come close inshore, such as 20 or 50 yards from the land, we get them to an anchor, because the nets would get foul of the bottom.

28,887. Do you sink your nets?—They all go down. Our nets are about 9 fathoms themselves.

28,888. (*Professor Huxley.*) You never sink your nets to the bottom?—No.

28,889. (*Mr. Caird.*) With regard to the haddock-fishing has it been improving or declining of recent years?—I cannot say very much about that. It is just about as it was I think. It is the same as the herring-fishing. They do not come as close inshore as they did 40 years back, and very strongly they used to come then.

28,890. Are there more boats engaged in the haddock-fishing now than there were formerly?—Yes, double the number.

28,891. And are they larger boats?—Yes.

28,892. And longer lines?—Yes.

28,893. And you go further to sea for the fish?—Yes.

28,894. Do you get as large a quantity of haddock as ever you got?—Yes.

28,895. And is there a larger quantity of haddocks brought on shore by all the fishermen engaged than there was 20 years ago when the boats were smaller?—The more the fish are brought ashore the more appear to succeed them, and there are as many brought on shore by these men as there were 30 years ago.

28,896. Then there is no sign of the fish being fished out?—No.

28,897. There are plenty of fish in the sea?—Plenty; we can get great numbers 30 miles off.

28,898. Is there any particular bank that you fish upon here?—We fish upon the Mar Bank.

28,899. How far off is that?—About 30 miles to the nearest part of it.

28,900. Is it a soft bottom?—Yes, it is a bank of sand.

28,901. Do you get haddocks in the best condition there?—Yes, in very good condition.

28,902. Do you get many cod and ling?—No, we have no gear that is strong enough for hauling in cod and ling.

28,903. Then you do not practise that kind of fishing?—No.

28,904. Has it ever been done along the shore?—Yes.

28,905. Is it done less than formerly?—Yes.

28,906. Is that because the haddock-fishing has been found more profitable?—Yes.

28,907. Are there any turbot and halibut caught here?—Yes.

28,908. Is that fishing still followed?—Well, not very much.

28,909. Do you get any soles?—No.

28,910. Is there any trawling off this shore anywhere?—No.

28,911. Nothing of the kind?—No.

28,912. Have you any shell-fish, lobsters, or crabs?—Yes.

28,913. Is there a lobster fishery here?—No, we get a chance one sometimes.

28,914. Do you get any crabs?—Yes, they are very numerous occasionally.

28,915. Are they followed regularly as an object of fishing by a certain class of fishermen?—Yes.

28,916. Does it yield a good deal of money?—Sometimes; but it is not the same every year. Some years they are plentiful and some years they are scarce.

28,917. It is not falling off on the whole?—Yes, it is.

STONE-HAVEN.

A. Lepper.

29 July 1864.

28,918. Is it not as good as it used to be?—There is not one caught now for six that used to be caught.

28,919. Have you rather over-fished them?—Yes, I think so.

28,920. Are there any oysters here?—No.

28,921. Are there any salmon caught along the coast?—Yes, a great number.

28,922. Do the fishermen get them?—No, the white-fishers do not seek for them.

28,923. They do not get them by any of the modes which have been mentioned?—No.

28,924. (*Professor Huxley.*) Your boats are all decked?—No.

28,925. Are some of them half-decked?—Yes, some of them are half-decked.

28,926. Are a good many of them open?—Yes.

28,927–8. The Frenchmen's boats are all decked?—Yes.

28,929. What is the greatest number of Frenchmen you have had among you?—I counted 71 one Sunday morning last season; but there are upwards of 100 sometimes.

28,930. Do they all come fishing among you?—Yes, [illegible] of them alongside of us.

28,931. Do they come inside the three-mile limit? [illegible] cannot exactly say that, but they came as nigh to [illegible] fishing as we were. I am not able to judge [illegible]hether they came within the three-mile limit or [illegible]ot.

28,932. Does their heavy tackle interfere with yours?—Yes, it cuts ours up all to pieces. When we get jammed in with them we are sure to be lost.

28,933. Is there any cruiser to look after your interest?—Yes, there was last year.

28,934. Does he not oblige these heavy decked boats to keep outside of you?—I believe that is the regulation but they do not follow it up.

28,935. Cannot you apply to the cruiser?—No doubt we could; but we try to keep clear of them as far as possible. That is all the shift we try.

28,936. Does not the cruiser look after them without your asking him?—He comes into the bay, but I never saw one there while they were shooting their nets.

28,937. You mean you never saw one there at the time you wanted him?—Yes.

28,938. What do they do?—All I have seen them trying to do is to smuggle tobacco and brandy.

28,939. Did you know that it was at all against the law for decked vessels to be among you?—Yes, perfectly.

28,940. You have heard of the Convention between this country and France?—Yes.

28,941. Then was it not worth your while to apply to the cruisers to put that Convention in force?—Some of them applied last year who got their nets cut up. They applied to the Custom House.

28,942. What did the Custom House do?—A man-of-war's boats went among them and compelled them to keep off, but as soon as they had gone, the very next night, they were as thick as ever again.

28,943. Does anybody look after the size of your mesh here?—Yes.

28,944. Who?—The Fishery officer.

28,945. What size do you have your mesh here?—About 30 rows to the yard.

28,946. Do you never have them 38 or 40?—No, they would be of no use to us that size.

28,947. Would you not catch fish if you had them that size?—No.

28,948. You do not use them yourself as small as that?—No.

28,949. Do you know of this regulation: "Whenever "decked herring-boats and undecked herring-boats, "shall commence shooting their nets at the same time, "the undecked boats shall shoot their nets to windward of the decked boats, except they should prefer "going to leeward to a distance of at least half-a-mile to "shoot their nets." Supposing the Frenchmen have shot their nets, if you go out you are not to shoot your nets within half-a-mile to the windward or leeward. That is the regulation, would you like to have it carried out?—It cannot be done I think; if I think I have a good place to shoot my nets, and they think that I have a good place, then they are sure to come near me.

28,950. Do you fish from an undecked boat?—Yes.

28,951–2. Would you wish to see that regulation carried out?—Yes.

28,953. Then on the other hand there is this regulation: "The decked boats on their part shall shoot their "nets to leeward of the undecked boats, unless they "prefer going to windward to a distance of at least half "a mile to shoot their nets." So that if you were on the ground first, and they came up, they would have to go to windward or leeward of you?—They always go to leeward, because they drift faster than we do.

28,954. If they went to windward, which they could do according to this law, they would drift down upon you?—Yes.

28,955. And that would be positive destruction to you?—Yes.

28,956. Then you would not like to see that regulation carried out?—No; they would be sure to come down upon us.

28,957. Do you carry any vanes at your mast-head?—No.

28,958. None at all?—No.

28,959. Do the Frenchmen carry any?—Yes.

28,960. Do you light your boats at night?—Yes.

28,961. How do you light them?—We just string a lanthorn up on the mast.

28,962. Do you put up one or two?—One.

28,963. Does the cruiser never interfere with you for lighting your boats in that way?—No.

28,964. Did you ever hear of this regulation: "In "order that boats fishing with drift-nets may be easily "recognized at night, the masters of these boats shall "hoist on one of their masts two lights, one over the "other, three feet apart?"—Yes.

28,965. You have heard of that regulation?—Yes.

28,966. But you have never paid attention to it?—Not a bit of it.

28,967. Nobody has ever called you to account for not paying attention to it?—No.

28,968. Do you ever fish on the Sunday here?—No, it is not done as a regular thing.

28,969. Does anybody do it?—No.

28,970. None of the fishermen here fish on the Sunday?—No.

28,971. (*Mr. Caird.*) Do the French boats fish on the Sunday?—They go out on the Sunday night.

28,972. Do your boats go out on the Sunday night?—They may leave at 11 or 12 o'clock on Sunday night if they are going to fish close inshore.

28,973. Then the French boats do not go out on the Sunday more than you do?—No.

28,974. Do the Yarmouth or Lowestoft boats come down as far as this?—No.

28,975. Do none of the large English boats come among you?—No.

28,976. (*Professor Huxley.*) What time are the herrings full?—They are full about this time.

28,977. And what time in the winter?—In the winter time they are full too.

28,978. Do you get as good a fishing in the winter as you do in the summer?—Yes, if the weather is good. This last winter we had as good a fishing as we had at Lammas.

28,979. You do not seem to think that the haddocks are falling off?—No, I do not think that. There are always fish in the sea if you go to the offing after them.

28,980. Have you any complaint to make here of herring-nets being used with too small a mesh?—I have heard several complaints made in the harbour about it, but I never saw any regulation put in force.

28,981–2. Is there any circle-net fishing carried on here?—Not that I am aware of.

STONEHAVEN.

A. Lepper.

29 July 1864.

28,983. Do you ever catch garvies about here?—No.

28,984. Are the boats which come in here from the Forth complained of as having too small nets?—Yes.

28,985. What size are the nets they use?—I cannot say.

28,986. Are they smaller than yours?—Yes, they take smaller herrings than we could take in any way.

28,987. Are you able to get plenty of bait for your long-lines?—Yes.

28,988. What bait do you use?—Mussels.

28,989. Have you any here?—No.

28,990. Where do you get them?—From Montrose, Dundee, and the Clyde.

28,991. Are they all brought by train?—Yes.

28,992. Do you pay dearly for them?—At a cost of a shilling or one-and-sixpence one can bait one's lines.

28,993. (*Mr. Caird.*) Are they dearer than they were some time ago. They are dearer than they were three or four years ago. In the winter time they are a great deal used.

The witness withdrew.

James Main called and examined.

J. Main.

28,994. (*Mr. Caird.*) Are you a fisherman?—Yes.

28,995. Have you heard the evidence of the previous witness?—Yes.

28,996. Do you agree with the statement he has made?—Yes, there is nothing he said that I consider wrong.

28,997. Is there anything you desire to add to what he has stated?—No.

28,998. Do you agree with him that there is a very good haddock fishery here still along the coast?—Yes, they fail sometimes inshore, but if we have good weather we have nothing to do but to go to the offing and we find plenty.

28,999. Are there plenty even for a greater number of boats than go now?—Yes.

29,000. Then you have never arrived at that point which would incline you to believe that the sea had ceased to give you fish?—No; there are always plenty of fish to be had if we only go for them.

29,001. (*Professor Huxley.*) You heard the regulations which were read just now?—Yes.

29,002. Did you ever hear of them before?—The Coastguard men have sometimes explained a little of them to us, but not so much as you have done.

29,003. Did you ever know them put in force?—No, I never knew any of them put in force.

The witness withdrew.

William Lepper called and examined.

W. Lepper.

29,004. (*Mr. Caird.*) Are you a fisherman here?—Yes.

29,005. You wish to make some statement to us?—Yes.

29,006. You have seen a good many French boats among your herring-fishing boats?—Yes.

29,007. Have they been increasing in number of late years?—There were more last year than ever I saw before.

29,008. Was there a good herring-fishing last year?—No, a very bad fishing last year.

29,009. Had they more success than you had on the average?—I do not know.

29,010. Did they stay long here?—I cannot say how long they remained.

29,011. How many have you seen here at a time?—I have seen 70 in this bay on a Sunday morning.

29,012. Is that the largest number you ever saw?—Yes, I think that is the most I ever saw.

29,013. Would the whole of those 70 be out fishing amongst your nets?—Yes, they would remain fishing just outside of us.

29,014. Were they within the three-mile limit?—I cannot state the distance at which they were.

29,015. Were you fishing more than three miles from the shore?—I think we were.

29,016. Then you do not think they were within the three-mile limit?—No.

29,017. How many fishing-boats would you have fishing at that time?—We should average, with chance boats, about 150. Some days there might be a difference of 30 or 40 boats, but taking one day with another we should have about 150.

29,018. Then there would be nearly as many French boats as there would be of yourselves?—Yes, almost.

29,019. There would be nearly as many nets at any rate?—Yes, they shoot about twice as many nets as we do.

29,020. Did you find they did you any damage when they were fishing amongst you?—All the damage they did was that they always went to the fishing ground before us. They left before the fishing time, and they were always on the ground shooting their nets before we could get there. In consequence of their being there before us we were afraid of their heavy tackle, and were obliged to go either outside or inside their boats.

29,021. In that way did they manage to occupy the best fishing ground?—Yes.

29,022. Did they get a better fishing than you did?—I do not think they did. Our nets are better than theirs. If our nets got the same fishing as theirs we could take about one-third more fish than they can.

29,023. Are your nets better constructed for catching fish than theirs are?—They are smaller to the yard, and they catch more than theirs.

29,024. Are they much smaller in the mesh than their nets?—Not a great deal.

29,025. Do the fish mesh more easily in them?—Yes, but they are always on the fishing ground before us.

29,026. Did they shoot their nets half an hour before sunset?—I cannot say that.

29,027. Did they pay any regard to that regulation? I do not think they did pay any regard to it any more than we did.

29,028. Neither one nor the other paid any regard to it?—No.

29,029. You regarded your own convenience altogether?—Yes, when we get on the fishing ground we shoot our nets.

29,030. Do you think it would be advantageous if you were prevented from shooting them until half an hour before sunset; do you think that it would be quite convenient for all parties, and that it would be of advantage to your interest generally to have that regulation enforced?—Yes.

29,031. It would be an advantage if you were prevented shooting them until half an hour before sunset?—Yes.

29,032. For what reason do you think so?—Because we always get entangled one with another before the fish rise. The nets all get into a mess.

29,033. Have you observed when the fish rise?—They rise about an hour or half an hour after sunset.

29,034. They do not rise until then?—I never saw any rise until then.

29,035. Then what is your anxiety to shoot before then if your nets are in the habit of getting entangled?—I believe it is just to deprive our neighbours of the ground.

29,036. Is there any Fishery vessel or gunboat on your station here to regulate matters?—There was one here last year; that is the only one I saw.

29,037. Did she just look in and then pass on?—She came out some days with her boat when the weather was bad, but our boats were not at sea when it was convenient for her to go, and she put ashore

STONEHAVEN.

W. Lepper.

29 July 1864.

again. I never saw her among the boats on the fishing ground.

29,038. Are you a haddock fisherman also?—Yes.

29,039. Do you fish for them on this coast?—Five miles to the north of this.

29,040. Do you agree with the previous witnesses that there are plenty of haddock to be got?—Yes, and they are much larger this season than ever I saw them before.

29,041. They are finer in quality as well as larger in quantity?—Yes, for a few weeks we left off to go to the Lammas-fishing.

29,042. Could you have gone on fishing haddock if you had not to go for the herring-fishing?—Yes, we could have gone on, but we were obliged by our merchants to go out on a certain date to fish for herrings.

29,043. Then for a certain time the haddock fishery is discontinued altogether?—Yes.

29,044. When the herring-fishing is over do you go back to the haddock-fishing?—Partly to that and partly to crab-fishing.

29,045. When does it begin again?—About two months after the herring-fishing closes.

29,046. And it continues on until your winter fishing begins?—Yes; in fact it is only a few years since the winter fishing commenced. In bad weather we are liable to be disappointed and cannot go after the herrings at all.

29,047. Have you found the winter herring-fishing more profitable to you than to continue at the haddock-fishing?—Yes, a great deal more profitable.

29,048. If there were no winter fishing would you go on with the haddock-fishing?—Yes.

29,049. Would you find them plentiful?—We should find a few.

29,050. Are they more plentiful at one season than another?—Yes.

29,051. When are they most plentiful?—In April and May they are most plentiful.

29,052. Are they in best condition then?—No, they are in the worst condition then.

29,053. But you get them in greater numbers?—Yes.

29,054. What is done with them?—They are all cured with us; every man cures his own fish.

29,055. Are they sold to the curers?—No, not in our place; every man cures his own fish.

29,056. Do you send none of your haddock fresh to the market?—No.

29,057. Are they made into Finnon haddock?—Yes.

29,058. Where is the place from which that name originated?—Our haddocks go under the name of Finnon haddocks, but we are three or four miles to the southward of Finnon.

29,059. Are they all exactly the same thing?—Yes, they are cured in the same way, and all go under the name of Finnon haddies.

29,060-61. Is it the name of a place from which they take that name?—Yes.

29,062. Is it near Aberdeen?—It is six or seven miles from Aberdeen.

29,063. On this side of Aberdeen?—Yes, to the southward.

29,064. But that particular kind of cure called "Finnon haddock" is practised on this coast?—Not at the next fishing village, but it is from Cowie to Aberdeen they all go under the name of Finnon haddocks.

29,065. Do you imagine that those you cure are better than are cured by other persons?—Yes, our gentlemen say so.

29,066. Do you get a better price for them?—Yes.

29,067. Where do you send them to market?—To Aberdeen.

29,068. Do you not send them to Glasgow?—No; I have been in the habit of sending them to those who send them away again.

29,069. Are they sent away from Aberdeen?—There is a man in our own place who buys them and sends them away both to Glasgow and Aberdeen. He is not a fish curer, but a fish dealer; he deals in fish and sends them away to the large towns.

29,070. Is it the families of the fishermen who cure the fish in this way?—Yes, every individual family cures its own fish.

29,071. But when the fishermen are out at sea is the curing being carried on on shore by the women?—Yes.

29,072. So that it is a sort of business conducted by means of your own families?—Yes.

29,073. And you have all the profits to yourselves?—Yes.

29,074. Has that gone on for a long series of years?—Ever since I can remember, and in the time of my father before my days.

29,075. Do the families of the fishermen all become fishermen?—Yes.

29,076. All the sons?—Yes; there may be one individual who leaves, but generally they all take to fishing.

29,077. Then the number of the fishermen all along this shore must be increasing rapidly?—Yes, there has been a great deal of difference since I can recollect.

29,078. Are there any strange fishermen who come among you and settle?—No, not in our place.

29,079. Do you get any cod, turbot, or halibut?—We may get a few occasionally, but we do not fish for them.

29,080. Do you fish for soles?—No.

29,081. There is no trawling along this coast?—No, I have never seen any.

29,082. Do you fish for crabs?—Yes.

29,083. Do you agree with the previous witness that the crab-fishing is somewhat declining?—Yes.

29,084. What is the reason that it is declining?—I think it is overdone.

29,085. Do you mean that the crabs are over-fished?—Yes.

29,086. Then they show signs which the haddocks have never shown yet, that too many of them are taken from the sea?—Yes, or else the fishermen have not yet found out the ground they are in.

29,087. You do not change the ground on which you fish?—No.

29,088. (*Professor Huxley.*) Do you make engagements with the curers to fish from a given day?—Yes.

29,089. Are there days when you fish every year, or are there different days fixed every year?—It varies every year. Perhaps we may go for two years about the same time, and then, perhaps, it will differ for a few years.

29,090. What is generally about the time?—From the 8th to the 10th and 12th of July.

29,091. And you go on as long as the fishing lasts?—Yes, for eight weeks.

29,092. During that time do the curers give you so much per thousand for the fish you catch?—They do not pay us by the thousand, but so much per cran.

29,093. Whether you catch much or little?—Yes.

29,094. You make a bargain and are bound to fish during that time?—Yes, whether we catch fish or not.

29,095. And what do you consider to be the signs of herring here?—Generally the particular signs are sea-mews and blow-fish.

The witness withdrew.

J. Jack.

JAMES JACK called and examined.

29,096. (*Mr. Caird.*) You are a fish-curer?—Yes.

29,097. Do you cure both herrings and haddocks?—I cure herrings, but I only cure very few haddocks.

29,098. Do you cure cod or ling?—Not many.

29,099. What you cure is chiefly herring?—Yes.

29,100. Is the proportion of herrings that are cured

now, compared with what is sent fresh to the market, increasing or diminishing?—There are a great deal more now sent fresh to the market than there used to be.

29,101. Is that chiefly in consequence of the opening of railways?—Yes.

29,102. Is that proportion increasing from year to year?—Yes.

29,103. Is there a smaller proportion being cured every year?—Of late years there have been a great many more herrings landed here than there were formerly, but there are a great deal more sent away to the market fresh.

29,104. Then from your experience as a curer do you think the herring fishery here has rather improved than diminished?—Yes.

29,105. Taking a series of years?—Yes.

29,106. Of course it fluctuates?—Yes.

29,107. Is there much of the winter herring cured?—No.

29,108. It all goes fresh to the market?—Yes; it is all made into bloaters, but we have only had them for one or two seasons.

29,109. Do you make bloaters here?—Yes, a great many.

29,110. In the same way that the Yarmouth bloaters are made?—Yes, we put them in smoke boxes.

29,111. Are they slightly smoked?—Yes.

29,112. And salted?—Yes, a little.

29,113. Is it a mode of curing herring very similar to that adopted in curing haddock?—Yes, it is something very similar.

29,114. Has the price of fish increased much here of recent years?—No, not much.

29,115. Does it keep pretty steady?—Yes, occasionally they are very high at the first part of the season.

29,116. Do you use the Government brand here upon your herrings?—Yes.

29,117. Do you think it is a great advantage to you as a curer to have it?—Yes, I do.

29,118. Are there many curers here besides yourself?—There are a good number, perhaps five or six.

29,119. Do you speak the views of most of the curers when you express that opinion?—They all use it.

29,120. They use it necessarily, because if it is not used it casts a suspicion upon the herrings which want it?—The herrings are not generally of as much value without it as with it.

29,121. Therefore, the curers must almost of necessity use the brand in order to be on a par with their neighbours?—Yes, but my opinion is, it is of advantage to the trade.

29,122. In what way is it of advantage?—If a customer wants supplying with herrings, and sends for Crown-branded herrings of equal quality, he has them guaranteed to him; there is no door left open for a dispute.

29,123. Is there any such brand in regard to bloaters or haddocks?—No.

29,124. Do you find that any loss results from the fact that there is no such brand on haddocks or bloaters?—I do not know that; but they are sold on a different principle altogether. The bloaters and haddocks are sent to the market and sold at the day's price, whatever it may be; we cannot keep them for more than a day.

29,125. Is not the sale of bloaters and haddocks influenced by the care with which they are cured?—Yes.

29,126. And does that not depend very much upon the skill and perseverance of the curer?—No doubt it does.

29,127. Would not for that reason one cure of haddocks bring a better price in the market, because the curer's name was known?—It will sometimes, but not always.

29,128. Is that not as good a guarantee for the quality of the fish as any Government brand can be?—Ido not think so, speaking generally. It would require a neutral person to examine them. For my part I prefer to have branded herrings to send abroad.

29,129. Have you a Fishery officer resident here?—No, not resident.

29,130. Then you must have a great many herrings cured and packed without their undergoing the superintendence of the Fishery officer?—He is seldom here until he comes to brand them.

29,131. Then the packing is done before he comes?—Yes, before he examines them officially.

29,132. So that the official examination is not so close and narrow as the examination of the owner of the fish would be, supposing that his interests entirely depended on their having been carefully cured?—The Fishery officer usually opens one barrel in ten; that is quite sufficient to test the quality of the fish and the mode of cure.

29,133. Would you take more care in curing to perform the operation carefully and well because one in ten is to be inspected by the Fishery officer than if none were to be inspected, but were to go year by year to market and be sold upon the character of the person who cured them?—I do not think they would be much better cured than they are now.

29,134. Would they be equally well cured?—Yes, if necessity required it.

29,135. Then in your opinion there is really no advantage in having the brand?—There might be careless curers, and we are now required to cure them up to a certain standard before we receive the brand.

29,136. Does not the advantage of the brand rather depend upon the facility with which the herrings can be made the subject of a bill of lading and transferred to the foreign market?—Partly; but there is this also, that it does not leave the foreign merchant open to raise so many disputes as he might otherwise feel inclined to raise when they entered the foreign market. No branded herrings that are sent out are objected to. They are open to some extent to objection even when branded, but they are not so open as they would be if they were not branded.

29,137. But if they are branded, can they not object to them equally as well as to the others?—Not as well; the foreign merchant buys Crown-branded herrings, and he must take them when they are sent to him.

29,138. Must he take them if they are in good condition or not?—They must be good.

29,139. Now, if the Fishery officer in opening 10 out of 100 barrels takes the 10 best and the other 90 happen to be bad, must the foreign merchant take them?—Yes, I should say so.

29,140. Is the brand sufficient to mark that they were the thing he bought?—Yes, I should say so.

29,141. (*Professor Huxley.*) Are there many curers here?—Five or six.

29,142. No more than that?—No.

29,143. Have you any notion of the quantity of cured herrings that are sent from here?—No.

29,144. Do you think that the fishing is as well as ever it was within your knowledge of this place?—It varies from year to year.

29,145. But how is it on the whole?—I do not think it has decreased.

The witness withdrew, and the inquiry was adjourned to Peterhead.

Peterhead, Aberdeenshire, Friday, 29th July 1864.

PRESENT:

J. CAIRD, Esq. M.P. (Chairman). | Professor HUXLEY, F.R.S.

PETERHEAD.

J. H. Will.

29 July 1864.

JOHN HENDERSON WILL called and examined.

29,146. (*Mr. Caird.*) You are a fish-curer here?—Yes.

29,147. Have you been long engaged in that business?—I have been for nearly 30 years in the trade, and for nearly 20 on my own account.

29,148. Do you cure haddocks as well as herrings?—I have cured haddocks for a considerable time—haddocks, and cod, and ling.

29,149. Besides herrings?—Yes.

29,150. Cod and ling?—The ling we cure principally for the market. Pickled ling does not sell in London; pickled cod does but not ling.

29,151. What do you do with the ling?—They are not sent much to the London market; we keep them and send them away to Glasgow, but not to London.

29,152. Do you send them away fresh?—Yes, when we can get them away, and we can manage that now railways have been introduced. We can get the cod and ling carried inland fresh, when formerly we should have had to cure them.

29,153. Is the great bulk of all the fish caught here, both herrings and haddocks, cured?—Yes, the bulk of them.

29,154. Is there no large quantity sent fresh to the market?—We have not had very much facility for sending them fresh to market until within the last 18 months. There are now more sent to the north than there were formerly.

29,155. Then is the railway likely to lead to a change in the destination of the fish?—Yes, to a considerable extent.

29,156. Is there a better price got for the fish that are sent fresh to the market?—When they are scarce they realize a good price, but when it comes to be a general fishing the price recedes, and we are obliged to cure for exportation; that is the case particularly with herrings.

29,157. Has the catch of herrings within recent years increased or diminished in the total?—I do not think they have diminished. In some seasons there may be a shortcoming, but the weather has a great deal to do with the catch of herrings. Some years it is unfavorable when the fish are on the coast. I have frequently seen fish on the coast when there has been a wind prevailing from the south-east which has caused such a sea that the boats could not get out to take them. There would have been a great deal more caught in some seasons if the weather had been favorable. I do not think myself that there has been any want of fish, but there has been a want of good weather occasionally.

29,158. You have noticed no sign of the fish becoming scarcer?—I am not under that impression. When we have a short fishing the weather has a great deal to do with the catch.

29,159. Does the same answer apply to all the other fish caught off the coast?—I could not say so much for the haddocks; there are not as many haddocks caught now on the ground where we used to catch them; perhaps they have taken further off into deeper water.

29,160. Are there as many haddocks caught now as in former years?—Not for the last two or three years.

29,161. Have you not had a good fishing this last year for haddocks?—There has not been a good haddock-fishing, but the weather has had a great deal to do with it. We have had gales of wind, and the boats could not get out.

29,162. Then the bad fishing has not been because the haddocks were scarce?—No, not so much on that account.

29,163. Has the number of boats fishing here for haddocks and herrings increased?—Yes, it has.

29,164. Are there many curers here?—There are a considerable number. There are a considerable number of small curers; there are some 20 or upwards, you may say from 20 to 30.

29,165. How do you regard the question of the necessity of branding the herrings?—Well, I think that was exhausted at the last examination here, when there was great excitement on the subject. I was in favour of the brand then, and my opinion has not altered since, because it is the foreign merchants who insist upon the brand. If they send an order here for a thousand barrels of Crown brands they would not take them unless they were branded.

29,166. But if none were branded at all they could get none branded?—Of course they could get none in that case, but as long as they insist upon having the Crown brand we feel it necessary to have the fish branded.

29,167. But suppose the system of the Government brand were put a stop to entirely, what would be the result upon the cure—upon the fisheries?—They would work under a disadvantage for some years, until confidence was restored and the foreign merchants had faith in the curer's own brand.

29,168. Would not confidence gradually grow up upon the curer's own brand?—If the Government brand were done away with altogether no doubt that would be the result.

29,169. I can understand that if it were partially allowed and some persons were to use it while others did not that it would be of great advantage to those who used it, but suppose that it was entirely put a stop to, then the foreign merchants, as they must have the herrings, would buy them without the brand?—Everyone would then have to send on his own guarantee.

29,170. Do you think it would stop the trade for some time if that were done?—I have no doubt that for a few years there would be a disarrangement of trade; the merchants would not have the same confidence in the article.

29,171. Are you aware that some of the herrings which are sent out of the country are never branded?—Yes, those which are sent out in the first of the year are not branded.

29,172. But are you aware that there are some places which send all their herrings without a brand?—Yes, there are none branded from Stornoway.

29,173. Does that prevent them from finding a market?—No.

29,174. Then why should it prevent you?—The Stornoway herrings will not keep; if they are not consumed within a certain period they are useless; ours will keep until next season. The only objection I have with regard to the brand is that they charge too much for it; I think fourpence is too much.

29,175. How much do they charge?—Fourpence a barrel; I consider that twopence would be quite enough.

29,176. Do you think that the effect of the brand is to insure the careful curing of the herrings?—Yes. There is one thing in regard to that; there is an officer appointed here who sees that the cask is of the proper size; he examines the fish, and as the buyer has the advantage of that examination he has no trouble himself. He buys them after they have the Crown brand attached to them because he knows they have been examined by the regular officer.

29,177. Then it seems that the brand is chiefly for the advantage of the foreign buyer?—Yes, that is the principal advantage that it affords.

29,178. But you do not brand your haddocks which go away?—No, nor the cod. The cod were once branded, but that has been done away with.

29,179. Did it do any harm doing away with it?—The cod are better now than when they were branded. If they were sent in the same condition as when they were branded, they would not buy them without a great reduction.

29,180. Has the quality of the cure improved since you have given up the brand?—Yes, the quality of the cure of cod has much improved. The people like a soft, light cure now; the softer it is the better.

29,181. If the brand had not been changed, would it have been worse for you?—We had to cure up to the brand. The firmness of the fish was a test, and we had to use a certain quantity of salt.

29,182. If that had continued up to the present time, might it not have interrupted the sale of your fish?—The fish that we cured when we had the brand did not suit the taste of the London people, because the softer they are the better they like them.

29,183. You have no brand on your haddocks?—No.

29,184. Then you manage to get your haddocks sold without a brand?—Yes.

29,185. Do they not sell according to the name of the curer?—They are marked with the initials of the curer's name.

29,186. Does that sell your fish?—Yes, that is a guarantee.

29,187. Do you make red herrings here?—Occasionally; there are a good number made at Peterhead principally for the London market.

29,188. Have you much altered the mode of curing of late years?—Yes.

29,189. What kind of alteration have you made?—We do not salt them as much.

29,190. Are all kinds of fish used more fresh?—We think the fish weigh far lighter when they are salted thin. At one time we had an impression that if they were not heavily salted they would not keep, but by salting them light the herrings have been found to be much sweeter and are better flavoured for the consumer.

29,191. Do you salt your herrings for foreign export in a lighter manner than you did formerly?—Yes.

29,192. Then you have altered the mode of cure even for the brand?—Yes, a great deal; we do not salt them nearly so heavily as we did 20 years ago.

29,193. Can you tell us whether the condition of the fishermen here is improving; are they in better circumstances than they were 20 years ago?—Yes, they are improving in their worldly circumstances, and they are improving in their learning too.

29,194. They are become more educated?—Yes, there has been a great change during the last 20 years.

29,195. Are they a very respectable class of men?—They are so generally.

29,196. And are they pretty well off?—Yes, they are, generally speaking.

29,197. Do they make money at the fishing?—Yes, there are some of them who have been making money by fishing.

29,198. Have they a larger class of boats now than they had in former years?—Yes, the boats have been very much better which they have had within the last 15 and 20 years. Within that time I might almost say that a new race of boats has sprung up altogether.

29,199. Are they on a much larger scale?—Yes.

29,200. And have they a more expensive set of nets and fishing tackle, and everything else necessary for carrying on the fishing?—Yes, the twine they make the nets of now they would not have used at that time. At that time they all used No. 10 twine; they would not have used a finer twine than No. 10. Now the twine they use is principally No. 7 and No. 8. Occasionally they use No. 9.

29,201. Generally speaking they use much finer twine in the manufacture of their nets?—Yes, very much finer twine.

29,202. Is that found to be better adapted for the meshing of the fish?—Yes, it holds them better after they are meshed.

29,203. But it will not wear as long, will it?—No, it will not wear so long. I may also say there is a considerable quantity of cotton used now in the making of the nets.

29,204. Is that used for the same purpose?—Yes.

29,204*a*. In order to make it better for the meshing of the fish?—Yes, the twine is sharper, and when the fish go in it holds them better; they are not so apt to get out again. A number of the fish got out and were lost when the old twine was used; it was not so sharp, and did not hold them so well in the mesh.

29,205. Have you heard any complaints made by the fishermen here in regard to any interruption of their fishing by foreign boats?—They have occasionally complained of the French and sometimes of the Dutch, but they have not complained of the Dutch as much as they have of the French.

29,206. Have you ever been at the fishing yourself?—Yes.

29,207. Did you observe the Frenchmen coming in to fish?—I went out principally to see the mode of fishing; the Frenchmen were not on the ground then, but we often see them near the shore here without the necessity of going outside.

29,208. Do they come here very often?—They do not come here so often as they do towards the south.

29,209. (*Professor Huxley.*) Were you curing herrings here before the brand was established?—No.

29,210. How long is it since the brand came in operation here?—The brand has been in operation ever since I have been connected with the trade, and that is now upwards of 30 years.

29,211. When the brand first came into existence was it not on account of the bounty that was then given?—Yes, it was, and if you will give us a bounty now we shall have no objection to take it. At that time they had 4*s*. a barrel in the shape of bounty, and they must have made a very good business by it.

29,212. What are the Frenchmen doing inshore when they are close in?—I consider that they come in in order to see whether the fishermen here fall in with the fish, and when they see they have fallen in with a body of fish they take the sea with them and shoot their nets along with them.

29,213. Are any of their own cruisers here?—There was one here last year.

29,214. Do they never interfere with them?—They have never interfered with them to my knowledge. Some time ago a considerable number of them were in the habit of coming here and purchasing herrings, but since the present Emperor of the French came to the throne he has been more strict, and he does not allow them to come and purchase herrings here; they are obliged to catch all they take away.

29,215. But if there is no cruiser here how could they prevent that?—They consider it smuggling, and would put a stop to it. The French fishermen get a bounty for catching herrings, and as I have just stated they were in the habit of coming here and buying them from us. They then went home and received a bounty upon them just as if they had caught them themselves. They do not come as often now as they were in the habit of doing.

29,216. (*Mr. Caird.*) Is there any regulation which in your opinion could be adopted here which would add to the supply of fish?—I do not consider that there is a great deficiency in the supply of fish. The supply of fish generally depends upon the weather during the season that the fish is on the coast. All the fishing depends more or less upon the weather.

29,217. It is not within your experience that there has really been any diminution in the supply of fish

PETERHEAD. *J. H. Will.* 29 July 1864.

in the sea?—There is no diminution. With regard to haddocks I do not believe that at all.

29,218. How has the price of fish been within the last 20 years?—It has gone on increasing.

29,219. Has it been increasing every year?—I gave up haddock and cod-curing in consequence of the price increasing, because there was no chance of obtaining a fair remuneration.

29,220. You had to pay so much to the fishermen?—Yes, I would rather want them than run the risk of paying so much for curing them.

29,221. Who takes them now?—The principal parties who have them now are people residing in London, who sell them in Billingsgate themselves.

29,222. How is it that they can make more out of them than you did?—They have all the profit themselves, whereas I had to pay them a commission.

29,223. Do you mean the Billingsgate salesmen?—Yes.

29,224. Have they stations here?—Yes.

29,225. Do they buy the fish direct and send them to London?—Yes.

29,226. They send them to London direct?—Yes, they go direct to Billingsgate.

29,227. You are speaking now of the haddocks?—Of the haddocks and of the cod also.

29,228. Do they all go up cured to London?—Yes.

29,229. Just the same as the Finnon haddocks?—Yes, and the cod will keep until Lent; they are not of much value before or after Lent.

29,230. Just during Lent they command a good price, and there is a good demand for cod and ling?—The cod we catch during the winter we keep until Lent comes in; they are then sent up for consumption during Lent.

29,231. All the cod caught during the winter?—Yes.

29,232. Do you retain them at home until Ash Wednesday?—Yes, and then the price goes up 10*s.* or 15*s.* a barrel.

29,233. (*Professor Huxley.*) Have you any winter fishery here?—There was a little last year.

29,234. But it is not followed generally?—It is a new thing.

29,235. But there was a little last year?—Yes, it was not to a great extent, but we think it may be followed to a great extent hereafter.

29,236. What condition were the fish in in the winter, were they full fish?—It was astonishing to see them; they were of very good quality.

29,237. Were they very full fish?—Yes.

The witness withdrew.

A. Jamieson.

ALEXANDER JAMIESON called and examined.

29,238. (*Mr. Caird.*) You are a fish-curer here?—Yes.

29,239. Do you cure herrings, haddock, and cod?—No, nothing but herrings.

29,240. You do not deal in haddock at all?—No, nothing but herrings.

29,241. Have you found the quantity of herrings increasing or diminishing within recent years?—They have been decreasing.

29,242. Has that arisen from a large quantity being sent to the market fresh, or has there been a decrease in the quantity of fish altogether?—I think the decrease would appear to be more in consequence of over-fishing. The ground has been over-fished as it were. There are a great many more boats now engaged in fishing than there were 35 years ago. I have been for 35 years connected with the fishing interest here.

29,243. Do you think that the larger number of boats that are here now do not get altogether as large a quantity of fish as the smaller number were in the habit of getting in former times?—There are more fish caught, but still there is a greater quantity of netting used in catching the larger number of fish. Under these circumstances I consider that there are fewer fish obtained in proportion to the number of people employed. Had the same number of boats been employed and the same quantity of netting 35 years ago, the take of fish would have been far greater, in my opinion, than it is now.

29,244. Has the price of fish increased since that time?—Yes, it has risen very considerably.

29,245. Do you find that the Government brand is a useful thing to you in your business?—Yes, it is very useful to me. I am a great advocate for continuing the brand, but not the fee. If we could do away with that part of it I should not have the slightest objection.

29,246. You would like to have the advantage of the brand without any of the disadvantages?—Yes, we do not like the fee at all.

29,247. What is the fee charged upon you for the Government brand?—Fourpence.

29,248. Is that fourpence for each barrel branded?—Yes.

29,249. What is the advantage to you of the brand?—It enables us to cure with great regularity. It is a sort of check over every individual, from the catcher up to the curer; and then, after the fish fall into the hands of the merchants, it is of great advantage to them, as they are enabled to exchange the barrels from one merchant to another without question. That is to say, when they have a number of barrels of full Crown brand herrings sent over to them, they can buy and sell upon the bill of lading, and transact their business with as much facility as if it were merely the passing of a bank note; whereas, if there were no brand there would be a want of confidence on the part of the merchants in the curers.

29,250. There is no brand, is there, upon any other description of fish sent from this place except herrings?—There are very few fish sent from this place except herrings.

29,251. Are there not a great number of haddocks got here?—No, the catch of haddocks is very trifling. I do not believe there are 500*l.* worth of haddocks sent away.

29,252. What do the fishermen do during the time there is no herring fishery here?—They prosecute the haddock and cod-fishing, but there is very little done here in that way.

29,253. Are any of the haddocks and cod sent fresh to the market?—Yes, both haddocks and cod are sent fresh to the market, but then it is only the home market that is supplied. There is no portion of it sent abroad and changing hands from merchant to merchant as is the case with the herrings. Perhaps, after the time a barrel of herrings is shipped here until it comes into the hands of the consumer, it may be exchanged three times, and the operation is performed without the slightest difficulty; whereas, if there were no branding, there would be no confidence, and it would be impossible to exchange the cargo of herrings so often.

29,254. Would there be no confidence in the curer's own name if it were well established?—That is a question which has not been tested yet. There have been several attempts to do that, but so far it has never succeeded.

29,255. If the brand were put a stop to entirely, and there were no brand in future, I presume that the foreigners must get their herrings somewhere?—Yes.

29,256. They would then be obliged to buy them without the brand?—No doubt.

29,257. Would they not then look to the name of the curer?—In Norway, where there is no brand, they have no confidence. The merchants there go to the market, and when they buy their fish they see and examine them for themselves, whereas our fish which have the Government brand may be sold three times over without being examined at all. They

very frequently pass through the hands of three different classes of merchants from the time we have shipped them until they reach the consumer.

29,258. Then in that way there are three profits upon them?—Yes.

29,259. And I presume that the consumer has to pay all these profits?—I should say so.

29,260. (*Professor Huxley.*) Do you recollect the period before the brand existed?—Do you mean before the Crown brand was established?

29,261. Yes?—No. There was at one time a bounty, but that was taken off altogether. I think in the year 1829 or 1830.

29,262. Do you know whether the brand originated with the bounty?—I think so.

29,263. Was the brand first affixed to the herring on account of a bounty being given?—Yes; the brand was affixed to the herring in consequence of the bounty.

29,264. You are not in a position to state at present what might be the effect of withdrawing the brand?—No.

29,265. What do you think would happen if the brand were withdrawn?—It would shake the confidence of the dealers. They could not buy and sell upon the barrels. They would have nothing to go by.

29,266. How long do you think that such a state of things would last?—I can form no idea of that.

29,267. Do you think that the trade would recover itself after the lapse of a few years?—Possibly it might, but I cannot form any idea of what the consequence would be, so far as my experience has gone.

29,268. Do you know of any other branch of trade in reference to which the Government affixes a stamp to indicate the quality of the goods disposed of?—No, I do not.

29,269. You say that the haddock fishery here is a very small matter?—Yes, very small.

29,270. Are you able to say what amount of haddocks and cod are caught here?—I am not prepared to say what is the amount of haddocks and cod cured here in the course of the year, but I think it is quite trifling.

The witness withdrew.

James Bell called and examined.

29,271. (*Mr. Caird.*) You are a fish-curer here?—Yes.

29,272. Do you cure any other kind of fish except herrings?—Yes.

29,273. What other kind?—Cod, in the winter time.

29,274. Do you cure any haddocks?—Not any.

29,275. Did you at any other time?—Yes, but I have given it up for the last few years.

29,276. Do you know whether the quantity of herrings cured here has been increasing, stationary, or diminishing?—It has been increasing during the last two or three years. Before then we had a short fishing.

29,277. Have you any idea whether any reason is assigned by the fishermen or by the trade as to the cause of the fluctuation?—No, I have no idea what the cause is. I have heard some people attribute it to the employment of too many boats, and to the larger fleet of nets now used. They say that they break up the shoals of fish.

29,278. Have the boats increased considerably in number?—Yes, within the last few years.

29,279. Has the total quantity of fish brought ashore here increased?—That is a question I am not prepared to answer.

29,280. With regard to the herring brand, do you approve of that system?—Yes.

29,281. Do you wish it to be continued?—Yes, I should like to have it continued, I have certainly one objection to it.

29,282. What is the objection you entertain to it?—I object to the payment of fourpence as a fee for the brand of each barrel.

29,283. Do you think that is too high a payment?—Yes, I do.

29,284. But is not the advantage which you receive from the brand worth that to you?—Yes, I suppose it is worth the fourpence. It is worth that most decidedly.

29,285. In what way do you think it benefits you?—It affords a kind of guarantee to the foreign merchant. If we brand our herrings here we are perfectly sure that when they go to the other side and are disposed of among foreign merchants we shall hear no complaint with regard to them, whereas if we were to pack them and send them away without having undergone and passed the Government Inspector we should be sure to hear complaints.

29,286. If they are branded the foreign merchants say nothing?—No.

29,287. I suppose that if the barrel have the full Crown brand, and the foreign merchants opened them and found the herrings in a bad state, they would have a right to reject them?—They would appeal to the Board and reject them too.

29,288. Would the loss ultimately fall upon you?—I rather think it would.

29,289. Would you have no redress?—I think not.

28,290. Then if that is the case, and you sent really good herrings to market without any brand, they would not be more liable to be rejected than those which are branded?—No, but the herrings would be much more liable to be rejected on the other side, if the markets happened to have fallen after the herrings had been shipped. I think some years ago they sent over an officer from the Fishery Board to inspect some of the herrings which had been sent there.

29,291. Was that in order that an officer of the Fishery Board might examine them for the second time on the other side?—Yes.

29,292. Was that in order to test their own brand?—Yes.

29,293. Did the Fishery Board do that?—Yes, I believe they did.

29,294. Upon what grounds did the foreign merchants desire to have a person sent over there to test the brand; was it because they thought the brand had been given without due inspection here?—I suppose that was the reason.

29,295. Practically, is it possible for the Fishery officer to inspect every barrel?—It could be done.

29,296. But that is not generally done?—No.

29,297. He inspects a few barrels in every hundred?—Generally one barrel in ten. He examines that, and if it does not happen to suit him and he rejects it he will examine a few more. Of course we don't know which barrel he intends to open, and therefore we have an inducement to have all the herrings well cured.

29,298. Would it not be equally an inducement to have them well cured when you knew that the whole of your cure depended for its character upon its being in a good state in the foreign market?—We should be compelled to rely upon our own merits entirely.

29,299. Would not that insure proper attention being paid to the cure?—Yes; I should not object to that if I had persons to deal with in whom I had full confidence.

29,300. You would not be in a worse position than other persons who have foreign markets to supply?—No.

29,301. Suppose that the brand was put a stop to entirely, and no foreigner could purchase herrings in this country with any Government brand upon them, would it not be the case that foreigners, if they wanted the herrings, would have to buy them from you whether they were branded or not?—Yes.

29,302. In that case would they not go to those curers in whom they had the greatest confidence?—I believe they would; but as a general rule they would

PETERHEAD.

J. Bell.

29 July 1864.

not buy any herrings without sending over a competent person to inspect them here in the first instance.

29,303. Would that be any hardship to you?—No, none at all, provided they were satisfied with the herrings on the other side.

29,304. I want clearly to understand from you what is the advantage which you think arises from having a Government brand?—I think that the Fishery officer is an important judge between the buyer and the seller, and the brand affixed to the herrings by that officer is a guarantee that the herrings are what they are represented to be.

29,305. (*Professor Huxley.*) If the foreign merchant sent an agent over here to inspect the herrings before he bought them would not that in effect produce a reduction in the price he would give you, because the expense of doing that must somehow or other come out of the herrings?—It might or it might not.

29,306. Or it might increase the price of the herrings on the other side?—Yes, it might do that.

29,307. You cannot say what would happen?—No. It was generally supposed when the fee for branding the herrings was levied by the Government that herrings which were sold at 27*s.* would subsequently be sold at 27*s.* 4*d.*, but that has been very seldom done.

29,308. Then the cost of branding the herrings comes out of the curers' pockets?—Yes, in all cases.

29,309. Might you not just as well pay the expense by appointing persons to examine the herrings on your own account as require the Government to do it for you?—Yes; but the official person appointed to inspect the herrings on the part of the Government is a disinterested person and has no object in representing the herrings to be better or worse than they really are.

29,310. If the foreign buyers have a good demand for herrings in their own country would they not be as glad to get them from you if they were good herrings whether they had the brand or not?—But suppose the markets to be full, then we have only the honour of the foreign buyer to rely upon.

29,311. Would not the agents of the foreign merchants over here examine the herrings as they were packed, and buy them according to the condition they were in when he then saw them?—Perhaps so.

29,312. The foreign merchants would have agents over here to buy them on the spot?—That might be the case.

29,313. Would not that be the natural mode of trade under the circumstances?—I think it would ultimately result in that.

29,314. The fish merchant would have his own brand instead of trusting to the Government brand?—Yes, and I think they would come over to inspect the herrings themselves.

29,315. That is very much what other merchants do now?—Yes; it does seem rather curious that we should wish the brand to remain; but I believe that if it were abolished it would result in considerable loss to the trade. If the markets should happen to fall after a cargo of herrings was shipped the foreign buyers would reject them, and would say that the herrings sent to them were not what they were represented to be.

29,316. But would that be the case if the herrings were bought by their agent here?—That would be a different question altogether.

29,317. If they wanted the herrings abroad, would they not take means to get them and adopt methods for securing the best possible article?—Yes, I think they would.

29,318. Then you would not be worse off than you are now, because at present you pay the Government for doing it?—Yes, exactly.

29,319. Might you not take some portion of the price off from the buyer if he had to do so?—I don't see how we could do that; we should not be able to get any more from the buyer whatever expenses we were put to.

29,320. It would come out of somebody's pocket?—Yes, and in all probability it would come out of ours.

29,321. You would not be worse off than you are now?—No.

The witness withdrew.

A. Sutherland.

ALEXANDER SUTHERLAND called and examined.

29,322. (*Mr. Caird.*) You are the Fishery officer here?—Yes.

29,323. You have been here for some time?—This is the second year I have been stationed here, but I have been doing duty here frequently in former years.

29,324. And know all about the fishery interest along this coast?—Yes, I was brought up in Fraserburgh.

29,325. What are the different stations included in your superintendence?—Beginning southward, they are Colliston, Old Castle, Whinnefold, Ward of Cruden, Bullers of Buchan, Boddom, Burnhaven, Peterhead, and Buchan Haven. That is all in this district. But at one time, in previous years, the district here extended as far as Dundee. It has been divided since into two districts, and Dundee is now in the district of Montrose.

29,326. Can you give us the number of boats, their value, and the number of fishermen in this district since the year 1855?—Yes.

29,327. Then will you give them to us in a tabular form, beginning with the year 1855?—The following is the return:

Year.	Number of Boats.	Tonnage.	Value.	Number of Men.
			£	
1855	320	2,538	8,333	1,070
1856	344	2,778	9,180	1,129
1857	348	2,820	9,344	1,150
1858	353	2,877	9,561	1,162
1859	353	2,988	9,962	1,006
1860	348	2,934	9,783	986
1861	344	2,895	9,657	1,010
1862	354	2,970	9,912	1,002
1863	363	3,439	11,656	1,026

29,328. You say that you have had a long experience in connexion with the fishery business along the coast?—Yes, ever since I was a boy.

29,329. In the course of it have you found that the total take of fish has been increasing, stationary, or diminishing?—It has varied in different years.

29,330. Are you speaking of all the kinds of fish taken, or speaking only of particular kinds of fish; does your answer apply to the herring; have they varied in different years?—Yes, they have varied in the quantity taken in different years.

29,331. But has there been a gradually increasing quantity taken?—Yes, since I first knew the fishing there has been a very decided increase, and I knew the fishing on this coast in the year 1817.

29,332. Has that decided increase been gradually progressive?—The increase has not been very great, but the fishing has increased of late years as it did when I first knew it.

29,333. You are speaking of the herring fishery now?—Yes.

29,334. Have there been a larger number of men, better boats, and better nets engaged in the fishery than there were formerly?—The nets, and the gear of the boats, and the boats themselves, have improved very considerably in comparison with what they were when I first knew the fishery.

29,335. Has the result of that been to get a larger number of fish on the whole?—I should require to refer to statistics in order to show that.

29,336. Has the condition of the fishermen themselves, in your opinion, improved during the time in which you have been acquainted with the fishing?—Yes.

29,337. They are in much better circumstances now than they were in former years?—Yes.

29,338. Are they generally in comfortable circumstances?—Yes, the majority of them are.

29,339. Do they make a very good livelihood?—Yes, they do, and they are becoming more careful of their money than they were when I first knew them.

29,340. With regard to the haddock fishery, has it been progressive also?—No, I do not think it has been progressive.

29,341. Are there not as many men and boats engaged in it now as there were formerly?—There may be as many boats and men, but I question if they get as many haddocks.

29,342. You do not think they get as many haddocks on the whole?—Yes.

29,343. You have no means of testing that with accuracy?—No, we do not take any statistics of the haddock-fishing.

29,344. Can you give us any information with regard to the cod and ling-fishing; has that been progressive or stationary?—I think the cod and ling-fishing has been rather decreasing, if anything.

29,345. Is that in consequence of the fishermen applying themselves to other modes of fishing?—In the season of the year when it goes on they have no other source of fishing.

29,346. Do they not fish for haddocks in that season?—Yes, they are combined with the cod and ling-fishing.

29,347. Do they fish them both in one fishing?—Yes.

29,348. Do they catch them on the same lines?—Sometimes they do.

29,349. Do they fish specially for cod and ling?—At times they do, in the spring of the year.

29,350. Do they use larger hooks for that purpose?—Upon their hand lines they use large hooks, but on the long-lines the small hook will hold a cod. When they go specially for halibut and skate they use the large hook.

29,351. Is there a bank off here celebrated for skate and halibut?—Yes, there is a bank which they frequent for those fish.

29,352. How far off is it?—It is a considerable distance, but I cannot say how far.

29,353. Is there any trawling off this coast?—There is no deep-sea trawling.

29,354. Have there been any complaints made with regard to the haddocks not coming as close inshore as they were in the habit of doing in former years?—There have been great complaints of that.

29,355. Have you ever heard any reason assigned for it?—I have heard no reason assigned that I can rely upon.

29,356. Is there any mode of fishing practised off this coast, within your knowledge, that is destructive of the young of the fish or the spawn?—No, not on this part of the coast that I am aware of.

29,357. Is there any difficulty in getting bait here?—At times there may be a little difficulty, and I may remark that unless they are able to obtain herrings for cod-bait here they never succeed in catching cod. The cod appears to feed in the winter time upon herrings, and when the fishermen bait their lines with mussels the cod will not take them; but immediately they get a few herrings they succeed. Accordingly, they always wish to obtain a few herrings in the winter time, in order to bait their lines. There has been a very good fishing this season, and the success was very marked. Immediately they obtained herrings they had an abundant supply of cod, skate, and halibut.

29,358. Then the catch of cod, skate, and halibut depends very much on the bait?—Yes, very much. They prefer herrings to feed upon in the winter rather than any other bait.

29,359. (*Professor Huxley.*) If there were any close time for herrings on this coast would not that interfere seriously with the catch of cod?—Unquestionably it would.

29,360. Would it put a stop to the fishery?—No, it would not put a stop to the fishery altogether. They would adopt other bait, but they would not succeed in catching so many fish.

29,361. Are there plenty of herrings here in the winter time?—Yes, I believe there is an abundance. They are scattered, however, and do not get into shoals in the winter time.

29,362. The winter fishing for herrings is rather a new thing here, is it not?—Yes.

29,363. It has been practised only for the last year or two?—Last winter I should hardly say it was practised. Nets have been taken out and set in the creeks and bays along the coast, and they have caught herrings and a few crabs, but there has been no regular trial. They have not attempted a regular herring drift-net fishery.

39,364. Was that because the badness of the weather at that season of the year prevented them from carrying on the fishery?—It was never thought of until the last year or two.

29,365. It was never thought of at all?—No.

29,366. There has been a regular winter fishing at the mouth of the Forth?—Yes.

29,367. And yet it never occurred to the people here to try the same thing?—No.

29,368. Is the weather such in the winter time as to enable you to fish with safety?—It is very wild here, and the weather is very uncertain. It is almost impossible for the men to calculate on what days they will be able to go out to the fishing. They would run a very great risk of losing nets of considerable value. For that reason they are very timid in shooting their nets in the winter season.

29,369. They are liable to sacrifice a much greater amount of property in the winter than in the summer season?—Yes, if the bad weather comes on when they are out at sea.

29,370. Do they catch herrings in the winter with dandy lines?—No, not in the winter. They have not attempted it this year, because the fishermen have been more successful in the cod-fishing; but in previous years, in the months of May and June, they have practised dandy-line fishing for herrings.

29,371. For the market?—No, for bait, and for their own consumption.

29,372. In what condition are the herrings here about the months of January and February?—The quality of the fish they got this winter was very fair.

29,373. Were they full fish?—They were pretty full; they were getting full. Towards the end of January there were many spent.

29,374. Do you recollect the time of the bounty here?—Yes, my father was a Fishery officer before me, and I attended him at the period of the bounty.

29,375. The herring fishery has increased very much since the bounty has been given up?—Yes, there has been a very great increase. I don't think at that time there were more than 15 or 16 boats.

29,376. Notwithstanding the cessation of the bounty, the ordinary engagements which have been entered into by the fishermen have been sufficient to create this great increase?—Yes.

29,377. Speaking from your knowledge of the fish curers, does there seem to be a great wish on their part to have the brand continued?—There is a great desire that the Government superintendence should be continued, but there are exceptions.

29,378. Are there any herrings exported unbranded?—At the beginning of the season the herrings are exported unbranded. They do not keep them a sufficient length of time in the salt to entitle them to the brand. They want them to get an early market. Herrings were sent away this year which had only been from one to five days in cure; whereas, they require to be 10 days in salt to entitle them to the brand.

29,379. Were those herrings exported to the foreign market, or to England?—When I speak of exporting, I mean exporting to the Continent.

PETERHEAD.

A. Sutherland.

29 July 1864.

29,380. Were they taken on the Continent freely and without difficulty?—They were sent away to see what markets they could catch.

29,381. Is there a considerable demand for them?—They are on their way now. I understand that the market is clear of herrings just now, and they will not wait.

29,382. They take them, brand or no brand?—Yes. I do not know what the reason is, but they want herrings, and the curers are so anxious to catch the markets that they are sending them off at once.

29,383. Do you as Fishery officer find a great variety of quality among the branded herrings?—There is a certain level which of course they must all come up to.

29,384. Do you ever find any great variety?—At Peterhead, under my particular charge, there is not a great variety. They bring them up a uniform good article.

29,385. And above the level you require there is not much variety?—No.

29,386. In order to obtain the Crown brand the herrings must be cured up to a certain pitch of excellence?—Yes.

29,387. The curer, besides that, does not make any difference or variety in his cure?—There is not a great variety of excellence of cure here; but they bring them up to as much perfection as circumstances will possibly allow. In the first instance it is necessary that the fish, when caught, should be of a certain quality; then there is something in the way in which they are handled, selected, put into salt, and afterwards cured. The care paid to all these matters is generally uniform.

29,388. Is it or is it not possible that a man should be able to make his herrings very much better than what is required for the Crown brand?—He cannot well do that. As it is he has to come up to a great degree of perfection.

29,389. Would you refuse the Crown brand to herrings that had not attained that highest degree of perfection?—It is very difficult to say what you are to call the highest degree of perfection. So much depends on the quality of the fish when they are actually caught; that is an ingredient which must be attended to in regard to the excellence which the fish attain, and their value as an article of food. For instance, young full fish make a much better article of food than herrings which are almost spawning.

29,390-2. But you give the full Crown brand to fish perfectly cured that are almost spawning?—Yes, if they are full herrings.

29,393. If you had two barrels, one cured while they were full fish, but young, and the other cured when they were fish ready to spawn, you would give them both the full Crown brand?—Yes.

29,394. Nevertheless the barrels which consisted of herrings that were full young fish would contain the better fish?—Yes, they would form a better article of food.

29,395. Then there is a considerable difference between one kind of full Crown-branded fish and another?—Yes, that depends on the stage of the fish's existence.

29,396. There is that difference?—Yes.

29,397. There is a certain range of full Crown-brand excellence?—Yes.

29,398. That depends to some extent on the condition of the fish?—Yes.

29,399. Does it not depend also on the mode in which the cure is effected?—Unquestionably. They must, before they are entitled to the brand at all, be gutted and salted before 24 hours have elapsed.

29,400. Is not the quality of the salt also an ingredient?—Yes, and the way in which they are handled from the time they are taken out of the sea.

29,401. Is there a good deal of range among the full Crown-branded herrings?—There must be a certain extent of range among them.

The witness withdrew, and the inquiry was adjourned until Saturday, July 30.

Peterhead, Aberdeenshire, Saturday, 30th July 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

ALEXANDER KING called and examined.

A. King.

30 July 1864.

29,402. (*Mr. Caird.*) Have you long been engaged on the fisheries on this coast?—Yes; for a long time.

29,403. Do you practise all the kinds of fishing that are practised here?—I practise the haddock-fishing, the herring-fishing, and the cod-fishing, in the winter time.

29,404. In your experience and in your knowledge, has the quantity of herring caught year by year increased or diminished?—In some years they are always light. The herring-fishing was very plentiful when I came to it first; but it seems to have altered its character. Some years there are a great deal, and in other years they are not very plentiful.

29,405. Are there more boats engaged now than when you begun?—A great many more.

29,406. Are they larger boats?—Yes.

29,406*a*. Are the fleets of nets larger?—Yes.

29,407. Do you find with those larger boats and the greater number that go, and the larger fleets of nets, that you make a larger catch of herrings than the small boats and nets were in the habit of making formerly?—Yes.

29,408. Have you at any time observed that the shoals of herrings which come in upon the coast are becoming smaller, or that the herrings themselves are less numerous?—I think there is no difference in that respect.

29,409. Is it only the irregularity of the seasons and the weather that you complain of?—Yes, just that.

29,410. Have you to complain of any interference with your fishing by Frenchmen coming among your nets?—Yes, when they come here they heave the garbage over for the dog-fish. That has the effect of raising a terrible quantity of dog-fish, which destroy our nets.

29,411. Is that inshore, or at some distance out at sea?—It is just wherever they haul up the fish to gut them.

29,412. Is that the chief complaint you have against them?—I know of no other.

29,413. Is that a very serious matter?—I don't believe there are a great number of Frenchmen who come upon this coast now. I don't think we sustain very much hurt from Frenchmen now.

29,414. They don't do you much harm by drifting among your nets?—No, they keep quite clear of that.

29,415. Do they fish now in the same place that you do?—Yes.

29,416. Do they fish more than three miles from the shore?—Yes, I never saw them fishing within three miles from the shore.

29,417. You don't complain of an infringement of the Convention Act in that respect?—No, we have

no complaint with regard to their coming too near the shore, so far as I have seen yet.

29,418. Do the shoals of herring come as near the coast as they did, or have they altered their course?—No, they don't come as near the shore as they did in former times.

29,419. Is there any reason that you can assign for their keeping further out now?—No, unless it is the number of boats that go out in the offing. We are of opinion that they have a tendency to break the shoals.

29,420. Are there a great number of steamers plying upon the coast?—Yes, there are a great number.

29,421. Could they have had any influence in preventing the shoals from coming closer in shore?—I cannot say.

29,422. Is the herring a fish that is easily frightened?—Yes, very easily frightened.

29,423. Have you any remark to make with regard to the time at which the fishermen shoot their nets; do they shoot them at irregular times in the evening?—No.

29,424. Do they mostly shoot them at one time?—They cannot all of them shoot at one time, because there are a great number of boats, and each has to get clear of his neighbour before they can shoot.

29,425. Is there any advantage in your opinion in observing the regulation that herring nets shall not be shot earlier than half an hour before sunset?—In my opinion it is quite time enough.

29,426. Is that regulation at all observed by the fishermen here?—The fishermen say that that is the earliest they can go the fishing with advantage to themselves.

29,427. Are many of the nets shot earlier than that?—Sometimes they are shot earlier.

29,428. Does anybody enforce any regulation with regard to the time at which you are to shoot your nets?—No, I never saw any one attempt to enforce a regulation upon the subject.

29,429. Would you desire to have some regulation enforced, or would you rather leave the fishermen to follow their own wishes, and carry out what they think best for themselves?—There are a great number of boats hanging about each other, and they would hardly get clear; I believe that is the reason which induces them to shoot earlier than they would otherwise do.

29,430. Do you think it is a matter of necessity that they should be allowed to shoot their nets as early as they can?—Yes.

29,431. Then you would not desire to have a regulation which would call upon them all to shoot their nets at one particular time?—No, that would hardly suit the fishing here.

29,432. Is that because a portion of the fishing boats do not get as early on the ground as others, and if all of them were prevented shooting, except at one particular time, it would be inconvenient?—Yes, because they would be all in one lump.

29,433. Do you know whether there is any loss sustained by the fishermen in consequence of their shooting much before sunset, and thereby disturbing the fish?—The fishermen tell us that it does a great deal of ill.

29,434. You have been long a fisherman yourself?—Yes.

29,435. What is the result of your experience?—I can say very little about it.

29,436. Have you not seen much injury done in that way?—No, I don't think I have.

29,437. Do you fish with ground-nets at any part of the season?—No.

29,438. Always with nets floating on the surface?—Yes.

29,439. Have you a winter fishing as well as a summer fishing?—We catch haddocks.

29,440. But I mean a winter herring-fishing as well as a summer herring-fishing?—We took herrings here last winter.

29,441. Was that the first time you tried them?—Yes.

29,442. Was the fishing successful?—Yes; but it was very bad weather.

29,443. There were plenty of fish if the weather had been suitable?—Yes.

29,444. With regard to the haddock fishery, is it within your experience that the quantity of haddocks caught on the coast has increased or diminished?—It has greatly diminished.

29,445. The total quantity has diminished?—Yes; it has diminished a great deal. They were at one time very plentiful off here, but now they have left the coast altogether.

29,446. But are there not more boats engaged in the haddock fishery than there were in former times?—There are a few more upon our coast.

29,447. For how many months in the year do you follow the haddock fishery?—All through the year, except for the two months when we are out after the herrings.

29,448. Have the haddocks changed the ground they were in the habit of coming to formerly?—Yes; they were in the habit of coming close in in our bay; now they have left us, and it is impossible to get any without going out a great distance.

29,449. How far do you go out to sea for them now?—Perhaps we will have to go 10 or 12 miles before we can find them.

29,450. But when you do go far out, do you find them?—Yes; we find them at times, but they are not nearly so plentiful.

29,451. Is the quality of the fish as good as it was formerly?—Yes, in quality I think it is just the same.

29,452. Then what is the reason they do not come to the same ground, and are less plentiful?—I cannot say very much about that. We sometimes blame the guns that are fired at Aberdeen.

29,453. Do you think they have any effect?—Yes; they do startle the fish greatly.

29,454. You are speaking of the haddocks now?—Yes; but it is the same with other fish. Supposing we get a good shot of herrings to-night, if there is any firing of cannon the next day we should see none of them the next night.

29,455. None of the haddocks?—No, nor of the herrings either; they start off directly into other water.

29,456. Do you think it is the firing of cannon at Aberdeen that has disturbed the ground which the fish frequented formerly?—Yes; that has been the effect in the shoal water.

29,457. When did this change take place in the ground the fish frequented—ever since the firing began?—I think that is the cause, because there have been no fish on our coast ever since the artillery began to practice.

29,458. Is it the volunteer cannon you refer to?—Yes, I suppose it is.

29,459. Do they fire a great many guns at Aberdeen?—Yes, a great many. They often fire once or twice a week.

29,460. Is it only at Aberdeen that this is done?—No; they fire at Peterhead also.

29,461. Will they not disturb the fish as well?—We don't hear the Peterhead guns. They are not so loud.

29,462. You mean that you do not hear them when you are out at sea?—Yes.

29,463. Do you get many cod and ling here?—Yes.

29,464. Is it a good cod and ling fishery?—Very good cod are got here.

29,465. Do you follow that as a particular branch of your business?—We go haddock and cod-fishing.

29,466. Are they caught on the same lines?—No; we have big lines for cod and ling.

29,467. Have you in your boats both cod lines and haddock lines?—We make no difference; but at Buchanhaven they have boats for the cod-fishing.

29,468. But you have not specially?—No.

PETERHEAD.

A. King.

30 July 1864.

29,469. Do you use cod lines at the same time you are using haddock lines, and fish both at the same time?—No; we use haddock lines for both; big stout lines.

29,470. Are cod caught with your haddock lines?—Yes.

29,471. Do you use the same bait?—Yes.

29,472. What is the bait you use; not mussels?—No, herrings. They are the best bait we can get for any kind of fish.

29,473. Do you get large quantities of cod here?—At times we get a good quantity here; but they are like the haddocks; they have been decreasing in quantity. They are not as plentiful as they were some time since.

29,474. What is done with them; are they sent away fresh to market, or are they cured?—They are cured.

29,475. Where do you send them to?—They are cured and sent to London.

29,476. Where do you get your bait from?—From Newburgh.

29,477. Do you get plenty there?—Yes, plenty.

29,478. Then you have no difficulty with regard to bait?—No, except the fact that it is very dear, and we are put to a great deal of trouble and expense in getting it.

29,479. Is the bait dearer now than it was in former times?—Yes, it is very dear.

29,480. Still you are not in any way hampered in your fishing from want of bait?—Not at present; but we have been hampered some time back, in the winter.

29,481. (*Professor Huxley.*) Does the Fishery cruiser here ever interfere with you—I mean the boat sent here by the Fishery Board?—No.

29,482. What size of mesh do you use for your herring nets?—What sized mesh?

29,483. Yes; how many to the yard?—I think there are about 30 to the yard.

29,484. Does anybody ever look after that?—No, I never saw anybody looking after it.

29,485. Have you any below that size?—No, none below that size.

29,486. Are your boats lighted when you go out at night?—Yes; on dark nights we hoist a light.

29,487. What light do you hoist?—We put up a white light.

29,488. Do you put up one or two lights?—It is just a lantern.

29,489. Do you put up one or two lights?—Sometimes three or four, I think.

29,490. Where do you put them?—We just put them in the middle of the boat.

29,491. One above the other?—No, there is only one light.

29,492. But sometimes there are two or three lights?—They are just little lights. Every boat carries one light.

29,493. You said two or three?—No, every boat carries one light.

29,494. Did you ever hear of any regulation that you should have two lights one above the other?—No, I never heard of that.

29,495. Has the Fishery cruiser never enforced that?—No. I don't think it is necessary to have two lights to one boat.

29,496. You never heard of a regulation to that effect?—No.

29,497. You were asked just now whether you ever got into any trouble with the Frenchmen?—No, we never get into any trouble with them, unless it is that they sometimes damage our grounds and our nets by heaving their garbage into the sea and raising the dog-fish.

29,498. Do you have a great deal of dog-fish on your fishing grounds?—Yes.

29,499. Do they destroy the herrings and the nets?—Yes; they destroy the herrings and nets too.

29,500. In what sort of condition are the herrings in the winter time? Are they full fish?—They are very good fish then.

29,501. Are they full fish?—Yes, they are very full.

29,502. What time of the year are they spent?—About the middle of February.

29,503. You seem to get on pretty well by yourselves; you don't seem to have anybody to trouble you?—No.

29,504. Is there anything you would like to have done?—I can't see anything that we require.

29,505. (*Mr. Caird.*) You think you can manage your own business best if you are left to yourselves?—Yes, I think so.

29,506. You don't want anybody to help you?—No. Some kind of help would do us good.

29,507. What help would do you any good?—It would do us good if we were able to get things cheaper.

The witness withdrew.

W. Buthley.

WILLIAM BUTHLEY called and examined.

29,508. (*Mr. Caird.*) You are a fisherman at Colliston?—Yes.

29,509. Have you been engaged in fishing there during the best part of your life?—Yes, ever since I was able to work.

29,510. Do you generally agree with the witness who has just been giving his evidence with regard to the supply of fish on this coast?—I could not say anything more about it than Alexander King has told you.

29,511. Do you find that the haddocks are diminishing in quantity?—Yes, greatly since I began to go to sea.

29,512. Is that for each boat or is the whole quantity smaller than it was formerly?—Is the whole quantity smaller?

29,513. Do you think the whole quantity caught on this coast is less than it used to be even when there were fewer boats?—Yes, I have seen two or three boats bringing in more than 40 or 50 will do now.

29,514. Have you any reason in your own mind that you can assign as the cause of that?—I have no reason except the firing of the cannon at Aberdeen across the shoal water of the bay.

29,515. When you go out to sea do you not find plenty of haddocks?—They are not so plentiful as they were at one time.

29,516. How far is the fishing ground from the shore at Aberdeen where the guns are fired?—Perhaps seven or eight miles,

29,517. Can you hear the guns quite well when you are fishing upon that ground?—Yes, we can even hear them when we are sitting in our houses at home.

29,518. How many miles is that from the place where they are being fired?—16 miles.

29,519. Have you noticed that after they have been fired the fish leave the ground?—Yes.

29,520. Do they go further to sea?—They go away altogether.

29,521. Do you get them again the next day, or in a day or two, or when do they come back again?—We caught a good shot this season in April. I remember very well that we caught them on the Saturday, and on the Tuesday following when we went after them again we got none.

29,522. When did you get any again?—We got none at all.

29,523. Did they go away altogether?—Yes.

29,524. Did you give up fishing in consequence?—No, we just tried in another place.

29,525. Did you find them in another place?—We tried a place away east; they were very plentiful when we caught them first, but we never got them again in such quantity.

29,526. Do you think the steamboats plying on the coast have any effect with regard to changing the course of the fish?—I cannot say.

29,527. Is there any trawling on this coast?—There has not been for a long time.

29,528. Has there ever been trawling here?—There was some trawling carried on 10 years ago in Aberdeen Bay; but there has been none at all for the last five or six years.

29,529. Do the deep-sea trawlers ever come down on this coast?—No.

29,530. Then you do not ascribe the changing of ground by the fish to any injuries which you have sustained by the practice of trawling on this coast?—The trawlers that were working in Aberdeen Bay did very great harm.

29,531. But I understand you have had no trawlers for the last 10 years?—No, but the trawlers have been working since I have been at sea.

29,532. Is the cod-fishing as good as it formerly was?—No.

29,533. Has all the white fishery rather decreased?—Yes.

29,534. With the exception of the herring-fishing?—The herring-fishing is not equal to what it was a number of years ago.

29,535. Have you a greater number of boats than were formerly employed here?—Yes.

29,536. Do all the men make a tolerable livelihood?—Yes.

29,537. Is the livelihood they make as good as when you began fishing?—No.

29,538. Do not the fish bring a better price?—Yes, the fish bring a better price; but we don't get as many in general.

29,539. With the increased number of men and boats, on the average, each boat was better stocked with fish at that time?—Yes.

29,540. With regard to shooting your nets before sunset, have you any remark to make upon that point; have you any desire to see a regulation enforced which would prevent any one man going fishing and shooting his nets earlier in the day than another?—I have heard plenty of the fishermen say that they never saw a good fishing when they shot their nets before sunset.

29,541. Have you observed that yourself?—Yes, unless it was rough weather.

29,542. Knowing that to be the case, do you not avoid shooting early for that reason?—If we can avoid it we do.

29,543. You do your best to avoid it for your own interest?—Yes.

29,544. Would you like to see the Fishery officer coming down here and compelling you to refrain from shooting your nets until half an hour before sunset?—I think it would be better if it was not done, as the fishermen consider that it may do them considerable harm to shoot their nets before sunset.

29,545. (*Professor Huxley.*) How many times in the week do the Aberdeen people practise their artillery—how often do you hear them?—We hear them once or twice a week.

29,546. Did they do that last winter?—They do it two or three times every month.

29,547. They have been practising regularly?—Yes.

29,548. Did you go out haddock-fishing last winter?—Yes.

29,549. Did you get haddocks?—We got a few, but the loads were small, as the weather was very bad, and we could not get at the fishing grounds often.

29,550. But still there were some haddocks got in the fishing last winter?—Yes, they did very well on some of the eastern coast of Scotland, in the Moray Firth.

29,551. But there were none in this neighbourhood?—We got more here than on the coast westward.

29,552. Then the firing did not frighten the haddocks here?—No.

29,553. If they practice three times a week, do you not consider that there is not much time for the haddocks to get over their fright?—The water is deeper here than it is with us.

The witness withdrew.

ROBERT BRUCE called and examined.

R. Bruce.

29,554. (*Mr. Caird.*) You are a fisherman at Peterhead?—No, at Buchanhaven.

29,555. Is that near Peterhead?—About a mile from Peterhead.

29,556. Have you long been a fisherman there?—From my boyhood.

29,557. Then you have considerable experience and knowledge of the different kinds of fishing practised along here?—Yes.

29,558. Speaking of the herring fishery, is it your opinion that the quantity of herrings caught, on the average, is increasing year by year?—I rather think it is diminishing.

29,559. Is there not a larger number of boats, and larger boats employed now than were formerly employed?—Yes.

29,560. Do you not think that the greater number of larger boats get a larger quantity of herrings?—No, I think they get a less quantity.

29,561. Has there been a progressive diminution or a fluctuating diminution?—About this time three years ago there was a good fishing, but I have seen it very much decrease since.

29,562. Has there not been one exceptionally good fishing within the last three years?—Yes; there was three years ago.

29,563. But you now have begun to have a winter fishing as well as a summer fishing, which formerly you had not?—Yes; there has been a little herring-fishing along the beach in the bay. We catch a few for bait for the cod.

29,564. Is there no winter fishing practised for the herrings themselves?—No.

29,565. Not along the shore?—No; there are only a few caught along the beach, and none by drift-nets.

29,566. They are obtained for bait only?—Yes, only for bait.

29,567. It is not a fishing that is practised in order that the fish may be sent to market? There is not a large proportion of the fish caught at that season sent to market?—No; very few are.

29,568. Have you found that the herrings go further to sea now, or are they much upon the same ground that they were formerly in the habit of frequenting?—I think they are found further out at sea now.

29,569. Can you give us any reason for that?—No; I cannot assign any reason.

29,570. With regard to the haddock-fishing, has it improved or diminished?—It has diminished; but there are plenty in the deep water, at some distance from land.

29,571. How far from land?—From 12 to 15 miles off.

29,572. Are they plentiful there?—I think they are just as plentiful there as ever they were.

29,573. Do you not follow them there?—Yes; but we have much larger boats now.

29,574. With those larger boats, going further out to sea, do you get more haddocks?—We do at times, but we only go twice or thrice a week; hardly three times on the average.

29,575. Did you get them oftener when they were near in shore?—Yes, we got them once a day.

29,576. Then you get a larger catch of them further out at sea, but you don't get them as often?—No.

29,577. Is the quality as good as it used to be?—No, the haddocks are worse in quality. They are not such well fed fish as when we got them off the shore.

PETERHEAD.

R. Bruce.

30 July 1864.

29,578. Are there no haddocks to be got off the shore?—There are a few, but only very few.

29,579. What do you fancy is the cause of the haddocks having left the shore?—I cannot tell you.

29,580. Have you no reason to give for it at all?—No.

29,581. You don't ascribe it to the deep-sea trawling?—No; I have not seen any trawling.

29,582. Are the haddocks easily disturbed by the steamboats passing?—I don't think they are.

29,583. You don't think that that can be the cause of it?—I have seen steamboats passing when we were getting plenty. I don't see that they do any harm.

29,584. Does the cod fishery continue to be as good as it was formerly?—No, except in Heron Bay, where we can get plenty of cod.

29,585. There is one place where you can get them?—Yes; when we go up to Heron Bay we can get plenty.

29,586. Then it is not from any want of cod that the cod fishery does not continue to be so good?—No; we can get plenty with the mussels there.

29,587. Have you been long in the habit of using herring bait for catching cod?—No; I don't think we have been more than four or five years trying for winter herrings.

29,588. Have you found out that the winter herring makes excellent bait?—Yes.

29,589. I think you said that if you had herring bait you could get plenty of cod, and that there was no appearance of the cod having decreased in the sea?—I don't think they have. In former days we had no herrings that we knew of in the winter which we could bait for cod, and when we baited with mussels we did not get any cod at all; but now we find that we can get plenty with herring bait.

29,590. That was the case in the early time of your fishing?—Yes, we did not use herrings then.

29,591. Did you catch them with mussels then?—Yes.

29,592. Do the cod not like mussels now?—No.

29,593. What do you think is the cause of that?—I don't know.

29,594. Is there any oyster fishery along the shore?—No.

29,595. Is there any lobster fishery?—There are some old men who catch lobsters sometimes.

29,596. It is not a matter of much importance?—No.

29,597. Is there a good crab fishery?—There are plenty of crabs among the rocks.

29,598. Are they fished?—No, they are not fished here; but the women and old men go down at low water in spring-tides to get them.

29,599. Are there a great many got here?—Not many; they don't lay themselves out to catch them.

29,600. Are they not considered worth following as a matter of business by the fishermen?—No.

29,601. (*Professor Huxley.*) What do you think of the guns frightening away the fish?—I don't know anything about it. I have heard complaints about the salmon fisheries, but I don't know that they ever did any harm to us.

29,602. Have you caught haddocks at the time the guns have been firing?—Yes.

29,603. Is that commonly the case?—I never knew it do them any harm, but I have heard complaints about it.

29,604. As far as your own experience goes you never found that it did any harm?—No; I should not say that it does.

The witness withdrew.

W. Strachan.

William Strachan called and examined.

29,605. (*Mr. Caird.*) Have you long been a fisherman on this shore?—I have been a fisherman for 45 years.

29,606. At Peterhead?—No, at Buchanhaven; but it is just the same thing as Peterhead.

29,607. Have you found in your long experience that the quantity of fish is increasing or diminishing?—When I came there were only two or three boats, and I believe we have now about 20 boats. We had as many fish when I came here first as we could take; but now we have upwards of 20 boats. I believe there are 27 altogether in our little village; all of which fish upon the same ground, and we get less fish. I think it is owing to the great increase which has taken place in the boats. That is the reason, I think, why the fish appear to be less.

29,608. With regard to the haddock-fishing, has the ground much changed?—At one time we could get them close in here, but now, what with so many fishing, and so many lines being put into the sea, and other things, they have left the ground. I believe the cause of that is the way in which we have been working them. The fish came back for a time, but only for a very short time, as compared with what we used to have them before. We have only had them, for instance, one week this season, whereas in my early time we used to have them the whole season round.

29,609. You had them for the whole season inshore?—Yes, but now when they come they only stop a week.

29,610. You ascribe that change to the great increase in the number of people fishing?—Yes.

29,611. Are the boats larger than they were formerly?—Yes, the large boats follow them to the offing, but in my early time we had only small boats engaged in the fishing.

29,612. How long is it since the fish changed their ground?—As we began to increase in the number of our boats the fish began to wear off. They wore off, in fact, in proportion as we began to take them.

29,613. Do they keep pretty steadily upon a certain range of ground?—The more we are going after them the further they are going off. At first we took the large boats 12 or 14 miles. For the last 10 years we have been going after them, and now we have to go 20 or 30 miles.

29,614. Have you always observed that as fast as you have increased the number of your boats the fish have gone further to sea?—Yes, they have always been going further off from us.

29,615. But when you get to them do you find quite as many fish as you were in the habit of finding formerly?—Yes.

29,616. Then there is no want of fish?—No; there are as many as there used to be, but the boats don't go as often after them. The fish are as plentiful as when I began, further out.

29,617. When you get out to the soft ground do you find them even more plentiful than they were formerly?—Yes.

29,618. Are they of as fine quality?—No, I cannot say that they are of the same quality.

29,619. Are they not as large?—They are as large, but not as good for eating. I hardly eat one myself. What we call sea haddocks are much inferior to the haddocks we used to get inshore.

29,620. Do the public complain?—Yes, I believe they do.

29,621. That does not prevent you from selling them?—No; but when we get any in the bay we get double the price for them that we get for sea haddocks.

29,622. When you get them inshore you get an increased price for them?—Yes, we get double the money. For any quantity of haddocks we obtain in the bay we get as much as for double the quantity of sea haddocks.

29,623. Is it a different bottom that you fish upon outside?—Yes.

29,624. Is it a rocky bottom or a soft bottom?—A rocky bottom with a kind of tide upon it.

29,625. What is the bottom inside?—A sandy bottom, and the fish live on sand eels and stuff of that kind. The food they get is altogether different from that they get outside.

29,626. Are there no sand eels on the bottom outside?—There do not appear to be; we get their insides, when we catch them in the bays, all full of sand eels.

29,627. When you open the haddocks inshore, do you find the contents of their stomachs different from what they are when you catch them outside?—Yes, they feed altogether upon a different kind of food.

29,628. Has that been the observation of any of the fishermen besides yourself?—Yes, we have often spoke about it amongst ourselves; we ken it very well.

29,629. With regard to cod-fishing, is it increasing or diminishing?—It is about the same; there were many more fish taken in our village 30 or 40 years ago than we can take now with a much larger number of us, and at that time we had not to go so far out to see for them. Now, there are upwards of 20 boats, and there are not so many fish caught and brought into our place upon the average as there were in my early days.

29,630. Then, though each boat does not get as large a haul, I presume that the whole number get more fish than you got in former times?—Yes.

29,631. Both of haddocks and of other fish?—Yes, but we only had a few boats formerly.

29,632. Have the cod changed the ground from where you were in the habit of fishing them?—No.

29,633. They continue upon the same ground where you formerly caught them?—We find them on the same ground when we go with the herring bait.

29,634. Are the cod the same in quality?—Yes.

29,635. Do you get many halibut or turbot?—Yes, we get a good deal of halibut.

29,636. Do you get any turbot?—Yes.

29,637. How do you catch them?—With lines; we call it a "Rawn fleuk"; that is what we call the turbot. I was once with a yacht here, and the thing that we called a "Rawn fleuk" was what they called a halibut.

29,638. Is not that one of the best fish caught here?—Yes.

29,639. What kind of bait do you use for catching it?—We use the sand-eel bait.

29,640. Is that the same thing that the haddocks feed on inshore?—Yes, precisely the same thing.

29,641. Then has the cod and ling and the turbot and halibut increased in quantity here?—Yes, there are far more than when I began first, but there are so many people taking them. The number of people taking the fish for a trade has much increased.

29,642. Does it require a different kind of bait to catch cod now than it did formerly?—Yes, we use the herring bait now when we can get it.

29,643. Formerly you did not use it, and yet you caught the cod?—Yes, there was no other bait to give them except that which we used. We did not try the herrings at all.

29,644. But the cod would feed on the herrings then if they could get them the same as they do now?—Yes, but now that we have got the herring bait we have been enabled to get plenty of cod. Last winter we got a large quantity of cod with herring bait, and we got nothing until we began to use the herrings.

29,645. Is the winter fishing purely for bait now?—Yes.

29,646. You do not follow it in order to sell the fish?—No, we only get a few for bait.

29,647. Do you think it possible that the winter fishery may increase, and that the catch will become so large that it will be of advantage for you to sell it?—We are thinking so, but we must have better means for catching the fish. At present we only use little boats with a few old nets. Some of the boats have got good takes, but what they have got has not been intended for sale; it is just only for bait that we take them.

29,648. Have you any remark to make with regard to the herring fishery. Are there any regulations enforced here or any modes of fishing practised in the herring fishery which are injurious to the fishing?—I do not know that there are any regulations that interfere with us. Sometimes the herrings are earlier, and then we have to shoot early for them. There is a kind of young fish that comes here, and we get those fish before the sun sets. If we did not shoot our nets before then we should not be able to get those fish.

29,649. Is it a peculiar kind of herring?—Yes, a young herring.

29,650. They come quicker up?—Yes, they always rise about the time the sun is going down, or just as it is going down. Unless we shot early we should not be able to get those fish.

29,651. Then you would not approve of any regulation that would prevent you shooting your nets until near sunset?—I do not think it would do any good, because in regard to that particular fish we should not be able to get many of them unless we shot our nets early.

29,652. Then you do not desire any interference with you in that respect?—No.

29,653. You rather prefer that the fishermen should be left to their own freedom to regulate themselves?—Yes; if they were stopped we should not get the same fish.

29,654. Do the fishermen adopt regulations among themselves to prevent one from getting an undue advantage over another in setting his nets?—We are very bad that way as to regulations. They will shoot over each other and not give enough berth or room for each other. Every boat in that respect does a heap of damage to itself and great harm to the fishing.

29,655. Are there any modes by which that could be better managed?—I do not know; perhaps if the Fishery people were to give us a little assistance in that matter it might do good; but then if any regulations were established, in all probability the fishermen would not keep them.

29,656. Suppose that some regulations were established making a provision that the boats should place their nets at certain distances apart from each other, would it not be difficult to enforce such a regulation?—There might be a little difficulty, but it would be easily done if they paid attention to it. At present they hardly care, and there are a heap of people going to the fishing who know nothing about it. There are a great many of them who hardly know anything about it, and they seem not to care where they shoot or what they do. They just put out their nets without caring what hurt they do to other people who are fishing.

29,657. Then you would like to have some Fishery vessel here to keep you in order?—It would be good for everybody, just to see what the boats are doing. Boats shoot many a time when there is no occasion for it, in order to get a good berth, and they do a good deal of damage.

29,658. Do you suffer from the Frenchmen fishing among you?—They did us some hurt three years back, but not lately.

29,659. Then you have no complaint to make with regard to them?—No, our only complaint is that they take the fish off the coast. They take a heap of the halibut and cod and ling with their lines inshore.

29,660. Do they come within three miles of the shore?—Yes, within half a mile.

29,661. Do they not pay attention to the regulation which prohibits them from coming within three miles of the shore?—No.

29,662. You know that there is such a regulation?—Yes, I know there is; but they are often fishing within half a mile.

29,663. And nobody interferes with them?—No, yet the people here know they are taking the fish.

29,664. Does anybody come here to examine the size of your nets?—There is nobody here to look at

PETERHEAD.

W. Strachan.

30 July 1884.

the nets. Last year, at Peterhead, I heard them say that they considered our mesh too small, and I heard that they were going to examine them.

29,665. Are the meshes smaller than they used to be?—Yes.

29,666. What is the size commonly used?—From 31 to 32.

29,667. From 31 to 32 rows to the yard?—Yes, and they take a terrible deal of fish.

29,668. Are you making them smaller than that now?—Yes, I have seen them 35 to the yard in some of the strange boats that come here. It is quite small herrings that they take, and I do not consider that that is right.

29,669. Does the large herring mesh in meshes of that size?—No, they cannot; the herrings they take are taken before they come up to be proper fish. It is for the young fish that they use those nets. The size I use is about 31 or 32.

29,670. (*Professor Huxley.*) Are you aware that the law prescribes 36 to the yard?—That is about the size they have. Their nets are quite as small as 36 to the yard.

29,671. Do you consider that 36 to the yard is too small?—All I know is that they will take a very small herring; quite a young herring may be taken in a net from 35 to 36.

29,672. Your herring is rather a large one here?—Yes, it is large in size.

29,673. What is the average size?—They are from 65 to 70 dozen in a cran.

29,674. What do you think about the guns frightening away the haddocks?—I often hear them say that the small fish are down on the coast here, and then I hear them complain that as soon as the guns have been fired all the fish made away from the coast. Directly the guns have been fired off the fishermen are not able to get any fish. They are obliged to go out to a considerable distance before they can get any fish.

29,675. You are speaking now of people fishing along the shore?—Yes.

29,676. Does it affect the sea-fishing?—I do not think it does; but along the coast I know the fish are of a very frightened character, and they will go among the herrings if they are disturbed. The fish often fly to a great distance; I have often remarked that, and have known them do it. I am satisfied that they hear quite well below the water.

29,677. You have remarked that?—Yes, and I have often heard people complain of the guns. At the same time I do not think there is any cause to complain of the fish in the sea; they were shifting about before the guns fired, and I think that that was occasioned by so many boats going out to the fishing.

29,678. In fact, you overfished them?—Yes, I think so.

The witness withdrew.

A. Sutherland.

ALEXANDER SUTHERLAND recalled and examined.

29,679. (*Mr. Caird.*) Have you found it necessary to interfere with the French fishermen when they have been, in your opinion, transgressing their limits?—Many fishermen have complained to me of the practice adopted by the Frenchmen of fishing inshore. They have stated that their long-lines have been injured in the bays and creeks. As far as I have been able to communicate with them, I have always told them that that was not allowed by the Convention, and the Fishery cutter being on the coast I generally endeavoured to communicate with him, in which case he immediately took means for preventing a repetition of the infringement by ordering them to haul in their lines and cease to fish. No longer ago than Wednesday last there were complaints made to me of lines having been used in the bay, and I communicated with the commander of the Coastguard. I went out with him and boarded three of the vessels. We found one long line shot about a quarter of a mile from the vessel in the middle of the bay, and upon asking the master of a French boat if it was his, he admitted that it was. I told him that it was improper and that it would not be allowed; whereupon he hauled up his line, and I observed that there were fish upon it. On board of the same vessel there were some fish newly caught, and I have no doubt that they had been caught in the bay.

29,680. You warned the boats off?—I told them that they would not be allowed to fish there or to shoot their lines anywhere within three miles. I communicated these facts to the Fishery Board, and understanding that the French were collecting on the coast they sent down the cutter. She is now stationed on the coast.

29,681. Do you ever find the Frenchmen fishing for herrings within three miles of the coast?—No; the herrings are generally outside three miles. Before you leave the question of the French vessels, perhaps you will allow me to remark that one of those vessels which we warned went round and brought up at Buckhaven, and, as I am informed, shot her lines again, having been fairly warned.

29,682. (*Professor Huxley.*) Suppose the men refused to go away, what would you do?—I was not prepared to take any extreme measure, but I should have communicated with the Fishery Board.

29,683. Could you take action under the Convention Act?—Yes.

29,684. Do you feel bound to carry out the other parts of the Convention Act?—In what way?

29,685. I mean with regard to the lighting of the boats?—No; I am not called upon to do that. I have nothing more to do than to communicate with the fishermen. I have never been called upon, nor do I think it necessary, to say of myself that they must have two lights.

29,686. But are you not aware that that is part of the Convention?—Yes.

29,687. But you have no instructions from the Fishery Board to interfere in that matter?—I have no particular instructions from the Fishery Board upon that point.

29,688. The only instruction you receive from the Fishery Board is to carry out that part of the Convention which relates to the three-miles boundary?—Yes.

29,689. Do you feel yourself called upon to carry out any of the regulations in reference to decked boats shooting near undecked boats, and so on?—I am not furnished with the means of doing it.

29,690. But if the fishermen complained to you, would you move the commander of the Fishery cutter so that he might act in the matter?—Yes, immediately; I am bound to do that. I have instructions to communicate every information of that kind to the commander of the Fishery cutter. I am in constant communication with him, and I keep him informed as to how the fishing is carried on. I tell him the nature of the information I have received from the fisherman from time to time, in order that he may have full knowledge of what is going on.

29,691. Has the commander of the Fishery cutter here interfered when French decked boats have been fishing among English undecked boats?—I could not instance any particular case of interference, but when they have been upon the coast and have been going to fish with our boats, the Fishery cutter has gone out with the boats, and has seen that the Frenchmen took up their proper position at the fishing. I am aware that that has been done; but to carry it out on the water myself would be impossible, as I have no means of doing it.

29,692. Do you mean that the Fishery cutter kept them half-a-mile outside?—I think he could keep them three miles outside.

29,693. But would he keep them half-a-mile beyond the undecked boats?—I do not know the limits that are prescribed; but no doubt he would take means to prevent any collision between our boats and the French boats. He would be the best judge of what was necessary, being a seafaring man.

29,694. Do you feel yourself called upon to see that the regulations contained in the Convention with respect to the vanes of the boats are carried out?—Yes; that is a matter upon which I have spoken to the French crews. On Wednesday evening, when I was on board these vessels, I pointed out the necessity of their having a blue flag. Only one of them had a flag about a foot square, whereas it is required to be two feet by three.

29,695. I do not think the vane is quite as large as that?—They are obliged to hoist a flag when they come within the limits.

29,696. I am speaking of the vane they are always supposed to carry?—They do not attend to that at all.

29,697. You do not feel it necessary to make the English fishermen attend to it?—The English fishermen fishing in these open boats would find it very inconvenient to comply with that regulation. They take the masts up and down.

29,698. But you are aware that there is such an article in the Convention?—Yes; and I may mention also that last season, when the Fishery cutter was here, and one of the French cutters was also here in the harbour, Mr. Macdonald waited upon the commander of the French boat, and urged upon him the propriety of speaking to the French fishermen in order to insure their attending to these matters. He wished them to be told that they were to keep their vanes in proper order, and not to take fish within the limits.

29,699. But if our people do not pay attention to the regulations of the Convention, they can hardly expect the French fishermen to do so?—There is no doubt they do not do what they ought.

29,700. They do not seem to pay any attention to these regulations at all. For instance, one regulation of the Convention is, that the fisherman shall hoist two lights, three feet apart, on one of their masts?—They do not do that.

29,701. They do nothing of the kind?—No.

29,702. It appears to me, that none of the regulations of the Convention are carried out?—There has been some difference of opinion as to whether these articles extend down to these parts.

29,703. If that article of the Convention which defines the limits is operative here, then all the rest are?—Of course; that is only a reasonable argument.

29,704. It is not clear how you can carry out one without carrying out all the rest?—My opinion is, that the English fishermen would consider some of these regulations oppressive, such as hoisting lights and keeping up vanes of a particular description.

The witness withdrew.

ALEXANDER BRUCE called and examined.

A. Bruce.

29,705. (*Mr. Caird.*) Are you a fisherman at Peterhead?—Yes.

29,706. In the course of your experience have you found that the quantity of herrings caught off this coast is increasing or diminishing?—There are as many caught here as there have been ever since I began to fish; this last year past the fishing was very good. I do not know what it may be this year, but there are more boats, and that would perhaps decrease the average taken per boat.

29,707. But the whole quantity, you think, is greater?—Yes.

29,708. Have the herrings changed their ground from where you were in the habit of catching them formerly?—They do not come as close to the land now as they did when I first became acquainted with the fishing.

29,709. Do you know any reason for that?—No, unless it is that there are so many boats breaking up the shoals when they come close to the land.

29,710. Were you in the habit of having any winter fishing for herrings in former times?—I suppose it will be about 15 years since it began.

29,711. Has the winter fishing been becoming a more profitable fishing than it used to be?—Yes.

29,712. Is it likely to increase?—Yes, it is increasing here every year, and it is doing a great deal of good to the cod fishermen in the winter time.

29,713. Is it chiefly for bait that you fish for them?—Yes.

29,714. There are not many herrings got in the winter fishing, in order to send to market?—At times there are, but not always.

29,715. They are chiefly caught for bait?—Yes.

29,716. Has the haddock-fishing increased or diminished of recent years?—It has diminished.

29,717. Has the total catch diminished?—Yes, the total catch is not "nigh hand" as much.

29,718. They have shifted their ground?—Yes.

29,719. Have you to go further to sea to find them?—Yes, a good deal further.

29,720. But when you go there, do you find them?—Yes.

29,721. Do you find them very plentiful?—At times they are very plentiful.

29,722. Are there more boats engaged now than there were formerly?—Yes.

29,723. Does the greater number of boats not get more fish than the smaller number did formerly?—There are not as many of them caught east and west with the larger number of boats as were caught with a smaller number of boats since I can recollect.

29,724. Is that because it takes longer to go to the ground and come back again?—Yes.

29,725. You are not able to go so often as you were?—We can go three times a week, and since I can recollect we had only to fish a mile or two off, and then we could go twice in the 24 hours.

29,726. Are the fish as good in quality?—They are not as heavy, or so big or large.

29,727. Are they otherwise in good condition?—Yes.

29,728. There is no falling off in the quality of the fish?—No.

29,729. What bait do you use?—Mussels for the haddocks.

29,730. Is there plenty of that description of bait to be had?—It is very scarce on the coast.

29,731. Have you any difficulty in getting bait?—We have very great difficulty, and it is too dear for us. We can hardly get them brought to us.

29,732. Have you opened out any new source for them?—There is a supply which comes by rail, but it is very dear.

29,733. Has the price of the bait increased very much of recent years?—Yes.

29,734. Does it cost you much more in a season for bait than it did when you first began fishing?—Yes.

29,735. Much more?—Yes, it costs double the money.

29,736. How much does it cos tyou in a year for bait?—It costs 4*l.* each man.

29,737. Is that 4*l.* each boat?—No, there are six men in each boat, and it costs 4*l.* each man.

29,738. That is 24*l.* for the boat?—Yes.

29,739. What would the cost be 20 years ago?—We got them from Montrose then at 50 shillings a cargo.

29,740. How long would that last?—It would go all through the summer months while we were catching

PETERHEAD.
A. Bruce.
30 July 1864.

haddocks. The mussels we got from Montrose were also of a smaller quality, and they are better for the haddocks than the large ones. In addition to that they are now double or three times the price that they were at that time.

29,741. Are there no mussel beds in this neighbourhood ?—No.

29,742. Are there any along the coast ?—I believe there is one about 12 miles from this.

29,743. Is that in any way protected from being destroyed in consequence of improperly fishing the mussels ?—Yes, there is a person employed in order to take care of them.

29,744. Do they not get a pretty regular crop from that bed ?—They have plenty of mussels, but they will not sell them. They send them away to the markets where they use them for eating, and they are very dear. They fetch eightpence a peck.

29,745. Formerly were they only used as bait ?—Yes.

29,746. And now they have become an article of consumption as food ?—Yes. When I first went fishing we could get them in the neighbourhood, and now we cannot get a supply once in a dozen years.

29,747. You are compelled to bring all your mussels from a distance ?—Yes.

29,748. Do you get them from Boston ?—Yes.

29,749. And some of them from the Clyde ?—Yes.

29,750. Then the increased price of mussels has been rather disadvantageous to you as fishermen ?—Yes. Sometimes when we get them by rail they have been kept too long, and they are a loss to us.

29,751. Has your cod-fishing increased of recent years ?—They have decreased for the last two years because we could not get herring bait.

29,752. Now you have got herring bait you can get plenty of cod ?—Yes, in the season when the herrings are right.

29,753 Then there has been no decrease in the cod ?—No.

29,754. Only you have a difficulty in catching them, owing to the want of proper bait ?—Yes.

29,755. When you can get the bait you find that you can do very well ?—Yes.

29,756. Is the quality of the cod as good as ever it was ?—Yes.

29,757. Do you get many halibut and ling ?—Not in that season.

29,758. But in the course of the year ?—Yes.

29,759. Is the fishing as good as it formerly was ?—Yes.

29,760. Is there any beam-trawling on this coast ?—No, we have no beam-trawling here.

29,761. Has there never been any here ?—Not upon this coast. There has been in Aberdeen Bay where there is soft ground, but it is hard ground here. They could not trawl here with the beam-trawl. The ground is very rough, and has a rocky sort of bottom.

29,762. (*Professor Huxley.*) How do you light your boat ?—We hoist a light if it is a very dark night.

29,763. Do you hoist one light or two ?—We have one with three panes of glass in the lantern.

29,764. You have one light ?—Yes.

29,765. Were you ever spoken to by the commander of the cutter or anybody else about that ?—No.

29,766. Were you ever told that you ought to have two lights ?—No.

29,767. Have you ever heard of such a regulation as that ?—No.

29,768. Is there any matter in which you have been interfered with by the commander of the cruiser ?—No.

29,769. Does anybody interfere with the size of the mesh of your nets ?—No.

29,770. Do you make it of what size you like ?—Yes, but it is always big here in this place. The mesh is very large ; it is a large herring we get.

The witness withdrew, and the inquiry was adjourned to Cromarty.

Cromarty, Saturday, 30th July 1864.

PRESENT :

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

CROMARTY.
D. Manson.
30 July 1864.

DONALD MANSON called and examined.

29,771. (*Mr. Caird.*) You are a fisherman of Cromarty ?—Yes.

29,772. Have you had many years experience with regard to the different kinds of fishing followed on this coast ?—Yes, I have been at it for a good many years.

29,773. What is the principal kind of fishing the fishermen follow here ?—There is the haddock-fishing during the winter time, and when the haddock-fishing is done we commence from the 18th to the 20th of July with the herring-fishing, and that lasts to the end of August.

29,774. What kind of fishing do you follow after that ?—We go away then to the white-fishing after that.

29,775. Have you any cod fishery here ?—No ; there is no cod-fishing, except in the fall, when we catch some of them on the small lines.

20,776. With the same lines as those you use for catching haddock ?—Yes.

29,777. What part of the Firth do you find most productive of haddock ?—From near to the light-house down to the South Suter at the head of the Firth.

29,778. Do you find the fish inshore ?—Yes, the fish come from the deep to the shallow water, and we may get a few for a couple of days, and then they all go away to the deep again.

29,779. In the course of your experience have you found that the haddocks have gone more out to sea than they were in the habit of doing formerly ?—Yes, they used to come playing up the coast during the herring time. They came very regularly during the herring time, but I have not seen anything of it for many years.

29,780. During the rest of the year, when herrings were not on the coast at all, did they keep very well inshore ?—The haddock keeps in 6 or 8 or 10 fathoms of water until the middle of spring comes on ; then they make away off to the deep water into 20 fathoms.

29,781. We find that upon other parts of the coast there is a complaint that the fish have ceased to be as plentiful inshore, and that they have been going further off into the offing—is that the case here ?—No, they keep pretty fairly in here on the regular fishing ground,

29,782. Has the number of boats which fish for haddock increased of recent years ?—Pretty fairly.

29,783. Do you get as good catches as you were in the habit of getting ?—No, they are falling away every year. There are so many catching them.

29,784. You mean there are so many at the fishing now ?—Yes.

29,785. Does each boat not get as good a fishing as it was in the habit of getting in the course of a season years ago ?—No.

29,786. Is the total quantity caught as great as it was formerly?—We have been very scarce of cod for many years.

29,787. But do you think the total quantity of haddocks caught is as great as it used to be?—No, I do not think it is.

29,788. Do you think that the greater number of boats does not get as large a number of fish as the smaller number did in former years?—No; I remember about 20 years ago we got 20 cwt. of fish in a boat, and now in almost a month's work you will hardly find that.

29,789. Has there been a great change in the price of fish within the last 20 years?—Yes, we get very fair prices from the curers. We are paid from 8*l.* to 12*l.* and 16*l.* as a bounty from the curers in the season. We get 8*s.* a cwt. for the haddocks. We give them all to the curers here, and we have 8*s.* for every cwt. we catch.

29,790. What is the nature of the engagement the fishermen have with the curers here?—For the haddock-fishing?

29,791. Yes.—From the 1st of October to the last of March we are bound to give the fish we catch to certain curers. We receive 8*s.* per cwt. for the fish. We sell them all we get of the fish we catch here. The curers also pay us 12*l.* as a bounty, on condition that we sell our fish to them. There are four men who go in each boat, so that each man gets 3*l.*

29,792. Each man gets 3*l.* as a bounty or wages?—Not as wages; it is free money.

29,793. The curer who gets the fish pays 3*l.* to each man?—Yes.

29,794. And besides that, on condition that you deliver to him all the fish you catch, he pays you 8*s.* a cwt.?—Yes; and upon that arrangement the curer must have them every day.

29,795. Do most of you sell them at 8*s.* a cwt.?—Yes.

29,796. Is that an increased price compared with what you used to receive in former years?—Yes, in former years they were very cheap.

29,797. What was the price formerly?—When I was a youngster myself I have sold 10 large haddocks for sixpence, and sometimes 12 of them, according to the market. Sometimes they would only be six for sixpence.

29,798. Was there the same engagement with the curer in former times that there is now?—No.

29,799. Then this arrangement with the curer is of comparatively recent date?—Yes, it was established 12 or 14 years since.

29,800. When the curers commenced to cure fish did they give as much as 8*s.* a cwt. for them?—No, we sold them then to the curers for 5*s.* a cwt.

29,801. And what was the bounty then?—1*l.* a man I think.

29,802. Therefore there has been a considerable increase?—Yes.

29,803. Are all the haddocks that are caught here cured?—Yes.

29,804. Are there none sent fresh to the market?—No.

29,805. Are they all made into Finnon haddocks?—Yes, they are all smoked.

29,806. Is there any large quantity of cod or ling caught here?—We get a very few cod during the winter time here. They were plentiful some years ago; but since the Buckie men have fished them in such great quantities they have diminished here.

29,807. What do the Buckie men do?—They go to the herring-fishing during the winter time. They catch all the cod during the winter, and what we get is only very few.

29,808. Do the Buckie fishermen fish more for cod than any other fishermen?—Yes, they always make more after the cod.

29,809. Has your herring fishery improved or diminished within recent years?—It did pretty fair three or four years ago.

29,810. Are there many people engaged it?—There are none at all engaged in it for the season, except three boats, which are fixed here. There are three boats engaged here by the curers.

29,811. Do the rest work upon their own account?—Yes.

29,812-13. Are there more boats now of all kinds than there used to be?—Yes, I think there are about 19 or 20 boats which go out from here during the herring time.

29,814. Are they larger than they were in former years?—Yes.

29,815. Do they carry larger fleets of nets?—Yes.

29,816. Do they catch more fish than were caught here in former times?—I do not think they do. I remember seeing very weighty fishings.

29,817. Are there not more herrings cured here than formerly?—No; I do not think so. I have seen very weighty fishings brought in here.

29,818. Is there any oyster fishery here?—No; we get none in this water. There are some about, up on the Tarbet ground.

29,819. Is that not a valuable fishery?—I do not know.

29,820. Have you any difficulty in getting bait here?—Yes; very much difficulty.

29,821. Where do you get your bait?—Away north, or up on the new Tarbet Ground.

29,822. Is there none got within the Cromarty Firth here?—Yes.

29,823. Can you not get as much as you require?—No.

29,824. Has there been a greater difficulty lately than there was formerly?—Bait has got very scarce now. The mussel beds have become very scarce.

29,825. Does anybody preserve them in any way? Are they private property?—I do not think there is any person looking after them, unless it may be a small scarp of mussels on the west; but I believe they are going to claim them at New Tarbet.

29,826. Have you been in the habit of getting your mussels from New Tarbet?—Yes.

29,827. For many years back?—Yes.

29,828. Has anybody interfered with you?—No.

29,829. Do you get your mussels here from any other quarter than that neighbourhood?—No.

29,830. You do not get them from great distances?—No.

29,831. Not from the Clyde?—No; they come from all round the Firth here.

29,832. Are they so scarce that you have sometimes a difficulty in procuring your bait?—Yes. If the weather be bad we cannot get any bait to put upon our lines in order to enable us to catch fish. The bait is very scarce now. The Buckie men have made a clean sweep of it.

29,833. The Buckie men have made a clean sweep of the bait?—Yes; with a sort of dredge by means of which they dredge them up.

29,834. Has anybody interfered with them?—No; I never heard of anybody interfering with them. I believe some person claimed the bait at one place. They paid for what they got, I believe.

29,835. They paid for the bait?—Yes.

29,836. And you think they have swept away the beds, and destroyed them?—Yes; the bait is very scarce now.

29,837. Where do the Buckie men get their bait now?—At Tain Firth.

29,838. (*Professor Huxley.*) Does anybody look after the fisheries here?—No.

29,839-40. Is there any cruiser here?—No.

29,841. What is the size of the mesh of your nets?—The herring nets?

29,842. Yes.—I do not know; I have nothing to do with the nets.

29,843. Do you not practise herring fishing?—No.

29,844. Do you think that the quantity of herrings caught here has fallen off as well as everything else?—Yes.

The witness withdrew.

ALEXANDER FINLAYSON called and examined.

CROMARTY.

A. Finlayson.

30 July 1864.

29,845. (*Mr. Caird.*) You have long been a fisherman here?—I have been a fisherman here ever since I began to work.

29,846. What is your opinion as to the supply of fish found on this coast of all kinds—is it increasing or diminishing, or is it about stationary?—I think the supply is decreasing.

29,847. Do you refer to any particular kind of fish, or to herrings and all the other kinds of white fish?—To the herrings mostly,—the herrings they catch in the winter time. I think if they were not caught then we should get them in the proper season.

29,848. Do you catch them yourselves in the winter time?—No, we never try then.

29,849. Do you think that because other fishermen along the shore have caught them that it has injured your summer fishing?—Yes, I am very well sure of that.

29,850. Then is that the ground upon which you say you think the herring-fishing has rather diminished?—Yes.

29,851. Has the herring-fishing diminished within the last few years?—Yes.

29,852. Was the fishing last year a good fishing?—It was pretty fair.

29,853. Was there a good fishing the year before?—It was not as good.

29,854. And the year before that how was it?—It was worse then.

29,855. Then it has been rather improving than falling off?—It has been falling off for a number of years back. When I went to the fishing first I could get 200 barrels, and now amongst the whole of us we can hardly get as much.

29,856. Have you shifted your ground?—No, we fish on the same ground.

29,857. You find the fish on the same ground?—Yes, we look after them in the same parts.

29,858. Do you practise ground-fishing at all towards the end of the season?—Yes, we follow over the same ground. We look for them upon that ground regularly at a particular time of the season.

29,859. Does anybody interfere with you when you are following herring-fishing to see that your nets are of the proper size, or that the regulations are kept with regard to the time of shooting your nets?—Mr. Thompson looks after the nets at Cromarty pretty sharply.

29,860. Have you long practised haddock-fishing also?—Yes.

29,861. Do you find that the haddocks are increasing or diminishing?—They are decreasing; that is because there are too many catching them now. For one boat at Cromarty since I can recollect there are three now, and there are none of them very old. When I went first to the fishing there were only 14 boats, and now there are 21.

29,862. Do not those 21 get more haddocks now than the 14 got in former times?—I do not know; I should say they do not get as many.

29,862*a*. Is the quality of the fish as good as it was formerly?—Very much the same.

29,863. Do you find the haddocks on the same ground as that upon which you found them formerly?—No.

29,864. Where do your boats go now?—They go further to the northwards.

29,865. Further out to sea?—Not out to sea but to the northward. They used to lie on the edge of the deep water; now they go further into shoal water

29,866. What is the cause of that?—I do not know; I cannot give any reason for it.

29,867. Do any trawl-vessels come here?—No.

29,868. Then there is nothing of that kind to disturb your fishing?—No.

29,869. Are you an oyster fisher?—No.

29,870. Are there any crabs got here or partons?—There are plenty in the roads.

29,871. Are they followed as a matter of business?—There is one man who comes from Aberdeen, and takes them and the lobsters, that is all.

29,872. Do not the fishermen here follow lobster-fishing?—No.

29,873. Is there any mackerel-fishing carried on here?—No.

29,874. (*Professor Huxley.*) Is there any circle-net-fishing here?—No.

29,875. Do you ever get any garvies in the Firth?—No, we never try for them. We have none of those kind of nets at Cromarty.

29,876. Are there garvies here?—Yes, but we have no nets we could shoot for them.

29,877. Nobody tries to catch them?—Not in the Firth.

29,878. Did you say just now that the haddocks were coming more inshore than they were in the habit of doing?—Yes, they are further to the northward.

29,879. I understood you to say that the Fishery officer looks pretty sharply after the mesh of your net?—Yes.

29,880. Does the cruiser look after you when you are fishing?—No, we have had no cruiser disturbing us when we were fishing.

29,881. What do you find to be the best size of mesh to use?—About one and a quarter inches.

29,882. You do not want to use a mesh smaller than 36 to the yard?—No, we have none smaller. I have got them at 30, some of them, but that is rather a large mesh.

29,883. Then there is no necessity for Mr. Thompson to look after you?—No.

29,884. Are the herrings here of rather a large size?—Yes.

29,885. Where is the winter fishing practised?—At Tarbet Ness and other places. We do not work close inshore just now.

29,886. How long do you pursue the herring-fishing here?—It is according to the length of time they remain upon the coast.

29,887. What time do you begin?—Formerly we began on the 10th of July, but now we do not begin until the 18th.

29,888. Do all the fishermen begin at the same time?—Yes, most of them.

29,889. Is that a matter of agreement?—No; every man pleases himself, but we are bound to go on the 18th.

29,890. Do you keep the fishing up as long as the herrings are on the coast?—Just so.

29,891. What time are the fish full here?—The middle of August is about the time.

29,892. Do you get herrings here in the winter?—Very few; we do not bother ourselves much about them then.

29,893. Do you not like to have them for bait?—We go west for them; the women go and buy them at the point.

29,894. What point?—Fortrose Point.

29,895. Do they catch them there in the winter?—Yes.

29,896. What time in the winter do they catch them?—About the 21st of January.

29,897. In what condition are the herrings then? Do you ever get them full?—Only very few of them; perhaps one out of a hundred.

29,898. Do you get them full in the month of February?—I cannot say that I ever saw any full in February.

29,899. But sometimes you do in January?—Yes.

29,900. Have you a particular way of lighting your vessels here at night?—No.

29,901-2. Do you carry a light?—We have no light, but sometimes we keep a fire all night.

29,903. You carry no light?—No; we carry a fire along with us, but it is below the deck.

29,904. What do you carry a fire for?—To cook our grub.

29,905. Are the boats you use decked boats?—Yes, some of them are decked forward.

29,906. Do you go outside the Cromarty Firth?—Yes, below Tarbet Ness Point.

29,907. How far out at sea do you go?—Six or seven miles; sometimes further and sometimes nearer.

29,908. And yet you have no lights?—No.

29,909. Do you not get run down sometimes?—No, never; we keep a good look out for that.

29,910. Does nobody ever tell you that you ought to carry lights?—We have heard something about it here.

29,911. But you do not pay any attention to it?—No, we never take any great thought of it; we never have been run down, and we do not give it much thought.

29,912. When do you shoot your nets?—Mostly after the sun has gone down. Some of them do not shoot until 12 o'clock at night, having been looking for the fish through the water.

29,913. Do you ever shoot your nets before sunset?—No.

29,914. Why do you not?—There would be no advantage in doing that. When they were plentiful four or five years back we might have done so.

29,915. If you thought it worth your while to do so, would you shoot your nets an hour or two before sunset?—If we thought we should get a good shoot we should put them out at any time.

29,916. There is no regulation enforced here against your doing so?—I never heard of any. I should do it in a minute if I thought I was going to get a good haul of fish.

29,917. How long are your fleets of nets here?—Some go 28, some 30, some 31, and others 32; some boats carry less and some carry more.

29,918. What is the length of each net?—From 18 to 20 fathoms.

29,919. Is the length of each fleet greater now than it used to be?—Yes, it is very nearly double as much.

29,920. And your boats are of larger tonnage?—Yes, they are much larger.

29,921. And they are better found?—They are better found in every respect.

29,922. I suppose that has cost some money, has it not?—Yes, it has cost a good deal of money.

29,923. Has all that money come out of the fishing?—Yes, in some way or other.

29,924. How many men are there in each boat here?—Some have four and a boy, some five, and some five and a boy.

29,925. Has the length of your long-lines increased of late years?—Yes, by far—they are a long way larger.

29,926. Do you use the same boats for long-line fishing as you do for herring-fishing?—No, they are small boats, 18 feet on the keel.

29,927. Where do you set your long-lines?—From this to Burgh Head, five miles out.

29,928. What kind of ground is it?—Both soft and hard; some of it has a soft bottom, and some a hard bottom.

29,929. You have never seen any trawlers here?—No.

29,930. Is it the same ground that the Buckie fishermen go upon?—No, they never come near now.

29,931. They do not come in your way?—No.

29,932. Are you ever troubled with the Frenchmen up here?—We have not been troubled with them for a number of years back. I believe there was one here last season which injured one of our boat's drift nets, but it did not do a great deal of damage.

29,933. How did it injure the nets?—It got foul of the drift.

29,934. Did it shoot on the weather side?—Yes, and drifted upon the nets.

29,935. Were the nets torn?—They shook the nets and took the herrings along with them.

29,936. Did they take the nets and the herrings as well?—No, not the nets.

29,937. Then they do not often do you much damage?—They have not done so for four or five years back.

29,938. Did the instance to which you refer occur inside the limits or outside?—Inside.

29,939. Within three miles of the shore?—Yes fully within that.

29,940. Do you commonly take herrings within three miles of the shore?—Yes.

29,941. Commonly?—Yes, if we do not get them within three miles of the shore, the fishing is done that season.

The witness withdrew.

George Skinner called and examined.

G. Skinner

29,942. (*Mr. Caird.*) You are a fisherman here?—Yes.

29,943. Within your experience as a fisherman here, have you found that the quantity of herring you have caught off this place is increasing or diminishing?—I think it is diminishing to a very great extent.

29,944. Do you mean that each boat gets fewer, or do all the boats, compared with the boats which were in the habit of fishing in former times, get a smaller quantity on the whole than was the case formerly?—They used to be able to get here from 300 to 500 crans, and now they call it a good fishing if they get 150 or 160 crans.

29,945. One hundred and fifty or 160 crans in the season?—Yes, in the season.

29,946. Has that decrease taken place within recent years?—Yes.

29,947. Has it been more marked recently?—It has been more marked since the fleets have got larger.

29,948. Since you took means to get more, by having better nets and larger nets, the result has been worse?—Yes.

29,949. What do you think is the cause of that?—I have one idea at one time, and another idea at another. I think the herring is a fish that is caught all the season over, and it cannot be expected that they will go on being as plentiful as they would be in a general way as if there were none caught.

29,950. Do you mean that having a winter fishing is injurious to the summer fishing?—Yes, it must be; what fish are taken out of the sea then cannot be put in again.

29,951. Is the winter fishing of recent introduction on this coast?—A number of years back they used to catch a great number of small fish, and I suppose that what might be caught in one season of this small fish, would make a good fishing if they were left to grow large.

29,952. In what way do they catch them?—With small nets.

29,953. Who use the small nets?—They generally use them west from us. There is a place called Inverness Firth where they are used.

29,954. Do they catch a good quantity of small herrings there?—Yes.

26,955. At what time of the year is that?—In January and the month before that.

29,956. Are those the herrings which are used as bait for the cod?—They use both the large and the small herrings for bait; they catch both.

29,957. Is that below Beauly?—Not as far up as Beauly.

29,958. Is it just about Fort George?—About there sometimes.

28,959. With regard to the haddock fishery, do you find that that is also diminishing?—Yes, it is diminishing to a great extent also.

CROMARTY.

G. Skinner.

30 July 1864.

29,960. What do you think is the cause of that?—I suppose it is the increase in the number of boats.

29,961. Do you think there are too many boats engaged in the fishing then?—I have no doubt of it.

29,962. Have the haddocks shifted their ground?—The decrease in the haddocks has made us much poorer in this quarter. There are a great number of fishermen from Nairn, who fish now upon our ground who were not in the habit of doing so formerly. They now fish generally all the winter when we are fishing, and that makes our fishing all the scantier.

29,963. Do you mean that there are now a new set of fishermen coming upon the ground which you were in the habit of fishing upon formerly alone?—Yes.

29,964. Have you found that the haddocks come upon the same ground now on which they were in the habit of coming in former years?—Yes, the very same ground.

29,965. They have not shifted out further to sea?—No.

29,966. Are they in as good a condition now as they were formerly?—Every bit in the season.

29,967. Do you get many cod here?—We have only got very few for the last few years back.

29,968. Do you follow cod-fishing as a special business?—Yes, when they are on the coast. They go to a great deal of winter fishing down the coast, and they take great hauls of cod in the winter; that diminishes them very much; they do not get liberty to come up here.

29,969. What part of the coast do you refer to?—From Wick westward towards Helmsdale.

29,970. Is that the best part of the coast for fishing cod?—It is generally a good ground, but if there were no boats catching them there, they would come up our way.

29,971. Do the fishermen from the Banffshire coast go across there to fish?—Yes.

29,972. Is that the best cod-fishing ground?—Yes.

29,973. Between Helmsdale and Wick?—Yes.

29,974. Are they caught chiefly with herring bait?—Yes.

29,975. The winter herring fishery is chiefly for the purpose of getting bait?—This last winter I have heard they were getting boatloads of herrings, and when they were getting as many herrings as that, they would probably not work at the cod at all.

29,976. Have you had any difficulty here in getting bait for your haddock fishery?—No doubt sometimes we have a little difficulty in the dead of the season, when we could not catch the mussels so well. We think we are lucky if we get some sprats then.

29,977. Do you get sprats here?—Yes.

29,978. How do you catch them?—We catch them with nets.

29,979. Have you special nets for that purpose?—Not us, but they have west, at Inverness Firth.

29,980. Do you obtain them for bait?—Yes.

29,981. Are there large quantities caught?—When I was a little boy we were in the habit of getting boatloads.

29,982. (*Professor Huxley.*) Do they catch a good many sprats up at Beauly?—Yes.

29,983. Do they catch them with circle-nets like the seine?—I cannot say.

29,984. Do you know what a seine is—it is what you call a trawl?—We catch them in the same way that we catch the herrings.

29,985. Do you catch them in the mesh?—Yes.

29,986. The only difference is, you use a smaller mesh?—Yes, it is much smaller; we have the meshes made on purpose for them.

29,987. Do you think that the fishing up at Beauly does you any harm here or at Inverness?—We cannot but expect that in catching these young fish there will be a heap of herrings among the sprats.

29,988. But seemingly it is not a matter of which you make any great complaint?—There were some years when a great quantity came to the Firth, and a great number of small herring were caught. In other years there was not so much; they are not so plentiful every year.

29,989. Do the herrings spawn about this part?—Yes.

29,990. Whereabouts do they spawn?—On the ground where we catch them generally, and sometimes very close in too.

29,991. Do you ever sink your nets to catch them?—Yes.

29,992. Is that a common practice here?—At some parts of the season, when the fish get sticking upon the ground full of spawn, we put our nets well down.

29,993. In what depth of water would that be?—In from 9 to 10 fathoms of water. I suppose we lost about 1,000*l.* in one week, what with material and fish, when we were fishing in that way.

29,994. How was that?—The fish struck so heavily that the boats were not able to make anything of them; the fish struck in a body and the nets got filled up with the fish. The consequence was that, as the boats were drifting, the nets became entangled with each other and became immovable. If the gunboat had been here at that time it would have been of great use. She would have saved in material and in fish from 1,000*l.* to 2,000*l.*

29,995. You lost your nets and fish and all?—Yes.

29,996. How long ago is that?—The year before last.

29,997. The gunboat could have helped you by putting out a boat's crew?—Yes, she could have put down a hook and have got many of them with a kedge; we could then have raised them up and got the fish out.

29,998. Do you mean a kedge anchor?—Yes, by using that she could have loaded every boat.

29,999. Could you not manage that among yourselves—have you no large boat of sufficient tonnage?—We had none at that time. There were 20 men in our boat and they could not get any length of nets up.

30,000. That is two years ago?—Yes.

30,000*a*. Have the nets remained at the bottom ever since?—Yes, and have rotted away.

30,001. Did the fish go on the ground last season?—Yes.

30,002. Did they spawn there again?—Yes.

30,003. Just as they did before?—Yes, just the same.

30,004. Have you any reason to believe that the nets remained there?—Yes, we often find them on our small lines.

30,005. So that the herrings and the nets will have rotted away together there?—Yes.

30,006. And yet you find that the fish come again?—Yes, on precisely the same spot.

30,007. Do you ever pursue the winter fishing for the herrings themselves?—We do no more than set a few nets to catch them for bait.

30,008. In what sort of condition do you find the winter fish?—We get them sometimes in the winter time full and sometimes not full. I think that sometimes herrings are caught at all periods of the year full.

The witness withdrew.

W. McClellan.

WILLIAM MCCLELLAN called and examined.

30,009. (*Mr. Caird.*) You desire to make some statement to us?—Yes. Some time ago we were out fishing when we came alongside a French boat. We were out with a small boat, and we were just taking our nets in, and were hauling them up as fast as we could, when they came across us and tore the nets.

CROMARTY.

W. McClellan.

30 July 1864.

I cried out to the gunboat, but he would not heed us.

30,010. Was the gunboat here at the time?—Yes.

30,011. What was done in the matter?—A boat went away to see if he could catch the people who had done the damage.

30,012. Did it catch them?—No.

30,013. The French boat had disappeared?—Yes.

30,014. And never came back again?—No, it never came back.

30,015–115. Did you know him before that?—No.

The witness withdrew.

George Thompson called and examined.

G. Thompson.

30,116. (*Mr. Caird.*) You are the Fishery officer here?—Yes.

30,117. You have been stationed here for some time?—For about 14 months.

30,118. Can you, from the books in your possession, give us statistics with regard to the number of boats and their value, the number of men employed in them, and the quantity of herrings cured here from 1855 up to the present time?—Yes.

30,119. Then you will be good enough to do so?—The following is the return:—

Year.	Number of Boats.	Value.	Number of Men.	Herrings cured.
		£		
1855	268	4,674	821	20,030 crans.
1856	279	5,171	817	6,660 „
1857	288	5,847	849	7,992 „
1858	287	4,880	832	3,174 „
1859	289	4,973	824	7,191½ „
1860	290	4,943	826	12,186 „
1861	308	5,275	878	18,321 „
1862	308	5,286	889	11,554 „
1863	309	5,662	902	13,625 „

30,120. Is that in the Cromarty district only?—It is from Kessock Ferry to Inver in the Firth of Tain round the point.

30,121. How many stations does it include?—Eleven.

30,122. Can you tell us whether the proportion of the catch of herrings which goes fresh to the market now is greater than what it was in former years?—I do not know that the catch here is so much more.

30,123. Has the opening of the railway to Invergordon made any change in the destination of the fish?—Not much yet.

30,124. Then are the returns you have given us affected very little by any such change?—Very little.

30,125. (*Professor Huxley.*) Has there always been a winter fishing in your district?—There has been so, according to the records contained in this book.

30,126. From what date?—I cannot exactly say just now, but for a long time back.

30,127. Thirty or forty years ago?—Thirty years at all events.

30,128. What have been the stations for the winter fish?—Avoch is the principal place, about two miles above the point.

30,129. Does it take place at Beauly also?—Yes, it takes place all the way down. The fish shift very much according to the state of the fresh water.

30,130. In what months does the winter fishing take place?—It commenced last year in November.

30,131. Have you any record of the time when it begins?—I think I have.

30,132. Has that fishing increased or diminished of late years?—It has diminished very much for the last few years; at least the fishermen tell me so.

30,133. The fishermen tell us also that the summer fishing has decreased?—Yes.

30,134. And they also say that the winter fishing has diminished?—Yes, some of them say the catch is not so good as it was.

30,135. In that case it would not appear that the winter fishing has had much to do with the summer fishing?—No.

The witness withdrew.

Alexander Archie called and examined.

A. Archie.

30,136. (*Mr. Caird*). You are a fish-curer here?—Yes.

30,137. Has there been any alteration in the destination of the fish in consequence of the opening of the railway?—I cannot say anything about that. There has been no fishing since it was opened except for herrings.

30,138. Are all your herrings cured that are caught?—There are a few of them that are sent into the country.

30,139. There are not many of them that go to the London market?—No, very few of them from this quarter.

30,140. Is it your opinion that the herrings have increased or decreased here?—The number of boats and fishermen has been increasing, and the larger number makes a greater catch; but there cannot be as much for every man.

30,141. But the total catch, you think, is on the increase?—I should not say there has been much of an increase, and there has certainly been less fish for each man.

30,142. Do you use the brand?—Yes.

30,143. Do you think it of importance to you as a curer that the system of branding should be continued?—Yes; it is of great importance in regard to the foreign market, because there are generally persons there who buy on the faith of the brand. When we sell in that way for the Prussian and Stettin markets, we can draw the money without seeing the merchants at all.

30,144. Do you cure any herrings for the market here?—I have not done so for a year or two, but I have done so.

30,145. There is no brand upon them?—No.

30,146. Can you sell them as well without the brand?—That is a much smaller concern. They can be sent daily or weekly to the market. We send them to an agent, who sells them to the best advantage.

30,147. Has any change taken place in regard to the mode of curing herrings in recent years?—No.

30,148. Do you salt them as much as you were in the habit of doing formerly?—We salt them just as they are required for the different markets. The different markets want them cured in different ways.

30,149. But they are not salted as much as they were formerly?—No, not as much as in former years.

30,150-60. Has there been any considerable change in that respect of late years?—Neither the Irish nor the foreign market wants them as salt now as formerly.

The witness withdrew, and the inquiry was adjourned until August 1st, at Wick.

Wick, Caithness, Monday, 1st August 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

WICK.

J. Low.

1 August 1864.

JAMES LOW called and examined.

30,161. (*Mr. Caird.*) You are the Fishery officer here?—Yes.

30,162. Can you give us the statistics of the number of boats, their value, and the number of men engaged in the herring fishery here during the last nine years?—Yes, the following is a return:—

Year.	Number of Boats.	Value.	Number of Men.
		£	
1855	952	57,120	5,712
1856	1,051	63,060	6,306
1857	1,096	65,760	6,576
1858	1,061	63,660	6,366
1859	1,094	65,640	6,564
1860	1,078	64,680	6,468
1861	1,099	65,940	6,594
1862	1,122	67,320	6,732
1863	1,084	65,040	6,504

The average value of each boat is about 60*l.*, and there are six men in each. We have boats of every value fishing here. Some of them are only worth 50*l.* and some 70*l.*, but upon a fair average the value of each boat would be about 60*l.* Part of the boats belong to other districts.

30,163. The return you have given us is a return of boats that come to fish during the whole of the herring season?—It is a return of our own boats supplemented by boats from other places.

30,164. But boats which remain here all the season?—Yes.

30,165. Their catch comes in here?—Yes.

30,166. And on the average each of those boats is of the value of 60*l.*?—Yes, that is the estimated value of all the boats.

30,167. Are they each of the same class of build?—Yes.

30,168. And carry the same number of men?—Yes, they average about six men to each boat.

30,169. Have you any record of the quantity of cod and ling caught here?—Yes, and this is a return of the quantity of herrings caught:

1855	170,284½	barrels
1856	132,792½	,,
1857	101,833	,,
1858	105,931	,,
1859	103,396	,,
1860	124,383	,,
1861	122,715	,,
1862	125,757½	,,
1863	125,641½	,,

30,170. Do you keep any record of the winter fishing?—Yes.

30,171. Can you tell us the yield of the winter fishing of herring here?—7,000 crans was about the gross last year. Last year was the first real season of the fishing. We have had two winter fishings, but last year was the principal. There were about 1,000 crans the year before last, and 7,000 crans last year.

30,172. There have as yet been only two winter fishings?—Yes, only two.

30,173. The first yielded about 1,000 crans?—Yes.

30,174. And the second about 7,000 crans?—Yes.

30,175. There has been a great increase in the winter fishing of the second year as compared with the first?—Yes, it was better prosecuted and there were more boats engaged at it.

30,176. Do the fishermen anticipate that it is going to become a profitable fishing for them?—I think it will be more than it has been hitherto. Their success last year has encouraged them to think more of it, and another season there will be more boats.

30,177. Are any of the herrings caught in the winter fishing used for cod bait?—Yes.

30,178. Has that led to the prosecution of a cod fishery,—the fact of their being able to get bait at that season?—This year there have not been so many cod as there were last year.

30,179. Did a portion of the last winter's catch come into market for consumption?—Yes, they were dispatched fresh or in a semi-fresh state by the steamers.

30,180. They were not cured in barrels?—No, they were sent away in a semi-fresh state. They were sent away south for immediate consumption. I believe that part of them were cured and part branded.

30,181. Are you aware if there is any idea among the fishermen that the winter fishing interferes with the summer fishing?—I have heard such a thing mooted, but not to a great extent.

30,182. Has anything been brought before you as Fishery officer by the fishermen in the way of complaint as to the mode in which any one prosecutes the Fishing here?—I have heard no complaint whatever. There seems to be one universal mode of fishing adopted here, namely, the regular drift-net fishing and I have heard of no complaint in reference to it.

30,183. The fishermen have not lodged any complaint against each other for infringing the rules of the fishing as recognized by themselves?—No, I have heard no complaint whatever.

30,184. Do you enforce any regulation as to the time at which the nets are to be shot; do you prevent them shooting their nets until half an hour before sunset?—The nets are very seldom shot here before sunset.

30,185. But are the fishermen allowed to shoot their nets as they find it convenient for themselves?—Yes, I think so; there is a cruiser stationed here, but the question of shooting nets has never been called in question. We seldom hear complaints of such a thing.

30,186. Is there ever any occasion to question the size of the nets?—No; our herrings are generally large, and small nets would not be considered of any advantage.

30,187. Is the mesh of the herring nets used here generally above the standard size?—Yes, considerably above the standard size; they are from 32 to 36 meshes to the yard.

30,188. Are there any French fishermen off this coast?—Very few; there were a few Dutchmen at the early part of the season, but there are none now.

30,189. Then no complaints have been made to you with regard to French boats going among the fishermen's nets or damaging them or fishing within the prescribed limits of three miles from the shore?—No such complaint has been made to my knowledge.

30,190. Is there any deep-sea trawling—beam-trawling, off this coast?—There is none to my knowledge, and I do not believe there is any.

30,191. Is there any destruction of herring spawn that you know of by any means adopted for fishing the herrings, or in any other way?—No, not here.

30,192. Are you aware whether the herring spawn close to the shore?—Yes, close to the shore.

30,193. Is there a good haddock fishery here?—The haddock fishery is said to have fallen off here; the fishermen state that they find it necessary to go a considerable distance out to sea before they are successful in catching haddocks.

WICK.

J. Low.

1 August 1864.

30,194. Do the fishermen who are engaged in herring fishing prosecute the haddock-fishing in the season when the herrings are not on the coast?—It is not carried on to any great extent at all here now that the winter fishing has commenced. There are three fisheries which the Wick fishermen now attend to: first, the winter fishing; then they prepare their material to go to the Stornoway fishery, which commences on the 20th of May, and then they have their own fishing in the summer. In addition to which they have all their nets and material to look after and keep in order.

30,195. Then the Wick fishermen have three fishing seasons?—Yes.

30,196. Two on their own coast and one at Stornoway?—Yes; in fact those are fishings to which nearly all go.

30,197. When does the Stornoway fishing commence?—On the 20th of May.

30,198. Is the 20th of May the end of the close time?—Yes.

30,199. Then you cannot commence the fishing till the end of the close time?—No.

30,200. Did you ever hear that complained of as a hardship?—No.

30,201. The close time only applies to the Stornoway coast?—We have no close time here. The herrings got on that coast are supposed to be of inferior quality, and the curers would be glad if none were taken there. They do not take in the market. The curers generally lose money upon the early catch, and they think that the 20th of May is quite soon enough to commence fishing.

30,202. Is that the opinion of the fishermen as well as the curers?—It is the opinion of the curers at any rate.

30,203. Have you not heard the fishermen express an opinion upon the subject?—No.

30,204. They have three seasons of herring-fishing here?—Yes.

30,205. Do most of the boats that prosecute the herring-fishing go to Stornoway in the month of May?—Yes.

30,206. And how long do they stay there?—Until the end of June.

30,207. Do they come back then to commence the fishing here?—Yes.

30,208. Do they use the same nets and boats at Stornoway which they use here?—Yes, just the same.

30,209. Then when do they prosecute the haddock and the cod fishery?—A few boats prosecute a cod fishery in the spring when they are getting herring bait, but the white-fishing is not prosecuted at all compared with the southward and the other stations.

30,210. Does that arise from there being no ready market here?—Yes, and partly from the want of a suitable harbour. This harbour is considered very dangerous in the winter. Gales spring up suddenly, and the boats are afraid of going out; in addition to which they have not the same means of sending the fish fresh to market that they have at other stations.

30,211. Towards the end of the summer fishing do the fishermen ever ground their nets and fish at the bottom?—They never do that here that I have heard of.

30,212. They always fish with their nets upon the surface?—I never heard of anything but the regular drift-net fishing practised here.

30,213. Are there any facilities here for obtaining bait for the white fishery?—None; they bring mussels from the south.

30,214. Are there none on this coast?—None nearer than the Tain Firth; that is the nearest I know of.

30,215. They get them there in abundance?—They may get them there, but the system has not been worked out. The fishermen will not go there to purchase a boatload of mussels, because if bad weather arises they are apt to lose money by the transaction.

30,216. Then the white fisheries are not practised partly because the market is not so easily accessible here, and partly because you have a difficulty in obtaining bait; have those two reasons interfered with the prosecution of the haddock fishery?—Yes, and there is a third reason.

30,217. What is that?—The want of a harbour to run to, because the white-fishing is the most valuable in the winter season.

30,218. Has not something been done by a Society to improve the harbour here?—Yes.

30,219. Is it intended to make a considerable addition to the accommodation of the harbour by the works which are now going on?—Yes; a very large addition.

30,220. (*Prof. Huxley.*) What was the condition of the fisheries last winter?—I was not here at the time.

The witness withdrew.

GEORGE REIACH called and examined.

G. Reiach.

30,221. (*Prof. Huxley.*) You have been here for some years?—Yes, previous to this spring.

30,222. There have been only two winter fishings here for herring?—Only two.

30,223. Was that because formerly the herrings were not seen by the fishermen on this coast?—It was supposed there were none on the coast.

30,224. That would hardly have been the case?—They must have been on the coast.

30,225. But perhaps the fishermen did not look out for them?—They were used as bait, when they caught them, for the cod.

30,226. Were they caught with the dandy lines very often?—Not in the winter season.

30,227. What was the condition of the fish when they were taken in the winter?—They were very good sound fish.

30,228. What time were they full?—They were full about the middle of February.

30,229. Was that the case this year, 1864, as well?—Yes, generally speaking.

30,230. Did you see any difference at all between those herrings and the other herrings that come in the autumn?—They were rather smaller in size, but quite as rich in flavour when they were used.

30,231. When you were here did you pay attention to the haddock and cod fishery?—Yes.

30,232. Did you hear any complaints with regard to any falling off in those fisheries?—Yes.

30,233. What was the nature of those complaints?—The in-shore fish were supposed to be fished up, and the fishermen stated that they had to go much further out to sea for them.

30,234. Did the fishermen mean that the scarcity arose from their having over-fished them themselves?—Yes, but they could not account for it very well.

30,235. But it was the fact?—Yes; they were more scarce in-shore.

30,236. Was the quality of the fish as good when they were caught?—Yes

30,237. Their only complaint then was that they had to go further for them?—Yes.

30,238. Did the same thing apply to the cod?—Yes.

30,239. Has the quantity of haddock and cod caught here been very large?—No; not of recent years.

30,240. How many boats pursue that fishing?—It is very difficult to tell.

30,241. Can you not give us a rough average?—I cannot possibly say with any exactness, but perhaps there may be from 30 to 40. I cannot possibly speak to the exact number, as they do not go regularly.

30,242. What becomes of the herrings which are caught in the winter fishery; are they cured?—They were cured this last year.

WICK.

G. Reiach.

1 August 1864.

30,243. Has any quantity been sold fresh ?—A small proportion. They are mostly all cured. You see the transit to the market takes some time, and unless they were salted they would not keep.

30,244. The market to which they were sent was not the Continental market ?—I believe that some went abroad; those which were perfectly cured went.

30,245. Was the sea open enough to allow of their being exported—was the Baltic open ?—They were sent over in the spring to Hamburgh.

30,246. Have you seen any important change in the quantity of fish taken during the time you have known this fishery; do you think that the average quantity of fish taken by each boat has remained the same, or has it increased or diminished ?—Taking each individual boat I should rather say that it has diminished.

30,247. Has the diminution been at all considerable, or remarkable, or noticeable ?—Not very. They increase the quantity of netting, and that keeps the supply pretty near the mark.

The witness withdrew.

Lieut. H. J. Challis, R.N.

Lieutenant Henry Joseph Challis, R.N., called and examined.

30,248. (*Mr. Caird.*) You are in command of H.M.S. "Lizard" ?—I am.

30,249. And you are placed here, under the instructions of the Fishery Board, for the protection of the white fisheries ?—I am.

30,250. Will you state the nature of your instructions and the duties you are called on to perform under them ?—I am ordered by the Admiralty, through my commander-in-chief, to communicate with Mr. Primrose, the secretary of the Fishery Board at Edinburgh, and from him I receive my directions.

30,251. What are those directions ?—For the last two seasons they have been to proceed to the coast between Duncansby Head on the north and Helmsdale on the south, and to carry out the regulations contained in the several Acts of Parliament with which I have been furnished. My principal duty is to enforce the numbering of the boats and sails, and to keep foreign vessels off the English limit of the coast. But that part of my duties is practically a dead letter, because I have not seen any foreign vessels here during the two years I have been engaged.

30,252. Are you expected to keep order among the fishing boats ?—Yes; I have to carry out the provisions of the Act of Parliament which lays down the duties of the naval officers superintending the fisheries. They are all prohibitory regulations in reference to the time for commencing fishing, and the size of the meshes of the nets. Any illegal article which may be found is liable to seizure by me, and to be detained for a month.

30,253. (*Prof. Huxley.*) Is the Act you refer to the Convention between this country and France ?—No, I think not. It is an Act of Parliament, the 24th or 26th of Victoria. It is an Act passed very lately; in 1860, I believe.

30,254. (*Mr. Caird.*) Is that the Herring Fishery Act ?—Yes; that is my guide.

30,255. Have you not also the Convention Act placed before you ?—Yes, certainly.

30,256. And you hold yourself bound to enforce the regulations of that Convention ?—Quite so.

30,257. And in the execution of that duty do you find it necessary, frequently, to interfere with the fishermen ?—From time to time I do. For instance, I often find boats going out to fish without having any numbers upon them. It was only last week that I sent two boats back into harbour for infringing the regulations after they had already been warned by me in the person of one of my officers. They nevertheless came out in defiance and were going to the fishing. They are liable to seizure and detention for a month, but I have not considered it advisable to do more than send them back into harbour till the regulations are complied with.

30,258. Have they shown any unwillingness to comply with your orders when they have been requested to do so ?—They always say that they will do what they are desired, but very often they do not do it.

30,259. Yet they never resist you ?—No, never by any chance.

30,260. Have you ever found it necessary to interfere in regard to the size of the mesh of the net ?—I never had occasion to complain of that. It has been principally in reference to numbering the boats and sails that I have found it necessary to interfere.

30,261. Have you had any occasion to speak to them as to the time at which they shoot their nets, namely, half-an-hour before sunset or otherwise ?—I have not. I do not find that they attempt to contravene that law.

30,262. Where there is a large fleet of boats as they have here at Wick, would it be much against their interests as fishermen to hamper them by rigidly enforcing such a regulation ?—I do not feel prepared to express an opinion upon that point.

(*The witness James Low.*) The Fishery Board have sent a petty officer here from the Princess Royal cutter to see that the regulations with regard to numbering the boats are enforced, and also to carry out instructions with regard to receiving property found at sea, and restoring it to the persons who may have lost it. A considerable amount of business has been done in that way for many years.

30,263. Has that boat been stationed here for some years back ?—Yes.

30,264. And those duties have been performed by it ?—Yes; there is a store connected with the office. All property picked up at sea is brought there, and it is there labelled and registered, and ultimately returned to those by whom it was lost.

30,265. (*To Lieutenant Challis.*) I think you said that that part of your duty which is to keep foreign fishing boats from coming within the prescribed limits is very little exercised, in consequence of there being very few foreign boats fishing here ?—I have never had occasion to enforce that regulation during the two seasons I have been here. I have been cruising off the coast between Duncansby Head and Helmsdale, and I have not seen a foreign boat attempting to fish here.

30,266. There have been no foreign boats here at all ?—No.

30,267. Neither Dutch nor French ?—No, not in my district.

30,268. Your district is to the north of Helmsdale ?—Yes, from the borders of Sutherlandshire along the coast of Caithness, including Helmsdale.

30,269. You do not go south of Caithness ?—No.

30,270. Is there any suggestion which, from the experience you have had, you desire to offer to the Commissioners with regard to any mode by which the supply of fish may be increased on this coast ?—No, I think that the fisheries are at present prosecuted with great skill.

30,271. They are prosecuted both with skill and perseverance ?—Entirely. At the same time I think it is a matter of some importance that there should be increased harbour accommodation. At present the coast of Caithness is entirely devoid of safe harbours. A work of the utmost importance to the herring fisheries will be the harbour which it is intended to construct at Wick, so that boats may have some safe place to run for at all times. At present, if it comes on to blow from the eastward and the boats are out of the harbour, they have no shelter whatever to run to.

30,272. Do you know all the fishery harbours on the coast ?—I am acquainted with all those in my district.

30,273. Has any considerable amount of expenditure been made upon them of recent years?—I can only speak of the two years during which I have been here, and with regard to expenditure, I have never seen any alterations or repairs undertaken except those which are now going on at Wick.

30,274. Would you lead us to infer that if the harbours on the coast were improved, it would lead to a large increase of fishing on the coast?—It would no doubt add to the safety of the boats and increase the number of people following the trade, more particularly at Wick; the others are only tidal harbours. There is in point of fact no place to run to if it comes on to blow from the eastward.

30,275. Have you heard any complaint made by the fishermen that there is already a sufficient number of boats fishing on the station?—No, I have never heard a complaint of that nature.

30,276. Have you been here during the time the winter herring-fishing was being carried on?—No, I have not.

30,277. Do you know anything of the haddock or cod-fisheries on this coast?—No, I do not.

30,278. (*Prof. Huxley.*) Under the Convention, I presume that you would warn off any foreign vessel; a French vessel, for instance, that you found fishing within the prescribed limits?—I should do so if I had occasion, but so far I have never had occasion.

30,279. Does the Act of the 24th of Victoria give you no power of that kind?—I do not bear in mind whether it does so or not, but I do not think it does.

30,280. Your powers in that respect are then, in point of fact, given to you under the Convention?—My power of interfering with foreign vessels fishing within the limit is given under the Convention.

30,281. Do your instructions require you to carry out any other portions of the Convention than that?—Not ordinarily.

30,282. For example, it is clearly part of the Convention that fishermen using drift-boats shall have their boats lighted in a particular way?—Yes, they are to carry lights.

30,283. Suppose you were to find drift-net fishermen carrying no lights, would you take them into port?—No, because if I were to attempt to do that, I should have to take half the herring fleet into port very often. The state of the weather when they are fishing and other matters render it almost impossible to carry out such a regulation as that.

30,284. You are aware that it is one of the regulations contained in this Act?—Yes, I am aware that a regulation to that effect is contained in the Convention Act.

30,285. Your instructions do not bind you to carry out that article of the Convention?—My instructions are to carry out the Convention Act and the British Fisheries Act, but my experience is that it would not be advisable to attempt to enforce all the regulations.

30,286. In point of fact you never have enforced the article to which I have called your attention?—No, and there are other particulars in which I have not considered it advisable to enforce the regulations contained in that Act.

30,287. We shall come to that bye and bye. The Convention not merely says that the boats shall carry lights, but it specifies the particular kind of lights they are to carry. The Act says:—"In "order that boats fishing with drift-nets may be "easily recognised at night, the masters of these "boats shall hoist on one of their masts two lights, "one over the other, three feet apart." You see from that, that merely having a single light is not in accordance with the law?—Yes.

30,288. But if they do not carry a light at all you do not trouble yourself about it?—No, I do not.

30,289. With regard to another matter, do the fishing boats here carry any vanes?—No.

30,290. You are aware that that is contrary to the Convention Act?—No.

30,291. They are bound to carry a particular kind of vane?—I was not aware of that.

30,292. The article says, "For the purpose of distinguishing by day drift-net fishing-boats from "trawl-boats, both shall carry at the mast head "vanes, which shall be at least eight inches in "height and two feet in length." There are other regulations as to the colour of the vanes?—Practically that article would not come into operation here as there are no trawl-boats on this coast. The drift-boats, therefore, could not get mixed up with the trawlers.

30,293. The Convention says nothing about that at all. It simply says that vanes are to be carried. With regard to shooting the nets before sunset, what is the practice here?—Their practice is to carry out that law very rigidly of their own accord.

30,294. They do not shoot their nets earlier than half an hour before sunset?—No, certainly not.

30,295. Suppose that in cruising about here you found that the herring made its appearance an hour or an hour and a half before sunset, and that the boats shot their nets, would you think it necessary to take those boats into your custody?—No, because if I were to attempt to do that I should do a great amount of damage. I should probably mention the matter to the Secretary of the Fishery Board, but I should not attempt to stop the boats in the prosecution of their fishing.

30,296. Has such a thing ever been done?—I have never seen an instance of the kind.

30,297. They do not shoot their nets before sunset?—Certainly not, as a general rule.

30,298. Do you look after the size of the mesh of the nets?—Yes.

30,299. Is there any tendency here to use a net with a mesh smaller than the legal size?—No.

30,300. Have you ever had occasion to seize nets on that account?—No.

30,301. Are the majority of the boats here decked or undecked?—The majority of the boats are undecked, but they have a small covered forecastle which has been getting more into use of late years. All the boats built now have that part covered in order to afford some slight shelter for the crew.

30,302. Are there any decked boats at all?—There are none entirely decked belonging to the fisheries at Wick.

30,303. Are there any decked boats that come up here from the south?—Some of the Inverness boats are partly decked, and they are rigged in a different manner.

30,304. Have you found it necessary to enforce the articles of the Convention respecting decked and undecked boats?—No.

30,305. What do you think of this regulation:—"The decked boats on their part shall shoot their "nets to leeward of the undecked boats, unless they "prefer going to the windward to a distance of at "least half a mile, to shoot their nets." What would be the practical effect of a decked boat with heavy gear and nets, going half a mile to windward of open boats and shooting her nets? What would be the probable result of that?—I confess that I do not see the importance of the law.

30,306. The intention of the law evidently is to keep the decked and undecked boats from coming into collision with each other, and to prevent the decked boats with their heavy gear from becoming entangled with the undecked boats. I presume that the decked boats would drive more rapidly than those which are undecked?—Yes, they would.

30,307. So that shooting half a mile to windward would not prevent an entanglement?—No.

30,308. They would soon drift down for half a mile?—I think so. The wind also would be likely to shift very much. It is never good for three hours at a time on this coast, and what would be to windward at one moment would soon be to leeward.

30,309. Have you had any complaints against the undecked boats from the decked boats?—No; but

WICK.

Lieut. H. J. Challis, R.N.

1 August 1864.

there is only one size of boats that fish on this coast. There is sometimes a little difference in the rig, but the majority are rigged in the same manner, and they are of the same size.

30,310. The Convention makes no mention of the size of the vessels, but it is merely a question of decked or undecked boats?—I presume that those who framed the Act had in their mind the large French luggers. That part of the Act would hardly come in force here.

30,311. There are no beam-trawlers here?—No.

30,312. If any beam-trawlers were to make their appearance off this coast it might occur to you, as commander of the cruiser here, to have complaints made to you?—I should not think they would come here, as this coast is not adapted for trawling.

30,313. Is there no soft ground here?—No; it is a rocky coast, quite unsuitable for trawling.

30,314. Do the fisherman here ever anchor their fishing nets?—No, not that I ever heard of.

30,315. Do you carry out the regulation of the Convention with respect to painting the names of the boats?—Yes, I do.

30,316. Are the names painted on the sails?—No; the number of the boat and her district are painted on the sails, and the names of the boat and of her owner are painted on the stern. The principal work I have to carry out is to see that that regulation is enforced.

30,317. Are not the numbers and names painted on the sails;—Not the names, but only the initial letters of the district they belong to. The number at the Custom House is painted on the sail; and the name of the boat in full and the name of her owner are painted on the stern.

30,318. You enforce that part of the Convention here?—I do.

30,319. Then the enforcing of the regulations of the Convention does not in any way depend upon the presence or absence of a foreign vessel here?—Not at all. The regulations are carried out precisely the same as they would be carried out under the same circumstances at any other place.

30,320. I ask that question because in the Report of the Commissioners of the British Fisheries in 1855 this paragraph occurs:—"In reference to the Con-"vention Act, so many admirable provisions are con-"tained in it for the due regulation of the fishing "grounds and fishing-boats, that it is to be regretted "they are special, only coming into operation where "the French boats fish." The meaning of that paragraph is, without doubt, that the Convention is inoperative unless French boats are on the ground?—Yes; but the Act in reference to the numbering of the boats is a later affair. The numbering of the boats has only been enforced in the way in which it is now carried out for the last two or three years.

30,321. But it is also part of the Convention?—It was in the Act of Parliament passed in 1861, I believe.

30,322. You mean the Act of 1860?—Yes, I think that is it.

30,323. Then, in point of fact as regards the numbering and painting the numbers on the sails, what you carry out is not the articles of the Convention?—No.

30,324. But the Act of Parliament, the 23rd and 24th of Victoria?—Yes, that is principally what comes into play.

30,325. Do you carry out any part of the Convention at all?—My orders are to carry out the Convention in its entirety. The whole of it is referred to me, and I should enforce it if I had occasion to do so, and if the circumstances arose from foreign boats being present.

30,326. But do you understand that the articles of the Convention are to be carried out only if foreigners are present?—They are to be carried out in any case. They are given to me as my guide.

30,327. Your guide in any case?—Yes, and I have also given to me other Acts of Parliament in reference to the fisheries.

30,328. And yet you perceive the bearing of the passage of the report which I just read to you?—It says that it is not to be carried out generally, except foreign boats are there.

30,329. But you, by your instructions, feel bound to carry the regulations out if foreign boats are there or not?—Yes, the Acts are given to me as my guide, and they are my guide. A copy of the Convention is given to me as well as all the letters and reports and papers which have been published in reference to the fisheries for a good many years.

30,330. In practice you have never been called upon to carry out any of the articles of the Convention?—No, I have not.

30,331. You seem to exercise a considerable dispensing power according to your own discretion?—Yes; but I can give you an instance of the mode in which the fisheries would be affected if I were to enforce the articles of the Convention rigidly. I might seize 50 boats a night, all of them infringing some regulation. I was out the other evening, and I might have seized at least 50 or 60, and brought them into harbour. It would not do to do that.

30,332. This regulation respecting the lighting of the boats appears to me to be an important matter?—Yes, so it is. Last year I was questioned about the lighting of the boats, and in pursuance of my instructions I said that the boats should have lights, but I have not seized a boat on that account.

30,333. But you feel empowered to do so if you like?—There is nothing to prevent me from doing so, but I do not think it desirable to seize them.

30,334. You would not feel yourself restrained from doing so on account of the absence of French vessels from the coast?—Certainly not.

30,335. Have you carefully looked at the articles of the Convention?—Yes, I have read them all through.

30,336. Do you think it practicable or desirable to carry them all out? Would it be to the interests of the fisheries to do so?—I think that many of them would be highly troublesome and bothering to the fishermen For instance, the article in reference to carrying vanes would be exceedingly difficult to carry out. The boats have shifting masts, which are up or down according to the state of the weather. It would involve a considerable amount of trouble and inconvenience to the fishermen if they were compelled to comply with the regulation. Then again, with regard to the names on the boats, so long as a boat can be identified by her number and the number of her district, that is quite sufficient without her being required to paint the name on the stern. All that you want is to be able to identify a boat if necessary. As it is there is considerable trouble in inducing them to put the names on the stern, and also the number on the buoys which is required according to the Act of Parliament.

30,337-8. What would be the effect of carrying out this regulation, supposing that there were decked boats on the ground:—"When undecked boats shall "arrive on grounds where fishing is already begun "by other boats, amongst which shall be decked "boats, the undecked boats so arriving shall shoot "their nets to windward of the decked boats, except "they prefer going to leeward, to a distance of at "least half a mile, to shoot their nets." Would not the enforcement of such a regulation give the practical possession of the ground to the decked boats?—Certainly it would, because the decked boats would choose their place, and the others must be guided by them. But I have never seen the large and small boats mixed up together fishing.

30,339. Suppose that a few French decked boats, or some of the large decked boats from Yarmouth and the south were on the ground, would you consider it expedient to carry out that regulation?—I should feel myself bound, if foreign boats came up, to carry out the Convention with regard to the distance from the coast at which they must fish.

30,340. But the decked boats would have the first chance of getting to the fishing ground ?—Yes.

30,341. And by this regulation, as soon as they have shot their nets all the Scotch undecked boats would be precluded from shooting their nets within half a mile of them, either to windward or leeward ?—Yes.

30,342. Would not that be a matter of great importance to the fishermen here ?—I think that a distance of half a mile or so would not make much difference in the fishing.

30,343. At any rate, would you feel yourself bound to carry out the regulation ?—I should feel bound to carry out the law, particularly in the case of foreign vessels, as it might become a question of dispute afterwards.

30,344. Suppose you were to find men fishing on Sunday, what would you do ? Do they fish here on Sunday at all ?—Never.

30,345. But suppose they took it into their heads to do so, would you feel empowered by the Convention to interfere with them, the article of the Convention being: "Herring fishermen, being within the "fishery limits of either country, shall comply with "the laws and regulations of the said country re-"specting the prohibition of fishing on the Sabbath "day ?"—I should feel bound to carry out the law; but I have never seen an infraction of it in that respect.

30,346. What is the law ? Is there any law against fishing on Sunday in Scotland ?—Yes, I think there is.

30,347. Apart from the Convention ?—I do not know whether there is any written law on the subject; but there is a well understood custom. I believe, however, that there is a law.

The witness withdrew.

MALCOLM GEDDES called and examined.

M. Geddes.

30,348. (*Mr. Caird.*) You are a fish-curer here ?—Yes.

30,349. Do you cure any other kind of fish than herrings ?—No.

30,350. The herring fishery is the great fishery on this part of the coast ?—Yes, it is.

30,351. Is it increasing or diminishing ?—I am rather inclined to say it is diminishing.

30,352. How is it with regard to haddocks ?—The quantity of haddocks they are getting now is not as much as it was formerly.

30,353. Is the quantity of cod and ling increasing or diminishing ?—The cod and ling fishery is not much practised here locally; it never has been to any great extent.

30,354. Do you think it would be more prosecuted if access to the markets was facilitated by the railways coming further north ?—I have no doubt of it. A good deal of cod might be got here if we had access to the markets.

30,355. Then the want of access to the markets prevents the cod and ling fishery from being prosecuted here ?—Yes; it is the want of markets that prevents it being prosecuted.

30,356. Over what length of years does your experience of the fisheries here extend ?—Upwards of 30 years.

30,357. Has the herring fishery increased during your experience, or is it stationary or diminishing ?—It fluctuates a good deal in different seasons; there are seasons that are pretty prosperous, and in others there is a good deal of falling off; but to speak of it generally, and taking into consideration the number of boats concerned, it may be that they have not fished as well, but the quantity of fish, taking one year with another, has not been equal to what it was formerly per boat. In the total quantity, however, there is not much difference.

30,358. Does the quantity of fish fluctuate according to the seasons ?—Yes.

30,359. But the whole catch of fish has shown no signs of dimunition, is that the case ?—I cannot say precisely as I have not the statistics before me.

30,360. Within your experience has the size of the boats and the length of the nets much increased ?—Yes, very greatly.

30,361. The boats are larger and the nets are larger ?—The nets are larger and more numerous.

30,362. Is the large proportion of all the herrings caught here cured for the foreign market ?—Yes, chiefly for the foreign market; chiefly for the German market. That is our principal market.

30,363. Has there been any change in the proportion of fish sent to the home market within recent years; are there more of them sent to be consumed fresh ?—There is not a large quantity sent from here fresh in our principal season.

30,364. Or to be consumed in the home market ?—Not much. There is a great want of convenience; we have no convenience for sending the fish to the home market.

30,365. Then the great fishery here is for the supply to the foreign market ?—Yes.

30,366. What markets do you principally send to ?—The German markets: Stettin, Dantzic, Koningsberg, Hamburg, and other places.

30,367. Do the German markets take the principal quantity ?—Yes.

30,368. Are none sent to Russia ?—Occasionally; but not much.

30,369. Do you send any to Austria ?—They mostly go to Austria through Prussia. We send them to Prussia, and some of them find their way to Austria and Poland through Prussia.

30,370. Are there any duties levied on the importation of fish into those countries which affect your interests ?—The duties which are levied affect the entrance of the fish into the Austrian market, and the large duties imposed affected the entrance of the fish into Prussia until they reduced their tariff.

30,371. Do you send none to the West Indies, as you were in the habit of sending in former years ?—Scarcely any are sent there now. We do not pack up for the West India market.

30,372. Have those interested in the fisheries made any representation to the Government in regard to the duties which are levied in foreign countries upon the fish exported from here ?—I believe that representations have been made, but whether any combined representation has ever been made or not I am not aware. Several representations have been made against both the Austrian and French tariff.

30,373. Is it the case that during the last two years a winter fishery has sprung up here ?—You may say that it chiefly sprung up last year. There had been a few caught for some years before the last year; but last year was the principal fishing.

30,374. It began the year before, and was continued last year ?—Yes.

30,375. Was it continued with success last year ?—Yes; the winter fishery last year was a very great success, I believe.

30,376. Was the quality of the fish good ?—The quality of the herrings was not equal to that of our summer fishery; but it was good, nevertheless.

30,377. The fish taken in the winter fishery were good marketable fish for consumption ?—Yes.

30,378. What was done with them ?—They were sent chiefly to the English markets.

30,379. Were they branded and salted ?—Some of them were cured and sent to the Irish market.

30,380. Were many of them used for cod bait ?—Yes, as far as they were required for cod bait; but there is not a large quantity that would be required for that purpose.

WICK.
M. Geddes.
August 1864.

30,381. Is that because the cod fishery is not much practised here?—Yes; the attention of the fishermen here is directed almost wholly to the herring fishery for the time being.

30,382. Do boats from the other places to the southward of this congregate here to prosecute the winter fishing?—Not much.

30,383. The boats which engaged in it were chiefly local boats?—Yes.

30,384. Taking the number of boats engaged last year in the winter fishery, and comparing them with the number of those engaged in the summer fishery, was the yield of each boat as good in the winter as it was in the summer?—I cannot speak with any accuracy as to that.

30,385. Did the fishermen themselves find that it was a profitable fishing?—I believe they did.

30,386. Are they likely to continue it in future seasons?—I believe it will be prosecuted to a great extent next year, in consequence of the encouragement they got.

30,387. Has any opinion been formed that the winter fishing will be injurious to the summer fishing?—No, I do not think so.

30,388. Is the price of the winter fish quite equal to, or is it greater than the price of those caught in the summer fishery?—Last year it was just about the same. It was a daily price, and of course there was a great variety and difference in the prices.

30,389. There is an abundant demand for winter fish at a good price?—Yes.

30,390. Although the Continental markets are practically closed to you at that season?—I have sent a cargo to the Continental markets even down to the spring. They have been prepared and sent in the spring. The fishing commenced last year a little after the new year, and continued until the month of February.

30,391. Has there been a discussion here among the curers with regard to the advantage or disadvantage of continuing the Government brand upon the herrings?—Yes, there has been a discussion.

30,392. Do opinions much differ among the curers as to the advantage of the brand?—They are divided in opinion.

30,393. What is your opinion about it as a curer?—My opinion has always been in favour of the brand.

30,394. What are your reasons for entertaining that opinion?—My principal reason for entertaining that opinion is that the Prussian market is our chief market. The Prussians come from the Continent at this time of the year, and they purchase herrings on the spot. My impression is that if the brand were abolished they would not be able to do so; they would not have any guarantee for the making up of the herrings, and we should therefore have to consign our herrings to Prussian agents, and I have no great expectation of that turning out very well.

30,395. Do the Prussian agents come here at present?—The Prussians come here and purchase.

30,396. Even although the cured herrings have the guarantee of the Government brand upon them?—Yes.

30,397. And they know what they purchase?—Yes.

30,398. If there were no brand upon them, would there not be a greater necessity for them coming here?—No, the reverse would be the case.

30,399. Why would that be so?—Because we should be compelled to consign them to agents in the Prussian ports.

30,400. Why would you be compelled to do that more if there were no brand than you do now?—Because they have told us that they would not come here to purchase.

30,401. But is it not reasonable to conclude that they would have a greater interest in coming here to see that they got a good article when they bought it than they have now that they have the Government guarantee for the quality of the fish?—Their idea is that they purchase it cheaper at Wick of our commission agent.

30,402. I presume that they come here because they want the fish?—Yes.

30,403. They do not come here for the purpose of accommodating you?—No, not to accommodate us; it is to accommodate themselves.

30,404. Do you not send a good deal of fish to the Continent without any brand?—Yes; we send a good deal in the earlier part of the fishing.

30,405. Have you any difficulty in getting them sold without a brand?—We seldom or ever consign any; we have sold them here.

30,406. Do you not send chiefly to the home market without a brand?—Yes; those sent to the Irish markets are without a brand.

30,407. Have they the mark of the curer's name upon them?—Yes.

30,408. Is not that a guarantee of the quality of the cure?—I can scarcely say that. There are many engaged in the trade who know nothing about the curers, and they have to depend upon the brand. There are also a number engaged as fish-curers who are not practical curers.

30,409. Is there a great difference in the skill exercised on the part of the curers in carrying out the cure?—Yes.

30,410. Does not the Government brand set aside altogether the capacity of one man as compared with that of another, and give an equal value to all?—My impression is that the regulation which the Government or the Board of Fisheries have established for the branding of herrings nearly comes up to a pitch which is as far as we can go. If the herrings secure the Government brand, then I consider they are nearly up to the cure, which is as good as it can possibly be.

30,411. How many barrels will be cured here in the course of a morning when there is a successful fishing?—Occasionally I have seen as high as 25,000. I have seen from 20,000 to 25,000 crans cured; that would make possibly one third more barrels.

30,412. Then there would be between 30,000 and 40,000 barrels?—Yes.

30,413. How many inspectors are there looking after the quality of the cure?—I think there are four here generally.

30,414. Then each Fishery inspector would have nearly 10,000 barrels to look after?—We do not depend altogether upon the Fishery inspector to look after them while the curing is going on. They only come when the fish are prepared, and then they inspect the barrels.

30,415. Are the barrels closed up when they come?—Yes.

30,416. They do not see any of the process of cure themselves?—They do if they choose; they are always going round, and they frequently see the curing going on.

30,417. Do you think the fact that they are going round, and that they have to make some sort of inspection of the cure, insures greater care in the cure?—There is one thing I may state in reference to it. Assuming that the catch some mornings is different from what it is in other days, if there was not some check on the women employed in packing the fish, almost all the coopers we employ would not be capable of looking after them. There is, however, this dread, which upon each packer has a salutary check, namely, that if they do not gut and pack the fish rightly the officer will reject them. That acts as a great check upon them.

30,418. Would it not be as great a check if it were left to the curer to see that the cure was well done?—Scarcely; we should have to employ a great number of men more than are necessary. We could not get enough for the catch we have some mornings. Some days we have very little to do, while upon other days we are overloaded, and the coopers have to work a great deal harder.

30,419. I suppose that eventually it is found that the advantage of the brand is to make your sales abroad more easily negotiable and managed?—Yes;

that is one of the main fruits of the branding system. It is a guarantee that when I sell herrings, if I sell them with the Crown brand upon them, the purchase is of course complete.

30,420. But it is only in the foreign market that the Crown brand is used at all?—It is chiefly in the foreign market. I do not know that it would be of much use in the home market.

30,421. (*Prof. Huxley.*) Do you think it is absolutely necessary for the inspection to be exercised by Government officers?—I should say absolutely necessary.

30,422–5. Could it not be done by some other authority? Is there a corporation at Wick?—There is a municipal corporation; but they take no cognizance of anything with reference to the fishing.

30,426. Might it not answer the purpose for the municipality here to appoint persons independent of the curers to examine and inspect the fish—in short, to appoint persons to exercise the same functions as those which are exercised by the Government inspectors now?—I am afraid they have no power to do it.

30,427. But I am supposing that they had the power?—If they had the power, it would probably act in the same manner.

30,428. At present you pay a tax of 4*d.* a barrel upon all the fish that are branded.

30,429. That raises a considerable sum does it not?—Yes.

30,430. The only advantage you derive from it is that your fish undergo a system of inspection?—Yes.

30,431–2. Do you know what sum is raised altogether from that tax of 4*d.* a barrel?—I cannot say.

30,433. I may take it that the sum yielded by the branding is a pretty considerable sum?—Yes, it is a pretty large sum.

30,434. I suppose if a light tax were raised by the municipality, and that they paid their own agents as inspectors, it would answer your purpose as well?—It would answer the purpose well enough if the German buyers had confidence in it. If their inspectors were clothed with the same powers as the Fishery officers now exercise of course it would answer the same purpose.

30,435. So that the advantage at present gained at Wick in consequence of the system of inspection might be obtained from a system worked by the local government?—Yes.

30,436. And it might cost you less?—We should not like it to cost us more. We should at any rate be inclined to oppose that.

30,437. What is the number of barrels upon which the full Crown brand is imposed?—About 81,000, but that is above the average.

30,438. It yields something like 1,300*l.* in revenue?—Yes, about that.

30,439. That would be a considerable revenue to the municipality?—I believe they would be very well pleased to get it.

30,440. Do you think if they had that revenue that they could appoint inspectors to do all the work without throwing it upon the country?—I have no doubt of it.

30,441. Is the brand of any advantage to the fishermen?—I do not know of what advantage it is to the fishermen; I am not aware of any except this, that it induces many to follow the business of curers who otherwise would not, and makes the competition greater.

30,442. It makes a greater demand?—Yes, except for that it does not benefit them. We take their herrings good or bad.

30,443. What is the system of engagement you have with the fishermen here?—There are various kinds of engagements. A great many engage without any price being agreed upon and a great number of them engage at a fixed price.

30,444. How do they engage without any price?—When they engage there is no fixed price. They do not know what the price is to be until the end of the season. Those are chiefly the boats which have large advances from the curers.

30,445. Suppose you were to engage without a price, what would be the terms of the engagement?—The engagement is that the fisherman fishes for me and is paid the general price.

30,446. He fishes for you, and is paid according to the average price of the market during the season?—Yes.

30,447. He is bound to fish for you during the season?—Yes.

30,448. Then what advantage does he get from making that arrangement?—He would probably get a pretty large sum for the time being, and probably a large sum at the end of the season. It is an advantage we should like to get rid of if we could do so.

30,449. Are you aware whether the fishermen are in debt to the curers?—Yes, they are very largely in debt.

30,450. And then they work it out?—Yes, if they can.

30,451. Is that generally the case here?—It is so general that the number of free boats, free to engage anywhere, is not very numerous here.

30,452. Does the curer make an advance to the fisherman upon the catch of the next season?—His advances are made at the end of the season. If the fishermen have not obtained enough fish to clear them, then they must get advances in order to enable them to go on.

30,453. Then the tendency of that system is to place the fishermen in a worse position every year?—I am sorry to say that they are not getting any better.

30,454. But yet a considerable sum is made by the fishing?—Yes.

30,455. Has there been any discussion here in reference to the close time?—No.

30,456. Is there anybody here who would like to see a close time enforced on this coast?—I am not aware that there is any number of persons here who would think it proper to have a close time.

30,457. There is a winter fishing coming on now?—Yes, there is.

30,458. Suppose that it should turn out well, would you like to see it prohibited?—No; I do not think so, nor have I heard any persons say so; but the fishing is of so recent a date that we are not able to say yet what the effect of it will be.

The witness withdrew.

FRANCIS SINCLAIR called and examined. *F. Sinclair.*

30,459. (*Mr. Caird.*) You are a fisherman here?—Yes, I am.

30,460. Have you been long engaged in the fishing here?—For upwards of 38 years.

30,461. Is it chiefly the herring fishery that you follow?—Yes, for the last few years.

30,462. Have you been in the habit of fishing for haddocks and cod?—Yes, I have.

30,463. Is that an improving or diminishing fishery?—The haddock fishery has diminished, but the cod fishery has been rather better for the last few years, owing to the herring bait which we have been able to get.

WICK.

F. Sinclair.

1 August 1864.

30,464. Has the haddock fishery diminished of late years?—Yes, it has diminished a good deal.

30,465. Are not haddocks found to the same amount?—No.

30,466. Where have they gone to?—That is a question I cannot answer.

30,467. Have you found them further out?—They are not to be found anywhere for the last few years.

30,468. Is there any reason in your own mind to which you can ascribe that change of ground?—I cannot give you any reason for it.

30,469. Was the fishery of much importance before?—Yes, it was of great importance.

30,470. Has it become a loss to you?—It is a good deal of loss to this place, and to other southern towns.

30,471. How far does that change of the fishery ground extend along this coast?—As far as the Firth of Forth, and down to the English coast.

30,472. We would rather you would speak only of what you know here; we desire merely to get information from the fishermen from the Ord to the Noss Head?—I am acquainted with the fishermen from the Ord to the Noss Head.

30,473. From the Ord to the Noss Head have the haddocks comparatively disappeared?—Yes.

30,474. Has there been any deep-sea trawling that could have affected the haddock fishery?—No, nothing of the kind.

30,475. You as a fisherman can assign no reason for it?—No; no reason whatever.

30,476. Have you attempted to follow the fish into deeper water?—Yes, we have gone further off after them.

30,477. And have you not succeeded in finding haddocks then?—No, not for some years back.

30,478. The cod-fishing, you say, has improved in consequence of your having herring bait?—Yes. It has been better owing to our being able to get herring bait.

30,479. Are the cod you get here of very fine quality?—Yes, they are of first-rate quality.

30,480. Would the cod fishery be increased very much if it was more diligently followed, and if there was a good market for the cod?—I believe the number of fish we take might be considerably increased if it was better followed.

30,481. Where do you get the cod?—All over the coast.

30,482. Are there no particular cod banks on this coast on which you find your best fishing?—No, we find them on all parts of the coast.

30,483. Do you find that the herring bait is the most killing bait you can get for cod?—Yes; it suits the fishing best.

30,484. Do you get any soles here?—Only a very few.

30,485. Have they ever been fished for by beam-trawlers?—There has been nothing of that kind here.

30,486. Do you get any turbot?—No, not many turbot, but a good many halibut.

30,487. Do you get any ling?—Yes, a good many ling.

30,488. Are there any shellfish—crabs and lobsters—here?—A few, but not many.

30,489. Has that fishing been increasing or diminishing?—I cannot say much with regard to it.

30,490. Is it not a very important fishery here?—No, there is not much done in it.

30,491. With regard to the herring fishery, do you find that while it has been fluctuating from year to year, there has been no sensible and material change in the total quantity taken upon the average of years?—I don't know that I can say much about that.

30,492. Do you think that the gains of the fishermen in recent years have been less or greater than they were in former years?—They have been less in a good many cases; but there is such a multitude of boats here that it is nearly impossible for all hands to be prosperous.

30,493. Has there been a large flee o boats for many years?—A very large fleet.

30,494. Are they increasing rapidly in numbers?—They have been increasing largely in numbers for the last few years.

30,495. Have they increased this season?—They have rather decreased, I believe, this season.

30,496. Do you believe that the shoals of herring which come on this coast are much the same as they were in former years?—They are much the same in quantity.

30,497. Are they found on the same ground?—Yes; we very often find them on the same ground.

30,498. And about the same time?—Yes; about the same time.

30,499. But a new fishery has sprung up here?—Yes.

30,500. A winter herring fishery?—Yes; it has commenced within the last year or two; but I do believe that the herrings which they catch now in the winter have frequented the coast for a long time back, and that they would have been caught if they had been tried for.

30,501. Did the fishermen never go out formerly to look after them?—No; none of them tried.

30,502. Do you expect that fishery to increase and become an important fishery?—Yes, there is every appearance of it.

30,503. Are the fish, when they are obtained, got in a good condition?—Yes, in very good condition.

30,504. Are they found on the same ground as you find the herring in the summer fishing?—For the most part they are on the same ground, but they are closer in shore.

30,505. They are found nearer land?—Yes, for the most part.

30,506. Does a boat in a day's fishing make as good fishing in the winter as in the summer?—It is better, I think, in proportion.

30,507. For the time it lasts?—Yes; it is much better.

30,508. How long last year did the winter fishing continue?—Rather better than six or seven weeks.

30,509. Then did the fish disappear?—They did not disappear altogether; there were a few still to be got.

30,510. But you found that it was not worth your while to continue the fishing?—Yes.

30,511. What do the fishermen do then?—They just remain idle. Perhaps they might go fishing just now and again.

30,512. Do they go to any other fishing?—Not until May or June.

30,513. Do most of the fishermen go to Stornoway in the month of May?—Yes; a good many of them do.

30,514. Do they leave this place and go to Stornoway?—Yes.

30,515. Do they find that an advantageous fishing?—Some do and some do not. To some it is a losing concern, and to others it is profitable.

30,516. Do you find, as a fisherman, that there is a disadvantage from the number of fishermen going out from this place in shooting your nets according to your own convenience, and not waiting till a particular time?—There is great inconvenience sometimes. Such a number of boats being gathered together makes it greatly inconvenient to shoot our nets at sea; but I don't see that there is any way of stopping it.

30,517. Do you mean that there is such a large number that no mode of interfering could be adopted that would help the individual fishermen?—It would be a very great trouble to try to put a stop to it.

30,518. But do you think it is at all practicable?—I don't know. It would require great attention.

30,519. Have you ever observed that shooting your nets before sunset is injurious?—Yes.

30,520. Does it prevent the fish from rising?—I believe it does.

WICK.

F. Sinclair.

1 August 1864.

30,521. Did you ever see it have that effect ?—I can't say that I ever did, but I believe so.

30,522. Do you ever catch fish before sunset ?—Very rarely.

30,523. Do they seldom come up till after sunset ?—Very rarely.

30,524. Do you ever, towards the end of summer, sink your nets and fish upon the ground ?—No, never.

30,525. Are there any spawning grounds known to you off this coast where the fish go to spawn ?—Yes, there is a good deal of spawning ground, or at any rate ground where I suppose the fish spawn.

30,526. Is there any destruction of spawn going on by any of the modes of fishing which you adopt here?—No, there is no destruction of spawn.

30,527. Are there any regulations enforced upon you that are injurious to you as fishermen ?—No, not as far as I can learn.

30,528. Do you desire to see any regulations adopted that will improve your position as fishermen ?—No.

30,529. Do you think it is best to leave you to follow the fishing as you think best and most profitable to yourselves ?—Yes.

30,530. (*Prof. Huxley.*) What number of hooks were there on your long-lines when you first began fishing ?—Four hundred.

30,531. Has the number much increased now ?—Yes.

30,532. How many do you put on your lines now ?—I cannot exactly say. I do not follow it in this part.

30,533. You do not follow it now ?—No.

30,534. Do you commonly carry any lights in your boats ?—Yes, we do.

30,535. In your drift-net boats ?—Yes.

30,536. What sort of lights do you carry ?—A white lantern.

30,537. Is that the general custom among the drift-net boats ?—Yes, it is.

30,538. The general custom is to carry only a single light ?—Yes.

30,539. Are your boats mostly decked or undecked?—They are a small bit decked.

30,540. They have a small half-deck ?—Yes, 12 or 15 feet.

30,541. Has the tonnage of the boats increased of late years ?—Not the last six or seven years.

30,542. Has the number of boats increased very much ?—Not this season, but within the last ten years.

30,543. Within the last few years ?—Yes.

30,544. And has the length of the fleets of nets increased ?—Yes ; to a very great extent.

30,545. Then a great deal of capital has been put into the fishing ?—Yes, a great deal.

30,546. And it has come out of the fishing, I suppose ?—Yes.

30,547. Then the fishing cannot have been so unprosperous ; it must have answered very well ?—Yes, it has answered very fairly for some time back.

30,548. For what reason did you increase the length of your fleets of nets ?—To increase the quantity of fish we could take.

30,549. Did you find that you could catch more by doing that ?—At times we do, but at times we do not. Sometimes it is impossible to get the length clear.

30,550. Do you get foul of each other ?—Yes, very often.

30,551. When you first went to sea what was the number of nets in your fleet ?—It differed very much, but it would be from 18 to 24 to each boat.

30,552. How many are there now ?—There are from 44 or 45 to 50.

30,553. There are twice the number, in point of fact?—Yes.

30,554. Is the length double what it used to be ?—It is more than double in many cases.

30,555. Do you catch a larger proportion of fish per boat now than you did some years ago ?—Some catch a larger quantity of fish than others do, but there is very little difference.

30,556. But is there an increased quantity of fish caught in proportion to the increased length of the nets ?—No.

30,557. Is it anything like as much ?—No

30,558. Is that because you get foul of each other, or because there are not so many fish ?—When we get foul of each other we get no fish.

30,559. Are there something like 2,000 or 3,000 boats that go out from the coast altogether ?—Perhaps there may be along the whole coast.

30,560. How many go from Wick ?—I don't know exactly, but there are more than 1,000 this year.

30,561. Then it will take them a great deal of time to get well clear of each other before they shoot their nets ?—Yes; in a sharp breeze of wind.

30,562. Perhaps you do not always wait to get well clear of one another ?—No; not sometimes.

30,563. (*Mr. Caird.*) Do you sell your fish direct to the curer, or do you engage as fishermen ?—We are commonly engaged.

30,564. Do those who do not engage to the curers make a better thing of the fishing than those who do?—There are none disengaged in the fishing season.

30,565. Do you engage at so much wages and give the whole of your catch to the curer ?—We get so much per cran for every cran we catch.

30,566. Is there no difference in the rates paid by the curers to the fishermen?—Yes, a great difference.

30,567. Does it depend upon the quantity of fish ?—No.

30,568. Then what does it depend upon ?—It is just owing to how they make an agreement; the curers strive to get them as cheap as they can, and we strive to get as much as we can for them.

30,569. Do the rates differ much ?—I believe they do.

30,570. Are the rates known to the public ?—No.

30,571. Then are they private agreements that nobody knows anything about ?—Yes ; they are very little known.

30,572. Are there any circumstances which enable one man to make a better agreement than another ?—Sometimes there are.

30,573. Is there any circumstance besides his own skill in making an agreement ?—Yes ; if he stand pretty clear he will have a better chance of obtaining a better price for his cran than those who are very much in debt.

30,574. Do those who are heavily in debt agree to take what is offered them ?—In most cases they do.

The witness withdrew.

JOHN MORE called and examined.

J. More.

30,575. (*Mr. Caird.*) Have you long been a fisherman here ?—Yes.

30,576. Do you agree with the previous witness that the haddock fishery has fallen off very much here?—Yes, I do.

30,577. Is there any reason in your own mind you can assign for that falling off ?—No, I do not know that there is any reason that I can assign.

30,578. You are not aware of any cause for it ?—No.

30,579. Was it a valuable fishery here ?—Yes, it was at one time.

30,580. In your opinion have the haddocks almost entirely left this coast ?—They have not altogether left it, but they get thinner and there are fewer to be got.

30,581. When you follow them further out to sea do you not get them ?—There is no advantage in that.

30,582. Have you tried it ?—Yes.

30,583. It is a somewhat important question, however, because they say further south that they can always find plenty of haddocks when they go further out to sea; I understand you to say that that is not the case here ?—No.

30,584. You have had no trawling to interfere with the haddock fishery on this coast?—No.

30,585. Is it good trawling ground here?—No.

30,586. Is it a hard or a soft bottom?—In deep water here it is a hard bottom.

30,587. Is there any destruction of spawn caused by any mode of fishing which is practised here that you know of?—I don't think there is.

30,588. With regard to the herring fishery, I suppose you find that the most profitable fishery on this coast?—Yes, it is the most profitable.

30,589. Is that one reason why you do not go so much after haddocks as you did at one time?—We don't go now owing to the winter fishing. That prevents us from following it so much.

30,590. Since the winter fishery came in it has been found the more profitable fishery?—Yes.

30,591. The haddock fishery for that time has been suspended?—Yes.

30,592. Is that, you think, one reason why fewer haddocks are got?—Yes.

30,593. It is not altogether that the haddocks have left the coast?—Yes; it is just that.

30,594. Do you think that the winter fishing is likely to become profitable to you?—It has been profitable for the last year or two.

30,595. The herrings are got in good condition at that time?—Yes, they are.

30,596. Do you fish with the same nets at that time as you do in the summer fishing?—Yes.

30,597. The nets are the same size?—Yes.

30,598. The cod fishery is the best here?—When you can get the herring bait.

30,599. Do you think it will become an increasing fishery bye and bye?—Yes; if we continue to get the herring, because that is the best bait for the cod.

30,600. Have you a ready market for the cod here?—The markets don't suit very well here.

30,601. Where do they go from this place for consumption?—They are sent south.

30,602. Are they sent away by steamboat?—Yes.

30,603. How often do the steamboats come here?—Twice a week, and I think once in winter.

30,604. What will you get for a good cod here?—About 1*s.* for a good cod; sometimes less and sometimes more; the price goes up and down in that way. It is very fine cod that we get here.

30,605. If the price got better, you would follow the fishing more regularly?—Yes.

30,606. Would that be succeeded by a larger quantity of cod?—Yes.

30,607. There are plenty to be had if the fishing is prosecuted?—Yes.

30,608. Do any of the English fishing vessels come on this coast at all?—Some years ago I have seen plenty, but there are not many now.

30,609. Have you any complaints to make as to the scarcity of bait for your white fishery?—If we get herrings that is the best bait for the cod.

30,610. For the cod?—For the cod and haddocks too.

30,611. On the whole, do you say that the condition of the fishermen is an improving one?—I really could not say that. Some of them are improving in their condition, and some are going the other way.

30,612. The boats are getting larger?—Yes.

30,613. And the nets larger?—Yes.

30,614. And the lines larger?—Yes; they are all increasing in that way.

30,615. Every one of those changes involves a larger expenditure of capital?—Yes.

30,616. Then the owner of a boat must be richer than he was 20 years ago?—I don't know that.

30,617. If the boat is his own?—Yes; if that is the case; but there are not many of them who have their own boats.

30,618. Do the sons of fishermen become fishermen in the course of time?—Yes, some of them do.

30,619. Do any of them go into trades, and go to sea?—Yes; some follow trades and some follow fishing.

30,620. Do the fishermen here farm bits of land as well as follow the fishing?—Yes; along the coast they have bits of farms.

30,621. Which they conduct at the period when the herring fishery is not going on?—Yes.

30,622. Do they not do that at Wick?—No; there are no farms in the town of Wick.

30,623. Then when they have no other occupation, do the fishermen not prosecute the fishing more constantly than those who have farms?—They go to the Lewis, to the fishing at Stornoway.

30,624. They don't continue at the haddock fishery?—The haddock fishery is mostly dropped.

30,625. Do the Buckie fishermen come on this coast to fish for cod?—Yes; they are often down here.

30,626. Do they fish in the same way that you do here?—Yes, in the same way.

30,627. Do they use the same kind of long-lines and the same kind of boats?—Yes.

30,628. Do they run with their fish to Buckie?—Yes.

30,629. Do they get a better price for their cod then you do?—Yes; I suppose they do; they are nearer the markets.

30,630. Would it not be better for you, if you had a good catch of cod, to send your fish to Buckie?—The weather might not suit us to get across.

30,631. But it would suit you as well as the Buckie fishermen?—If that was our home we should try and fight for it.

30,632. Have they the same kind of boats?—They have not just the same hull, but they are equally as good boats.

30,633. Would your boats keep the sea equally as well?—I believe so.

30,634. (*Prof. Huxley.*) Have you found the summer fishing for herring at all affected by the winter fishing?—No.

30,635. You find that there are as many fish here in summer as there were before the winter fishing was established?—I know no difference at all.

30,636. Have you any wish to have a close time for this coast?—I see no necessity for that on this coast. I don't see that it would do any good.

30,637. You were saying just now that herrings were very important for your cod and haddock fishing. Supposing you were prohibited from taking herrings from the beginning of January till the month of May, could you catch any cod and haddock?—Only very few.

30,638. The haddocks at that time will not take mussels?—The haddocks will, but the mussels are not bait for cod.

30,639. At any rate, the herring bait is the best?—Yes.

30,639*a*. And a prohibition against taking herrings for bait would injure your fishery very much?—It would injure the cod fishery very much.

30,640. Were there not lots of mullet taken here last winter?—I don't think there were.

30,641. Do you happen to know any thing about it?—There might be a few got, but I don't think it would be of any consequence.

30,642. Are you at all interfered with by the Dutch or French fishermen here?—Not very much; there are very few of them on this coast now.

30,643. Do they come here occasionally?—I have seen two or three here this season.

30,644. Were there any last season?—Yes, a few last season.

30,645. Are there always two or three here?—Yes; but they are about to go away now; this is the time they leave the coast.

30,646. But still they do come?—Yes.

30,647. Have you ever any trouble with them?—Not much; but we may have to shift them about.

30,648. When they shoot their nets to windward of you, do they drift down upon you?—Yes; and we have to shift then.

30,649. Does anybody ever look after them to see that they keep from damaging you?—I never saw anybody looking after them.

30,650. They are all decked boats, of course?—Yes.

The witness withdrew.

WILLIAM BRUCE called and examined.

30,651. (*Mr. Caird.*) You are a fisherman on this coast?—Yes.

30,652. You have heard the evidence given by the previous fishermen in regard to the different kinds of fish caught here?—Yes, part of it.

30,653. Do you agree with them that the haddock fishery is decreasing?—Yes; quite so.

30,654. Is there any reason to which you can attribute that in your own mind?—No, none whatever, except that which has already been stated.

30,655. Partly, according to the last witness, it is because a better interest has sprung up in the winter herring fishery?—Yes.

30,656. The fishermen have found it more profitable to follow that than the haddock-fishing?—They have found it more profitable latterly; but it is a fishing that is in its infancy yet.

30,657. Do you think that the winter herring fishery is likely to become an important fishery?—Yes, I think so.

30,658. It has not yet shown any signs of being injurious to the summer fishing?—Not that I know of.

30,659. Are there any regulations enforced among the fishermen here in regard to the herring fishery of which you have reason to complain?—No.

30,660. Would you desire to see any regulations enforced with regard to the shooting of your nets?—I think that would be quite proper.

30,661. Would it be practicable, do you think, among so many boats, to enforce a regulation that would prevent the fishermen from shooting their nets until half an hour before sunset?—I think it is quite right that that should be the case.

30,662. Do you think that sometimes great injury is done to the fishing by the nets being shot before sunset?—I think that no profit comes from it.

30,663. Do fishermen do it frequently?—They do it sometimes, but not frequently.

30,664. Do they do it at any time when it could be avoided?—It could always be avoided if they were strict enough.

30,665. Do they often do it when they need not do it?—The principal reason why they shoot their nets before sunset is, that if they happen to be anywhere near the fishing ground they put out their nets where they think there is a good fishing berth, and where they have the best chance.

30,666. They do not put them out because they get the fish earlier in consequence, they do it in order to occupy the ground?—Yes; it is in order to occupy the ground that they put their net out soon.

30,667. Would it be possible among such a large fleet of boats as a thousand to make them all wait until one time?—Yes; when Captain Macdonald was here, he went out to prohibit them from shooting until the proper time.

30,668. Was that regulation followed by an increase in the take of fish?—I cannot say much about that. The fish seem thinner now than they were. Some years we have a good fishing, and sometimes an inferior one.

30,669. That is the case now?—It has been the case ever since I can remember.

30,670. Do you wish to see any regulations enforced as to the time at which you should shoot your nets?—I think it would be very proper indeed.

30,671. Is there any other point in regard to which you wish to have any regulation enforced?—I don't see that we could get any benefit from any other regulation.

30,672. Is there any mode of fishing adopted along the coast that is destructive to the spawning of the fish?—I cannot say much about that.

30,673. Have you ever seen the spawn destroyed?—No; none to my knowledge.

30,674. Then you do not think there is any destroyed on the coast?—I don't think we can destroy the spawn of the fish by any way that we try the fishing on this coast.

30,675. You do not think that any mode of fishing is practised on this coast which is destructive to the spawn?—I don't think so.

30,676. Is there any mode which you can suggest, as a practical fisherman, by which any regulation could be established which would improve the fishery here?—I am not aware of any.

30,677. Do you suffer much from want of a good harbour?—Yes, we do much. We are injured to a great extent because we have no place of safety to run to.

30,678. If you had a good harbour would it increase the number of boats coming here?—Yes, and the number of fish taken.

30,679. How would that increase the number of fish?—Often when the fish are on the coast, the boats cannot prosecute the fishing owing to the want of a safe harbour.

30,680. Do you mean that they cannot venture out because they do not know how to get in again?—Yes.

30,681. If they had a good harbour to run for would they take the sea oftener than they do?—Yes, there would be double the boats if we had a good harbour.

30,682. Where would you desire to see a good harbour of that kind established?—I don't know that there is any place better than Wick.

30,683. Is that the best local station?—It is the most central on the coast of Caithness.

30,684. And most easily accessible from the fishing grounds?—Yes, there is none that could be so easily made.

30,685. Has the fact of the railway being brought so far north as Meikle Ferry had any effect upon the price of fish yet?—No, we have no proper means of communication between this place and Meikle Ferry.

30,687. Would not increased railway accommodation be a great improvement to you?—Yes, it would be a great improvement.

30,688. Is the price of fish here and on the Banffshire coast different?—I don't think there is much difference. We had some London buyers who sent it up at once to the London market from here by steamer.

30,689. That was codfish?—Yes, codfish caught in the winter time.

30,690. Do you think the cod fishery is capable of much extension here?—That depends entirely on whether there is good fine weather.

30,691. If you had plenty of bait it would be better?—Yes, it might be improved.

30,692. It might be extensively pursued?—Yes, there are only a few boats that prosecute it when they can get herrings.

30,693. The great majority of the fishermen are employed in the winter herring fishery?—Yes.

30,694. But some go after the codfish?—Not in the summer time. The cod are scarce on this coast at this season of the year.

30,695. But in the winter time when they are following only the winter herring fishery you get bait for the cod as I understand?—Yes.

WICK.

W. Bruce.

1 August 1864.

30,696. Are there boats that go specially to the cod fishery at the times that others are going to the winter herring fishery ?—Yes, but they are only few in number. The smaller boats do not prosecute it to any great extent.

30,697. But how this fishery is to be prosecuted, and whether you catch any cod, depends upon obtaining herring for bait ?—Yes.

30,698. At the time the winter herring fishery is going on the cod will take no other bait ?—No, it is of no use to try them here unless we have got herring bait.

30,699. Have you any remark to make with regard to the mode of engaging your catch for the curer; during the summer season do you find that it operates disadvantageously to you as fishermen ?—No; it is a bargain between the parties, and nobody interferes.

30,700. It is not an open bargain with which any body has anything to do?—No.

30,701. Is it satisfactory to both parties ?—Yes, it is always so before they make an agreement, unless something occurs during the servitude, such as having occasion to pay off a man for not being competent to do the work; but that seldom occurs.

30,702. Then each man is in the habit of making an agreement with the curer ?—Yes.

30,703. Does he make the agreement with the boat's crew ?—The agreement is generally made by the person who owns the boat.

30,704. And he agrees with the other men manning the boat along with him ?—Yes.

30,705. Has there been a considerable increase in the number of curers of recent years ?—I think they have rather decreased lately. Trade has been very bad for the last two or three years.

30,706. (*Prof. Huxley.*) Is there any garvie-fishing here ?—No.

30,707. Is there any circle net fishing practised on shore ?—No, there is nothing practised here in connection with fishing except the cod and haddock-fishing and the herring-fishing.

30,708. You have no small trawls or seines ?—No, we have very few soles on this coast.

30,709. Was there not last year a catch of mullets or pilchins ?—Yes.

30,710. I believe you call them pilchins here ?—We call them mullets generally; I do not know if that is the proper name for them or not, but there are very few caught here.

30,711. There was a statement in the papers about there having been a large catch in the early part of the year ?—There may have been a few barrels caught in a small creek called Buckhaven.

30,712. Was it not of any consequence ?—No.

30,713. They were not pilchards ?—No, I know what pilchards are.

The witness withdrew.

D. Harper.

DONALD HARPER called and examined.

30,714. (*Mr. Caird.*) You are a fisherman here ?—Yes.

30,715. You have heard the evidence given by the fishermen who have just been examined ?—Yes.

30,716. Do you agree generally with the opinions which they have expressed ?—Yes, I do.

30,717. Is there anything you should like to add to what they have stated with regard to the supply of fish ?—No, nothing. With regard to enforcing restrictions, I should like to see a restriction enforced to keep the boats from shooting their nets before sundown.

30,718. Do you think that would be possible ?—Yes, perfectly possible.

30,719. How would you do it ?—I think there was an Act passed that would prevent it.

30,720. There is an Act in existence at this moment that would prevent it if it were enforced. The article in the Convention Act is:—"It is forbidden "to herring drift-net fishing boats to shoot their nets "earlier in the day than half an hour before sunset, "except at places where it is customary to carry on "the drift-net fishing by daylight." It is not customary to carry out drift-net fishing here by daylight ?—No.

30,721. Then there is an Act at this moment which, if carried out, would prevent you from shooting your nets earlier than half an hour before sunset; is that complied with generally ?—No, far from it.

30,722. Do the fishermen shoot their nets as they find it convenient for themselves ?—Yes. Wherever they find fish one night it is customary for the boats to go down to the same ground next day before sundown and shoot their nets.

30,723. Do they commence fishing at once ?—Yes.

30,724. Do you think that is injurious to the fishing ?—Yes.

30,725. Have you noticed that the fish do not rise ?—I have noticed them shoot their nets among the herring when they have been playing in the water, and they have not succeeded in getting one of them up.

30,726. Do the fish go down at once ?—Whether they go down or not they go under the net.

30,727. But here is an Act which is at present in existence, and it is not sufficient, you see, to prevent the evil of which you complain ?—It is not put in force. I think the steamboat here ought to see that it is complied with.

30,728. Would not the interference of the steamboat lead to confusion among so many boats ?—No, I think not.

30,729. Do you think that in this case if they would comply with the regulation it would be a benefit and not a hardship to themselves ?—Yes, I think it would be a benefit.

30,730. Is there any other point you desire to bring before us other than what you have already stated ?—Nothing.

30,731. (*Prof. Huxley.*) Do you think the size of the mesh is the right size ?—Yes, but it varies very much. Some have a mesh very small.

30,732. What is the smallest size ?—I have seen some under an inch.

30,733. But that is against the law ?—I should say that it is.

30,734. Is there anybody who examines the meshes of the net ?—Yes; I think the late Mr. Russell took the nets from some persons two or three years ago.

30,735. Is the herring that is caught here a large herring or a small one ?—They vary according to the different seasons.

30,736. What is the average size of the mesh; how many are there to the yard ?—I believe there is about an average of 32 to the yard.

30,737. Do you agree with what the previous witnesses have stated about a close time ?—Yes.

30,738. That it would prevent the haddock and cod fishing here ?—Yes, it would almost entirely prevent it.

The witness withdrew.

J. McAdie.

JOHN MCADIE called and examined.

30,739. (*Mr. Caird.*) You are a fish-curer here ?—I am.

30,740. Do you approve of the continuance of the Government brand ?—Not under the present rule adopted by the Board of Fisheries.

30,741. What do you object to in that rule ?—There are many of the regulations connected with the Board of Fisheries that I would change.

30,742. In regard to the brand especially ?—Yes, in reference to the brand; but there are very few of

those regulations which operate injuriously which could not be remedied by the Board of Fisheries if they were willing to do so.

30,743. Tell us what they are?—I may mention one. It is one that has created the greatest amount of difference between the fish-curers and the Fishery officers, and it has reference to the filling up of the barrels. The curers conceive that the cure of the fish is damaged by the amount of fish which is pressed into the barrels.

30,744. Is there a certain amount of fish pressed into the barrels in consequence of a particular regulation of the Fishery Board, and without which being complied with no brand would be given?—Yes, that is the evil we complain of. There was an Act of the Fishery Board, or rather an Act of Parliament, which provided that a certain weight should go into a barrel of fish. That Act of Parliament is still in existence. It has never been repealed; but the curers are not allowed to take the benefit of it. Each curer is obliged to abide by the opinion of the Fishery officer, whether the barrel is full or not; he cannot fall back upon the Act which gives a certain amount of weight.

30,745. Is there a certain amount of fish that is held to fill a barrel?—No, not now. It is left entirely to the judgment of the Fishery officer whether the barrel is full or not.

30,746. Do you mean that the judgment of the Fishery officer is generally to force more fish into the barrel than can properly be put into it?—I mean to say that all Fishery officers are not alike, and one Fishery officer will pass a barrel as being of full weight which another Fishery officer would condemn.

30,747. Is there any rule to guide you in filling a barrel, or do you take it just by the eye?—There is nothing at all but the opinion of the Fishery officer. That is what we have to abide by. We have no appeal court to fall back upon in the event of our being dissatisfied with the decision of the Fishery officer.

30,748. Have you any other point to complain of upon that head?—Not upon that head; but I may say this, that that is the chief cause of the character of the British herrings being worse in the estimation of the foreign consumer than those which are cured in accordance with the Dutch method of curing.

30,749. Is it the fact that the British herrings have a lower character in the foreign market than the Dutch?—They do bring a lower price in the same market.

30,750. And do you think that is owing to the method of cure?—Yes.

30,751. What is the method of cure practised by the Dutch curers, and in what does it differ from the method of cure you adopt?—The barrels cured by the Dutch are filled slacker. The brine and pickle have then free access to go among the fish, whereas our barrels are filled so tightly and pressed together so hard that the pickle in the barrel has no free circulation.

30,752. Are we to conclude that the action of the Fishery Board in insisting upon a certain mode of filling the barrels before they consent to give the brand is injurious to the cure of fish?—Yes, I believe so myself.

30,753. If it were left entirely to yourselves do you think that following your own opinion upon the matter you would make a better cure?—If I were left to myself I should not fill the barrels so full.

30,754. And would the result be that the fish would be better in quality?—I am certain of it.

30,755. Then in your opinion it is injurious to you as a curer to have this brand?—It damages the quality of the fish.

30,756. Is there any other objection you have to the brand than that?—I do not recollect anything particularly just now.

30,757. Do you see any advantage you derive from the brand which compensates you for that?—There are certain things connected with the branding of herrings and the rules of the Fishery Board which might be reformed so as to meet the wishes of the trade without inconvenience to the Fishery Board. The system then might be made to work perfectly well; but there have been remonstrances sent up to the Board from Wick and other places which have not been heeded at all by the Board.

30,758. Is much skill necessary in curing fish?—There is more or less skill certainly required, but I cannot say what amount.

30,759. Is there, for instance, a considerable difference in the quality of one curer's herrings from those of another, according to the manner in which the cure is done?—There is a difference in the quality certainly. For instance, there are two brands which the Board give to the fish, that is, a full brand and a brand for lank or spent fish. There are full fish which may be branded with the full brand which may be of two shillings or three shillings a barrel less in value, according to the quality of the cure.

30,760. Then the care and the skill with which the cure is performed have a considerable influence on the quality of the fish?—Undoubtedly they have, but they have no effect upon the price of the fish after the brand goes upon the barrel. They all then fetch the same price.

30,761. Then a man's skill which he may have acquired by great diligence and perseverance go for nothing in that case?—Yes, after they are branded.

30,762. Has the use of the brand led to persons going into the business as curers who had not much skill?—I would not say that; I am not prepared to say that; I cannot tell.

30,763. If the brand were entirely taken away, would it be injurious to you, as a curer, the want of the brand?—I do not believe it would; but then at the same time I believe we should have to institute something else in its stead locally.

30,764. Could you not depend on the name which you as a curer would give the fish, after they became known in the foreign market?—Perfectly well; but it would put the curer to additional trouble, and would require additional handling of the fish. For instance, a buyer comes to me to-day and wishes to buy herrings from me of one particular description. He would have to examine them, and they would have to be all opened as he came along, whereas if they had either the Government brand or a mark affixed to them by the local authorities all that trouble would be spared.

30,765. But would not your character as a curer be taken as a guarantee as much as the brand of the local authorities?—It may be so.

30,766. Is it the case that the foreign buyer sends his agents here to buy the fish?—Yes.

30,767. Do they not become acquainted with the different curers and the method in which the cure is effected?—They do not appear to ask anything more than if the fish are full branded or lank.

30,768. But if the branding were done away with and the same buyers came here they would think it necessary to ask more than that probably?—No doubt they would.

30,769. Could not they satisfy themselves on the spot, whether the fish were properly cured?—Un doubtedly they could.

30,770. Then does your evidence go to this; that you do not see any advantage in the continuance of the Government brand?—I do not see any advantage in it in the manner in which it is conducted at present.

30,771. Do you know any way in which it could be conducted so as to make it more advantageous?—I am not prepared to notice specially all the different grievances we have as to the proceedings of the Fishery Board, but there are several such as that which I have mentioned. But the question of weight is considered a greater grievance than any other we have. In point of fact we have no test to fall back

WICK.

J. McAdie.

1 August 1864.

upon at present. We do not know what is to be considered a full barrel of fish at the present moment.

30,772. You are left as it were to the changeful opinion of the inspector as to the weight?—Yes, of the different inspectors.

30,773. As the case may be?—Yes.

30,774. Have you found that there is an increasing demand at home for the fish caught here? Has access to the home markets been opened up?—I cannot say that there has been much difference in that respect for the last few years.

30,775. The foreign market remains your best market still?—Undoubtedly.

30,776. Have you bought any of the winter caught herrings?—Yes, I have done so.

30,777. What do you do with them?—I cured them and sold them.

30,778. Did you sell them in the home market?—No, I sold them here for the foreign market.

30,779. Were they branded?—They were.

30,780. Then are the herrings caught in the winter fishing likely to go to the foreign market as well as those caught in the summer fishing?—I believe so.

30,781. Is that because they would bring a higher price?—I do not say that.

30,782. Then what is the reason?—I do not believe that they will bring a better price.

30,783. But will they not bring a better price if they are sent and sold abroad than if they are sold in the home market?—Undoubtedly.

30,784. Do you cure any other kind of fish except herrings?—No.

30,785. Do you cure any haddocks?—No.

30,786. Any cod?—No.

30,787. (*Prof. Huxley.*) Do you think that if municipal inspectors were appointed here, the whole expense being borne by the municipality, that that would answer the purpose of the foreign merchant as well as the Government inspectors do?—I do not see why it should not.

30,788. If the agents of foreign merchants are here why do they not exercise some inspection themselves as the cure goes on?—They get it cheaper as it is at present. We pay for the inspection being done.

30,789. But if they were left to the same resources as other merchants would they not be obliged to look after it for themselves?—Yes.

30,790. Supposing that the brand were abolished altogether, would that create any irreparable disturbance in the trade?—It is very possible that it would create a little annoyance and a small revolution in the trade for the first one or two years, because in the continental markets the brand is the acknowleged standard at the present moment of the value and quality of the autumn fish, but that is not the case with the May and June fish.

30,791. The fact is, then, that the Government, under the branding system do for the fish merchants what all other classes of merchants have to do for themselves?—Unquestionably.

30,792. Would the enforcement of a close time here be of any advantage to you as a curer?—I am not prepared to give any answer to that. That is the question on which there is a great diversity of opinion. Fishermen are the best parties to give a decided opinion upon a question of that nature. Some say it would be better if there were a close time from May until the 19th or 20th of July, and others oppose it.

30,792*a*. I ask now with special reference to you as a curer, would it be of convenience to you?—It would not be injurious to me at all.

30,793. Would it not rather help to clear the market for you?—That is a time of the year when the fish generally are not of good quality, they are not so good in the months of May and June.

30,794. Do you catch herrings here sometimes in May and June?—There are a few boats which go to sea, but our fishing does not commence generally till the 19th or 20th of July.

30,795. If the herrings here are not of good quality why do you buy them?—There are always plenty of fish markets to consume all the quantity that is caught, and the quantity of those that are caught in May and June is very trifling.

30,796. With regard to the winter fishing which is now coming on would you like to have a close time prohibiting that?—No, not at all.

30,797. You rather like to buy those herrings?—Yes.

30,798. You can dispose of as many of them as you can get?—That was the case last year, and it was the only time we had a winter fishing to speak of.

30,799. Do you buy codfish?—No.

30,800. Do you buy haddocks?—No.

30,801. Do the agents of the fish merchants here buy your herrings straight out?—Yes, certainly.

30,802. Do they buy any quantity they like on your curing grounds?—Yes, on the guarantee of the barrels being properly cured and branded. That is the thing upon which they buy them on the spot.

30,803. So that after they have left your curing grounds you have no further risk or responsibility?—No.

The witness withdrew.

M. Gunn.

MARCUS GUNN called and examined.

30,804. (*Mr. Caird.*) You are an agent for the purchase of fish here for some of the foreign merchants are you not?—I buy herrrings for Mr. Wellmann of Stettin.

30,805. Then your principal is well acquainted with the character of the fish here caught?—I have been a good while at it.

30,806. Do you buy largely here for him?—Yes, pretty extensively.

30,807. Has he been in the habit of buying here for some years back?—Yes, for 30 or 40 years.

30,808. Does he know the names of the principal curers here?—I have no doubt that he does.

30,809. And the character of their cure?—Yes, he is regularly here every year.

30,810. Does he depend very much upon the Government brand as a guide to him in his purchases?—I have had no correspondence with Mr. Wellmann for nine months back, but I am of opinion that he is in favour of the brand.

30,811. Does it enable you who are resident on the spot and constantly among the curers to select a better quality of herring, or without the Government brand could you equally satisfy yourself as to the quality?—It has been a guarantee to the purchaser and exporter for many years back, and we rely a good deal upon it.

30,812. Then the fact of its being there relieves you of the necessity of looking much into the cure?—Sometimes we examine the herrings even after the official brand has been placed upon them.

30,813. Do you ever reject any that have been branded?—I never rejected an entire parcel, but I have got some few barrels filled up afterwards.

30,814. Supposing the brand were abolished, would that prevent your principal from coming to the market here to buy fish?—I have no doubt it would be an impediment in his way.

30,815. Could he get the fish anywhere else?—I do not know. There is a great deal of fish on the west coast of Scotland, but this is the principal place.

30,816. But if the brand were done away with on all parts of the coast, there would be no difference in that respect with regard to the fish obtained at any place?—There would be no difference if the Government brand was done away with.

30,817. Can you say whether the demand for fish at Stettin is so great that it would induce your principal to come here whether the fish were branded or not?—I can hardly give an answer to that.

30,118. Are the Dutch fish ever branded?—I do not think they are.

30,819. You do not know?—No, I do not know.

30,820. Are there any foreign buyers present now?—I do not think there are.

The witness withdrew.

SAMUEL LAING, Esq., called and examined.

30,821. (*Mr. Caird.*) Can you give us any information as to the prospect of a reduction of the duty upon herrings in the foreign markets to which the herrings of this part of the coast are sent?—I may say that I believe that, next to the existence of a railway at Wick, a reduction of the duty on herrings in foreign countries would be of the greatest benefit to the fisheries of this district. I think there is a fair prospect of getting a reduction effected, more especially in Austria, for I recollect being there in 1858 and pressing the matter very much on Baron Bruck, who was then the finance minister of Austria, and I believe he was persuaded that a reduction of the duty would be beneficial to the finances of Austria; that they would make a larger revenue with a reduced duty. And he promised me that he would make a reduction in the first change of the tariff that should be introduced; but unfortunately the Italian war came then, and Baron Bruck committed suicide, and in consequence the matter fell to the ground.

30,822. Are you aware whether there is any prospect of a revision of the Austrian tariff being entered upon soon?—I am not aware specifically.

30,823. Do you think that the promise that was then made to you is likely to be kept in view when a revision of the tariff shall take place by Austria, or would you recommend any representations to be made by our Government to Austria upon the subject?—I think if a private representation were made to Baron Pleuer, the present finance minister, showing the facts and figures on the papers prepared by Mr. Mackie here, there would be every prospect of inducing him to make a reduction.

30,824. Do you know anything of the duties upon herrings imported into France and what prospect there may be of obtaining a reduction there?—I know this only, that at the time the French commercial treaty was under negotiation efforts were made to induce the French government to reduce the duty, and the great difficulty was that it was not purely a commercial question with them, but a question of the encouragement of their marine. They go upon the system of giving bounties to the fishermen, and it was considered to be inconsistent to reduce the import duties, so as to create a competition with their own fishermen, at the same time that they were giving bounties.

30,825. Is the same system still in force and would it prevent their adopting any modification of the duties on imported fish?—They still pursue the system of bounties, but the principles of free trade have made very rapid progress in France and perhaps they would be more willing now to apply those principles to the fisheries.

30,826. Do you think that the only action we can take in the matter is to keep it steadily before the French government in any question that may arise with respect to the revision of their tariff?—Yes I think so.

30,827. Is there any other point you desire to place before us?—No.

30,828. (*Prof. Huxley.*) There is a statement contained in a document which has been prepared by Mr. Mackie, that the revenue, in spite of the reduction of duty in Prussia, has greatly increased?—Yes.

30,828*a*. Are you aware that that is the case?—I went into the figures three or four years ago, and I am aware generally that that is the case.

30,828*b*. The statement here is, that in 1862 the duty was reduced to one dollar, and the result was that Prussia derived a revenue which increased 50 per cent.?—I cannot enter into the particulars, but I know there was a large increase of revenue and that the trade increased enormously. The reduction of the duty in Austria is very important, because a great deal of the import trade is in transit between Austria, Silesia, and Poland.

The witness withdrew.

JOHN MACKIE called and examined.

30,829. (*Mr. Caird.*) I believe, Mr. Mackie, that you have prepared a paper in reference to the fisheries which you are desirous to bring before us?—Yes, I was asked by Mr. Traill to prepare a paper and I have done so.

30,830. You wish to put that paper in?—Yes. It is as follows:—

"Northern Ensign" Office,
Wick, 1st August 1864.

HAVING for many years directed considerable attention to the fisheries of Scotland, particularly of the north-east coast, and more especially of that portion which extends from Peterhead to Wick inclusive, I am anxious to have an opportunity of bringing under your notice certain facts in regard to them, which I conceive are pertinent to the object of your inquiry.

As you are aware, the chief product of these shores has, since the early part of this century, been the herring. But as the herring-fishing season has hitherto extended over but about two months in the year, it is evident that the fishermen must either devote the rest of the year to other employments, or pursue their calling in search of other descriptions of fish. They do both. A large portion of those who prosecute the herring-fishing on the seaboard indicated have small farms which they cultivate; many are engaged in other departments of industry during the year, and probably a half of the 27,000 persons engaged in the north-east coast herring fishing come from the West Highlands and Islands early in July, and in the beginning of September return home, when the fishing is closed.

The remainder are *boná fide* resident fishermen, and regularly prosecute other fishings of various descriptions throughout the year. These fishings are in haddocks, cod, ling, halibut, skate, turbot, and lobsters.

The haddock fishery has of late years greatly fallen off, especially on the coasts of Aberdeen, Banff, and Moray, so much so that within the last few years considerable numbers of Banffshire crews have found it necessary to leave their homes during winter and spring, and to settle on the Caithness coast, where they have been to a considerable extent successful in the capture of haddocks, though here also the fishing has during the last two years a good deal fallen off. The haddocks thus caught are generally cured, and converted into what are popularly known as "Finnan haddies," and are in that state despatched by steamer to the Aberdeen, Edinburgh, Glasgow, London, and other markets. The haddock fishings of the Caithness and Sutherland eastern seaboard have at times yielded from 10,000*l*. to 15,000*l*. a year.

The cod fishery has during the last few years greatly risen in productiveness and importance, especially on the Caithness and Sutherland coasts. That the cultivation of the cod fishery on the Caithness coast has improved and is still gradually extending will be seen from the fact that

WICK.

Now that herring bait is to be had in winter, I have no doubt of this fishing assuming still larger proportions. In the past season, with that bait, a large number of Banff and Moray crews were, with those of Caithness, actively employed in that branch of fishing along these shores, and very large quantities, amounting on several days to many thousands of splendid fish, were landed. The ling, tarbot, and halibut are caught simultaneously with cod, and have for several years been abundant.

The skate-fishing is always, at the proper season, productive on the Caithness coast, and forms an important article of local diet.

The lobster-fishing is only cultivated to a very limited extent, and is not likely ever to bulk largely as a means of fishing industry,—the time and expense of transit adding largely to the cost.

As is known to you, the chief branch of fishing is that of herrings. Before referring to the autumn fishing, I may remark that up to a couple of years ago the popular and universal belief was that although the herring was certainly not a migratory fish, and never entirely left our shores, it abandoned the neighbourhood of the coasts at the close of the autumn fishing, went to the offing in deep water, and there remained till July, when it gradually approached land for spawning purposes. The experience of the last two winters has entirely swept away this belief, and left no room to doubt that the herring is local in its habitation, never leaves our coast, and is to be found in vast shoals a few miles off the east coast of Sutherland and Caithness, as well in January and February as in July, August, and September.

In the winter of 1862–3 the idea struck some fishermen of the possibility of a few herrings being caught off this coast, at that time, for the purpose of being used as cod bait, and an attempt being made it was crowned with such success that other fishermen imitated the example, and in a few weeks herrings to the value of several thousand pounds were brought ashore. This year, early in January, another and more general effort was made, and for nearly two months the winter herring fishing was prosecuted with a success considerably greater in proportion than the most prosperous autumn fishing ever presented in Caithness. Fishermen belonging to this county, to Sutherland, Moray, and Banff, gathered at Wick, Lybster, Dunbeath, and Helmsdale, and by the end of February herrings to the value of fully 15,000*l.* were landed, and were nearly all sent off in a semi-fresh condition to the southern markets. With such undoubted evidence of the presence of huge bodies of herrings off these shores in winter it is obvious that, with other favourable circumstances, a large and prosperous winter herring fishery will soon be established on this coast—to the effect of which it is impossible to attach too great importance.

The autumn herring-fishing from Peterhead to Wick is the most extensive, the most productive, and consequently the most important branch of fishing industry in the British empire. I herewith hand you the statistics of last year and several previous, and need not therefore burden this paper with other figures, farther than to say that over that short seaboard there were last year caught in two short months no fewer than 304,780 crans of herrings, the value of which, after being cured, and including freight to other ports (chiefly in British vessels), insurance, and other charges, may be safely stated at 450,000*l.* The entire catch of six years may be stated at 1,700,000 crans, the value of which on being exported, could not be less than two millions and a half sterling. Of these quantities the narrow eastern seaboard of Caithness yielded last year not much short of half, and has in six years caught, cured, and exported herrings to the value of a million and a quarter sterling.

The only outlets for our herrings previous to the enterprise assuming its present large proportions were the West Indies and home markets, chiefly Ireland. But since the abolition of slavery in our West India colonies, the demand for herrings has fallen off, and our exports to them are now *nil.* Ireland was, prior to the outbreak of the potato disease, a very large consumer of our herrings, but since then the consumption has greatly fallen off, as the following figures will show:—

Exported to Ireland in	1841	-	187,953	barrels.
Do.	do.	1842	- 165,327	„
Do.	do.	1843	- 127,770	„
Do.	do.	1844	- 120,300	„
Do.	do.	1847	- 102,690	„
Do.	do.	1848	- 78,262	„
Do.	do.	1849	- 77,334	„
Do.	do.	1850	- 62,705	„
Do.	do.	1851	- 75,091	„
Do.	do.	1852	- 58,392	„
Do.	do.	1853	- 90,063	„
Do.	do.	1854	- 118,023	„
Da.	do.	1855	- 93,569	„
Do.	do.	1856	- 84,060	„
Do.	do.	1859	- 64,390	„
Do.	do.	1860	- 76,546	„
Do.	do.	1862	- 61,771	„
Do.	do.	1863	- 66,513	„

These figures clearly prove that Ireland cannot now be relied on for more than a very partial consumption of our herrings, probably not more than 10 per cent., and that we must look somewhere else for markets.

These we have secured to some extent in Prussia, which, through the beneficial operation of a reduced tariff, is gradually extending its consumption of Scotch herrings, as is shown by the fact that whereas in 1841 the entire import into all foreign European ports was but 91,069 barrels, Prussia last year alone took from us upwards of 300,000 barrels. The imports into the various ports for a series of years indicate the gradually increasing importance of our export herring trade. As taken from Prussian official returns, they will be found in a letter which I beg to hand herewith. I may add that in 1826, the imports of Scotch herrings into Stettin was 7,695 barrels; in 1863, 159,357 barrels.

I need not here refer to the obvious injury which the blockade of the Prussian ports exercised at the commencement of the fishing this season upon our herring trade. It is clear that if markets which consume three-fourths of the catch of Caithness, Sutherland, Ross, Moray, Banff, and Aberdeen are shut against us other means of outlet must be glutted; and that for a large quantity caught there can be no market, except at greatly reduced rates, to the serious injury of all engaged in the adventure, who (even with the present markets, which are far from adequate to take off the supply and regulate prices, so as to secure such an average return as to give fishermen and fish curers a suitable reward for their labour and outlay) entered this year on the undertaking with a more nervous dread of the issue than for many years, the effect of the Danish war, and even the temporary blockade, being to reduce prices to many fishermen who were engaged before its removal, and render them anxious to be protected by a heavy fishing; while the curers feel that a small catch is their only hope of being saved from serious loss. One very striking instance of the effect of the blockade occurred last month in the St. Petersburg market, which last year yielded excellent returns to the produce of the Lewis fishing; but this season, owing to the largely increased import, rendered necessary by the blockade of the Prussian ports, the returns have been ruinously low, and in some cases are barely equal to the original cost of the barrels when empty, leaving the curers in the loss of the fish, freight, salt, &c., amounting to upwards of 1*l.* per barrel. I may also note, that, from the same cause, the number of the boats fishing on this coast, whose reliance, owing to distance from home markets, is the Prussian market, is considerably diminished this year, and is under that of any season for 10 years.

I have written thus almost preliminary to entering on the question into which the Commission has been appointed to inquire, and which is one to which too much importance cannot be attached. And I venture, with respect, to submit to you certain *desiderata* which I conceive are essential to the maintenance and the increased prosperity of the trade. Some of these have been referred to in my letter to Mr. Traill, and I shall do no more in regard to them than say that the erection of the new Harbour works at Wick, enabling the fishermen to go to sea with the confidence of a sufficient shelter if overtaken by a storm, will undoubtedly warrant their prosecuting the fishing more frequently, and will otherwise tend greatly to increase the catch of all descriptions of fish, and consequently add to the importance of this branch of national industry.

As to the duties imposed by Austria, France, and Spain, it is clearly, as a question of finance, as well as one of

obvious national and international policy, their interest to follow the example of Prussia. Were that done, a very great impetus would be given to our fishing trade, and the north-eastern seaboard would to a great extent become the fish mart of Europe.

Austria itself has already, in one case, shown how preferable a low tariff is to a high one in its effect upon revenue. In the article of tea, Austria, previous to 1851, levied a duty of 90 gulders per Austrian hundredweight of tea, and then reduced it to 15 gulders per Zollverein hundredweight, and whilst from 1841 to 1851 the total imports of that article were only 3,601 cwts., with a revenue of 324,070 gulders, the imports during the succeeding years were:—

620	cwts. in	1851
1,938	do.	1852
3,795	do.	1853
3,637	do.	1854
6,490	do.	1855
4,170	do.	1856
3,771	do.	1857
4,226	do.	1858
4,306	do.	1859
4,975	do.	1860

being together, with a gradual yearly rise, 37,928 cwts., yielding 568,920 gulders.

It may also be noticed, that this country, which is much more interested than any other in the prosperity of its fisheries, now interposes no obstacle to the importation of fish. Since the abolition of our fish duties the importation of herrings, salmon, &c., from Norway and other countries having fisheries has immensely increased, and, as regards herrings, it is now the practice of some Scotch curers to send representatives to Norway during the progress of its herring-fishing to purchase largely for our markets, so much so, that whereas in 1858 only 8 barrels were imported into this country from Norway, in 1859 there were 889 barrels, in 1860, 45,891 barrels; and it is believed that in 1862 and 1863 the quantity imported was about 30,000 barrels. No injurious result has been suffered by our fisheries in consequence of this opening of our markets, nor did our fishermen or fish-curers utter a murmur of regret on the removal of our protective duties on fish.

It is, moreover, worthy of notice, that Austria does not require a protective fish duty, as it has no fishing in its own seas, nor does it send vessels to prosecute the fishing elsewhere. And it is deserving of remark that this country has long ago reduced its tariff on articles of Austrian produce. Wool is imported free of duty, and while on corn and other grain the duty is only 1*s.* per quarter, the duty on wine is reduced to 1*s.* per gallon. At present, *via* Stettin, considerable quantities of Austrian wool and grain are imported into this country; and the wine trade, by the same route, is just beginning to develope itself. Consequently, apart from the consideration of revenue, which the remarkable experience of Prussia clearly points to, as presenting but one line of duty, it is but fair that we should expect Austria to reciprocate with Great Britain in the matter of an article, which, neither on protective nor revenue considerations, they can have any object in longer excluding.

Of late years there has been a considerable import of Scotch herrings into St. Petersburg, where, however, the high duties and the system of filling barrels known as the "brack" exert an injurious influence on the extension of the trade, and render it hopeless to expect any material increase till the duty is lowered and the "brack" abolished. There is also a transit duty of about 1*s.* per barrel imposed, and altogether the expense of conveying a barrel of herrings to St. Petersburg, is, freight, insurance, duty, brack, and transit duty, about thrice the amount of that on a barrel taken to Stettin or any other Prussian port.

In regard to the duties levied by France, which practically prohibit the import of our herrings, one significant fact merits attention, viz., that at an early period of even this season herrings were bought on this coast by French vessels, and were carried off to France, and imported there as the *bonâ fide* catch of French fishermen. This is done yearly and systematically, and shows that one of the chief reasons for which the French government shut us out of their markets is rendered nugatory to a great extent by the parties on whose account the high protective duties are maintained. Cases have again and again been known of Boulogne vessels being fitted out with nets and curing materials proceeding to the Scotch coast, and returning at the end of the season laden with herrings purchased from Scotch curers, and without once casting their own nets into the sea.

I may here interject the remark that the question of Highland Improvement is inseparably connected with the success of the East Coast Herring-Fishing. In addition to the rising importance of the Lewis herring-fishing, now giving employment in its season to some 6,000 individuals (not included in the statistics herewith handed you), the comfort of a large portion of the West Highlanders and Islanders rises and falls with the success or the failure of the Caithness or Sutherland fishing. It is, perhaps, well for me to state that a large proportion of the rents of the small crofts in these western districts is drawn from the herring-fishing of the north-east coast, and that it has of late years exerted a great influence in teaching the Highlanders habits of industry, and converting many of them into owners of herring boats and materials. It is not difficult, therefore, to see that an increased demand for our fish, by the opening up of new markets, would not only add to the national wealth, but would greatly assist in relieving the Highlanders of the incubus of poverty which has so long hung around the necks of the people.

But there are certain seasons of the year when the herrings caught are not of a quality that suits them for the continental markets, or in which the frost shuts the Baltic, and consequently we are at these times dependent entirely on the home consumption. Here, however, our great distance from the marts of home industry interposes and shows how important to our fisheries is the securing of suitable means of speedy transmission. Reference to this matter is made in my letter to Mr. Traill, and I now only supplement the remarks then made by our subsequent experience. At the commencement of our fishing, a few days ago, herrings were in excellent demand on the two days per week of the steamers' sailings for Aberdeen and Granton, but even on these days the price was never within 50 per cent. of that obtained at stations to which railways extend, and on other days the demand was almost nominal. Thus, on the same days on which as high as 30*s.* to 50*s.* per cran was quoted at Dunbar, Stonehaven, Peterhead, and Lossiemouth, which have direct railway communication with the south, the price at Wick never exceeded 20*s.* and was at times as low as 10*s.*, while at Lybster it was actually down at 5*s.* These striking differences, though certainly connected with the question of supply and demand, would not have occurred had there been a means of carrying the fresh fish by rail from Caithness to the southern markets. And though it is clear that such a means of transmission must be mainly provided by private enterprise, it is a question whether it is not a matter of consideration for the Government to encourage to some extent the extension of the railway to a district which can, at the most important seasons of the year, so largely provide an article of nutritious diet to the various centres of population and industry throughout the kingdom, as well as greatly assist the material and social progress of the Highlands of Scotland.

This remark brings me to submit to the Commission certain other means by which I humbly conceive the Government can greatly contribute to the promotion of the North East Coast Fisheries. You will allow me, by way of illustration, to refer to the manner in which other powers foster their fisheries. France, Holland, and particularly Norway, take the liveliest interest in the prosperity of their fishermen, and Norway yearly expends a large sum for that purpose with the best results. Telegraph stations have, at Government expense, been erected in every fishing district, where also a staff of Government officials has been established to protect, assist, and otherwise encourage the undertaking. Here, cut off as we are by a distance of 85 miles from the nearest telegraph office, and having the most unreasonable postal arrangements with the fishing stations opposite, we are left in the dark for days as to the state and progress of the fishing and markets elsewhere, so much so that letters reach Wick from Paris sooner than from even Fraserburgh and Peterhead, and telegrams take days in their transmission when other districts have them in hours.

Another excellent means of aiding the fishing could be supplied by Government. For several years a small steamer has been sent down ostensibly "for the protection of the fisheries," but that vessel has been practically of no use. She has lain in the bay for days on end, and for all practical purposes the fishermen would have been better without her presence, as she has occupied the fairway, and been otherwise a hindrance. It is the opinion of all engaged in the fishing that, besides securing men for the navy, a number of vessels sent down, say one to each important station, would be of immense value. Night after night they would proceed to sea with the herring fleet, reporting in the morning where the shoals of the herrings were to be found, assisting crews when their nets were foul or sunk with fish, towing boats to sea or land in calms, or aiding them in distress, intimating the daily success at their respective stations, assisting in the conveyance of stock where it might run short, and otherwise promoting the enterprise. In times of peace no more useful employment could be given to such vessels as the "Lizard," nor could a better plan be

WICK.
. Mackie.
ugust 1864.

devised for recruiting to Her Majesty's service. I feel bound to say that a small sailing cutter, under the command of Captain Samuel McDonald, of the Fishery Board's service, stationed several years ago, for some successive seasons, on this coast, though without steam assistance, was of the greatest service. Every night, along with the fishing fleet, this vessel went to sea, returning in the morning, and at all times and in all weathers, inspiring confidence in the minds of the fishermen, and otherwise promoting and protecting the fisheries. Why the steamer now on the service should not be thus employed is a question which all interested have year by year put.

Allow me briefly to sum up what I conceive to be the essentials to the prosperity and increase of the fishings on this coast:

1. A reduction of the fish duties imposed by France, Austria, and Spain.
2. Means of speedy transit of fresh fish by railway to the home markets.
3. Telegraphic communication with the various stations.
4. Government steamers at the respective stations, for the purposes above indicated.

With such essentials secured I have no doubt our fisheries would expand and prosper, and by the blessing of Providence this coast would become the great fish market of the world, while the nation at large, as well as the districts immediately interested, would be proportionally advantaged.

I have not thought it necessary to advert to modes of fishing and the close time, because neither question has been agitated on this coast. We have no trawling of any description, and our mode of fishing by net is uniform. I might, however, have remarked on a very injurious practice that is prosecuted by the Dutch busses when off this coast, viz., that of casting large quantities of herring offal into the sea where they catch and cure the herrings. This practice has been found to do a serious injury; it disturbs the shoals, the herring being an exceedingly sensitive fish, and it draws to the spot immense shoals of dog-fish, which commit great havoc on our fishermen's nets, and on the herrings after being meshed.

Some years ago an impression prevailed in favour of a close time here during the months of April, May, and June, but since then the prosperity of the Lewis fishing has drawn away the greater part of our fishermen to that island during most of the period named, and rendered any legislation for this coast unnecessary, as the effect of only a few boats prosecuting the fishing with a limited supply of nets, chiefly with the view of catching herrings for bait to the cod-fishing, can do little or no injury to the maturing shoals, and not prejudicially affect the markets by filling them with immature fish.

In regard to close time in the island of Lewis, the impression of those who have given the subject unprejudiced consideration is that the system has wrought well, but that a modification of it to the extent of allowing the local fishermen to catch herrings for bait may be safely and beneficially conceded. The fishermen themselves approve of the present arrangement subject to this modification, and it is perhaps deserving of remark that, apart from the general question of close time, the quality of the herrings caught between the commencement of the regular season (20th May) and 1st June is almost uniformly so inferior as to involve the curers in a loss. I have no doubt the fact will be attested by many curers who have had practical experience of the Lewis fishing.

I have not entered on the disputed questions relating to the official brand of the Fishery Board or the general utility of that establishment. The former is practically a fish-curer's question; but in one respect it is certainly a matter affecting the public. Viewing it in that light, I am of opinion that the brand is of importance, and that its abolition would be followed by a serious derangement, for some years, of our relations with foreign customers, who very strongly object to any interference with the brand. At the same time a majority of the curers here seem to be favourable to the abolition of the brand; some objecting to it on the broad principle of the impolicy of all such modes of interference with trade, while others take exception to the fee as being by far too high, and really making Wick pay for a much larger share of the expenses of maintaining an establishment from which they derive little benefit beyond that obtained from the official imprimatur on their herrings. There are also serious objections here and elsewhere to certain regulations issued by the Board, against which the Chamber of Commerce has in vain memorialised; and I am of opinion that the disinclination on the part of the Board to concede claims obviously just, and founded on practical views of the modes of cure and general conduct of the fisheries, has had a good deal to do in sustaining the opposition to the Board and its brand. I believe that, so far as continental opinion is concerned, the view entertained is that it is to the brand we are indebted for having succeeded in successfully competing with the Norwegians, and gaining such a preference in Prussia and Poland for our herrings; and it is worthy of being observed that the complaints against careless and insufficient cure of Norwegian herrings up to 1862 induced the Norwegian government to interfere, and now there are official sorters and packers appointed by the "Commune," and the fish have since then been classed according to quality and size, with a favourable result, last year, in the demand for the herrings of Norwegian cure.

Up to two or three years ago, the impression among the trade was that the brand was a legal guarantee, and that herrings once branded and sold could not be legally rejected on any ground whatever. In fact, this was publicly notified, the Board having published a letter from Mr. Wellmann, of Stettin, to Mr. Traill, M.P., dated February 1851, in which he states:—"When a party purchases Crown and full branded herrings at present, he is bound to receive them, if they bear that brand, independent of the quality;" and our courts of justice have frequently given their decision in accordance with this statement, upon the ground that the Fishery Board is a Government establishment, and, therefore, reliance can be placed upon their impartial inspection and strict superintendence." Even in 1859, a circular signed by the herring dealers of Stettin, Dantzic, and other ports, alleged that "at present the Government brand is a legal tender in every court of justice, even in this country." Two years ago, however, this view was exploded, several cargoes of full Crown-branded herrings having, in a falling market, been rejected in Stettin and elsewhere in Prussia, on the ground of imperfect character and cure. I herewith hand you copies of the documents from which I have quoted, and two others bearing on the same subject.

If, however, the brand were abolished, there is no doubt that a surveillance equally strict, though not involving the fish-curers in any direct expense for its support, would still be required. On public grounds it is clear that the herring curing trade has no more right to be exempted from official surveillance than has any other. Merchants are superintended in the matter of their weights; and other trades, including butchers, are narrowly watched in the interest of the public; and it is worthy of notice that the department of herring cure which has shaken itself clear of superintendence, that of *reds* has not only become less important in its character, but the want of inspection of the barrels has brought about practices by which the public have greatly suffered.

In the matter of statistics, it appears to me that an improvement can be made. I do not see what confidence can be placed in the cod returns as presently made up; at all events I am satisfied that those for Caithness and Sutherland are much understated; and that the most practical mode of securing correct returns would be that every fisherman having a boat registered at the Custom House should be obliged, under a penalty, within 14 days after the 31st of December in each year, to hand in to the Fishery officer of his district, a return of the quantities of crans of herrings, number of cod, &c., landed from that boat during the year, according to a schedule given to the owner in the beginning of the season. All the boats being now numbered,—a regulation of the greatest importance to the fishermen themselves,—this arrangement could be easily carried out, and, under suitable penalties rigidly enforced at the outset, would secure perfect returns from every district.

I am strongly of opinion that the Fishery Board has, on the whole, been of the greatest public service. In the matter of fishery harbours it has erected and encouraged the erection of not a few, to the manifest advantage of the fisheries and the saving of human life. It has a staff of officials of great practical intelligence and integrity, and anxious to promote the fishing interests under their charge; and I feel satisfied that were there a greater readiness manifested to popularise the details of superintendence, and make them keep pace with the advancing spirit of the age, throwing no unnecessary obstacle in the way of curers carrying out such approved modes of cure as do not either interfere with fair dealing or otherwise do injustice to the buyer, the feeling of hostility by many would be overcome, and the Board and the trade would act with harmony, to the increased advantage of an interest now so wide in its ramifications, so extensive in its influence, and whose increased prosperity is of such vital national importance.

Perhaps it may not be out of place here to refer to the saving of the lives of the fishermen at sea. I do so with the view of directing the notice of the Commission to a certificate by an eminent Newcastle firm regarding an invention by a gentleman in this county, which promises to be of important use to the thousands engaged at sea in this

enterprise. Such an invention, which is represented as being cheap, simple, and applicable to every emergency, is certainly entitled to at least favourable enquiry and consideration by the Government, and all interested in the saving of human life. The inventor, who has devoted many years of study to the subject, assures me that there is no emergency which his plan will not meet, and that any fishing boat can, without encumbrance or involving additional labour to the fisherman, have it applied.

I beg you will excuse the prolixity of the details I have given, and have to add that if I have not been sufficiently explicit on any of the points referred to, I shall be happy to have an opportunity of explanation, and meantime have the honour to be,

Gentlemen,
Your very obedient servant,
Jno. Mackie,
Editor of "Northern Ensign."

List of Papers appended to this Letter.

1. Letter to Mr. Traill, M.P.
2. Do. do. from foreign herring dealers.
3. Do. do. from Alex. Miller, Esq., Leith.
4. Do. do. from A. Wellman, Esq., Stettin.
5. Paper on the herring brand, by the foreign dealers.
6. Certificate by Messrs. Andrew Leslie & Co., regarding invention of saving life.
7. North-east coast herring fishing statistics. (*See Appendix.*)

30,831. That paper has reference to the fisheries of Wick?—It relates to the fisheries upon the north-east coast from Peterhead to Wick.

30,832. It contains a good many statistical returns and tables?—Yes.

30,833. What basis have you for those tables and returns?—They are partly the official returns of the Fishery Board, partly Austrian official returns, and partly Prussian.

30,834. Have you carefully collated those figures?—I have.

30,835. As far as you can do so, you vouch for their accuracy?—I am quite satisfied as to their accuracy.

30,836. Have you any returns which show the exports to Ireland?—Yes, I have.

30,837. Are those returns obtained from the Custom House?—From the Custom House and the Fishery Board returns.

30,838. What access have you had to information in regard to Prussia?—I got the returns from Mr. Wellmann, who received them from the Secretary of the Stettin Chamber of Commerce.

30,839. Do the facts you state here apply exclusively to Stettin?—Austria and Stettin.

30,840. Austria through Stettin?—Yes.

30,841. The herrings do not go by the Mediterranean at all?—No.

30,842. Have you in the course of your experience here been able to arrive at any opinion as to the advantage or disadvantage of the Government brand?—I have formed an opinion in favour of the maintenance of the brand.

30,843. Will you give us the grounds of that opinion?—It is chiefly upon the ground given by the previous witnesses, that it is a guarantee to the purchaser as to the quality of the fish. It saves an immense amount of trouble and expense, and very probably, in the case of a falling market, saves the curer from having the herrings thrown upon him after they have reached foreign ports.

30,844. Is it not the fact that the foreign merchants send their agents here to purchase?—The foreign merchant comes himself to purchase, and he purchases the herrings on the faith of the brand.

30,845. Do you not think it is contrary to the modern principle of trade to give any Government guarantee for the quality of anything a man sells?—That is the only tangible argument that could be urged against the maintenance of the brand; but I think this is an exceptional case.

30,846. Is there anything in the character of the particular article of herring that should make it an exception?—The objection in the case of a barrel of herrings is, that you cannot accept the sample without examining every herring in it. If you are to stand by the quality of the fish, as a test you must open and examine every fish.

30,847. Are not large quantities sent into the market which are not branded at all?—Not many. Out of 110,000 barrels that are cured here from 80,000 to 90,000 go away branded.

30,848. Then there are 20,000 or so which go away without being branded?—Yes; but a good many of those go away fresh, and are sold in the fresh markets.

30,849. Are they partially cured?—Yes, they are in a semi-fresh state

30,850. Would not the same objection you mention apply to them, namely, that each barrel must be examined?—No; they are not bought by persons here at all. They are sent to the market, and taken out and sold in dozens and half dozens, and the party who sends them from here gets a return accordingly. They are not purchased by any dealer on the spot.

30,851. Has there been any change of opinion among the dealers themselves as to the advantage or disadvantage of the brand?—I think there are more now who are opposed to the brand than there were before.

30,852. Is the opposition to the brand a growing one here?—It has been in Wick.

30,853. You heard the evidence of the previous witness, Mr. McAdie, as to the injury sustained by the curers from being obliged to fill the barrels to such an excess as to be injurious to the cure?—That is a fish-curer's question. They are opposed to the recent regulations of the Fishery Board, I believe. I have referred to their objections in my paper.

30,854. Is that not one of the natural consequences of any Government interference in trade?—It may be.

30,855. It substitutes a rule for a man's skill?—Yes, it certainly does.

30,856. But notwithstanding that, you remain of opinion that it is of advantage to the trade generally, and to the interests of the fishery here, that the brand should be continued?—Yes, I think it is.

30,857. Can you give us any information as to the progress of this new winter fishing for herrings?—It was never tried until last winter. A few boats made the attempt, and they got a few thousand crans. This winter, in the early part of the new year, another attempt was made, and it was so successful that the number of boats increased, and between Helmsdale and Wick 15,000*l.* worth of herrings were brought ashore in the course of a few weeks. We never knew anything like it before.

30,858. Then that fishery is likely to continue?—I think it is.

30,859. And with great advantage to the place?—Yes, when once the harbour is completed; and if we had a railway to the fishing districts of this coast we should be still more greatly benefited. I think that is essential to the success of the fisheries here.

30,860. Do you think that a harbour is necessary owing to the commencement of this winter fishery, which takes place at a season when the boats would be more exposed to the inclemency of the weather?—Yes; the nights are long and dark then. In the present fishery they have the benefit of daylight half their time.

30,861. Are the improvements which are now begun to be made in the harbour such as will be very useful to the fishing interest?—I have no doubt of it. There is to be about 120,000*l.* laid out on them.

30,862. When do you expect those improvements to be completed?—The contractor is allowed seven years for the completion of the work.

30,863. Have you received any Government assistance in the matter?—None. But 80,000*l.* had to be borrowed.

30,864. From the Public Loan Commissioners?—Yes.

WICK.

J. Mackie.

1 August 1864.

30,865. Will that sum be borrowed on the security of the dues of the harbour ?—Yes.

30,866. Who has made up the rest ?—The British Fisheries Society, whose property the harbour is. They have 40,000*l.*, which has accumulated from their estates, and which they are to lay out.

30,867. The accumulation of their property is to be spent in enlarging the harbour ?—Yes.

30,868. Have they now the entire control of the dues of the harbour ?—Yes.

30,869. Have they mortgaged them for the loan they have obtained from the Public Loan Commissioners ?—Yes, or they are to do so. But they are to expend their own 40,000*l.* first, and then the Public Loan Commissioners will advance the balance at $3\frac{1}{4}$ per cent.

30,870. What depth of water will there be in the harbour ?—30 feet at ordinary spring tides.

30,871. So that fishing vessels can enter the harbour at all times of the tide ?—Yes ; and ordinary coasting vessels and steamers also. There will be an addition of 15 acres to the harbour accommodation, whereas at present there are only $12\frac{1}{2}$ acres altogether.

30,872. Then, in the interest of the fisheries here, you have no representation to make to us as to the necessity of increased harbour accommodation, that being now about to be accomplished ?—Certainly not.

30,873. Can you tell us anything with regard to the haddock fishery here ?—It had fallen off a good deal last year. More were caught this season than for some years previously, but the catch was not numerous.

30,874. Is the haddock fishery followed with any great perseverance ?—It used to be followed to a considerable extent between Lybster and Wick.

30,875. Where is Lybster ?—Lower down on the coast.

30,876. If there were greater facilities for getting to the market, do you think the haddock fishery would be followed with more perseverance ?—Possibly it would ; but I think the winter fishing, with a large catch of cod, would be likely to draw away many of the fishermen from it.

30,877. Has there been an increase in the catch of cod ?—Twenty years ago the catch of cod was not nearly so great as it was here last year. Twenty years ago 50,000 cod were caught on this coast, and last year the number caught was 120,000, so that it had more than doubled.

30,878. Do you think it is capable of still further increase ?—I believe it is. We can get plenty of herring bait, and we got the very finest cod this season and last.

30,879. Have you heard any opinion expressed as to the propriety of having a close time ?—My opinion was certainly in favour of a close time; but of late years the fishermen have taken away to the fishing at Lewis and Stornoway, so that a few only are following catching herrings for bait. I do not see that a few following fishing in that way would do any great injury to the maturing shoals.

30,880. Are you aware that any destruction of spawn takes place on this coast by any mode of fishing that is practised ?—No ; I do not think so. I never heard of it or saw it.

30,881. Have you heard any demand on the part of the fishermen for new regulations to be enforced, or for others to be done away with, that in their opinion are injurious to the fisheries here ?—No, I have not.

30,882. Have you heard any remarks made with regard to their shooting their nets before sunset ?—I have heard remarks made upon that, I believe it was prevented for some years when the Princess Royal cutter was here.

30,883. In this paper, which I understand was prepared by you—a printed paper—you state that the proportion of the winter catch to the number of boats has greatly exceeded the most productive autumn fishing ?—So it did.

30,884. Do you mean that each boat made a better fishing than in the autumn ?—Yes, in proportion to the time and the number of boats engaged. They had more men of course on board the boats in consequence of the season.

33,885. Had they more nets ?—No, not nearly so many nets.

30,886. Does the increased number of men enable them to get more fish ?—It enables them to get quicker to the fishing grounds. The boats now are very large, and they require more strength in the winter than in the summer.

30,887. But it is correct to state that in proportion to the number of boats the catch has greatly exceeded the most productive autumn fishing ?—Decidedly so.

30,888. If that continues to be the case, do you expect the winter fishing to become the most productive of the two ?—I should not say that because the summer fishing brings an immense number of fishermen from the Highlands and the isles which would not be the case with regard to the winter fishing. We cannot expect these island men to come to the winter fishing.

30,889. Still this winter fishery will add immensely to the profits of the native fishermen ?—Yes. All that we want for the winter fishery, after the harbour is completed, is the means of transit to the markets. The Baltic is shut in in the winter by the frost, and our chief reliance must be upon the home market.

30,890. Is there any prospect of a railway coming upon this coast ?—I hope so. If Mr. Laing and others will put their shoulders to the wheel they will bring it here.

30,891. Have you any knowledge whether the winter fishery is likely to injure the brood, and in that way to be injurious to the summer fishing ?—I do not think so. I never heard those who are practically acquainted with the fishing express any fear upon that head. I have had so little experience in it practically, that I should prefer not hazarding an opinion upon it.

30,892. Is the price of the herrings caught here in the winter time, in consequence of the distance from the markets, very much less than that of the herrings caught further south—off Dunbar for instance ?—Very much ; 50 per cent. sometimes, or even more.

30,893. Does that arise from the facilities for getting to the market being better at Dunbar ?—It is all owing to railway communication. There were herrings last winter from Lossiemouth and other places selling for 30*s.* and 40*s.* a cran, while they were selling here at 10*s.* a cran ; and one day at Lybster at from 5*s.* to 7*s.* a cran.

30,894. Would you say that increased facilities for getting to the market would lead to a large extension of the fisheries here ?—I should say so.

30,895. Do you think there is no chance of a great extension of boats and the appliances for catching fish in any way diminishing the general catch by over fishing ?—I do not think so.

30,896. Has there been no sign of the fish being over-fished on this coast ?—I do not think so.

30,897. There are as many fish in the sea now as were ever taken out of it ?—I am satisfied there are. The reason why an increased number of nets has not produced an increased number of fish arises from two important facts. In the first place, the want of a proper harbour so that boats would be able to leave at all times of the tide. They have now to go out in a body altogether, and the result is that they all meet on the fishing ground at the same time. They have no time to spread themselves out. They all cast their nets over each other, and the catch of fish has been diminished by the confusion thus created as well as by the fouling of the nets.

30,898. Would not that evil be avoided by enforcing the regulation that the fishermen should not be allowed to shoot before sunset ?—No ; I think if they had an opportunity of getting out of harbour and of going to sea at all times of the tide they would be enabled to spread themselves more.

30,899. Having a better harbour they would be able to get to the fishing ground at all times of the tide ?—Yes.

30,900. (*Prof. Huxley.*) Have you paid attention to the Acts of Parliament relating to the fisheries here ?—Yes.

30,901. Is it your opinion that by the 23rd Victoria a close time might be enforced by the Fishery Board ?—I think so, if they chose.

30,902. There is a particular passage in the Act to which I will direct your attention :—"The Commissioners may on application made to them, and after such inquiry as they shall think necessary, by regulations to be made by them from time to time, prohibit on the coasts of Scotland, and within such limits and for such periods as they may think fit, the use of any trawl, drag, or beam net, which in the opinion of the said Commissioners is injurious to the spawn of herrings or otherwise to the herring fishery; and every person who commits any breach or contravention of any such regulations shall be liable to a penalty of not less than 5*l.* and not exceeding 20*l.* for every such offence; provided that this provision shall not in any way affect any of the prohibitions or requirements of any of the recited Acts, in so far as relates to fishing for herrings." That gives the Fishery Board power over the whole coasts of Scotland ?—Yes.

30,903. So that it is possible for the Fishery Board, if they thought fit, to enforce a close time under this Act ?—Yes, they have power, but they are not likely ever to be asked to exercise it.

30,904. The Act does not define who should ask them ?—If there was a strong pressure brought upon the Local Board, they would be likely to do what would be right for the interests of the fishing.

30,905. For example, if the fish-curers on the west coast found it desirable to shut up your fishing temporarily they are competent to make the application ?—They had better not try it.

30,906. That is another matter; they can make such an application ?—Yes, no doubt.

30,907. Do you think it desirable that the Fishery Board should possess such a large power as that ?—I think it is rather dangerous to give them such a power.

30,908. You think your winter fishing is likely to prove a valuable one ?—Yes.

30,909. The Fishery Board could enforce a close time of the same duration as that now enforced upon the west coast ?—I do not see on what ground the Fishery Board would do that.

30,910. That is another thing. The question is whether it is within the power of the Board ?—They are interested in the promotion of the fisheries, and though they have the power, they would not interfere if they were not asked. They were asked on the west coast.

30,911. By a portion of the body interested, not by the whole ?—I think it was a very strong feeling generally.

30,912. Do you think it desirable that a Board should have that power over your fishing and over your interests ?—If there was a proviso added, in the event of its being asked for by the localities.

30,913. Do you think that, as matters now stand, it is desirable ?—I do not think there is any likelihood of its being used. It would be dangerous to give to anybody such powers.

30,914. In the paper you have placed before us here you seem to be rather favourable to a close time in May and June ?—Yes.

30,915. Is there no considerable quantity of herrings ever caught in May and June here ?—There is not a very large quantity caught, but I have seen a few caught. My impression is that it disturbs the shoals, but now that cannot be done because the fishermen go to Stornoway to fish there. You are probably aware that the herrings are exceedingly sensitive. It was suspected, although not definitely established, that the herrings were disturbed at a very critical period of their maturity.

30,916. Do you not think that the fishermen themselves would abstain for their own interests from fishing when they knew that it would be injurious to their own interests ?—I would not say that.

30,917. As regards the brand, are you of opinion that if the municipality here were to undertake the inspection and the branding of herrings that that would meet all the wants of the fish-curers ?—I do not think it would. The difference between a municipal brand and the Government brand would be very material in the estimation of the public. I think there is everything in the fact of its being a Government brand. Besides that, I do not see the practicability of having a municipal brand carried out as efficiently as a Government brand. For example, you might instance herring-fishing stations that have no corporations at all. In Wick the municipality only embraces 1,500 inhabitants. When you go to Pulteney you are beyond the municipality altogether, and if you go to Lybster, Helmsdale, or Dunbeath, there are no corporations whatever.

30,918. If they thought it so very desirable to have a responsible inspection of that kind established, it of course would be done ?—I do not see the necessity for introducing any new system at all.

30,919. That is another point. Would it be of service if introduced ?—I think no new plan would be as well as the present system.

30,920. You state in your paper here that certain curers took exception to the fee as being too high, and as making them pay too large a share of the expenses of maintaining an establishment from which they derived little benefit beyond that obtained from the official stamp upon their herrings. Do you think that is a valid objection ?—I think it is rather hard to make Wick pay between 1,200*l.* and 1,500*l.* a year for the herrings that are cured here.

30,921. But it would be rather hard that I living in the south of England should pay these fees for Scotland ?—You do not do it.

30,922. We contribute in England to the expense. It is paid out of the Estimates ?—There are 26 officers, and the salaries of those officers does not come to more than from 3,000*l.* to 4,000*l.*

30,923. Do not the accounts of the Fishery Board include superintendence and various other items far beyond what is paid for by the fee levied upon branding the herrings ?—Perhaps so.

30,924. (*Mr. Caird.*) You limited your answer to the cost of the brand alone ?—No, to the salaries of the officers as well.

30,925. (*Prof. Huxley.*) You seem to forget that there is an inspecting vessel employed by the Fishery Board, and a great number of other expenses to be provided for ?—With regard to the inspecting vessel we consider that the steamer here is more of an incumbrance than otherwise. Except when we had Capt. Macdonald here we have always regarded these vessels as injurious to us.

30,926. Why so ?—Because, instead of going out to the fishing grounds with the fishing boats and encouraging the fishermen, and giving them notice of the shoals of fish, the steamer we have here now has laid in the bay for weeks without once accompanying the fishing boats. In addition to that, she once saw, about two years since, a boat perishing under her lee without making any effort to save it. The cruelty of doing so was represented to the captain, and he said he did not interfere because it had not been officially reported to him that the boat was in danger. The fishermen further complain that when the wind is in a particular direction, and they require to beat out of the bay, the steamer is an incumbrance to them rather than an assistance, and that she is practically injurious to the promotion of the fishing. (*See letter from Lieut. Challis, R.N., in Appendix.*)

30,927. I see it is stated in your paper here, to return to the subject of the brand, that the Government brand gives no legal guarantee ?—We were under the impression that it did.

WICK.

J. Mackie.

August 1864.

30,928. But your statement is that it did not?—Two years ago there were some herrings sent that were defective on reaching Stettin, and they were cast.

30,929. Then in what respect can the brand be better than one that would be put on by the local authorities?—Only because it is a Government brand.

30,930. Do you think that sounds better to foreign people?—Yes.

30,931. Without really being more effective?—I think it is more effective.

30,932. Have you formed any opinion about the expediency of enforcing the Convention Act here?—I think that the Convention Act generally applies to cases of trawling in decked boats.

30,933. There are a great many regulations about lighting the boats, and so on?—I think it is of great importance to have the boats lighted, and I believe that is almost universally neglected.

30,934. Are you aware whether foreign boats are usually here during the fishing season?—There are not many of them.

30,935. But there are always some?—Yes, there are always some. The French boats come very often to buy herrings. As Mr. Laing remarked, there are bounties paid in France to the French fishermen. A case occurred here not long ago. A French vessel came to this coast; she had the usual supply of nets and barrels and salt for the purpose of curing, but she bought herrings here; and since then she has proceeded to France and discharged her cargo without having once wetted her nets. A larger number of vessels come to Fraserburg and Peterhead, and they receive the bounty afterwards on the faith that they have caught the herrings themselves.

30,936. Are you of opinion that there are French boats fishing here every year?—Yes, two or three of them at any rate.

30,937. So that if that is all that is required for enforcing the Convention, they do exist here?—Yes.

30,938. Then there is nothing to prevent the Convention being enforced so far as relates to the appearance of French boats?—No.

30,939. Yet it does not appear that the regulations contained in the Convention Act are carried out at all?—Not at all. I think it would be of the utmost importance if that part of it with regard to lighting was insisted upon.

30,940. You say in your paper: "In the matter of statistics it appears to me that an improvement can be made;" in what way would you suggest an improvement?—I think I have suggested it in that document itself.

30,941. From what you know of the way in which the catch of fresh fish is estimated, would you say that you could depend upon the statistics in reference to fresh fish?—I think so. I have reason to know it, because for several years I have adopted a test of my own for discovering the actual amount, and I have compared my returns with those of the Fishery officer. My figures have seldom shown more than a few hundred barrels difference at the close of the season when compared with those of the Fishery Board.

30,942. Would it not be a matter of importance that some accurate statistics should always be gathered?—I think so.

30,943. So that it would be important to have somebody to take it in hand and set up an accurate system of statistics?—I think the present staff is sufficient for the purpose.

30,944. Do you think the mode adopted by the Fishery Board of collecting statistics insures accurate returns?—I think their herring statistics are practically correct; but I have not much confidence in their statistics with regard to the catch of cod. I do not know how it is possible with the present mode of collecting statistics to come to an accurate approximation. I know that the quantity caught off the coasts of Caithness is far greater than it is estimated.

30,945. Does that apply to haddocks as well?—Yes, my observation would apply to haddocks, but I do not think they take notice of haddocks in the statistics.

30,946. Then there are no trustworthy figures to show the progress or retrogression of the haddock fishery?—Not as regards haddocks; but the returns are trustworthy as regards herrings generally. They do all in their power to obtain them accurate. But I think you will find a suggestion in the document which I have handed in, by which the work would be much more effectually done.

The witness withdrew.

J. Bremner.

JOSIAH BREMNER called and examined.

30,947. (*Mr. Caird.*) You are a fish-curer here?—I am.

30,948. We have been making an inquiry into the operation of the Government brand, and we are desirous of ascertaining the opinion of the curers as to its advantage or disadvantage. What is your opinion upon that matter as a curer?—My opinion has long been that it ought to have been done away with long ago.

30,949. Have you been for many years a curer here?—Yes, for upwards of 30 years.

30,950. Then you do not think that the brand has been of any advantage to you as a curer?—No, I think it is a great disadvantage.

30,951. Will you give us the reasons on which you form that opinion?—My reason is, that we have now to pay for it, and besides that, when there are two curers curing for the brand one will, perhaps, cure so that he just gets the brand, while the other will cure his fish very well indeed; but the moment the brand goes on, both in the estimation of the buyer are of the same quality, because they are Crown full brand herrings. The system of branding does not encourage anything like emulation.

30,952. Do you think there is a considerable difference, according to the mode in which the cure is effected, in the quality of the cured fish?—I do not only think it, but I am certain of it.

30,953. And do you think that the existence of the brand does away with those careful operations which a man's self-interest would lead him to adopt?—I do.

30,954. Do you cure largely for the foreign market?—I cure mostly for the foreign market; it is never a very large quantity, but yet I cure a pretty fair quantity.

30,955. Would you have any difficulty in selling your herrings in the foreign market if they had no brand?—I would take all the risk of that; I am not afraid of it.

30,956. That is if the brand were done away with altogether?—Yes, it must be done away with for all.

30,957. You would then sell in your own name as a curer?—Yes.

30,958. Do you think that in doing so no injury would be done to you as a curer?—I am satisfied of that.

30,959. Do you think the brand, by the power it gives the Fishery officer of inspecting and imposing the necessity of filling the barrels in a certain way or otherwise, operates injuriously upon the cure itself or not?—Yes, they generally require them to be filled so full as to be injurious to the fish.

30,960. If you were left entirely to your own opinion as to how you should cure and fill your barrels, and so on, do you think you would insure a better cure than by having them exposed to an inspection of that kind?—I think so; I am sure many would do it.

30,961. For their own self-interest?—Yes.

WICK.

J. Bremner.

1 August 1864.

30,962. You would do your best to get a good marketable article ?—Certainly.

30,963. Is that an opinion which you find is shared by many of the curers in Wick ?—Yes, by about three-fourths of them, I think.

30,964. Is it an opinion that is progressing in Wick ?—I think it is.

30,965. Are the people beginning to feel more and more that there is less necessity for the retention of a Government brand ?—We have found latterly that it is useless, because after getting the Government brand we have the purchasers examining the barrels for themselves, and in the continental markets some of them have been rejected.

30,966. Then do you find that the barrels which have the Government brand upon them are just as much liable to be rejected ?—Those which I speak of which were rejected, had the Government brand upon them.

30,967. Then the Government brand does not protect you from having the fish rejected ?—No, it appears not.

30,968. Has it any compensating advantages ?—None, in my estimation.

30,969. Can you speak at all as to the progress of the white-fishing on this coast ?—No.

30,970. You do not cure white fish ?—No.

30,971. Do you cure the winter herring as well as the summer herring ?—Yes, I cured some last winter.

30,972. Were they in good condition ?—Yes, but they were not a very fine article.

30,973. As a curer, do you think it is likely to become an important fishing ?—Yes, it appears so from what has been going on for the last two seasons; but the fishing is only in its infancy yet and there cannot be much said about it.

30,974. (*Prof. Huxley.*) Is there any considerable variation of quality among the herrings which receive the full Crown brand ?—Yes, a good deal.

30,975. Is there any corresponding variation in the price in the market ?—I dare say not; unless, as I said before, there happens to be a falling market. If there is a rising market the same thing does not apply.

30,976. You were speaking just now of a particular mode of packing the herrings. You said the Fishery officers required the barrels to be packed too full ?—That is my impression, and I think it is injurious to the fish.

30,977. If you were allowed to pack the barrels more loosely do you think the herrings would sell better ?—My opinion is that the fish would be much better.

30,978. And consequently they would sell better ?—Yes.

30,979. What do you think about the question of close time ?—I think that such a thing ought never to have been established ; that is my own opinion.

30,980. Do you think that that is another restriction on the course of trade ?—Yes.

30,981. Do you think there would be any advantage in having a close time in the months of May and June ?—I do not think so.

30,982. You would not care to have any sort of guarantee at all upon your barrels ?—I think the curer's name ought to be a sufficient guarantee for them. I do not see what exception ought to be made in the case of herrings. Let the character of the person who cures them be the guarantee. I was of that opinion long before there was a fee charged.

30,983. The system of branding arose out of the bounty ?—Yes, that was the commencement of it.

30,984. And in point of fact it is a bounty still ?—It is a bounty.

30,985. It is a certain amount of Government money expended in giving advantages to a particular trade ?—It is not in that way that any money is expended, it is expended in keeping up a staff elsewhere. We give them more money than they pay for branding the herrings in Wick.

30,986. Do you think that the money goes to the Government ?—It goes to keep up the Board altogether. I do not know where it goes, but I know we pay more money than is sufficient to keep up the staff they require here.

30,987. Would it be practicable, if you found it to be useful to have some kind of inspection, to set it up among yourselves ?—I have no doubt if it were found useful.

30,988. And supposing it were found to be useful and beneficial, could you do it at less expense than fourpence a barrel ?—Yes, at less than half of it.

30,989. So that if you were empowered to organize a local board of inspection you could do it out of your own funds and be released from a large proportion of the tax ?—Yes.

The witness withdrew.

D. Davidson.

David Davidson called and examined.

30,990. (*Mr. Caird.*) You are a fish-curer here ?—I am.

30,991. What is your opinion with regard to the advantage or disadvantage of the continuance of the Government brand upon herrings ?—Well, I think that the brand is very useful. I have been curing herrings here for more than 30 years, and of course I watched the trade over all that length of time, and I think that the brand has been of the greatest possible advantage.

30,992. In what way have you found it to be of advantage ?—I refer particularly to a recent improvement, and that is the special brand, separating the full from the spent fish. Before that was established the fish were generally packed promiscuously and they could not at all compete with the Dutch fish in the foreign market, as the Dutch were in the habit of selecting their fish from the very best of their herrings. After the full brand was introduced the trade experienced the greatest possible benefit in the German markets. I recollect when the export of herrings from this coast to Germany did not exceed 5,000 barrels, speaking from memory, and now it is about 80,000 barrels a year. I have also the authority of the German herring dealers for stating that at the present moment the Scotch herrings with the full brand are even preferred to the Dutch herrings in Stettin.

30,993. Have the Dutch any government brand upon their barrels ?—They have no brand exactly, but they mark each kind with an M.

30,994. With a curer's mark ?—Yes.

30,995. There is no Government brand there ?—Not as far as I know.

30,996. Then it would appear that the Dutch, not having a Government inspection, rely more than you upon a system of separating one class of herring from another ?—They did.

30,997. Would you not from self-interest have done that without the Government helping you ?—We never did it until the Government insisted upon the brand.

30,998. But now, knowing the advantage of it, would you continue it whether the herrings were branded or not ?—Of course.

30,999. Then the brand is not necessary to enable you to continue that which you believe to be beneficial to your own interest ?—No. I could buy herrings by a written contract binding the curers to separate the herrings, but it would never be done perfectly. They only do it perfectly when they know that they have to subject their barrels to the Fishery officers.

31,000. Could you not do that by agreement ?—It would involve our frequently going into a court of law. They would just tell me to take the herrings if they were not pleased with them. I should sue them for damages, but I do not care about being put to that trouble and expense.

31,001. Does the Fishery officer, by inspecting the fish, insure that this is done better that you could do

WICK.

D. Davidson.

1 August 1864.

by any other means?—It is done in that way as perfectly as any human institution does any other thing. There are some exceptional instances where herrings get the Government brand, and are subsequently found to be faulty. Some of the officers may be remiss in their duty, but that very rarely occurs; years and years pass by in which there is not a single parcel of Crown-branded herrings objected to.

31,002. You have stated to us that one advantage you have derived in consequence of the introduction of the Crown brand consists in the separation of the different qualities of the herrings?—Yes.

31,003. Is there any other advantage?—All the foreign correspondents I have tell me that the Government brand is of the greatest possible benefit to the trade.

31,004. Do they send their agents here to buy the fish?—They come themselves or appoint agents.

31,005. Are they not acquainted with the different curers here and the quality of the cure?—Of course they are; but they must go and inspect the herrings, and it is not every one that can judge of a barrel of herrings by looking at it.

31,006. Is not the man who buys the herrings as likely to inspect them as the Government inspector?—If the buyer were to purchase herrings without the brand, he would find the greatest difficulty in getting the best possible article. The curers might fill their barrels too slightly, or mix the fish without paying much attention to separating them.

31,007. Would it not be to their interest to prepare a good marketable article that would procure a good price?—Of course it would; but the orders for the herrings come from distant places. For instance, in Stettin or Dantzic, there are very few herrings consumed; the orders come there from Warsaw or the interior of Germany. The persons there who buy the herrings, unless they were aware that they would get Crown-branded herrings, would only buy to a limited extent; and the same class of men would not engage in trade, because they would be so liable to be imposed upon and be served with a bad article.

31,008. Are the Crown branded herrings ever rejected in the foreign markets?—Perhaps there may be exceptional cases of that sort once in five years.

31,009. Then there is nothing in the brand itself that prevents them from being rejected?—Some of the largest Prussian dealers told me that as a rule it was held in a court of law there that if a man sold Crown-branded herrings and delivered them Crown-branded herrings, that was held to be an acquittance of his obligation.

31,010. Has any case arisen in the courts of Germany or Prussia, where the fact of the herrings being delivered as Crown-branded herrings was held sufficient to acquit the seller from the obligation of delivering a good article?—There have been one or two exceptional cases where the officer has not examined them sufficiently, and where they have not turned out so well; but that might occur in anything; no human institution is perfect. I may likewise mention that those connected with the herring trade, the large dealers, say that we have almost nullified the Dutch fish, so that it is now a mere bagatelle. The Norwegian curers have not succeeded as well as we have, also on account of the brand. If there was no brand there would be no regulation as to the size of the herring barrel. Red herrings are not branded, and the people who manufacture red herrings make the barrels 25 gallons, 26, or 28, according to their own taste, whereas the legal sized barrel must be 32. If there was no brand, and a man from Warsaw sent an order for 1,000 barrels, he would not know whether he would get them 25 or 32, which is the legal size.

31,011. But would he not rely upon the character of the man he dealt with, as in any other transaction?—Yes, I suppose so; but it is a notorious fact that the red-herring barrel is made of 25, 26, and 28 gallons, while only a very few of them are made of 30 gallons.

31,012. Is there any advantage with regard to the payment for the herrings, when you draw upon a foreign buyer, after having sold them with a Government brand?—Yes. I am a bank agent, and I can speak positively with regard to that. It gives the greatest facility for raising money here and in discounting bills. We often discount bills accompanied by a bill of lading. We should be very slow to advance money upon a bill of lading if the brand was not upon the cargo, and most other bankers would.

31,013. Then the brand gives an additional commercial value to the herrings?—Yes, an immense value; and it enables parties to get advances three months before the herrings are out of the sea.

31,014. How is it possible, if you only get the advances upon documents reciting that the herrings have the Government brand, how can the herrings not out of the sea be branded in any way?—You are confounding two things.

31,015. I want you to explain?—The party is bound to deliver the herrings as soon as they are out of the sea.

31,016. He could not conveniently deliver them before?—It is not I, but the curers and the buyers, who speculate; it is not the banker.

31,017. Bills are not discounted on documents signifying that the brand will be given; but that operation only takes place after the herrings are branded?—They are bound to deliver to the man who gives the money Crown full brand herrings.

31,018. Then in that case you depend upon the character of the man with whom you are dealing to fulfil the obligation?—Yes, by delivering full branded herrings.

31,019. It is a personal guarantee?—Exactly; but the money would not be advanced unless herrings were to be delivered with the brand.

31,020. (*Prof. Huxley.*) Do you know any other branch of trade in which anything like the brand is affixed to the commodity of the merchant?—No, I do not; it is an exception.

31,021. Does the herring trade differ so much from any other description of trade that it should have that peculiar privilege?—I think it has been the means of raising the trade to its present state of prosperity, and it would be injurious to do away with it. I hold it to be beyond a doubt that the fish-curer would not receive the extreme high price he does now if the brand were abolished.

31,022. But to take another example:—people buy wine in bottle, but they take the risk of the merchant supplying them with a good article?—Yes, I believe they do; but in that case they taste it.

31,023. Only an odd bottle or so?—There is one thing that makes the herrings differ from the importation of wine, or the stamping of linen, or anything else. We are sometimes forced to have bad herrings, contrary to our wish and all the care we can exert. On some occasions when the fish are weighty, and the boats get large shoots, and the day is hot, they are bad before they come to us, and no curer can make them good. A large boatload of herrings on a hot day will get into a state of fermentation, and their bellies will burst. If it were not for the brand, by some means or other those herrings would be made to look better than they really are, and would be sold in the foreign market.

31,024. Does not the same difficulty relate to wine? The merchant gets a bad vintage as well as a good one, and tries to pass it off?—I am not able to speak on that matter; I am not in the wine trade. I have had to do with the herring trade before the branding was introduced, and since, and I say the greatest possible benefit has been derived from the brand.

31,025. I thought the brand was established when the bounty was given?—Yes; but I speak of the special brand which was given since.

31,026. Do you think that great advantages have arisen from that division of the herrings under the

special brand?—Even when it was first introduced it created an immense improvement here. I have seen the herrings before the brand was introduced, and a great part of them was unmarketable.

31,027. Do you remember the period before the bounty was given for herrings?—Yes, I do.

31,028. When was the brand first introduced?—I think in 1814 or 1815. The first branding was by the Excise merely for the sake of the salt. I was working among the herrings when the brand was introduced. My father was in the trade before me. I was a boy then.

31,029. There can be no doubt from what you say that it is a great convenience to a peculiar branch of trade, there is no question about that; but the point to get at is, if there is anything in the nature of the trade that gives it a right to the privileges it enjoys?—If there were any foreign merchants here they would tell you that with that brand the herrings pass free from hand to hand with only 6*d.* per barrel profit. A bill of lading is given which passes from hand to hand for 6*d.* a barrel without any trouble. If it were necessary to have an examination of the herrings it would have a tendency to spoil them, because the barrel could not be made up tight again.

31,030. But the same advantages would accrue to many other branches of commerce by the institution of a Government brand?—I do not think that it is exactly so, because in manufactures they can make their articles good if they choose, but if they get bad herrings they can never make them good.

31,031. But manufacturers cannot make good linen out of bad flax. I wish to understand clearly why this brand is given. I can comprehend that it is an advantage to the trade in some respects to have a Government superintendence, but I do not see how the trade differs from every other trade in such a degree as to give it a right to that sort of superintendence which no other trade has?—The foreign merchants say they could not carry on the trade in the way they do without the brand.

31,032. Do you think that any kind of voluntary inspection could be established?—By no means. I think that would have very little influence. If the present system of branding were to be done away with, the best way would be to sweep the brand away altogether.

31,033. If that were done, how long would it disturb the trade before the foreign merchants would come to the place, and would learn to depend upon the brand of the individual curer?—Perhaps four or five years.

31,034. After that things would go on satisfactorily?—Yes; but I think it would never be of the same advantage to the fishermen as now.

31,035. Is there not a considerable demand for those herrings abroad on the Continent?—Yes, the demand is very large. We depend upon Germany almost wholly for the consumption of our herrings. The home markets are next to nothing.

31,036. The Continental market then must have the herrings?—Yes, but at their own prices. The great advantage of the system of branding is, that we can get more money for the herrings, and pay the fishermen more. It is a serious business to convey a barrel of herrings 500 miles into the interior of Germany and to have them rejected. At present, under the system of branding, it is only in very exceptional cases that the fish become bad.

31,037. Do you deal in cod?—Not now; I did at one time.

31,038. There is no sort of Government brand on cod, is there?—At one time they used to stamp them.

31,039. But of late years there has been nothing of the kind?—No.

31,040. Have you any difficulty in disposing of your cod?—Cod is a very different thing from herring; every fish is open and dried. That is very different from a barrel of herrings, which would take an enormous time to go through separately.

31,041. Are the cod sent loose?—Yes, every fish is sent quite loose.

31,042. But the buyer would not inspect every cod; would he not take his chance by taking a sample here and there?—Yes; but every one of them is seen by the people who land them. In passing from the buyer to the seller every individual fish is handled.

31,043. Did not that trade go on without any superintendence?—Yes.

31,044. Have you anything to say with regard to a close time?—With regard to the close time, I must say I came from Stornoway about 14 years ago. I had been curing there for upwards of 20 years. My opinion is that the close time which has been appointed for the Stornoway fishing is very injurious, and it would be very improper to extend the close time which they have upon the west coast here. The circumstances of the people along the western coast are very poor; some of them are almost starving, and yet the effect of this close time is to prevent people who are really in want of food from fishing the sea in order to obtain it.

31,045. (*Mr. Cairdl.*) In your opinion should the close time be entirely abolished, and the western coast of Scotland be placed upon the same footing as the east coast?—I think so; although, perhaps, it might be found desirable to have a close time from the 1st of April until the 20th or 25th of May.

31,046. Are there any circumstances on the west coast which place it in a different position from the east coast?—It was considered that the fish were not fit for food, but they are fit for bait. My own opinion is, the regulation enforcing a close time ought to be swept away altogether.

31,047. Do the fishermen complain of it?—Yes. At Stornoway they told me last season that there were times when they could get from 10,000 to 20,000 and 30,000 barrels of herrings if they had liberty to fish.

31,048. And yet they were starving and were not allowed to fish?—Yes.

31,049. When should the fishing commence with advantage to the fishermen and to secure good fish being caught?—Not before the 20th or 25th of May. The present close time ends on the 20th of May, and that would be a suitable time to begin.

31,050. They are allowed at present to begin then?—Yes. They might have a close time from the 1st of April, but whether it should extend so long or only for 20 days might be a question. I understand that before the 20th of May the fish are very bad.

31,051. How long are they poor and inferior?—They are poor on the 20th of May, but they improve when June commences.

31,052. When do they begin to get worse?—About the month of April. They are pretty good in the winter.

31,053. At what time could the fishermen have caught that additional quantity of fish they spoke to you about in Stornoway?—In December and January.

31,054. In the winter fishing?—Yes, similar to what they get here.

31,055. That is now entirely cut off from them?—Yes, unless they commit an illegal act. If it is difficult to arrange about a close time, I should say sweep it away altogether.

31,056. Is the quality different of the Stornoway herrings as compared with those you get here in the winter time?—The herrings we got there were very fine. We had the finest herrings in the world in June.

31,057. Do you cure them?—Yes.

31,058. For the foreign market?—Yes.

31,059. Did you brand them?—We had no time to keep them for branding; we wanted to ship them off as soon as we got them.

31,060. Then you did not find any difficulty in consequence of the want of branding?—A great quantity were thrown away because the fish were

WICK.

D. Davidson.

1 August 1864.

ticklish. They were quite a speculative article; sometimes we got nothing for them and sometimes we got a large price.

31,061. Is there a large quantity cured there?—Yes, 55,000 crans were got in the month of June.

31,062. (*Prof. Huxley.*) Do you know the Isle of Skye?—I have been there, and I know it. The fishermen there are very poor, and the close time has affected them very injuriously.

31,063. During the last winter were they not entirely prevented from catching herrings?—Yes, but they did it "under the rose." What I say is, that if there is any difficulty in arranging a close time, let it be done away with, and throw all the fishing open.

31,064. Is it within your knowledge that the circumstances of the fishermen of the Isle of Skye are very poor?—Yes.

31,065. What was their condition last winter?—I read in the papers that they were really starving. It is not a good fishing island, however, the Isle of Skye.

31,066. Still there was a good deal of herring there in the winter?—There was a good deal for bait, and some years they have had plenty to cure.

31,067. Has the prohibition from catching this fish and catching the codfish through having no bait been a heavy blow to them?—Yes.

31,068. Why should any difference be made between the east and the west coasts of Scotland?—I do not know.

31,069. Are you aware that at Anstruther, a winter and a summer fishery go on every year without one affecting the other?—Yes.

31,070. Then why should the winter fishing be prohibited on the western coast?—I believe it was to protect the Loch Fyne fishing. I was at Anstruther and Dunbar in 1816, and there was a double fishery then.

31,071. A winter and a summer fishery?—Yes. There was an immense fishing there in 1816.

31,072. Has that continued ever since?—One year they have a good fishing and another it is bad.

31,073. It does not appear to have entered their minds that one fishing is injurious to another?—No, I think it is a different fish they catch in the different seasons.

31,074. You think there are two descriptions of herrings?—There are great varieties of opinion about that. Although we have caught herrings on this coast during the last two winters it is not my opinion that those herrings are always there. My opinion is that if the herrings had been present on this coast in such bodies as they were during the last two years they would have been discovered.

31,075. What led the fishermen here to expect the appearance of herring in the winter?—I suppose it was the general appearance which shows the presence of herring and also the fact that some of the men were using old nets to catch herrings for bait and they were surprised to find such a quantity, and then they shot the proper nets and got a good take.

31,076. What makes you think they were not here before?—At one time there used to be immense bodies caught up in the neghbourhood of Burntisland, but now they have all disappeared.

31,077. That is high up in the Firth of Forth?—Yes. They have often caught them at Anstruther, but there has been almost no fishing for herrings in the Forth of late years. I am inclined to believe that for two or three years they disappear, and then come again as they have done here.

The witness withdrew.

P. Murdo.

PETER MURDO called and examined.

31,078. (*Mr. Caird.*) Are you a curer?—Yes, and I am the son of as old a curer as there is in Caithness. My father happened to be a curer in Caithness for 40 years.

31,079. Have you had a long experience as a curer?—Yes.

31,080. Is it your opinion that the continuance of the Government brand on cured herrings is desirable and advantageous to the fisheries?—I will state this: during my father's time he was connected with about as extensive a firm of curers as there was in the north of Scotland, named James Miller and Sons, of Leith. My father was their manager and friend for years. A great quantity of the fish they had were cured, and a great many more were purchased by my father for Messrs. Miller, and sent to Ireland without the brand. We made up our own herrings as carefully as we could, and we found we could send our own cure without a brand as advantageously as we could those that we purchased with the brand.

31,081. That was for the home market?—Yes, the Irish market.

31,082. But with regard to the foreign market, how would the case be there?—My father bought for a Lisbon company, an extensive company on the Banffshire coast, of which he was agent. He had to purchase the herrings branded, but when he was anxious to get early into the market to compete with other merchants he would take several cargoes unbranded, selected from out of a careful curer's stock; he would take them on their character and on looking at an odd barrel or so by a cooper of our own. They were sent into the market, and I suppose they would obtain the same price as those of his neighbours.

31,083. Would the want of the brand lead you to be more particular in the selection of your coopers and curers?—Yes.

31,084. Would it make you more active in the superintendence yourself?—Yes. If I cure for a particular market, and make them up carelessly or indifferently, then I must suffer for it. The more particular and more careful I can make up my cure for the market the better it is for me, because I suppose that in that case the parties who purchase from me will come to me again next season.

31,085. Do you think the foreign merchant who comes here would not soon discover whether he could rely on the character of the curer as well as upon the Government brand?—He might be deceived for one season, but I should not expect that he would be deceived for two seasons in succession.

31,086. (*Prof. Huxley.*) You seem disposed to let everything go to an open competition?—Yes.

31,087. You would have every man trust to his own skill and to his own name?—Exactly. I suppose the nature of the institution of the Fishery Board was this:—When the fisheries of Scotland were in their infancy, the Government guaranteed a bounty in order to enable deserving struggling men to get into the trade. They gave them a bounty of some four shillings a barrel, which enabled them probably to get the steam up. The trade was in its infancy then, but afterwards it became improved. It was just like the growth of children, they begin to creep first, and then they get hold of the wall and walk, and then they begin to swagger.

31,088. You want now to get rid of the Government leading strings?—I think we can do without the protection of the Fishery Board, because our credit is good.

31,089. Does the existence of the brand oblige every fish-curer to have recourse to it whether he wishes or no?—That just depends.

31,090. But he must have it for the foreign market?—It depends on circumstances. If there is a small fishing, if the fishing is slack and backward, the merchants will give you the same money for unbranded herrings as they will give you for those which are branded; but when we come to a general or heavy fishing then they say brand them. On the Continent the German buyers often hold surveys on our branded fish, and inspectors have been over from the Fishery Board, specially sent from Scotland, to inspect them. Perhaps they may have lost the pickle,

and the merchants have said, with the sanction of the inspector sent by the Fishery Board, "These herrings require five per cent. more to make them sufficient for the market." Now that would not be the case if the market was scarce of herrings, and there was no deficiency in the demand. Anything will sell in a case of scarcity, but it requires a very good article to sell in the foreign market when the supply is good.

31,091. Then you think that the existence of the brand gives no advantage to the fish which are branded when there is a great demand?—When the demand is great the stamp might do as well on the bottom of the barrel as on the side of it. We brand the barrels on the bottom with our private marks, and my big M. will pass for as much value as Mr. Primrose's full Crown.

31,092. Do you think that the abolition of the brand would cause any great disturbance in the trade?—No; I think not. Why should you not protect the farming interest by a brand as well as the fishing interest. Suppose a farmer comes into Wick with a crock of butter and I purchase it, if I get a good crock of butter from him, in all probability I should deal with him again next time; but if he gives me an inferior article I should pass him by and select another farmer.

31,093. Do you think the fish merchants would deal with you in the same way?—Yes. If we cheated them one year, they would be certain to pass us by the next, and our trade would soon come to be self-supporting without the surveillance of any officials from the Fishery Board or the Government brand. It is not the 13,000*l.* that is voted by Parliament to promote the fisheries that I object to; it is the principle, and the sterling principle, and the honesty of the trade, that ought to support the trade, and not their 13,000*l.*

The witness withdrew.

JOHN CLEGHORN called and examined.

J. Cleghorn.

31,094. (*Mr. Caird.*) Are you connected in any way with the fisheries here?—No.

31,095 Have you any interest in the fisheries?—Not much.

31,096. Have you had an opportunity of ascertaining in any way how the fishery interests here are progressing?—My attention was called to the fluctuations in the fishery some years ago, and I set about inquiring into the causes of those fluctuations; and I have had my attention particularly directed to the herring fishery ever since.

31,097. What is the result of your inquiry and observation?—The result of my observation has been to show that the fluctuations in the fishery have been caused, not by a greater or less number of herrings being on the co st in one year or another. What I mean is, that there has not been a greater quantity in some years than there has been in previous years; but the fluctuations are caused by fluctuations in the netting.

31,098. Do you mean in the quantity of nets used in catching the herrings?—Yes, it is there that the fluctuations exist. As far as I have been able to ascertain there appears to have been a constant decrease in the size of the shoals of herrings about which the fishermen are engaged.

31,099. A decrease in the size of the shoals?—Yes.

31,100. I thought you said just now that it depended on the netting and not upon the shoals?—There has been a constant decrease in the quantity of herrings off our shore; but some years we get a larger quantity of herrings caught and taken ashore than in other years. It has been generally supposed that this large quantity is owing to our getting herrings from some unknown region.

31,101. Is it not a natural conclusion that if the fishermen catch more herrings there are more herrings on the coast?—No, it is not.

31,102. Is it not so if the same industry has been employed in procuring them?—No, it is not.

31,103. How do you contradict that?—I contradict it by the statistical tables which have been furnished by the Fishery Board.

31,104. (*Prof. Huxley.*) Those very statistics are all furnished by the results of the catch, are they not?—Yes.

31,105. Then are you not arguing in a circle?—In addition to those statistics, I have taken into account the quantity of nets used and the number of boats employed.

31,106. (*Mr. Caird.*) Is there any fact that you can place before us?—I have some facts here. I have here the statistics of last year of the herring fishery which were published here, and I see in them a list of the boats and the number of crans taken by the boats fishing from Wick for the last 27 years. I have omitted the first year, and I have divided the table into two parts. I have calculated the number of boats employed during the first 13 years and during the second 13 years, together with the average number of crans taken in each period, and the total number of crans; and the result has been that in the first 13 years there were 10,202 boats, the average crans were 1,457, and the total number of crans 1,134,302.

31,107. That is in the first period of the 13 years?—Yes.

31,108. What conclusion do you draw from that as compared with the second period?—In the second period there were 13,522 boats, and the average was 1,201¾, and the total quantity 1,235,678 crans. Thus with 3,000 more boats, and perhaps from 30,000 to 40,000 more nets we only took 10,000 more crans of herrings.

31,109. What is the conclusion you draw from all that?—The conclusion I draw is that the shoal of herrings has not increased, but that it has diminished.

31,110. Is there any remedy you can suggest for that?—Well; I think we must be prepared to show that that is really the case, because it has been called in question.

31,111. But suppose it is admitted, what conclusion do you come to from that?—I come to the conclusion that some steps must be taken to secure a permanence in the catch of herrings if we wish to prosper, seeing that we have built a town on the faith of the herrings being eternal and enduring for ever. I think it is the duty of the Government, or of some other body, to take some steps in order to secure their permanence.

31,113. What steps would you take?—Naturalists are not prepared to state whether the fish spawn twice a year.

31,114. (*Prof. Huxley.*) I beg your pardon, I think they are?—Do fish spawn twice a year?

31,115. Not the same fish, but the herrings spawn twice in a year. There are two spawning times.—I have been noticing the herrings for the last 40 years, and I believe we have a spawning time for the herrings every month in the year. That being the case, I think it would tend to their permanence if we were prevented from fishing them at one of the spawning months.

31,116. (*Mr. Caird.*) That is to say, for one month of the year?—Perhaps for a longer period than that; but I am not prepared to say what steps should be taken.

31,117. You merely wish to call the attention of the Government to the fact?—Yes. I wish to call their attention to the fact that there is a change going on, and that it has been going on since we began to fish, and that if it continues to go on we must in the course of time arrive at a period when we shall have no herrings to fish.

WICK.

J. Cleghorn.

1 August 1864.

31,118. (*Prof. Huxley.*) When you speak about the herring spawning in every month in the year, do you mean that they are the same herrings which spawn then?—I believe that we have races of herrings that spawn in January, February, March, April, May, June, July, August, September, October, November, and December.

31,119. In every month you find a certain number of herrings spawning?—Yes.

31,120. But that does not interfere with the fact that a great and maximum spawning takes place in certain months of every year?—We have much larger shoals of herrings which come to maturity in the month of August.

31,121. And again in the month of February?—Yes. The greatest amount of herrings we take is on the 12th of August. They come to maturity with a regularity almost beyond all belief, without the aid of these statistics to throw a light on the fact.

31,122. Do you think that, supposing you were to stop the fihing at one period of the year, all the fish we should not catch would remain for us to catch another time?—No; but I think all that nature has done to diminish the herrings is as nothing at all compared to the quantity we destroy by netting. We employ at the present moment 36,000 nets, or about 1,000 miles of netting every evening during the fishing here, and we are sweeping night after night the district in which alone the herrings can spawn.

31,123. Have you happened to see the report of the Commission which sat two years ago, and which deals with that very question?—Yes.

31,124. The reporters there are of opinion that the herrings destroyed by men are as nothing compared to the quantity destroyed by other fish and by porpoises?—With all respect to the Commission I do not think that they had facts to bear them out in the conclusions to which they arrived. In the first place, they take it for granted that the cod constantly lives upon herrings, and that every day he is destroying herrings.

31,125. During a certain period of the year?—I think the cod, like a number of other rapacious feeders in the sea, take herrings when they can get them more easily than other food. I think the cod acts as we do. In the spawning season, when the herrings congregate in large masses, I believe the cod do destroy a great number of them, and so also do the gulls and other birds. But at the same time I regard what they destroy in that way as nothing at all. All that they do is rather healthy than otherwise, as it leads to the promotion of the health of the general body of herrings, and has no tendency to make any perceptible diminution in their numbers. On the contrary, it keeps them in a healthy state. In the first place, they take the weak and sickly sooner than any others.

31,126. It has been stated to us in the course of the evidence, that a winter and summer fishing have been going on at Anstruther for the last 40 years; are you aware of that?—Yes.

31,127. Yet there has been no decrease in the number of fish found there?—But I think the period has now arrived when that decrease will be found.

31,128. Then your opinion is formed rather as a matter of logic than experience, as a matter of reasoning rather than based upon positive data?—Yes; from the statistics I have seen I believe that the herrings in the Firth of Forth are done, and that the fishery is finished.

31,129. Finished?—Yes. I am positive from what has been going on there that it is finished.

31,130. Why there is a large fishing going on there at this moment?—No, there is not, begging your pardon.

31,131. Not down off Dunbar?—They may be getting five or six crans in a morning, but it is a very small fishing. It is not what it used to be. They had a large fishing at Burntisland at one time, and it has altogether disappeared.

31,132. The statistics of the Fishery Board show a very different state of things from that which you mention?—I do not see how they can. All my statistics prove that what I say is correct.

31,133. Last year, according to this return, there were 36,943 barrels cured in the Eyemouth district, and 23,000 barrels cured in the Anstruther district?—Yes.

31,134. Is that the fishing you refer to as coming to an end?—Yes; in 1860 they took a great deal more. In previous years they took 48,000, 23,000, 21,000, and only 8,000 last year.

31,134*a*. That is not like the fishing coming to an end?—I think it is, if they took 48,000 one year and only 8,000 last year.

The witness withdrew.

J. Low.

JAMES LOW re-called and examined.

31,135. (*Mr. Caird,*) Can you give us any information with regard to the falling off in the herring fishery in Dunbar?—It was a light fishing at Dunbar last year, but it was an exceptional year.

The witness withdrew.

J. Bremner.

JOSIAH BREMNER re-called and examined.

31,136. (*Mr. Caird.*) Can you tell us from your long experience whether the fisheries are carried on now with more or less spirit than they were in former years?—I think with rather less spirit.

31,137. What is the reason of that?—I think it is owing to the kind of boats and the bad harbour; the boats are afraid to go out in bad weather.

31,138. Then will the improvements in the harbour considerably alter that?—Yes.

31,139. Is there any difference in the men being paid wages instead of by the cran?—I think it makes them much lazier. For instance, a boat has four or five men, according to the size of the boat, but they are hired men, and we cannot get them to go out to fish as we wish. They are not as active as they would be if they were paid by the cran. Just now they are getting wages; they receive so many pounds each, and the master of the boat or the owner has all the advantage. However good a fishing they make, the men only get a certain amount, perhaps 4*l*., 5*l*., 6*l*., or 7*l*. a man.

31,140. Then the fishermen employed in the boat do not share in the catch of the boat in any way?—No.

31,141. That is limited entirely to the owner of the boat?—Yes.

31,142. And he makes his contract with the fish-curer?—Yes.

31,143. The men being generally paid wages?—Yes, some owners fix so much wages and so much chance; others pay the men wholly by wages.

31,144. Is that system a change from the system that previously existed?—I cannot say that it is.

31,145. Has it long been carried on in the same way?—Yes, ever since I can recollect.

31,146. Is there any disposition among the fishermen themselves to ask for a change of the system, are they anxious to get a share of the fishing?—Not very much: they themselves think it safer to be sure of a

certain number of pounds and have no more about it.

31,147. But do you think that if they had a joint interest with the owner of the boat it would prompt them to use greater exertion?—I think that would be the natural consequence. Mr. Davidson states that we cannot sell the herrings in the Baltic if they were not branded. I am not in the least afraid of that. A lot of hungry Germans will always like the herrings if they can get them.

The witness withdrew.

DANIEL STUART called and examined. *D. Stuart.*

31,148. (*Mr. Caird.*) You have heard the evidence of the previous witnesses?—Yes.

31,149. Is there anything you desire to add in regard to the curing or the operation of the brand?—I would sweep away the brand altogether.

31,150. Do you think there is no advantage in having it?—No.

31,151. In your opinion is there any disadvantage?—If the brand were done away with we should do the utmost in our power to cure to the satisfaction of the buyers, but we have no need to do that just now.

31,152. Do you mean that there is no motive for showing greater skill or using greater exertions?—None whatever.

31,153. If the brand were done away with that motive would come into play?—Certainly it would.

31,154. Is there anything else you are desirous of saying to us on the subject?—No.

31,155. Does the existence of a Government brand, when a curer is curing for the foreign market, compel him to make use of it whether he cares about it or not?—No.

31,156. But unless he brands his herrings he does not get the same chance of selling them as he would otherwise do?—Quite so, but he is not compelled to brand them.

31,157. Do you not feel obliged to have the Government brand, whether you care for it or not, simply because you would be placed at a disadvantage without it?—I am obliged to have it, but I do not care for it.

31,158. Then you are placed under an artificial disadvantage owing to the existence of this Government brand?—Yes.

31,159. One argument which is used to show that there is a desire for the brand is, that you continue to pay a fee for it?—Yes.

31,160. Then the effect of having them branded in that way is, in fact, to show that you want to have them branded?—Yes.

31,161. Whereas in consequence of the existence of the brand, you are obliged to take advantage of it in order to compete with other fish dealers in the foreign markets?—Yes.

31,162. Then is the amount of the fees paid an index of the feeling of the curers?—No, there are a few connected with the foreign buyers who desire to have the brand. Three-fourths of the trade are against it.

31,163. So long as it exists do you think you would be placed at a disadvantage in going to a foreign market if you were not to have it?—Yes.

31,164. You are obliged to have it whether you wish it or not?—Yes.

The witness withdrew.

JOHN MCADIE re-called and examined. *J. McAdie.*

31,165. (*Mr. Caird.*) I believe that you desire to add something to the evidence you have already given?—Mr. Davidson, in his evidence, spoke in reference to the Fishery Board. He said that if the Board were done away with that was the whole thing, and it did not matter how the branding was carried on—that the abolition of the Board was the great matter.

31,166. Is not that the feeling of the trade generally?—Yes, it is the Board which the trade is opposed to. It is from the Fishery Board that these non-practical rules issue to the practical portion of the establishment, namely, the Fishery officers.

31,167. You object to the Fishery Board more than to the brand?—Yes, because it is from them that these non-practical rules issue. I am not altogether decidedly opposed to the branding system if it could be reformed so as to meet the wishes of the trade.

31,168. But you think that the Board do not correctly interpret the wishes or interests of the trade?—They do not. As a proof of that I may state this last year, in January, we sent a petition to the Board of Fisheries requesting some alterations; those alterations were in reference to the filling of the barrels and the altering the bunghole. Yet that petition was refused by the Fishery Board; they would not make the alteration we suggested; but the first alteration we then wished to have was the cause of their entailing on the country the cost of a commission to Stettin and to the Baltic. Herrings which had the Crown full brand were rejected for being slack. The trade wished them to fall back again upon the weight test. That would have saved the necessity of any commission going out.

31,169. Is there anything else?—There was also a statement made that no money would be advanced upon herrings unless they were branded. That is not the fact. Every year there are cured in the Lewis islands from 20,000 to 50,000 barrels, and each year money is advanced upon those herrings before they are shipped. They are all of them unbranded.

31,170. In the same way as money is advanced upon branded herrings here?—Yes, the very same way. Money has been advanced both in this and in former years. There is another objection which the trade have to the proceedings of the Board at Edinburgh. The Fishery Board consider it right to adhere to any suggestions that are made to them by the foreign merchants, but they ignore the trade altogether. The foreign merchants were the persons who urged the extraordinary filling of the barrels which has been doing so much damage to the fish.

31,171. The foreign merchants did that?—Yes.

The witness withdrew, and the inquiry was adjourned to the 3d of August at Kirkwall.

Kirkwall, the Orkneys, Wednesday, 3rd August 1864.

PRESENT:

J. CAIRD, Esq. M.P. (Chairman). | Professor HUXLEY, F.R.S.

KIRKWALL.

JOHN MUIR called and examined.

J. Muir.

3 August 1864.

31,172. (*Mr. Caird.*) You are a fisherman here?—Yes, and I have been engaged as a pilot for nine years in the service.

31,173. Are you acquainted with all the different kinds of fish caught here?—Yes, quite well.

31,174. What are the principal fish caught in this quarter?—Cod is the principal fish; that is generally the great run of fishing, and we have herrings at this time of the year.

31,175. Have you any haddocks?—Yes, there are haddocks, but there are not many on this side of the island; there are generally more about Copinsha and Scapa Bay.

31,176. Are you acquainted with the fishing carried on in all parts of the island?—Yes, quite well.

31,177. Then my questions will apply to the whole. Have the cod and ling fisheries been increasing of late years, or have they fallen off?—I do not think they have increased for the last two or three years.

31,178. Have they kept as good as they were in former years?—They are pretty good, but not quite as plentiful as they were. There is good ling-fishing and cod-fishing about Stronsa.

31,179. Has the haddock-fishing been increasing or diminishing lately?—No, it has not done much.

31,180. Has it been falling off?—It has been falling off for the last two years.

31,181. What in your opinion has been the cause of that?—I really do not know exactly.

31,182. Are there many people engaged in it?—Not in the haddock-fishing, but there are a good many engaged in the herring-fishing.

31,183. Do you know if the haddocks have changed their ground at all?—They do change their ground.

31,184. Have they gone more into the deep sea?—They shift about; they go into the deep sea and off the banks now; they shift out and in. I have seen them in Kirkwall Bay caught on the hook and line, but we do not get any now.

31,185. Where do you find them now?—South of the banks of Copinsha and in Scapa Flow.

31,186. Outside?—Yes.

31,187. Are there plenty in Scapa Flow?—Yes.

31,188. Are there many people engaged in fishing at Scapa Flow?—Not many now; they are generally all engaged at the herring-fishing.

31,189. At this time of the year?—Yes.

31,190. But I am speaking of the regular time for haddock-fishing?—There is a good deal caught in the Flow then.

31,191. Are there more caught there now than there were formerly?—I do not think so.

31,192. Has the herring fishery much fallen off in the islands?—It has fallen off, but it has been much owing to the weather.

31,193. Has the weather been unfavourable to the fishing?—It has been very windy.

31,194. Whereabouts are the herrings generally found?—Generally from the Start at Lopness away down to the Skerries.

31,195. Is that outside altogether?—Yes, outside the country altogether.

31,196. Do not the herrings come into the bay at all?—They do about this time of the year; when the herrings set in on the coast then they come into the bay.

31,197. What kind of bait do you use here for the white-fishing?—We use the lug-worm, whelks, and mussels.

31,198. Is there a good supply of bait to be had?—Yes, there is plenty. Mussels are the best bait for the cod.

31,199. Were you in the habit of practising the cod-fishing more in former times than you do now?—A great many more sloops and boats were in the habit of coming and going from here.

31,200. What is the reason in your opinion that it has fallen off?—I do not know; they thought the sloops did not fish very well, and they got open boats for it, but they did not do so well.

31,201. Was there any bounty paid for the cod-fishing?—There is none now. There was a bounty for it when I followed it.

31,202. Was it a good fishing time when you followed it?—There was a great deal more fish.

31,203. Was it a good deal more followed then?—Yes, it was more followed.

31,204. Was that on account of the bounty?—Yes, to some extent, but the fish are not found as they were formerly.

31,205. The fish are not to be had?—Not in the same quantity, but they fish with long-lines now and mussels bait, and generally when they go out with one of the lug-boats they have one man to attend to the bait and another to attend to the line. That is the best way of catching fish now. But before we used to fish them over the vessels side with hand-lines baited with whelks.

31,206. Is the present method of fishing a more expensive method than you were in the habit of following in former years?—I do not think it is more expensive.

31,207. Is it more difficult?—It is more difficult.

31,208. Are there different kinds of boats employed in the fishing here?—Yes.

31,209. What are the different kinds?—There are both small and big; there are large herring-boats from 28 to 30 feet keel, and skiffs which are quite small boats.

31,210. Are there any decked boats employed in the fishing?—There are sloops for the cod-fishing; they are decked boats.

31,211. Have you any idea how many of them there are?—There is only one out from here, I believe. There may be one more from the north isles.

31,212. Are the boats and nets employed in the herring-fishing larger than they were formerly?—Yes, they are a great deal larger. They used to go with little boats from 18 to 20 feet keel, and now they are from 30 to 32 feet.

31,213. Do the boats from all parts of the island assemble where the herrings are expected to be?—They generally assemble in Shapinsha.

31,214. Are the herrings expected to be here all the year round?—We never try them in the winter time.

31,215. Have you no winter herring-fishing at all?—No.

31,216. Have you only a summer fishing in July, August, and the beginning of September?—Yes, they fish sometimes in Ireland or on the west coast in the latter part of June, and they get a good deal of herring there, the same as they do in the Lewis islands sometimes.

31,217. Are they in good condition when the early fishing begins?—Yes, they are small but fat.

31,218. Has winter fishing been attempted here?—None for the herrings, but plenty for the cod.

31,219. I mean for the herrings?—There is none for the herrings.

31,220. Is there any good lobster-fishing in these islands?—Very good.

31,221. Is it followed by many people?—They fish a good deal of lobsters in the course of the year with creels.

31,222. Is that a new thing?—Yes, it is a new thing here.

31,223. What were they in the habit of fishing them with before?—With nets.

31,224. Creels are pots?—Yes; they plant them near the shore and put bait in them, and the lobsters crawl in and cannot get out again.

31,225. Is the lobster-fishing increasing at all?—It has done very well. I do not think it is increasing.

31,226. Are lobsters found on all parts of the coast?—They are generally best about the islands where there is a good tide; they are not so good in the dead water.

31,227. Are partons or crabs much fished here?—There are plenty of partons.

31,228. Are they much fished?—Yes, they are caught along with the lobsters.

31,229. Is there no particular fishing for them?—No.

31,230. They are only caught along with the lobsters?—Yes.

31,231. Are they caught in the same creels?—Yes, and the same nets.

31,232. Is there any oyster-fishing here?—Yes, in Bay Firth and Tankerness and Deer Sound.

31,233. Are they fished diligently?—They can only catch them in calm weather, and they haul them up with the dreugh.

31,234. What is the dreugh?—It is a long seaweed that grows on the sea shore. It is like twine. They haul the oysters up with it.

31,235. Do the oysters stick to it?—Yes, and the small stones, and they haul them all up together.

31,236. Cannot they dredge them in the usual way?—No, they cannot dredge them on the hard ground.

31,237. Is it too rocky?—Yes.

31,238. There are no oyster scarps here?—There are plenty caught in a moderate way.

31,239. But there is no regular fishing?—No further than that they catch some in Bay Firth and Deer Sound.

31,240. Are there many caught there?—300 or 400 at a time.

31,241. What is your experience as a fisherman over a great many years? Do you think that the quantity of fish that can be caught on this coast is as great now as it was in former times?—I think it might be if it was well persevered with.

31,242. You have seen no signs of the sea falling off in the supply of fish?—None, but the fishing is not so well followed up, especially the cod-fishing, as it used to be.

31,243. What is the cause of that?—There are times when the codfish generally go off to the sea. They go off to the north side of Westra, and there plenty of cod, and large ones too, may be got; but they are not so good near inshore.

31,244. Have they been more fished inshore of recent years?—Yes; and I have seen them so close in that 28 score might be got in a couple or three hours.

31,245. Can that be done now?—No, it cannot.

31,246. Do you ever fish for cod with herring bait?—Yes, and capital bait it is too.

31,247. There will be a winter fishing to catch the herring at that time?—Yes, but the weather is rough in the winter time, so that there is no getting out with the boats.

31,248. (*Professor Huxley.*) Do you manage to catch a considerable quantity of cod in the winter time with your mussels?—Yes.

31,249. Do you think that you catch as many as if you had herrings for bait?—I think that mussel bait is as good for the cod as herrings.

31,250. Can you get plenty with mussel bait here?—Yes.

31,251. What time of the year do the herrings spawn on this coast?—Perhaps about three weeks after this.

31,252. About the end or the middle of August?—Yes, they spawn then. Perhaps we shall get a run of the spawned ones in about a week, and a fortnight after that we shall get full ones again.

31,253. Will they be spawning in September as well?—Yes, the run of the herrings generally comes from the northward.

31,254. In what sort of condition have those been which you get in January and February?—They are quite thin then.

31,255. Is there any cruiser up here when you are engaged in the herring-fishing,—any Government cruiser?—I never saw any only the Jean cutter. That used to attend the fishing a good while ago.

31,256. How long ago?—It is about eight or nine years since she attended the fishing here.

31,257. What is the size of the mesh you have in the nets here?—I am not exactly sure.

31,258. How many to the yard?—I cannot tell. I do not know exactly.

31,259. Does nobody look after your nets to see how large the mesh is?—I suppose they do, but the fishermen just make them of their own size, according as they think they can fish with them.

31,260. Do you make them any size you like?—Yes.

31,261. Do you light your boats when you go out at night?—We mostly have a light on dark nights; we put up a fiery brand if we see a vessel coming.

31,262. That is the plan you adopt?—Yes.

31,263. You do not carry two lights?—I do not think so. I never saw any of them carrying two lights.

31,264. Does nobody look after you to see how your vessels are lighted?—I do not think so, but they must keep a good look out for their own safety.

31,265. Do you think they do it for their own safety?—Yes.

31,266. Do any French boats come up here?—Yes, French boats and Dutch boats too.

31,267. Do they all come up here fishing?—Yes, and pretty close too.

31,268. They come within three miles of the shore?—I have seen them within two miles of the shore.

31,269. Have you ever been annoyed by their fishing?—No, I never was.

31,270. Were you ever interfered with by them?—No, never.

The witness withdrew.

JAMES WALLS called and examined.

J. Walls.

31,271. (*Mr. Caird.*) You were at one time engaged in the export trade of cod from these islands to Spain?—I was engaged in the curing.

31,272. In curing cod for exportation?—Yes, for exportation.

31,273. How many years experience had you of the cod-fishing in the Orkneys?—At that time I had 15 years or so. I was only five years engaged for the Spanish market. The rest of the time I cured for the home market.

31,274. Off what part of the islands were cod found in the greatest abundance when you cured?—On the south and north islands.

31,275. Were there many boats engaged then in the fishing?—Considerably more than are engaged now. I cannot give the exact number, but I should suppose there were about 100.

31,276. When did that business cease to be prosecuted?—In 1852.

31,277. What was the cause of its being stopped?—Partly because Mr. Anderson, of the Peninsular

KIRKWALL.

J. Walls

3 August 1864.

Company, who used to run a steamer, in order that the trade for the Spanish markets might be carried on, gave it up and ceased his connexion with the trade in the Orkneys.

31,278. It was not from any excessive charge of import duties, or anything that interfered with the sale of the fish?—No; it arose, I believe, from local causes in Orkney.

31,279. Was it a large export that was carried on?—About 600 or 800 tons a year were sent away, and sometimes more.

31,280. What were those fish worth a ton?—At that time they were worth from 12*l.* to 14*l.* a ton, shipped on board.

31,281. Has that source of income to the fishermen been entirely lost in consequence of the cessation of the trade?—Not as regards prices. Prices have advanced, but the quantity of fish caught is not nearly so large.

31,282. Has nobody taken up the trade since Mr. Anderson gave it up?—No, not for the Spanish market.

31,283. Was it not found a lucrative trade by Mr. Anderson while he followed it?—I am not aware, but I rather think not.

31,284. Had that anything to do with its abandonment?—I believe it arose from a bad system of management and from the prices.

31,285. Was the cure not considered satisfactory in the Spanish markets?—Yes.

31,286. Had the cure anything to do with the abandonment of the trade?—It was not so much the cure in Orkney as the carriage and cost of conveyance in Spanish bottoms.

31,287. Has any improvement been discovered in the mode of cure?—Yes, very great improvement.

31,288. Is the cure better now than it was then?—Yes it is.

31,289. But the Spanish markets have not been re-opened?—No, they go now by way of Shetland to Spain.

31,290. Is that because there is no direct communication with the Spanish market from here?—Yes, principally.

31,291. But it is still exported through Shetland to Spain?—Yes.

31,292. Has the fishing since that time much decreased?—Yes, by Orkney boats.

31,293. On the coast of the Orkney Islands?—Yes.

31,294. Are there no other boats which come on your coast now?—There are a large number of smacks from Grimsby and the south.

31,295. Then has the total catch increased rather than decreased by other means?—I suppose it is about the same.

31,296. Is the quality of the cod the same as it was?—They are better I think.

31,297. Do you know whether if the fishing were zealously practised the quantity that would be taken would show any sign of diminution?—I have no doubt that if the fishing was properly conducted and carried on that it would be greatly increased in the Orkneys.

31,298. At what season of the year is that cod-fishing carried on?—Through the whole season.

31,299. Both summer and winter?—Yes, summer and winter.

31,300. What kind of bait is used?—Various kinds. In the summer time they prefer fresh herrings if they can get them, but they generally use whelks.

31,301. We have been told in some places that where the herring bait can be had, the cod refuse all other kinds of bait?—They prefer herring bait.

31,302. Are all the cod caught by the Orkney and Shetland boats cured for the foreign market?—No.

31,303. Are some of them sent fresh to the home market?—Yes, and to the Irish market.

31,304. Is that a new destination for the fish?—The home market has always been a destination for the fish, but inferior fish have always been sent to the home market.

31,305. Are they partly cured?—They are all salted.

31,306. Then none are sent absolutely fresh?—No.

31,307. Do the Grimsby boats send their fish fresh?—They were accustomed to do so, but now they land them in Orkney and have them cured here. They cleanse them well and take up a large quantity at the end of the season and then go off for the winter season.

31,308. Are there a number of boats engaged in that fishing?—Yes, a very large number.

31,309. Are you able to say how many?—I don't quite know. Last year in Orkney there were about 40.

31,310. Is that an increasing number?—I am not aware.

31,311. You cannot say whether the number of boats engaged in the cod-fishing is greater now than it was some years ago?—The number in Orkney itself has greatly diminished.

31,312. But taking both your own boats, the Shetland boats, and the boats from the South, has the number increased or diminished?—I cannot speak with regard to the Shetland boats at all.

31,313. Do not the Shetland boats come here?—No.

31,314. Then taking all the boats which appear on your ground and comparing them with what the number was when you had an export trade to Spain, is the number as great now as it was then or not?—I think the number has diminished.

31,315. Have you ever heard that there has been any sign of a falling off in the fish; has the quantity of cod which can be caught on the coast decreased?—I don't think there has been much falling off. There has been a falling off as regards the catch of our own boats, but not as regards the aggregate number.

31,316. Are the boats engaged in the cod fishery larger or smaller now than they were when you were engaged in the fishing?—I believe that they are about the same size.

31,317. Has any change taken place in the size of the boats, the length of the lines, and the gear employed in catching cod?—No.

31,318. Has there been much change in the price of cod of recent years?—Prices have advanced considerably.

31,319. What is the change that has taken place?—From 4*s.* 6*d.*, which I paid for a hundredweight of fish delivered with their heads off, it has advanced to 7*s.* and 8*s.*

31,320. Then there has been an advance of nearly 100 per cent.?—There has been an advance of 75 per cent. at any rate.

31,321. That of itself, if the catch had continued as good, would have been a great temptation to continue the fishing?—Yes, but our herring-boats are annually diminishing in number.

31,322. What is the cause of that?—It arose originally, in my opinion, from two causes. One is the practice of advances made by the herring curers. I do not know what the motive was for resorting to that, but as the fishermen got the same price, whatever quantity of fish they had, the consequence was that they had no inducement to prosecute the fishing as they otherwise would have done. The herring-boats engaged in the cod-fishing also, and when the people came to receive payment, they found that half the money had been swallowed up by the curers or merchants, and so the boats fell off, and as they fell off they could not replace them again, as they had no money; that is one cause. Another cause has been the increased agriculture of the country. Our fishermen being partly farmers and partly fishermen they found that prosecuting the agricultural interest was more to their advantage.

31,323. Then the fishermen are not solely employed as fishermen?—No.

31,324. They are engaged in agriculture as well as in fishing?—Yes.

KIRKWALL.

J. Walls.

3 August 1864.

31,325. In recent years, do you think that part of their occupation has paid them best?—They seem to have thought so. They do not get themselves so embarrassed and involved in debt as they did formerly when their connexion with the curers existed.

31,326. When they were engaged in the cod fishery, were they under a system of advances by the curers of cod?—No, Mr. Anderson and I refused to give them advances.

31,327. Did you pay them so much for what they brought on shore or did you give them wages?—We paid them for what they brought on shore.

31,328. So that their income was entirely in proportion to their own exertions?—Yes, when we had a man who had no advances from the herring curers, we found him generally an active and successful fisherman; but when we had a man who was embarrassed and in debt, we found that he had no inducement to be active and that that class generally finished as bad as they commenced.

31,329. Then the herring fishery has not been a profitable one to the Orkney fishermen?—No; when they might have been able to obtain 15*s.* or 16*s.* per cran they have been in such circumstances that they could only obtain from 8*s.* to 10*s.*; they were obliged to take what the herring curers offered them. The quality of the boats and the drift-nets fell away so much that at last it was not safe to go to sea, and the people were never able to replace the property.

31,330. Are there different classes of boats engaged in the fishing here?—Yes.

31,331. What are the different classes?—In some of the islands they prosecute the cod-fishing in skiffs or yawls, and in others they fish with the same boats that they use in the herring fishery.

31,332. Are they large boats?—Yes, they carry about 10 men.

31,333. Are there no decked boats engaged in the fishery?—Most of them are half-decked.

31,334. Are there none that can keep the sea in all weathers?—There are some small smacks or sloops.

31,335. Within your experience has the cod-fishing ground shifted at all?—The fishermen think so.

31,336. Have you reason to believe that that is so?—I think it does shift from one sea to another, but there is no permanent shifting.

31,337. Are there certain banks that are well known to be productive of cod?—Yes.

31,338. And those banks are regularly fished?—Yes.

31,339. Has there ever been any beam-trawling on this coast?—Not that I have heard of.

31,340. Are there any soles found here?—Flat-fish are not much caught here.

31,341. You have no flat-fish here?—A few are caught in shallow water sometimes, but not many.

31,342. Are not turbot caught?—Occasionally; there are a great deal of coalfish between Fair Island and the Orkneys.

31,343. Do you know anything of the haddock-fishery?—Very little.

31,344. Then are we to understand that the herring fishery in Orkney is a declining business?—Yes.

31,345. And in declining has it also diminished the cod fishery?—Yes.

31,346. That has not arisen from any scarcity of fish, but from the embarrassments of the fishermen?—Yes, we consider that the fish are here before they go to the Caithness coast. The fishery could be prosecuted with great advantage, but the people are not able to do it.

31,347. (*Professor Huxley.*) Was there any Government brand attached to the cod exported to Spain?—Yes, there was for the Spanish market.

31,348. On what principle was that brand affixed to the cod?—Under the inspection of the Board of Fisheries.

31,349. Was there no bounty on the cod then?—No, there was no bounty.

31,350. Was it continued after the bounty ceased?—I understand it was a condition of the bounty that they should be branded; latterly there was no value attached to it.

31,351. There was no value attached to the brand?—No.

31,352. How was that?—Mr. Anderson and the Spanish merchants considered that they were as able to judge as the Government inspector.

31,353. Did you find that the withdrawal of the brand had any effect on the continental market?—Not in the least.

31,354. Were no conditions attached to the cure before the brand was affixed?—Nothing but the brand.

31,355. The Government inspector would not brand them unless they came up to a certain standard?—Yes.

31,356. You found that you could do without it?—Yes.

31,357. The foreign buyer trusted to your cure?—Yes.

31,358. And so the system of branding dropped of itself?—Yes.

31,359. From neither party finding any advantage in it?—Yes.

31,360. When you speak of the system of advances, do you wish us to understand that the men spent all the advances made to them?—They spent them in support of their families and in other things before they realized anything to pay them up.

31,361. After they had been engaged in the fishing, were they able to pay those advances and to leave a margin?—Only a small one.

31,362. I suppose the advances were not spent very thriftily?—Not in all cases.

31,363. If they had spent them in a more economical way, could they have paid them off?—They were most anxious to get the advances, but they precluded them from making any arrangement as to price.

31,364. I suppose that having the money they spent it rather more freely than they would have done if they had had to work for it first?—It was not likely they would be more economical.

31,365. Has the system of branding herrings extended up here?—Yes.

31,366. Are you an exporter of branded herrings?—I exported one cargo last year.

31,367. What do you think of the system of branding?—I can give you no opinion upon it.

31,368. Are you in favour of it or otherwise?—I have not had such experience of the herring fishery as would enable me to give you my opinion. Perhaps I may explain also that I was an agent for four years in the lobster trade.

31,369. (*Mr. Caird.*) Can you give us any information as to the lobster trade?—Very little. During that time they were carried away by the smacks in wells; now the system is altered, and they go away by steamers.

31,370. Do they not go as fresh to the market?—I think they do; they go to Aberdeen.

31,371. Is the trade extensive?—It was. I think it has been doing better since the people were better paid; the business is altogether quite as well conducted, and it is rather increasing now; I am certain it is.

31,372. Have you any idea as to how much money may be brought to these islands in consequence of the lobster fishery?—I cannot say what may be brought now; eight or 10 years ago I could tell you.

31,373. What was it then?—About 2,000*l.*

31,374. 2,000*l.* a year?—Yes.

31,375. Did that include the crab fishery?—There never was at any time here a crab fishery, except a little, locally.

31,376. Do they not pay the expense of their long transit?—No.

31,377. Do you know anything in regard to the oyster fishery?—Nothing.

31,378. Is it a matter of little importance here?—Here there is little done in that way; there is only one place where they are caught.

The witness withdrew.

KIRKWALL.

R. Scarth.

3 August 1864.

ROBERT SCARTH called and examined.

31,379. (*Mr. Caird.*) I believe you have had experience of the different kinds of interests connected with the fishing trade in these islands for many years, have you not?—Yes.

31,380. Can you tell us whether the fishing interests of the Orkneys are increasing, stationary, or diminishing?—I think they have been increasing. They were stationary for a time, but I think they are again increasing, because the sale of the fish is becoming more immediately in the hands of the fisherman.

31,381. And they can get them more readily to market?—Yes, they can get them more readily to market, and the fisherman comes nearer the consumer than he used to do.

31,382. In that way the profits are less divided?—Yes, I think so.

31,383. I suppose that the price of the fish also has increased in recent years?—Yes, very much.

31,384. Do you think that the number of people engaged in the fisheries of all kinds in these islands is on the increase?—No, I don't think that. I believe it is because the agriculture of the country has very much improved and labourers are well paid for agricultural work. Many of them too have no capital to purchase boats and materials for the fishing, and not having been accustomed to it from their youth they will not go now. I think the fishermen are wearing out in this country.

31,385. But are the fishermen who have good boats and good tackle and who specially make fishing their business, making a good business of it?—They are making more of it than they did formerly. I think whenever they are independent of advances they are doing very well.

31,386. Has the system of advances proved injurious to the fishermen?—Yes, but without advances I don't see how the fishing could be carried on. Previous to 1815 there was no fishing whatever in Orkney except lobster-fishing; then a few fishermen engaged in the cod and herring-fishing for the market. In 1815 Mr. Driver and a few others commenced curing herrings on the North Island, and afterwards when Kirkwall was likely to go down, Mr. Laing introduced the system of advances, and by that means boats and nets were created. The men here had no capital to do it for themselves, and the fishing consequently is only a recent thing in Orkney. We never have had true fishermen here. The men have not been devoted only to the fishing as they are in other places. Our fishermen have been partly farmers and partly fishermen. I think the decline in the fishing has been owing much to that circumstance.

31,387. And also to the increase in the demand for agricultural labour?—Yes.

31,388. Has the decline in the manufacture of kelp had anything to do with the embarrassed circumstances of the people?—Yes. In a great part of the island they don't manufacture kelp; there are only a few of them engaged in that.

31,389. You described the gradual growth of the fisheries as being the consequence of advances made to the fishermen; how long did that system continue; when did it begin to fall off?—Of course the fishermen were enabled to go on at first by means of these advances, but the result in the end was prejudicial to them. After a time, as is well known to all here, the fishermen got into the habit of taking larger advances, and the consequence was that they had to borrow money and they sank under a load of debt. Others who were careful and cautious went on pretty fairly, and to this day are fishing and doing well.

31,390. By degrees are you getting from that unsound class of fishermen to a sounder class?—Yes, quite so.

31,391. And are the fishermen who are prosecuting the business becoming more entirely fishermen and less connected with farming?—Yes.

31,392. Is that the case inside and outside the island?—All through the country.

31,393. Is one part of the coast more favourable to the existence of a class of fishermen solely dependent upon fishing than another?—The North Islands are more particularly so.

31,394. Is that where the cod-fishing is most prosecuted?—Yes.

31,395. Has there been anything in the state of the fish market to have caused any decline in the cure of codfish?—I don't think there has been.

31,396. Do you know whether the banks which formerly yielded cod are as productive of cod as they ever were?—I believe they are, but the fish are not found each season on the same banks; they shift their ground a good deal. At least when I had experience of the fishing I was living in the North Island and I found that to be the case. Where we had a great number one year we did not find that they came back there the next.

31,397. Has there been a decided decline in the system of curing cod in this island?—I cannot tell you anything about it since the year 1849, which was the last year I had anything to do with it. I have not given much attention to the cure of the fish since, but the advance in the cure up to that time was very considerable.

31,398. Is it your opinion that the cod fishery in these islands might be very successfully extended?—If we had a race of fishermen bred to the business as they have in other places, and if they followed it, I think it might be very successfully extended. My reason for thinking so is that within the last few years two Banffshire boats came down to the west side of the main land where the fish were never sought before and they cured a great quantity of fish besides supplying the people about the country with halibuts, eels, and skate.

31,399. Was it principally cured cod?—Yes, cod and tusk.

31,400. Did they catch them on grounds that were not known to the country people?—It was known but not followed there. They had only hand-lines, but these men had the proper long-lines, and they have had a most successful fishing for the last three years.

31,401. Are you of opinion that the coast is capable of yielding a large amount of fishing?—I believe that the sea is swarming with fish. From the large quantity which I see brought ashore every day I have an opportunity of judging. I saw also the quantity cured and stacked by each of these large boats. They are very large boats. The first year they came, supposing they were coming to a barren country, they carried with them turnips, potatoes, and provisions for consumption. Afterwards they merely brought their fishing gear when they found they were among hospitable people, who treated them very well. They have loaded their boats of 30 tons completely with dried fish and taken them home with them, besides selling as much as 40*s.* worth of green fish in a day to the country people.

31,402. Then the people of the islands are to some extent indebted to the exertions of people from a distance for a supply of fish?—Yes. The same thing has been done at Offa, where Mr. Fortescue introduced some poor fishermen from Buckie, and most of the inhabitants have had a continual supply of fish since.

31,403. Do they prosecute the fishing with greater industry and perseverance?—Yes, and they have better materials and lines for the purpose.

31,404. Has the price of fish, within your knowledge, gradually increased?—Yes; the price of green fish has much increased.

31,405. Is the example which has been shown by the men coming from the south, and the profitable fishing which they have had, likely to be followed by the native fishermen here?—Yes, I think so.

31,406. Then do you think it is likely to increase the fishing on the islands themselves?—Yes, I think the fishermen are fully equal to those men in hardi-

hood in going to sea, but they have not been bred to the fishing from their infancy as those men have. Neither have they materials and lines.

31,407. I suppose they have always a little bit of land to fall back upon?—Many of them have pieces of land to fall back upon.

31,408. We have been confining our attention exclusively to the cod and herring fishery, can you tell us anything about the haddock fishery?—No, except that it has increased. We more frequently see haddock in the market than we did formerly.

31,409. Do you think it is capable of still further increase?—Yes.

31,410. Can you tell us anything with regard to the herring fishery?—I know nothing about it now. When Mr. Laing attempted to establish the fishery here the herring seemed of first-rate quality. Most of them were packed up for Spain and the West Indies. We were indebted to the Fishery Board for the attention paid by their Fishery officer. When the thing was quite new, and the people working, as it were, quite inexperienced, the instructions given by the Fishery officer were invaluable. That was from the year 1819 to 1823 or 1824. At that time we could send no fish to the West Indies without having them properly branded; so much did the character of the fish depend upon the brand.

31,411. Have you yourself any knowledge of the brand?—At that time I was greatly in favour of it. I cannot speak of it now. I have been out of the trade for a long time.

31,412. Do you not think that the fishing interests of these islands might be left to depend upon the natural rule of increased remuneration for increased exertions rather than upon any help from Government?—Yes; I certainly think so.

31,413. You are not in favour of artificial assistance of that kind?—Certainly not. I don't see any advantage to be derived from help of that sort.

31,414. You stated just now, in answer to a question from me, that you believed that in the early infancy of the fisheries they were indebted to the Fishery Board for instructions in the art of fishing, do you think that the time has arrived when that is no longer necessary?—I don't say that. With regard to the surveillance of the Fishery officer and the Fishery Board, I think it would still be needed, and that the fishermen would be much indebted to it.

31,415. Do you not think that the fishermen who have come from the south and who have introduced improved methods of fishing, would be better able to instruct the fishermen than a paid Fishery officer?—I should think so.

31,416. From the fact of their own success?—Yes.

31,417. And, therefore, you would leave the interests of the fishery in these islands to that natural mode of teaching rather than to any artificial mode of teaching?—Decidedly. But the Fishery officer was of very great advantage in the early stage of the fishing. I always look upon this as an advantage—that the Fishery officer would check any chance of sending away bad fish among good. If that were done it would greatly injure the market. As to the Spanish market, the services of the Fishery officer were decidedly valuable. The cod had all to be examined, and all below a certain length were struck out, and any that were improperly cured, or thin, or wasted, were thrown aside. The fish that were then considered fit for the market and were branded by the Fishery officer to be shipped.

31,418. (*Professor Huxley.*) The previous witness told us that the brand became neglected for the Spanish market?—That was not the result of my experience when I had to do with the Spanish market.

31,419. Are you aware if there is any mode of fishing practised on this coast which is destructive and wasteful?—I don't think so.

31,420. Is circle net-fishing practised on this coast? No.

31,421. Nor trawling?—No.

31,422. Is there any seining?—No; the only seining is a large seine net that is principally used to take the young of the coal-fish.

31,423. Is that prosecuted considerably here?—Yes; considerably in this harbour.

31,424. Is it considered that it is destructive to the fish?—There is a great variety of opinion about it; but it does not appear to destroy them, for they have had as many fish as ever they have had.

31,425. Has it been practised for many years?—Yes.

31,426. Are there large quantities of young coal-fish caught in that way?—Yes, very large quantities.

31,427. Are stake-nets of any kind used here?—No.

31,428. (*Mr. Caird.*) There are no salmon caught on these islands?—No.

31,429. Not along the coast anywhere?—Not as far as I know. There are disputed cases of a single fish being caught; but it has not been well authenticated that there ever was a salmon caught on the islands. I have no doubt, from the appearance of many of the streams and lochs, that if ova were transplanted here we would have salmon, because I believe that the fish have their particular beds, and that they return every year the same as migrating birds do.

31,430. You have no large rivers?—We have no large streams; but we have some large lochs, which are closely connected with the sea.

31,431. Would salmon breed in those lochs?—Yes; there are excellent gravel banks. I think they would breed there, and that if they were once tried the salmon would return every year.

The witness withdrew.

CHARLES SMITH called and examined.

C. Smith.

31,432. (*Mr. Caird.*) You are a fisherman here?—Yes.

31,433. In this neighbourhood?—Yes.

31,434. Have you followed all the different kinds of fishing that are practised here?—No, I have only followed the herring-fishing to any extent.

31,435. At what seasons of the year are the herrings fished for in the Orkneys?—The latter part of July and August and about two weeks in September. There are about two weeks in July that the fishing is followed.

31,436. Is there no winter fishing?—No.

31,437. Nor any May fishing?—No; I believe there was a May fishing at one time on the west coast of the islands, but I am thinking that that has been discontinued for some time past. I have not heard of it latterly.

31,438. Have you been for a good many years engaged in the summer fishing?—The herring-fishing do you mean?

31,439. Yes.—I began in 1817, and I have continued it ever since.

31,440. Are you still fishing with the same kind of boat you began with, or have you a larger boat?—The boat is rather larger.

31,441. And the fleets of nets, how are they?—They are larger also; but there were as many of them when I began.

31,442. Do you manage to get twice as many fish?—Sometimes three times as many.

31,443. Are the shoals of herrings improving or diminishing?—They are some years improving and then another year there will be a great diminution.

31,444. They vary a good deal?—Yes.

31,445. They fluctuate from year to year?—Yes, very much.

31,446. Do they appear on the same part of the coast as they were in the habit of coming to formerly?—To some extent, but they change their ground considerably. For some years you will find

KIRKWALL.

C. Smith.

3 August 1864.

them in shoals in one place, and then for a number of years you will not find them on the same ground. Perhaps there will be miles between the places where you find them.

31,447. Has the number of fishermen engaged in taking them increased or diminished since you began?—The boats have greatly diminished, but the men have not diminished so much as the boats.

31,448. Are they larger boats?—Yes.

31,449. And do they carry more nets?—Yes.

31,450. How many men were there in a boat when you first began?—Only four.

31,451. How many men are there in a boat now?—Five generally, and six in some of them.

31,452. Do you think there are more nets put into the sea than there were then considering the increased size of the boats now?—There was one time when I think there were quite as many nets put into the sea as now. We are beginning to improve here a little again. The boats have rather increased this last season.

31,453. Has the business been improving in consequence of the increase in the price of the fish?—I cannot say anything about the increase of the business. There is one thing, and that is that the fishermen are clearer than they have been for some time past. They are not so much in the hands of the curers though there are some who are yet.

31,454. Has the system of advances to the fishermen by the curers much interfered with the herring fishery?—Yes, it has interfered with it very much, because it placed the fisherman entirely in the power of the curer.

31,455. Do you consider that it was hurtful to the fishing?—I consider that to a great extent it was the ruin of the business. Perhaps it raised it at first, but by and by it converted it into a very bad business. I daresay one thing that made it bad was that a great number of fishermen were not very faithful, they took the advances at first and they sold their fish to other persons after all. That however is all ended now.

31,456. Are your herrings principally cured for the foreign market?—Yes, but they are sold both in the home and foreign markets. For a while I have been selling for the home markets. I am a fisherman and not a curer.

31,457. Then you do not know where they go?—I believe they went to Ireland last year.

31,458. Has the size of the mesh of your nets been the same that it was in former years?—Yes, just about the same.

31,459. Does anybody ever interfere with you as to the size of your nets?—No, nobody.

31,460. Nobody ever inquires into that at all?—No.

31,461. Or as to the time of the evening when you should shoot your nets?—I never saw anyone meddled with except once. One morning they were shooting their nets and an officer interfered.

31,462. Do you think there is any occasion for interference in that respect?—I never saw any.

31,463. Is any harm done by the men being left to shoot their nets as they like?—No, they cannot fish unless they shoot at a proper time.

31,464. Do you think it would be of advantage to have a regulation of that kind?—No.

31,465. Do you think it would be best to leave them to consult their own interests in the matter?—Yes.

31,466. Did you ever see any destruction of spawn by any mode of fishing adopted here?—I never saw any spawn destroyed. I have seen spent herrings in multitudes.

31,467. (*Professor Huxley.*) Are there any modes of fishing practised here which destroy the young of the herring?—I do not think there are.

31,468. What is the size of the mesh you use here in your nets?—There are generally about 30 meshes to the yard; they run about 30 and 31.

31,469. Does anybody look after the size?—Nobody.

31,470. Can the fishermen here make the mesh of any size they like?—They have done so, and they have made it according to the way in which they felt they could best catch the fish with it.

31,471. Does nobody interfere or examine the size of the mesh?—Nobody.

31,472. Do you largely cure spent fish here?—They cure all they catch, and they have a good deal of spent fish sometimes.

31,473. Have you ever practised the winter herring fishery here?—No, it was never tried here.

31,474. Are there any herrings caught here in small quantities for bait?—No.

31,475. Does anybody try for them?—They were never tried for as far as I know.

31,476. Do you think that the herrings are off the coast at that time?—I have never seen any sign of it.

31,477. Do you never catch them in the stomachs of the cod at that time?—I have caught cod in the winter time, but not with herrings in them.

31,478. Had they any other fish in them?—Yes, small cod, but nothing of any consequence.

31,479. Have you ever cured fish as well as fished for them?—No, I never cured fish.

31,480. Have you had any interference with your fishing here by the French or Dutch fishermen?—The Dutch come now upon our coasts at the latter end of the month of June. They were down here this year.

31,481. Do any considerable number of Dutchmen come?—There are a number of them, but how many I cannot say.

31,482. Are the fishermen of the Orkneys interfered with by them; do they shoot their nets down upon you?—They are away before we go out to the fishing.

31,483. Do they fish in deeper water than you do?—Yes, and they are deeper in the water too.

31,484. Do they sink their nets deeper than you do?—Yes.

31,485. Have you ever known any case in which the French or Dutch fishermen inflicted damage to the nets of the Orkney fishermen?—Not that I am aware of.

31,486. You never heard any complaints of that kind?—No, I never heard any complaints.

31,487. (*Mr. Caird.*) Is there any influence upon the fisheries by the spring or neap tides?—There are some places where the tides slack at the springs and where they are rapid at the neaps.

31,488. Whereabouts are the best fishing grounds?—At Stronsa; from the Start up to the heads and about the heads generally.

31,489. About the heads of Stronsa?—Yes.

31,490. Are those grounds well known to the herring fishermen?—Yes, they are.

31,491. Are there any herrings caught in Scapa Flow?—I believe there are in the summer time. There is one thing I should like to mention and that is that some means ought to be taken to prevent the fishermen from injuring one another at sea. They take away each other's buoys and do great damage to one another when they come in contact. I think that ought to be put a stop to.

31,492. Would you like to see a system of interference with you established in that respect?—I should like to see a system established which would prevent any sort of theft of buoys.

31,493. Would you be willing to pay the expense of a police to protect you at sea?—I do not know anything about that, but we should be willing to be protected in any way.

The witness withdrew.

KIRKWALL.

JOHN SHERER called and examined.

J. Sherer.

3 August 1864.

31,494. (*Mr. Caird.*) You are a fisherman and a fish-curer?—I am a fish-curer. I never was at the fishing.

31,495. Of what kind of fish have you had the curing?—Nothing but the herrings; I have been curing herrings since 1817.

31,496. Has your cure been increasing in quantity during that period?—Yes; but the fishings here are very irregular. Last year there was a very good one as is proved by the returns of the Fishery Board, which show that it was equal to the three former ones. There were 26,000 barrels, I think.

31,497. Where do you carry on your cure?—At the farm of Holm Sound.

31,498. Is that where there is a large catch?—Some years there is, but we generally get most of our herrings from Stronsa and the northern islands.

31,499. Do they bring them to you?—Our own boats go there and come round with them.

31,500. On that farm in the course of a season how many barrels of herrings do you cure?—We differ according to the season. Last year, as I just said, was a very good one. Upon the average the boats brought in 140 crans. I got as many as 700 crans from five boats. That was very good. Some years it has been as low as 25.

31,501. Then it must make a great difference to the fishermen, whether there is a good year or a bad one?—Yes, the fishing varies very much; it is very uneven.

31,502. Have you been in the habit of having your cure branded with the Government brand?—Yes, if I send anything to the foreign markets; but not if I send the fish to Ireland. Last year I branded 500 barrels.

31,503. Then you would send away 200 without a brand?—Yes, they went to the home market.

31,504. Were they cured in the same way?—Yes, they were of the same quality and cured in the same way,

31,505. Which paid you the best?—They both sold alike; but if they had gone unbranded to the foreign market there would have been a deal of difference.

31,506. But you saved the price of the brand?—Yes, on a few. Three-fourths of the fish that are caught on the north-east coast go foreign.

31,507. Do you approve of the continuance of the Government brand?—Yes, I do.

31,508. Could you not sell your herrings abroad without it?—Not with any satisfaction.

31,509. Do foreign buyers come to you?—They come to Wick but not here.

31,510. Cannot they depend upon anything but the brand?—No.

31,511. Is there no inspection at the place of cure?—No, the fish just go from hand to hand.

31,512. Are there any disputes when they are exported abroad?—There have been disputes but they have resulted in nothing. It was only a trial to get out of a falling market. The Fishery Board sent over a commission to inquire into that matter and after that commission went out it was never tried. That was in 1862, I believe.

31,513. Have you had experience of the system of making advances to the fishermen?—That is not much done where I am.

31,514. Is it not a system that is usually followed there?—Well, to a very trifling extent. A few pounds may be advanced perhaps for an outfit; but there are no heavy advances made.

31,515. Have you not found that those advances have been going on in arrears from year to year?—Yes, further south.

31,516. But not with yourself?—No, it has not done any material injury to me, but it would perhaps be good if advances were never given except fit to out the boat for another year.

31,517. And you would never have advances made to any large extent?—No.

31,518. Never to such an extent as would make it burdensome to the fishermen, and prevent them from coming year you again?—I never knew that done. Perhaps 20*l.* would be the highest advance.

31,519. What would be the value of a fisherman's boat and gear ready for the sea, with all the nets and every other appliance?—About 150*l.*, taking a new boat and all her drift-nets.

31,520. And in advancing money to the fishermen you never give more than 20*l.*?—The average would be nothing like that. That might perhaps be given upon a new one.

31,521. What would the average be?—I cannot say exactly. It would depend upon the boat and the nets.

31,522. Have the fishermen who bring the fish to the place you speak of increased or diminished in number within your experience?—They have rather decreased.

31,523. Have the boats decreased in size?—No, they have increased in size. They are larger boats, and the drifts are about double.

31,524. Have those increased boats and nets resulted in a larger fishery than there was in former years?—Yes, as far as the boats are concerned, but the boats are fewer in number. They have been increasing, however, within the last two years.

31,525. Do the herring fishermen who fish there engage in any other fishing at other seasons of the year, or do they go to their farms?—Most of them have little patches of ground which they cultivate.

31,526. Do they cultivate them at all seasons except the herring-fishing season?—Yes.

31,527. Is that prejudicial to the prosecution of their business as fishermen, with perseverance?—I have no fault to find with regard to the herring-fishing.

31,528. But with regard to other kinds of fishing?—It may be so.

31,529. Have the men you speak of never been in the habit of following any other fishing than the herring-fishing?—No.

31,530. That is just the sort of harvest which they get from the sea?—Yes, and they attend to the farm closely, but they do not follow any other fishing.

31,531. Are they not experienced or skilled in any other fishing?—No.

31,532. Then the same class continue to be employed in herring-fishing as formerly?—Yes.

31,533. But they do not increase?—No.

31,534. Then their families do not go into the same business?—No, some of them are dropping off If we have a poor season it does not pay, and then they drop off from it.

31,535. Has your market for the home consumption been increasing in proportion to the quantity exported abroad in recent years?—No, the Irish market has much declined. They do not take half the quantity which they took since I can recollect.

31,536. But there is always a plentiful demand from the north of Europe?—Yes.

31,537. From Prussia?—Yes.

The witness withdrew.

DONALD HARPER called and examined.

D. Harper.

31,538. (*Mr. Caird.*) You are the Fishery officer stationed in Orkney?—Yes.

31,539. What extent of district have you the charge of?—The whole of the Orkney islands.

31,540. Then the returns you can place in our hands will apply to the fishing of the whole of the Orkney islands?—Yes.

31,541. Have you made out returns of the number of boats employed, their value, and the number of fishermen from the year 1855 to 1863 inclusive?—Yes.

KIRKWALL.
D. Harper.
3 August 1864.

31,542. Are they applicable to the whole of the islands of Orkney?—Yes.

31,543. They apply to the whole of the fisheries?—Yes; the boats are put in one class, although they are in reality in three.

31,544. Then do you put in a return of the number of boats, their tonnage, the number of fishermen, the number of fish-curers, of coopers, the value of the boats, the nets, and lines, and the total value engaged in the different kinds of fishing in the Orkney islands from the year 1855 until the year 1863 inclusive?—Yes, the following is the return:

AN ACCOUNT of the Number of Boats, Decked or Undecked, employed in the Herring, and Cod and Ling Fisheries from the Year 1855 to 1863, with the Number of Fishermen and Boys, by whom manned, the Number of Fish-curers and Coopers, with the Estimated Value of Boats, Nets, and Lines.

Years.	Number of Boats.	Tonnage of Boats.	Number of Fishermen and Boys.	Number of Fish Curers.	Number of Coopers.	All other Persons estimated.	Estimated			
							Value of Boats.	Value of Nets.	Value of Lines.	Total Value.
							£	£	£	£
1855	623	3,989	2,507	40	75	1,126	11,066	11,473	761	23,300
1856	703	4,201	2,517	39	67	1,538	12,264	18,086	820	31,170
1857	683	3,968	2,489	32	66	1,006	11,390	17,554	563	29,507
1858	708	5,087	2,521	35	73	769	11,423	13,072	440	24,935
1859	692	4,001	2,515	31	69	729	10,828	11,835	479	23,142
1860	691	4,033	2,510	30	73	799	10,826	12,128	491	23,445
1861	687	3,941	2,505	29	69	753	10,964	12,046	435	23,445
1862	672	3,882	2,449	25	52	1,028	10,788	11,761	446	22,995
1863	656	3,818	2,399	29	66	1,228	10,014	11,054	466	21,534

31,545. You have also an account of the quantity of cod and ling cured in the Orkney islands?—Yes.

31,546. From what dates?—From 1855 to 1863 inclusive.

31,547. What is the return?—It is as follows:

AN ACCOUNT of the Quantity of COD and LING cured in Orkney for each Year, from 1855 to 1863.

Year.	Number of Fish.	Cwts. Cured, Dried.	Tons.	Cwts.
1855	353,491	9,553	477	13
1856	352,655	9,706	485	6
1857	483,152	12,062	603	2
1858	445,560	14,065	703	5
1859	479,970	13,850	692	10
1860	453,178	13,800	690	0
1861	413,907	12,852	642	12
1862	404,685	12,354	617	14
1863	417,527	13,549	677	9

31,548. You have also an account of the quantity of herrings cured in the Orkneys?—Yes, it is as follows:—

AN ACCOUNT of the Quantity of HERRINGS cured in Orkney from 1855 to 1863.

Year.	Boats.	Average Crans.	Total Crans.	Average Price.
				s. d.
1855	362	76	27,512	12 6
1856	377	31¼	11,800	15 0
1857	380	35½	13,481	19 0
1858	370	37¼	13,822	16 0
1859	330	34¾	11,490	20 0
1860	347	33	11,890	20 0
1861	335	28¾	9,600	20 0
1862	274	43	11,755	18 0
1863	220	97	21,390	13 0

31,549. Have you been long stationed here?—No, only very recently.

31,550. From when?—From the 1st of May.

31,551. The 1st of May last?—Yes.

31,552. Then you have not visited all the stations yet?—No, but I have visited the principal fish-curing stations.

31,553. At the principal stations do you find that the fishing is practised with the same perseverance as before?—The herring-fishing has been more than it has been for the last six or eight years.

31,554. How is the cod and ling fishery?—The weather this year has been unfavourable for the cod and ling fishery.

31,555. It has not been as successful as formerly?—No, it has not met with the same success.

31,556. That has been on account of the weather?—Yes, the fishermen tell me that.

31,557. Have you heard of any decline in the quantity of fish caught off the coast of the Orkneys?—Some of the curers say it is owing to the fishermen not being so diligent as they were at one time.

31,558. Not from any want of fish?—They say so to me.

31,559. Have you heard that with regard to any other kind of fish as well as cod and ling?—No.

31,560. How is the haddock fishery here?—There are very few got on the coast of the Orkneys.

31,561. Is it a fishing that is not much followed?—Yes.

31,562. Does that arise from the fact that there is no paying market for haddocks on this coast?—There is a scarcity of haddocks on this coast, I think.

31,563. It is not a plentiful fish here?—No.

31,564. Is there any trawling on this coast?—None that I ever heard of.

31,565. Is there any fishing for soles?—Not that ever I heard of, but they take a great many of the young saithe; they draw them in with the sweep net.

31,566. And how do they use it; from the shore?—Yes.

31,567. Does a boat go out?—I am not aware how they manage it. I have never seen them. There is a person here from South Ronaldsha who can tell you all about it.

31,568. (*Professor Huxley.*) Do you know anything about a winter fishing here for herring?—No.

31,569. Have you not heard of such a thing on any of these islands?—No; nor is there any winter fishing going on here in these islands.

31,570. Have you ever heard of herrings being found here in the winter?—Yes.

31,571. Where?—At the different creeks; at Scapa Flow, St. Margaret's Hope, and other places.

31,572. Are they a smaller description of herrings?—Yes.

31,573. Are they caught with the large herrings?—We get them sometimes larger with the sillock.

31,574. Are they young herrings, or are they full grown?—They are young herrings. When I arrived here in May they were getting a herring which was very like those they get at Wick.

31,575. (*Mr. Caird.*) Had you had experience as a Fishery officer for some time on the coast before you came here?—No, I had none before.

31,576. Is this the first time you have been a Fishery officer?—Yes.

31,577. Did you live on the sea coast before?—Yes.

31,578. Where?—At Wick.

KIRKWALL.

D. Harper.

3 August 1864.

31,579. Do you think from what you have heard since you came to the Orkneys that there is any great hardship in the weather here which prevents the fishermen from following their business more than on the coast of Caithness?—The tides are very rapid here.

31,580. Do they experience bad weather here and strong tides?—Yes.

31,581. Are there not strong tides and bad weather on the Caithness coast as well as here, and not so good harbours on the Caithness coast as in Orkney?—Perhaps so.

31,582. Have you heard any complaints from the fishermen as to the difficulty of prosecuting their business arising from the uncertainty of the weather, and the strong tides?—Yes.

31,583. But it does not occur to you that it is a greater difficulty than on the Caithness coast?—It is not as bad for getting out to sea and getting in again. The winter is perhaps more regarded here than on the Caithness coast owing to the strength of the tides.

31,584. (*Professor Huxley.*) With light winds might it be difficult for the fishermen to bring their cargoes home?—Yes.

31,585. More so than on the Caithness coast?—Yes.

The witness withdrew.

JOHN CROMARTY called and examined.

J. Cromarty.

31,586. (*Mr. Caird.*) Are you a fisherman?—Yes.

31,587. You know something, I believe, about the mode of fishing by circle-net?—No, I never saw a circle-net set.

31,588. Have you seen a seine-net?—Yes, I have seen a seine-net.

31,589. Do you know how to manage it?—Yes.

31,590. How is it done?—It is taken into a boat which goes off from the shore and takes a sweep round and shuts all within it.

31,591. What do you catch with it?—Small coal-fish.

31,592. Is it practised on particular parts of the coast?—No, nearly all over.

31,593. Anybody who likes to fish with that net can do so?—Yes.

31,594. Is it followed to any great extent?—It is followed on the coast. People do it for themselves.

31,595. Just to catch fish for their own use?—Yes.

31,596. Then is it mostly the case that any person who has a house near the shore practises that kind of fishing for his own use?—They will have a net among a whole lot of people, perhaps one net will serve 20 families.

31,597. So that there is a very good supply of fish at home generally speaking?—They get a good deal of them in the winter.

31,598. Are they sillocks that they get?—Yes.

31,599. They are never fished for sending to the market?—No, they are not. They are not sent away until they come to be large.

31,600. Do they form a considerable article of food among the people?—Yes, they do.

31,601. Are you acquainted with the other kinds of fishing followed in the Orkneys?—Yes, I have been at the cod-fishing for years.

31,602. Do you think the cod-fishing is capable of being increased in the Orkneys?—The codfish have left the country very much. There are not so many of them to be found as we took there at one time.

31,603. Are they not so numerous now as they were some years ago?—I was master of a small fishing-boat for three years constantly, and I was not able to get enough to keep them up.

31,604. Have you been at the cod fishery within recent years?—No.

31,605. When was the last time you were at it?—Twelve years ago, and then I was in a smack.

31,606. Then you cannot tell us what is the state of the fishing now?—I have been at it since, but not constantly. The last time I was at it was five years ago, and there were very few to be got. Where before I could have got 20,000 in a season of three months, I could only get a few hundreds.

31,607. What do you think is the cause of the change?—I do not know. I think it is that the small fish in all the bights and bays are caught up when they are young, and they cannot get the large ones in the sea in consequence.

31,608. Did you ever try the haddock-fishing?—Yes, I have been after the haddocks too.

31,609. Are there plenty to be got here?—There were plenty once, but it is nothing now like what it used to be.

31,610. Have they changed their ground?—They have changed their ground, but I have no doubt that good fish are to be caught if the fishermen went round the coast to the Lewis. Sometimes when fishing round by the Butt of Lewis and Cape Wrath we have caught from 30 to 40 tons.

31,611. Whereabouts did you get your best fishing?—The best fishing we got from Cape Wrath.

31,612. Not in the Orkney islands at all?—Yes, we were in the habit of fishing here and did a good fishing. We also had a good fishing both to the eastward and westward. Sometimes we went as far as the Faroe islands.

31,613. You were sure to find them somewhere?—Yes.

31,614. What is the size of the mesh of the seine which you say is used here?—The mesh is of a very small size, not more than half an inch.

31,615. Is it a seine with a cod—a pocket?—It is just a straight herring-net only it is of great length and not so deep.

31,616. Then it is not a regular seine with a pocket?—No, not at all.

31,617. Did you get many young herrings among the sillocks?—Sometimes we have caught a few.

31,618. Did you get any garvies?—Garvies?

31,619. Yes, sprats?—Sometimes we got a few, but not often.

31,620. But you did get them sometimes?—Yes, I have seen them off Stromness, but it is not often they are here now.

31,621. Do you think that the catch of these fish with the seine has a tendency to destroy the fish out at sea?—No; I think the small cod are all caught up when quite young, not with the seine but with lines. They are caught in that way when very young and they are not allowed to grow big.

31,622. Are there more caught in the seine than on the lines?—Yes, but not so many cod.

31,623. What are mostly taken up with the seine are the saithe?—Yes, sillocks, and perhaps a damaged cod among them.

The witness withdrew.

ROBERT BROCK called and examined.

R. Brock.

31,624. (*Mr. Caird.*) You are a fisherman here?—I have been a fisherman, but not of late years.

31,625. What kind of fishing did you particularly follow?—Herring-fishing.

31,626. Anything else?—Lobster-fishing.

31,627. Any other kind?—No.

31,628. Have you ever been in the habit of fishing in Kirkwall Bay?—Yes, for sillocks.

31,629. With a sweep-net?—Yes.

31,630. Did you find it a profitable fishing?—Yes.

31,631. Are there always plenty of these sillocks to be had?—Yes.

KIRKWALL.

R. Brock.

3 August 1864.

31,632. At all times of the year ?—No, only in the winter season.

31,633. Did you sell the fish that were caught in that way ?—Yes, when we could get them sold.

31,634. Were they got so plentifully that they only brought a small price ?—They were got so plentifully that we had to sell them for the dunghill in some cases.

31,635. They were not sold to eat ?—No.

31,636. Are they good to eat ?—Yes.

31,637. Is there a large quantity of them consumed ?—Yes, by the people.

31,638. In the winter time ?—Yes.

31,639. What price are you in the habit of selling them at ?—About three shillings the cran.

31,640. Then it is a very cheap kind of food ?—Yes, very cheap indeed.

31,641. Did they salt them or use them fresh ?—They did not salt them.

31,642. Are there many boats engaged in the winter in that fishing ?—Yes, a good many.

31,643. Is that commonly the case round a good part of the coast of these islands ?—Yes, they get them all round the coast of these islands.

31,644. Everywhere ?—Everywhere.

31,645. Are they used for bait at all ?—They do not make very good bait.

31,646. Do they try them for bait ?—They do try them, but they do not do very well.

31,647. Are you always certain of catching them when you go out ?—Yes, generally.

31,648. Are they in such abundance that you are quite sure of getting them ?—Yes, sometimes, but not at all times.

31,649. But you are certain of getting less or more ?—Yes, less or more.

31,650. Do you ever get large quantities ?—Yes, I have seen six or seven boatloads taken at one haul.

31,651. Then they will be a very cheap food for the poorer classes in the winter time ?—Yes.

31,652. And they are very much used in that way ?—Yes.

31,653. Have you ever been at the haddock fishery here ?—Yes.

31,654. Have you found it a good fishery ?—Well, at one time they were more plentiful than we find them now.

31,655. Do they not come on the same ground that they were formerly found upon ?—No.

31,656. What do you think is the cause of that ?—I cannot say.

31,657. Have you also been a cod fisher ?—No, I have not fished the cod much.

31,658. Have you ever fished cod at all ?—I have fished cod, but not much.

31,659. Are you still following the herring-fishing ?—No.

31,660. Did you find it a profitable fishing generally ?—The herring-fishing ?

31,661. Yes.—It was very well for a few years, but it got very bad, and a good many dropped it.

31,662. Did they drop it because they found it was ceasing to be productive to them ?—They dropped it because the fish could not be found. There were a few years here when the fish could not be found, but it got better a few years back.

31,663. Have you any experience or knowledge with regard to the system of advances from the herring curers to the fishermen ?—Yes.

31,664. Is it advantageous to the fishermen or not ?—I think it is not advantageous to the fishermen. I think it is very bad for them.

31,665. You think they had better suffer a little, and endeavour to do without it ?—Yes, I never had any advance.

31,666. Has the system of advances diminished the number of fishermen ?—It has greatly.

31,667. Have the fishermen been getting into embarrassed circumstances, and not been able to get out of them ?—They got in debt, and the curers took their boats and nets and everything away from them.

31,668. (*Professor Huxley.*) Did you ever catch any full-sized herrings here in the winter time ?—Yes.

31,669. Full-sized herrings ?—Yes.

31,670. At what time of the year ?—In the winter.

31,671. In January or February ?—I think I have in the month of January caught full-grown herrings.

31,672. In what condition were they ?—They were about half full.

31,673. Did you ever catch any spent herrings at that time ?—No.

31,674. Not in January or February ?—No.

31,675. Did you only catch one now and then ?—Yes, they were not plentiful.

31,676. What time do the herrings spawn here ?—In August and September.

31,677. (*Mr. Caird.*) Can you tell us anything about the lobster fishery ?—Yes.

31,678. Have you followed it ?—Yes.

31,679. Have you found it increasing ?—Yes, it is increasing.

31,680. Is the price of the lobster better than it was formerly ?—It is more than double what it was formerly.

31,681. That would make it therefore an object of increased importance to the people who follow it ?—Yes.

31,682. Do more go out to it ?—Yes, a great many more.

31,683. Are there more lobsters caught than there used to be ?—Yes, I think so from the experience I have had.

31,684. Are the places where the lobsters can be fished extensive on the coast of Orkney ?—At what time of the year ?

31,685. At the proper time ?—They fish them here all the winter now.

31,686. Are there many parts of the coast where they can be obtained ?—Yes, they can mostly be obtained all round the coast.

31,687. Have the lobster fisheries shown any sign of falling off ?—None. From all the experience I have had they have shown an increase.

31,688. Is it likely to be an increasing business ?—I think so.

31,689. Is it paying very well ?—Yes, it is paying very well.

31,690. Do you know anything about the export of whelks ?—Yes.

31,691. Is that a large business ?—There is a good deal done in that way.

31,692. Where are they sent to ?—To London.

31,693. Are they sent by steamer ?—Yes.

31,694. Is the trade increasing ?—No, it is decreasing if anything.

31,695. When you say there are a good deal sent away, what number of tons go away every year ?—I can only say what I send myself.

31,696. What do you send ?—Forty or 50 bags a week.

31,697. Do they leave a profit after paying the carriage ?—Sometimes they do, and sometimes not. If they get them to the market fresh then they leave a profit, but if they happen to get there in bad order then they do not.

31,698. Is there much money coming into this country from them in the course of a year ?—Yes, a good deal.

31,699. As much as from the lobsters ?—No.

31,700. Then it is not to be compared to the lobster-fishing ?—No.

31,701. Is there any other kind of shell-fish sent from this island ?—Yes, a few oysters.

31,702. Do the oysters bring much money ?—No, they are not much fished.

31,703. Are they fished with the dredge in the way in which oyster beds are usually fished ?—No, they are not dredged.

31,704. Is there a large crab or parton fishery ?—We get plenty of partons along with the lobsters in the creels.

KIRKWALL.

R. Brock.

3 August 1864.

31,705. Are they sent away ?—No, they will not keep to send away. We are too far from the market.

31,706. Do the lobsters keep ?—Yes, they do very well.

31,707. Do you send them away alive ?—Yes, to London. They go by rail from Aberdeen.

31,708. But the crabs would not pay the carriage ? No, they would not live.

31,709. Do they not live as long as the lobsters ?—No, in a short time they would die away.

31,710. How are the lobsters packed ?—In boxes.

31,711. Are they packed up with anything ?—A little seaweed.

31,712. In seaweed ?—Yes, above and below them.

31,713. Are the partons packed in the same way ? —Yes, somewhat in the same way.

31,714. But they do not live as long ?—No, it will not do to send them away, not even to Edinburgh.

31,715. Has the lobster trade sprung up very much since the opening of the railway to Aberdeen ?—Yes, a great deal.

31,716. Formerly you could not get them quick enough to the market ?—No, we used to send them to Granton, now they all go from Aberdeen.

31,717. (*Professor Huxley.*) How do you get your whelks ?—We catch them at the ebb.

31,718. Are they as abundant as that ?—Yes, the people go and pick them up.

31,719. Is it the large whelk ?—No, the black whelk.

31,720. Do you mean periwinkles ?—Yes.

31,721. That is quite another matter. What we call whelks you call buckies ?—Yes.

31,722. You mean by whelks the periwinkle ?—Yes.

31,723. Do you use whelks for bait ?—Yes.

31,724. How do you catch them ?—They catch them upon a cod's head.

The witness withdrew.

ALEXANDER RUSSELL called and examined.

A. Russell.

31,725. (*Mr. Caird.*) What experience have you had with regard to the fisheries of the Orkneys ?—I have had some experience with regard to the herrings and lobsters.

31,726. Is the herring fishery an important one or a declining one ?—It improved for some time and then fell off again, and now I think it is improving again.

31,727. What was the cause of the decline ?—I think the great cause was the want of fish.

31,728. And now the fish seem to have shown some signs of coming back again ?—Yes, at least for the last three months.

31,729. Is there any suggestion you could offer to the Commission with regard to the fishing interest of the Orkneys by which it could be improved ?—I do not know that there is.

31,730. Is there any destruction of the young of fish by any mode of fishing that is carried on here ?—No, I do not think there is.

31,731. Are there any regulations imposed upon the fishermen here which are injurious to them in their trade ?—No.

31,732. Are you a herring fisherman ?—No, I cured herrings for some time, but I have not done so for the last three years.

31,733. Have you received advantage from the Government brand ?—I think the brand is very useful.

31,734. Were you in the habit of sending some of your herrings to the home market ?—Yes, to Ireland.

31,735. Is there any brand upon the herrings sent to Ireland ?—No, it was never used for the Irish market.

31,736. Then how did the Irish purchaser satisfy himself as to the quality of the cure ?—Both by bargaining with the seller as to the quality, and then opening the barrels and examining them.

31,737. Is that not done by the foreign purchaser ? —Yes, but the transaction is made more handy by having a guarantee.

31,738. Can you tell us anything about the lobster fishery here ?—Yes.

31,739. Is it an increasing fishery ?—At present it is increasing, but I suppose there were as many caught 30 years ago as are caught now. At that time they were carried away by well-smacks.

31,740. Were they carried alive in the wells ?—Yes.

31,741. Is not the present mode of transit much cheaper and quicker ?—It is quicker, but they were carried in better order when they were carried on board the well-smacks. They are very liable to die on board the steamers.

31,742. Is it not a superior fish that is caught now ? —A higher price is given for them.

31,743. What is the principal season for fishing for them in the Orkneys ?—May and June. The principal portion of them is caught during those two months.

The witness withdrew, and the inquiry was adjourned until August 4, at Lerwick in Shetland.

Lerwick, Shetland, Thursday, 4th August 1864.

PRESENT :

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

GEORGE H. B. HAY called and examined.

LERWICK.

G. H. B. Hay.

4 August 1864.

31,744. (*Mr. Caird.*) You are a fish-curer here ?—Yes.

31,745. What kind of fish do you cure ?—White fish and herrings.

31,746. What are the principal fisheries that are carried on in Shetland ?—The cod and ling fisheries, I should say.

31,747. Is there also a herring fishery here ?—Yes, but it is not very extensive.

31,748. At what season is the cod fishery carried on ?—On this coast it is chiefly carried on by decked vessels which begin the fishery about the month of May and go on until August. There is also a cod fishery by boats from certain parts of the country during the winter time.

31,749. But the principal fishery is carried on from May till August ?—Yes.

31,750. What are the kinds of fish taken during those months ?—Cod and ling and tusk.

31,751. Is there a large number of boats employed in that fishery ?—Yes, a considerable number.

31,752. Is the fishery followed with long-lines ?—The ling fishery is entirely followed with long-lines.

31,753. But how is the cod fishery carried on ?—The cod fishery is carried on with hand-lines.

31,754. Has that fishery been increasing or diminishing in its yield within recent years ?—Well, I think the ling fishery has rather increased. The cod fishery is carried on in quite a different manner from the way in which it was carried on at one time.

LERWICK.

G. H. B. Hay.

4 August 1864.

31,755. What is the change that has been made?—The cod are not so abundant on the coast here now as they were and the vessels which are now used are built of a different character and they are obliged to go to a greater distance and they partly fish on the coasts of Faroe and Iceland.

31,756. Are the fish not brought here as they used to be?—Yes; they are split and salted in the holds of the vessels and then they are brought here to be washed and dried.

31,757. Then the vessels continue their fishing on the fishing grounds for a considerable period?—Yes, for a month or six weeks at a time.

31,758. And I presume that they come in with a large quantity of fish at a time?—Yes.

31,759. What weight of fish will a vessel bring in at one time from the cod fishing ground?—In the wet state they will bring in from 20 to 30 tons if there has been a successful fishing.

31,760. Are there many vessels engaged in that fishery?—Yes, I think this year from Shetland there are about 40 vessels.

31,761. And they are all decked boats?— Yes, decked vessels.

31,762. And are there strange vessels also?—Yes; smacks come to the cod-fishing from Hull, and Grimsby, and London.

31,763. Do they use the cod they catch in the same way by partly salting them and bringing them here to be dried?—Yes; they bring them in here and sell them to persons at Lerwick.

31,764. To the curers you mean?—Yes.

31,765. In fact they follow exactly the same fishing as the native vessels?—Yes.

31,766. Do they use the same kinds of lines and bait?—Yes, just the same.

31,767. And they come here regularly every year?—They are beginning to come more each year. For the last four or five years they have been increasing in number. They find that it fills up a portion of the time that would be unoccupied on their own coast.

31,768. Are the native boats increasing in numbers and size?—I think there is very little change as to the number of ling boats. The ling-fishing is carried on entirely in open boats.

31,769. Speaking of the cod-fishing boats are they increasing in number?—They are increasing I should say.

31,770. Has the size of the boats within recent years increased also?—Yes.

31,771. Have they changed their lines; do they use longer lines now than they did formerly?—No; I think the lines they use now are the same as they always used.

31,772. And do they use the same kind of bait for catching the fish?—Yes.

31,773. What kind of bait do they use?—They use shell-fish when they can get it.

31,774. Buckies?—Yes.

31,775. Is that bait not to be found in abundance here?—When they are fishing as far off as the Faroe Islands they are obliged to go in there to get it.

31,776. Do they find it there without much trouble?—Yes.

31,777. Then when those partly salted fish are brought in here what is done with them?—They are washed and dried.

31,778. And are prepared for export?—Yes.

31,779. Are they exported to foreign markets?—Yes, to Spain.

31,780. Do none of them go to the home markets?—Only the small and inferior ones. All the finest go to the foreign markets.

31,781. Are they put into barrels or sent loose?—They are sent loose.

31,782. Is there any trade or Government mark on them when they are sent away?—No; that has been abolished. There was at one time.

31,783. Were you in the trade when that Government brand was placed on them?—I was quite young at the time, but I was in the business.

31,784. Do you recollect whether the operation of the brand was for the advantage of the fishery or otherwise?—I think it did very little good.

31,785. You do not find that you sustain any loss from the want of that brand now?—No, I cannot say that we do.

31,786. Then, with regard to the ling fishery, when is that carried on? Are the ling and tusk fisheries carried on together?—Yes; all along the coast. The greatest stations are to the north part of the North Mainland.

31,787. I understood you to say that the boats used in the ling and tusk fishery are all open boats?—Yes.

31,788. Then is there a greater number of persons employed in the ling and tusk fisheries than in the cod fishery?—Yes, there is a larger number, I should say, employed in the ling fishery.

31,789. During what season is that carried on?—It is carried on during the same time.

31,790. From May to August?—Yes.

31,791. Then it is not a winter fishery?—They do carry on a winter fishery in some parts, but not in a general way over the country.

31,792. Is there a large quantity of that kind of fish caught?—Yes.

31,792*a*. Is it an increasing or a diminishing quantity?—I think it is an increasing quantity.

31,793. And are the ling and tusk cured in the same way as the cod are for export to the foreign markets?—There is not so much ling caught as cod. They are occasionally sent to Australia, but very little goes now to Spain.

31,794. But none of those fish are to any extent sent fresh to the market?—No, none are sent fresh.

31,795. Is there a particular kind of bait used for the ling and tusk which is different from that used for the cod?—Yes.

31,796. What is it?—It is a fish-bait.

31,797. What sort of fish-bait do they use?—I think they use the haddock and herring when they can get them, and also mackerel.

31,798. Is there any haddock fishery round this coast?—Not to any extent. There are haddocks for the supply of the town. They catch about sufficient to supply the town and neighbourhood.

31,799. But the haddock fishery is not followed as an object of much importance?—No, it is not.

31,800. Might it be extended do you think?—Well, I don't know that it could.

31,801. Was it ever a valuable fishery in Shetland?—No.

31,802. (*Professor Huxley.*) Have you sent out vessels to the Faroe Islands fishing for cod?—Yes.

31,803. Was there not a particular period at which the cod left these islands?—Yes.

31,804. What year was that; was it about the year 1835 that they left these islands or Faroe?—I cannot speak so much about Faroe, but they have left this coast at different periods.

31,805. Can you give us some of the periods when they have left the coast?—I think that previous to 1835 or 1836 they left this coast; or, at least, the fishing had greatly diminished. It had fallen off so very much that vessels went to Faroe at that time in search of fish.

31,806. Did they find the fish at the Faroe Islands?—Yes, but they were not so abundant as they have been found during the last few years.

31,807. Is the cod fishery liable to spontaneous variations of that kind?—I think it is.

31,808. And for no apparent reason?—No.

31,809. Was there any cause supposed to exist which would account for it?—Not that I know of.

31,810. There is nothing like trawling going on here?—No, nothing of that sort.

31,811. There is no beam-trawling practised here?—No,

31,812. Do they use seines along this coast?—No.

31,813. I suppose the coast is too rocky?—Yes, I believe it is.

31,814. Did you ever send vessels to Davis's Straits for cod ?—Yes.

31,815. How long ago is that ?—I think the first time would be about the year 1845 or 1846.

31,816. Did you find that the cod were abundant there ?—Yes, for some years they were found very abundant.

31,817. How many years did it remain abundant ?—I think for four years it was abundant, and they had very good fishing.

31,818. Then did it fall off again ?—Yes, the last year but one the quantity was very much less, and the last year of all there was scarcely any cod got at all.

31,819. What year was that ?—That would be in 1850, I should think. We have tried it once since then.

31,820. And with what success ?—We found the cod very scarce indeed.

31,821. Then they had not recruited themselves ?—No, and just 10 years had elapsed.

31,822. Was any other kind of fishing going on in Davis's Straits at that time ?—Not at that place.

31,823. Have you paid any attention to the cure of herrings here ?—Yes.

31,824. Can you tell me what time of the year you get full fish in these islands ?—About the month of August.

31,825. And when do they become spent fish ?—At the latter end of September.

31,826. You find them full from August to September ?—Yes ; but there are full fish to be seen at other seasons. I have seen full fish much later.

31,827. Much later than September ?—Yes.

31,828. How late have you seen full fish ?—I have seen full fish up to the beginning of October, but they are generally spent at that time.

31,829. Are herrings taken here in the winter,—in January or February for instance ?—There are none taken here at that time now.

31,830. Have they ever been taken here in those months ?—Yes.

31,831. Then was there ever a winter-fishing here ?—Yes, but it is very long ago—100 years ago, I believe.

31,832. Are herrings never taken here for bait in the months of January or February ?—No, I think not ; they cannot get them at that time.

31,833. Then you do not happen to know in what condition they are at that time of the year ?—No, I do not.

31,834. Have you noticed any peculiarity in the size of the herrings of Shetland ?—No.

31,835. Are they larger than the herrings which are obtained elsewhere ?—No, I think not.

31,836. Have you noticed them at different seasons of a large size ?—I have seen herrings caught by some of the Dutch vessels as late as November somewhere in this neighbourhood of a very large size.

31,837. In the previous Commission on which I was engaged some two years ago I was told by some of the fishermen that herrings were not unfrequently found on the shores of the Shetland Islands as much as 14 inches in length ?—I cannot speak of that. Some of the fishermen will be better able to give you information on that point.

31,838. Are the fishermen here wholly engaged in fishing or have they land to cultivate as well ?—Most of them have land.

31,839. So that they do not depend entirely on the fish they take ?—No, not entirely.

31,840. What would be the cost of the outfit of a cod vessel ?—That depends entirely upon its size. The class of vessels we are using just now would cost about 500*l.* each, I suppose.

31,841. Then I presume they are decked vessels ?—Yes.

31,842. That cost includes everything; the vessel with all its apparatus of long-lines, and so on ?—They do not use long-lines.

31,843. Do they use hand-lines ?—Yes, they use hand-lines. Some of the vessels will cost a good deal more than that.

31,844. Will that be a fair average price ?—I think it will.

31,845. Have the size of the vessels, and the expense of them increased of late years ?—There were many of a much smaller class of vessels used when they fished on this coast.

31,846. Then all that has come out of the fishing, I suppose ?—In what way ?

31,847. I mean the additional capital that has been put in the vessels ?—No, I do not think it has.

31,848. How has it been managed then ; are the vessels the property of the fishermen themselves generally ?—No, they are scarcely ever the property of the fishermen.

31,849. Then the fishermen are merely employed in them ?—Merely employed in them. They get a share of the fishing.

31,850. Then the vessels are the property of the merchants on shore, I suppose ?—Yes.

31,851. I presume that as the size of the vessels has been increased and more capital has been put into the trade, it has been yielding a fair profit?—Only of late years. The fish diminished altogether almost. A large fleet of vessels went to the cod fishery from this place and they went on for many years, the cod getting scarcer every year and the fishery was nearly given up, when there was found to be an abundance of fish at Faroe. That continued for a certain time, and in order to carry on that fishing new vessels were got chiefly.

31,852. Does no fishing take place on the old ground ?—Very little. There are a few smacks working at it still, but not a great many.

31,853. You were saying that foreign vessels fished here a good deal, I think ?—No, I meant vessels from England.

31,854. Do foreign vessels come up here to fish for herring ?—Yes, Dutch vessels.

31,855. Have you ever heard of any complaints with regard to their interfering with the other fishermen ?—I think the Dutch fishing boats have seldom or ever been complained of.

31,856. Is there ever any Fishery vessel up here looking after the interests of the fisheries ?—Yes. There was at one time some interference by the Belgian fishermen ; they came into the harbours and sent out boats, and there was a Fishery steamboat down for some time, but there has been little complaint lately of any interference.

31,857. (*Mr. Caird.*) Is there any lobster fishery here ?—No. I believe there are a few lobsters to be found, but they have not been fished with success.

31,858. They never have been fished as a matter of business here ?—They have been tried, but it has not been found successful.

31,859. Are there any oyster fisheries here ?—There are none for the purposes of trade. They are to be found in various places.

31,860. Are there any good oyster beds on the island ?—Yes.

31,861. Is the quality of the oysters good —Yes, they are very good.

31,862. Then is it a business that might be developed by the application of industry to it ?—Well, I do not know whether that is so or not. They are some distance from this place, and the expense of bringing them here and shipping them would add very much to the cost.

31,863. Do you think the cost of conveyance south would be too expensive to make it answer ?—The difficulty would be more to get them conveyed here to Lerwick. That would add considerably to the cost.

31,864. What means are there for sending them to the south from Lerwick ?—There is a steamer once a week.

31,865. If the difficulty of conveyance could be got over, are there beds which are established for the

LERWICK.

G. H. B. Hay.

4 August 1864.

development of the oyster fisheries ?—I do not think it ever could be made a very extensive fishery.

31,866. Are you aware if there is any mode of fishing practised in the islands which is wasteful of the brood or the spawn of the fish ?—I do not know that there is any. Some of the fishermen complain of the taking of young coal-fish in that way in large quantities.

31,867. That is the sillock, is it not ?—Yes, they call them sillocks.

31,868. Have you any reason to believe that there has been an increase of the catch of those fish of later years ?—No, I do not think there has been.

31,869. Are they found here in great quantities ?—Yes.

31,870. Is that in the winter time ?—Yes.

31,871. Are they taken by nets ?—Yes, with round nets.

31,872. Circle nets ?—Yes, round nets.

31,873. They are drawn along the shore ?—They dip them, gather the fish about them, and lift them up.

31,874. Do those nets take great quantities of fish ?—Yes.

31,875. Does that mode of fishing form a considerable portion of the business of the fishermen during the winter months ?—Yes, they take the fish sometimes for the liver in order to extract the oil.

31,876. Is there much oil extracted from them in that way ?—Yes.

31,877. Is it a matter of considerable importance in the way of trade ?—It is in some parts.

31,878. Is it in Lerwick ?—No ; we seldom get more here than supplies our own wants.

31,879. In some parts of the island does it really become sufficient in extent to form an export of oil ?—Yes.

31,880. Is that carried on to any considerable extent ?—Yes, I think so.

31,881. Is it a valuable oil ?—Yes.

31,882. You get whales here occasionally ?—Yes.

31,883. What kind are they ?—They are only of small size, about 18 or 20 feet long.

31,884. (*Professor Huxley.*) Is it the calling whale ?—Yes.

31,885. (*Mr. Caird.*) Are they found here every year ?—No, not every year.

31,886. But mostly every year ?—A few years.

31,887. Is there a considerable quantity of oil got from them ?—Yes.

31,888. (*Professor Huxley.*) Is there any great difference in the size of the fish got from the Faroe islands and those got along the coast here ?—What they get on the coast of the Faroe islands are much about the same as they are here. There is a bank some distance from the Faroe islands where they get cod of very large size.

31,889. A bank some distance from the Faroe islands ?—Yes.

31,890. What would be the difference in size ?—They are more than twice as large.

31,891. (*Mr. Caird.*) Has that bank any name ?—They call it the Faroe bank.

31,892. Is it a well-known fishing bank ?—Yes.

31,893. Is it as productive of these large cod as ever it was ?—No. They got large fish there last year, but they have got scarcely any this year.

31,894. What is supposed to be the cause of that ?—I cannot tell.

31,895. Is there any beam-trawling practised here ?—No.

The witness withdrew.

JOHN ROBERTSON, senior, called and examined.

J. Robertson, sen.

31,896. (*Mr. Caird.*) You are a fish-curer here ?—Yes.

31,897. From your experience can you tell us whether the supply of fish caught round the islands has been increasing, stationary, or diminishing during the last 10 years ?—I think it has been rather increasing.

31,898. Has any change taken place in the mode of fishing cod, ling, or tusk within your time ?—No.

31,899. Are the number of boats engaged in the fisheries on the increase ?—Yes ; for a few years back they have been on the increase. Last year there were rather less than there were in the year before.

31,900. Do the fish frequent the same fishing-grounds that they frequented formerly ?—Yes, the same.

31,901. Have you only one weekly steamer here ?—Yes.

31,902. And are your fish chiefly sent by that steamer to the south ?—There is not much of it sent by steamer.

31,903. Then you are not much dependent upon that steam communication for the export of your fish ?—No.

31,904. Are the fish exported in cargoes ?—Generally in cargoes.

31,905. So that the opening of communications of this kind has not much altered your mode of fishing here, or led to any great change ?—No.

31,906. I suppose there is no part of the fish caught round the islands sent fresh to the market, except to the home market and to the islands ?—There are none sent fresh from here.

31,907. Are none of the vessels which come from the English coast cod-well vessels ?—They have wells, but a very few of them take cod south fresh.

31,908. Do they not come far north for that description of fish ?—No.

31,909. Is the herring fishery an improving or diminishing one here ?—It has been rather decreasing. It was carried on to a greater extent some years ago than it is now.

31,910. Has it ever been a valuable fishery in Shetland ?—I cannot say much about it. I was once engaged in curing herrings, but I am not engaged in it now.

31,911. Speaking of the curing of cod and ling, were you in the trade at the time there was a Crown brand upon them ?—No.

31,912. Have you ever found in your business as an exporter of fish any cause to regret the want of such a Crown brand ?—Well, I cannot say that I have.

31,913. You have never found any difficulty in marketing your fish abroad ?—No.

31,914. Have you any mark whatever upon them that they may know the cure by ?—We have no mark upon them.

31,915. Then how do they know that the fish are well cured ?—Only by examining the quality of the fish.

31,916. Within recent years has the price of fish increased ?—Yes.

31,917. The price given for fish abroad ?—Yes.

31,918. And the price given to the fishermen also ?—Yes, in proportion.

31,919. Are there more of the sons and families of the native fishermen going into the fishing business than did formerly ?—They have been for the last 10 years more engaged in the fishing than before.

31,920. Has it been found a more remunerative business than it formerly was ?—Yes, the price has been rather better.

31,921. Are the fishermen in any case solely fishermen, or are they in all cases also small farmers ?—They generally have small farms.

31,922. They do not follow the business of fishing all the year round ?—Not entirely.

The witness withdrew.

JOHN HARRISON called and examined.

31,923. (*Mr. Caird.*) You are a curer and exporter of fish?—Yes.

31,924. In your opinion is the quantity of fish caught and cured here increasing or diminishing?—It has been increasing ever since I have been in the trade.

31,925. How long is that?—For about the last six years.

31,926. Has it been a regular and progressive increase?—I should say that it has.

31,927. Has the price at the same time been improving?—It has varied occasionally, but on the whole it has increased.

31,928. Is the increase of price at all the cause of the increased application of the fishermen to the business?—No, I think not.

31,929. Do you think that the fish have become more plentiful?—The fish have not become more plentiful, but the increase of the price in the case of the ling fishery has stimulated the men to further exertions in order to catch the fish; that, however, has not been the case in the cod fishery. The increase of the fishing in the case of the cod has not been occasioned by the increase of price; but still the success of the few vessels that went to the fisheries a few years ago has caused more men to enter into it than were engaged in it formerly.

31,930. Has the cod-fishing been a more increasing business than any other kind of fishing here?—Much more so.

31,931. Have there been more going into it than to any other kind of fishing?—There has been more capital employed in it.

31,932. Is that capital more productive than that employed in any other kind of fishing?—I think so.

31,933. Is it because the fishing is more valuable, or what is the cause of it?—The great reason of it is that the vessels are capable of sticking to the fishing the whole season, though in the case of the home-fishing here the boats they use are open boats, and the men have to lay by for two-thirds of their time in consequence of bad weather. The boats are so frail that they cannot stand anything that would be called bad weather.

31,934. Are they half-decked boats?—No.

31,935. Are they open boats?—Yes.

31,936. The decked boats which can keep the sea for this reason do not lose their time, and make a better business of it?—Yes.

31,937. Do the decked boats keep the sea for long together?—Yes, for three months at a time in some cases.

31,938. Without coming ashore at all?—They go in occasionally to the Faroe Islands to supply the boats with water, but they will be eight or 10 or 12 weeks away from Lerwick before they return again.

31,939. Is that the whole fishing of the season?—That is about half the season's fishing. In some cases where they are more than ordinarily successful they will go three times.

31,940. What weight of fish will a boat bring in as the result of 10 or 12 weeks' fishing?—This season, on the average, a boat's catch has been about 8,000 fish for the first voyage, from the 7th April to the 15th June. It was a somewhat earlier fishing this year, but the quantity caught would yield about 11 or 12 tons of dried fish on the average.

31,941. What does that dried fish make a ton here?—I should say about 20*l.* a ton.

31,942. That would be a good average yield?—They do not do so well here afterwards. The second is never so productive as the first, because in the first of the season the fish are more plentiful on this coast than at the end of it.

31,943. Sometimes they make a third voyage?—Yes, sometimes, but the Faroe fishery is never so productive at the end of August, the fish all go away then.

31,944. What do the boats do at the latter part of the year?—Latterly they have gone to Iceland towards the end of September; they find there always a good run of fish at the latter end of August, and in the month of September.

31,945. What do they do with the fish?—They generally salt it down in a wet state, and cure it in the following season.

31,946. How long do they stay on the coast of Iceland?—Five weeks.

31,947. Do they bring home the fish they catch?—They may be able to fill themselves in four weeks there.

31,948. Is it a more productive fishery?—Yes, there is a more extended ground to fish over.

31,949. But it is not fished so early?—Yes, in the month of May and there is a fine fishing there always in the month of June, until the 15th July, then the fish generally go off the ground.

31,950. Are they found here then?—The same quality of fish is not here at all, that is quite a distinct quality.

31,951. Do your fishermen go there in May when the fishery begins?—Very rarely.

31,952. What do they do after they leave Iceland in the latter part of the season?—The vessels are laid up then.

31,953. Until next April?—Yes.

31,954. Do the fishermen employ themselves in agricultural operations during the winter, or what do they do?—I think they do nothing at all. The fishermen have nothing to do with the vessels; they are generally, on the average, of about 40 tons register.

31,955. Who do they belong to?—To the fish-curers themselves.

31,956. Do the fish-curers hire the men at wages, or do they give them some share of the fishing?—The fishermen have half the catch, a share of the fishing, and some other perquisites as well.

31,957. Has that been found to be a good remuneration for the fishermen?—A very good remuneration during the last few years.

31,958. And have the fishermen been improving their condition under that arrangement?—Many of them have been improving their condition, very decidedly so.

31,959. Are they going in increasing numbers to this business?—They have been increasing every season.

31,960. And the fish-curers are increasing their vessels?—Yes.

31,961. Do your vessels ever go cod-fishing at all to Norway?—No, not any of them within my recollection.

31,962. With regard to the ling and tusk-fishing, you say it is not so remunerative in consequence of the boats being unfit to keep at the sea?—Yes.

31,963. Is it a fishery that would pay to place better boats in the business?—I do not think there is any fishing that would at all pay so well.

31,964. Then why do not the curers turn their attention to it?—It is not so much that the curers would not be inclined to undertake the cost of any new experiments, as that the fishermen have a sort of dislike to any innovation.

31,965. Is the fishing season for ling and tusk the same as that for cod?—It commences later and ends earlier.

31,966. What is the season?—From the 12th May until the end of July, or perhaps for a few days into August.

31,967. Do cured ling and tusk bring as good a price as cured cod?—Latterly it has brought a better price in the last two or three years, but now the cod have got up to the price of ling.

31,968. Has anybody thought of trying the use of decked vessels at the ling fishery?—It has been tried, but there have been great difficulties in the way. I believe they have tried vessels with a couple of boats. There is generally a swell on the sea, and they have a difficulty in managing the boats as they go along. There are seven men in each vessel. A small decked-craft here of about 25 tons register had one boat only, and they set out their lines eight times and out of those

LERWICK.

J. Harrison.

4 August 1864.

eight times they were only able twice to get the fish aboard without the aid of a line. There is so much sea on that it is impossible at times to conduct the fishing.

31,969. They cannot fish the ling in the same way as the cod?—No.

31,970. What do they fish the ling with?—Long lines.

31,971. Are they hauled in?—Yes, by means of a boat. The boat is from 20 to 21 feet on the keel. They are boats with six men.

31,972. The ling cannot be fished out of those vessels?—Not in those waters. They might fish them out of decked vessels even with the water as deep, but the ground is so uneven. There are patches of sand and patches of rock, and the lines would be liable to break.

31,973. Then there is a practical difficulty in changing from open boats to larger vessels?—Yes.

31,974. Is there any appearance, as far as you know of, of any decrease in the quantity of cod and ling upon the fishing-grounds which those fish frequent?—The only decline, and a very great decline it has been, is on our own coasts here on the west side of the country—on the banks here to the westward. About the time I was born, about the year 1834, 1835, or 1836, we had a very heavy fishing, even more than they get now at Faroe. Some of the small smacks had as good a fishing as the large ones of from 40 to 50 tons register. The only reason which I can assign for the decrease is the spring fishing, which we carry on on the west side. I think that is a bad thing. There are a few fishermen who take up the fish in the month of February when the cod are full of spawn, and that must operate injuriously to the summer fishing of cod. There is nothing else that I am aware of.

31,975. Are those banks which have declined in their yield of fish more liable to be fished in the month of February than the other banks which have continued to yield well?—As a general rule they do not fish in February. The fish come in-shore to deposit their spawn, but they are sometimes taken up by the fishermen when they are in-shore.

31,976. That is not in the May and June fishery?—No, in the month of February; that is the time that the cod are full of spawn. They spawn here in the month of March.

31,977. Are they got in February?—Yes.

31,978. Is there any haddock fishery of any importance here?—No.

31,979. With regard to the oysters, a previous witness said there were plenty of beds, but that it was not found profitable to fish them?—I do not understand anything about oysters at all.

31,980. Do you cure herrings?—No, not at all. I know very little about the herrings.

31,981. (*Professor Huxley.*) Is it an ordinary thing in your experience for the codfish to shift their ground after a few years?—I have not had the benefit of many years' experience, so I am not able to say that; but I am aware that in some cases, such as Faroe Bank last season, there was a very plentiful fishing, the most plentiful that was ever remembered, yet this season they can get nothing at all.

31,982. Upon the same banks?—Yes. And the year before last there were no fish at all in the first part of the season; three or four weeks afterwards they became very plentiful and the fishermen had a good run. They remained for a short time on the bank and then went away again.

31,983. Have any of your people been at the Rockall fisheries?—Yes.

31,984. There was a great fishing there some years ago?—Yes.

31,985. How many years ago is that?—Three years ago.

31,986. Has that fishery remained the same or has it fallen off?—It has fallen off. At the first of this season there were some vessels that went there about the latter end of May, but the got there rather too late. The first two or three days there were plenty of fish on the ground, and they got great numbers. The men seemed to say if they had been there a fortnight earlier they would have made a good fishing. They were too late for the Rockall fishery this year.

31,987. Are you of opinion that the fish will go back there?—Yes, I think so.

31,988. Was last year a bad season?—Only a few vessels went there then.

31,989. Was that on account of the weather?—No, because they had got rather disgusted with it.

31,990. Had it been so the year before?—Yes.

31,991. In 1862?—Yes.

31,992. Was the fishing of 1862 a bad fishing?—A good many vessels went there, but they did very poorly. The weather was also very bad, it was too boisterous to enable them to do much. There is one thing I should like to mention with regard to our cod-fishing, which is a very great trial and trouble to our fishermen when they go to the Faroe fishing. They require to go to the Faroe islands to get whelks for bait.

31,993. (*Mr. Caird.*) Is the whelk the best bait there?—Yes.

31,994. Buckies?—Yes, what we call buckies.

31,995. Well, what do you complain of?—Why, the Danish Government have placed restrictions on fishing them. They won't allow any fishermen to fish but themselves, and unless we get the Faroe men to fish for us and pay them so much a-day, we are not allowed to get the whelks at all. Now in many cases the Faroe men are very lazy, and when they are called on they won't fish; the consequence is that sometimes our men are obliged to lay in harbour for eight days, whereas if they were allowed to catch the bait themselves they might have got out in two—that is a serious injury to our fishery.

31,996. Could not your men have got the bait themselves and paid the Faroe men wages, although they did not do the fishing?—They won't even allow one of our men to go into the boats.

31,997. Is that a Danish regulation?—It is either a local or a government regulation. They say it is a local regulation of the governor who has been appointed there lately.

31,998. Was it not the case in former years?—No, it has only been the case for the last two years.

31,999. Was there not formerly a regulation that British fishermen should pay for that bait?—Each vessel paid 2*s.* 6*d.* anchorage money.

32,000. And was she allowed to take what bait she pleased?—Yes.

32,001. Is it supposed that the bait is decreasing, and that it is necessary to have some regulation in order to prevent it from being overfished?—That is not the reason assigned for the regulation, because the Faroe people do not use much of the bait themselves.

32,002. Then there is no complaint that it is decreasing?—No, there is plenty of bait.

32,003. Do you think it advisable to have some representation made to the Danish Government on the subject?—Very advisable indeed. I have no doubt that our vessels have lost one-third of the quantity of fish they might otherwise have caught, or equal to 300 tons this year, in consequence of that regulation.

32,004. Do you desire some regulation by which you would be able to procure the bait?—Yes.

32,005. You do not object to pay for the bait?—No, we have not the slightest objection to pay for it.

32,006. But you object to be kept unnecessarily waiting when bait could be got for you?—Yes.

32,007. (*Professor Huxley.*) Do the Danish Government allow you to fish within three miles of the shore of the Faroe Islands?—I do not think there is any restriction.

32,008. Of any kind?—No. It is rarely that our vessels are obliged to fish within three leagues of the coast off the north-west part of the island; but in the case of the tides being against them they may draw closer in towards the land. They do not even fish

within nine miles of the coast; they generally keep 20 or 30 miles off the coast.

32,009. Do you cure your fish on shore at the Faroe islands?—No.

32,010. Have you no establishment for that purpose?—No.

32,011. Are they cured on board?—They are split and salted on board; they are dry salted.

32,012. (*Mr. Caird.*) Is the offal thrown overboard?—Yes.

32,013. (*Professor Huxley.*) Do the Faroe people carry on a considerable fishing there?—No, it is not very considerable. It is mostly in open boats, but the quantity of fish has increased.

32,014. Do they complain of any interference on the part of our people with them?—I have heard of nothing of the kind.

32,015. (*Mr. Caird.*) Do the Danes fish much on the banks on that coast?—They fish along the coast in the same way as our fishermen do. The Faroese have open boats as well.

32,016. They do not fish with decked vessels at all?—No.

32,017. They do not compete with you?—No.

32,018. Nor do you compete with them?—Not in any way.

The witness withdrew.

John Stove called and examined.

J. Stove.

32,019. (*Mr. Caird.*) Have you long been a fisherman in Shetland?—Yes.

32,020. How long?—For more than 40 years.

32,021. And have you practised all the different kinds of fishing that are practised in these islands?—Yes.

32,022. Have you gone to the cod-fishing outside?—Yes, some time ago.

32,023. Was that in a decked boat?—Yes, it was in our home-fishing upon what we call the Faroe banks.

32,024. Was that hand-line fishing?—Yes.

32,025. During the time you were following the cod-fishing were there any signs of an increase or diminution in the quantity of fish?—It was just at the very time that the increase in the fish came; it would be about 22 years ago.

32,026. Have you not been there since then?—No.

32,027. Then you cannot tell us what is the state of the matter now?—No.

32,028. Have you been a fisherman for ling and tusk also?—Yes.

32,029. That is followed in a different manner and in a different kind of boat?—Yes, in open boats.

32,030. And with long-lines?—Yes.

32,031. Cannot it be followed in the same manner as the cod-fishing?—No.

32,032. Are the two kinds of fish taken by different kinds of bait?—Yes, there are different kinds of bait.

32,033. What bait do you use for the cod, and what for the ling and tusk?—Buckie and mussel for cod and fish-bait for the ling and tusk. The principal bait is what we call pulters, which are small codfish.

32,034. The ling and tusk do not take the mussel and whelk?—No, herring and the mackerel are the best bait for ling and tusk.

32,035. Is not herring the best bait for cod?—It is a fine bait for the cod, but we cannot get it.

32,036. Is the catch of ling and tusk in your experience increased in quantity?—Yes, it has.

32,037. Are you well acquainted with the fishing grounds for both cod, ling, and tusk?—I am well acquainted with the home grounds.

32,038. Has there been any sign in your knowledge or experience which shows that they are not yielding as well as they were in the habit of doing in former years?—I think they are yielding better; but there is a better mode of fishing them, and the gear is differently made in all respects from what it was in olden times.

32,039. More fish are caught now in consequence?—Yes.

32,040. And the more the grounds are fished is it your opinion the more fish are to be got?—I will not say that there are more fish to be got, because in former years I think the fish were more plentiful, but they were not so much caught as now.

32,041. Are there not many more people engaged in fishing for them now?—Yes.

32,042. Are the fish of as good a quality as they formerly were?—Yes, equally as good.

32,043. Is there any mode of fishing practised here which is injurious to the young of the fish or the spawn?—Yes, in the westward in the month of March the small cod are taken up at the very time they are breeding.

32,044. The small cod?—Yes.

32,045. Is there much injury done to the cod fishery by that?—I cannot say there has been much injury done by that, but it is considered that it has been injurious to the home banks.

32,046. But are not those small cod very good for food?—Yes, they are.

32,047. And they are very readily sold?—Yes.

32,048. Are there plenty of them to be got?—Yes, there are plenty to be got. They are taken up at the same time with the breeding cod which has spawn in it.

32,049. Are they in a very good condition?—They are in the very best condition at any time of the year.

32,050. Is there much cod-fishing in the months of February and March?—On the west side there is a good deal of ling and cod caught in those months.

32,051. In-shore?—Yes.

32,052. It is not at the distant fisheries that this is done?—No; it is done by open boats in sight of the land.

32,053. Has that mode of fishing been increasing or diminishing of late years?—It has increased.

32,054. Is there plenty of bait to be got here for all the kinds of fishing that you follow?—Yes, there is good bait to be got.

32,055. Then there is no difficulty in following your business for want of bait?—It is very rarely that we cannot get bait, unless we have bad weather. Under other circumstances we have not much difficulty in getting it.

32,056. Have you been a herring fisherman?—I was for some short time, for about five years.

32,057. At what time of the year did you fish for herrings?—In the harvest time, in the months of August and September.

32,058. Just the summer fishing?—Yes.

32,059. Never at any other time?—No, unless there were a few boats making a trial in the latter part of the month of July.

32,060. Have the herring fisheries improved or diminished in Shetland?—Whether it is that they have not been so closely worked I do not know, but they have diminished as compared with the quantity that was caught in former years.

32,061. Then they have not increased?—No, they have diminished. The quantity compared with what was caught in former years has fallen off.

32,062. Is there any improper mode of fishing adopted in fishing them. Do the fishermen shoot too early in the evening, or do anything of that kind?—There have been south country people fishing here, and they have fished in the same way. They have only one mode of shooting their nets, all of them, but they have tried early and late for the fish.

32,063. Have they shot their nets both early and late?—They have shot them soon in the night and in the middle of the night, to see which would answer.

LERWICK.

J. Stove.

4 August 1864.

32,064. And which answered best?—Sometimes one way and sometimes the other, as the fish were up and down in the water.

32,065. I suppose it is considered best to shoot the nets just before sunset?—Yes, or in the middle of the night.

32,066. But not earlier?—No.

32,067. Have the fishermen thought it would be advantageous to have some strict regulation enforced as to the time at which they should shoot their nets?—I have never heard of it.

32,068. Then the fishermen do not want any Government officer or anybody else to come here and interfere with their mode of fishing?—I never heard that they did.

32,069. (*Professor Huxley.*) You sometimes get rather large herrings here, do you not?—Just at the time that they are full, then they are larger than at any other time. They are generally of a fair size. But as for the size you mentioned a short time ago, I never saw anything of the kind here.

32,070. Did you never see herrings 14 inches long here?—I cannot say that I have, but they would not be very far from it.

32,070*a*. Some of them would be as large as that?—I have seen occasionally one or two that would be very large, and perhaps as big as that.

32,071. Have you seen them bigger?—I cannot say that I have.

32,072. Is it common to get herrings as large as that?—Sometimes we may get four or five crans out of twelve crans in a boat which are generally of a very large size.

32,073. Do you think they would be as large as that?—They may be about as large, or just under it. I would not say that the generality of them are as large as that.

32,074. What time are the herrings full here?—In August and September.

32,075. When are they mostly spent?—In the latter part of September, then they are about the worst.

32,076. Did you ever catch herrings for bait in the winter time?—No, but I have known them to get herrings here, with a rare one occasionally in the winter time that was completely full, about Christmas.

32,077. Did you ever get spent fish in the winter time?—I never saw any, but I have known them get rare ones in the winter time.

32,078. Did they occasionally get spent ones?—No, they were full about Christmas.

32,079. Do the Dutchmen fish amongst you in the winter time?—No.

32,080. Are there any Dutch busses fishing with you?—No, they are all open boats here.

32,081. How many of them are there?—From 50 to 60, but at one time upwards of 100.

32,082. Whereabouts do they fish?—Upon the coast off Bressay Head and Sumburgh Head.

32,083. How far off from the coast do they fish?—Sometimes three or five miles off, and sometimes ten.

32,084. Do they ever fish within three miles?—I will not say that; if they did that they would injure their nets.

32,085. Do they ever interfere with you?—Very little; there may be a rare time when they interfere with us, they may interfere a little bit every year.

32,086. Do the French boats come up here to fish?—No, they did in former times, but they have not done so now for a long time.

32,087. Then are there no other foreign vessels but the Dutch up here?—Not unless there are one or two boats from Belgium or Hanover, but we call them all Dutch.

32,088. How many meshes to the yard are your nets?—That I could not positively say, but they are of rather a large size that we use in our fishing. There are lots of herrings here in the month of May, but they are so small that the nets usually shot here for them cannot take them.

32,089. Does anybody look to your nets here to see that the meshes are of the right size?—Yes, there was great notice taken of that at one time.

32,090. Who looks after them?—I cannot say, but I know they were not allowed to have them below a certain size.

32,091. How do you light your boats here, do you light them when you go out at nights?—No, unless we have a little fire; we have a fire in them generally, and if we see any vessel coming we hold up a fire. We have no oil light.

32,092. Does anybody look after that?—I never heard that it was looked after; all we do is to take a little bit of coal and hold it up in a dark night if we see a boat or have anything in our way.

32,093. You do not carry two lights in your boats?—No, never; we never have anything of that kind; all we have is just a piece of fire.

The witness withdrew.

G. Hay.

GEORGE HAY recalled and examined.

32,094. (*Mr. Caird.*) You wish to add something to your evidence?—Yes, I should like to add a few words. You said something with regard to an interference on the part of the Government for the extension or promotion of the fisheries here. Now what is felt as the greatest hardship here is the excessive duties which are charged in foreign countries on our fish.

32,095. In what countries especially do you feel that? To what countries do you send your fish? Is it chiefly to Spain?—Spain chiefly, for cod-fish and also for ling.

32,096. Is the import duty levied in Spain upon that fish very heavy?—Yes, very heavy.

32,097. But it is not prohibitory, inasmuch as you do sell your fish there?—No.

32,098. What per-centage is it upon the total value of the fish?—It is nearly half as much as the price of the fish.

32,099. And if that import duty were lowered do you think the fishery would be largely extended?—Yes, and there would be also an extension of the ling fishery.

32,100. Is there no demand for your fish except in Spain?—There would be a great demand for it in other countries, but it is prohibited in certain countries. For instance, there would be a great demand in France, but it is practically prohibited there.

32,101. Do you cure herrings?—Yes.

32,102. Do you use the brand?—Yes.

32,103. What is your opinion of the value of the brand to you as a curer?—I think it is very valuable.

32,104. Do you not find any necessity for it in the case of dried fish?—The quality of dried fish can easily be seen by a cursory examination of it, but it would be always difficult to detect that in the case of herrings. It would be very troublesome to open a great quantity of herrings, and besides that, I think the brand affords a security to the curer against being imposed upon after he has sent his herrings abroad.

32,105. In what way does it do that?—The best quality is guaranteed before the herrings are sent away, and the merchants cannot raise objections to it. You would have such objections raised in the foreign markets if there were no brand that it would be found very inconvenient, and we are a great distance from the place where the fish is consumed.

32,106. Do you never hear objections raised against herrings that have received the brand?—I believe that objections have occasionally been raised.

32,107. Are foreigners at all bound by the brand of this country?—If the bargain is made that the merchant is to buy them after they have been inspected by the Government officer here then he is bound to take them.

32,108. Would a foreign court of law consider the bargain completely fulfilled if you delivered fullCrown branded herrings, and they should turn out on their arrival not to be in the condition the foreign buyer expected them to be in?—I do not know how the foreign lawyers might look upon that point; but if we could show that the herrings were good enough to be entitled to the brand when they left here, I think the curer would have fulfilled his bargain after he had shipped them in good condition.

32,109. But if there have been instances in which branded herrings have been rejected as well as herrings without the brand, is that not a proof that the brand is held to be insufficient by the foreign buyers to enforce their contract?—I have only had one case of that sort. I sold herrings to a Hamburgh merchant which were shipped in good order and branded. They were agreed to be sold according to the brand—so many barrels of Crown branded herrings. They were in good condition when they were sent, but the vessel had a bad passage, the weather was very bad, and they got strained a good deal, and the consequence was that there was a considerable loss of pickle in some of them. That was the statement made to me, but I think the real fact was that the market had fallen. When they were delivered the merchant wished to throw them up and to cancel the bargain.

32,110. They were branded herrings?—Yes, he wished to go into a court there.

32,111. He wished to do so?—Yes, in Hamburgh.

32,112. Relying on the fact that the herrings were not such as he expected them to be?—Yes, but we proposed a reference to any of his consuls in this country, and it was referred to the Hamburgh consul in Leith, a German, who decided that the bargain was fulfilled and that the merchant was not entitled to reject the herrings.

32,113. Did he act upon that award?—Yes.

32,114. And paid the money?—Yes. I believe we should have got nothing for them at all if it had not been for the brand.

32,115. You do not know what would have been the result if it had been left to the decision of a court of law in Hamburgh?—No.

32,116. (*Professor Huxley.*) How do you know you would have got nothing at all for them if they had not been branded? Suppose the consul at Leith had been satisfied they were a good article when they were sent out without any brand, would he not have been bound in equity to decide for you, whether they were branded or not branded?—Yes, but the bargain specially was that they were to be branded.

32,117. Did he rely upon that?—Yes, and on the evidence of the officer that they were good when they left here he decided in our favour.

32,118. (*Mr. Caird*). Do you not send some of your herrings to the home market which are not branded?—There are not many sent to the home market.

32,119. Not many sent from here?—No. There is one thing which has been very much against the herring fishery, and that is the want of a sufficient market for the spent fish specially. At the time that the herring-fishing was carried on to the greatest extent here there was a large quantity of spent fish exported to the West Indies, and that market has quite ceased now. The herrings that are caught here are chiefly spent herrings, the greater proportion of them are spent. They do not begin the herring-fishing here until the ling-fishing has ended, and at that time the herrings are chiefly spent.

32,120. (*Professor Huxley.*) Is that in August?—No, in September. Last year the only markets we had for spent herrings were Stettin and Dantzic and the price was so low as to make it scarcely worth while catching them.

32,121. Is the ling-fishing so much more profitable than the full herring-fishing that they rather keep to that than go to the herring-fishing?—It is a more certain thing. But it is thought that if the herrings could be got into France or Austria it would do a great deal of good; if the duties were relaxed there that might be done.

32,122. (*Mr. Caird.*) Your principal market, I suppose, is Prussia?—Yes.

32,123. Are there many curers here in Lerwick?—No, not a great many.

32,124. Can you say what is the general opinion of the curers with regard to the brand?—No, I cannot tell that. There are some of them here who can speak for themselves.

The witness withdrew.

PETER GARRIOCK called and examined.

P. Garriock.

32,125. (*Mr. Caird.*) Are you a curer here?—Yes, to a small extent.

32,126. What is your opinion with regard to the advantage of the Government brand? Do you think it is an advantage or disadvantage to continue it for the herrings?—I decidedly think it is of advantage.

32,127. Upon what ground do you base that opinion?—Merely because I think it gives a character to the article. I have probably done more in the way of purchasing for a foreign merchant than in curing, and I could not have acted for him at all unless the herrings had some such character given to them as is given to them by the brand.

32,128. Do not the foreign merchants come here themselves or send agents to purchase fish?—Very seldom; one or two may come.

32,129. Then this gentleman employed you to do that for him?—Yes.

32,130. Is it not in your power as local agent yourself to examine the fish, and to be able to certify as to whether the cure had been good or bad?—I might do so, but in addition to my own opinion I have in the brand that of the Government officer.

32,131. Has not the Fishery officer a good many different stations to look after?—Yes.

32,132. Then he cannot always be on the ground when the cure is going on?—No.

32,133. He can only take some sample barrels and look at them?—Quite true.

32,134. But you could have them constantly under your eye?—Yes.

32,135. Is this the principal curing station in Shetland?—No, the principal part of the herrings are cured out of Lerwick at stations on the north and south of the island.

32,136. Has not the Crown brand the effect of making a common price for all the herrings, whether they are carefully cured or not so carefully cured?—Yes.

32,137. Do you think that is an advantage?—As far as the cure of Shetland is concerned, I think that one barrel of herrings that has the full Crown brand upon it would be in as good a condition as another. There is not so much difference.

32,138. Is there no superiority of skill or care exercised in the process of curing?—There may be, but not to that extent which would induce a merchant to refuse one man's fish more than another's.

32,139. But would it warrant him in preferring one man's fish to another's?—I think not. I do not think there is that difference of cure here.

32,140. Is there any other remark you desire to make to us in regard to the fishing interests of Shetland?—None, as far as I am aware of at present.

The witness withdrew.

LERWICK.

J. Harrison.

4 August 1864.

JOHN HARRISON recalled and examined.

32,141. (*Mr. Caird.*) You desire to add something to your previous evidence?—Yes; I wish to make a statement in reference to the import duty charged upon our fish in Spain. I think it has not been mentioned to you that there is a differential duty in the case of Spanish and English bottoms which is very injurious to our interests here, because many times there is not only a difference in the price which amounts to 2*l.* 10*s.* per ton, but many years in the winter time we cannot get Spanish vessels. 2*l.* 10*s.* is a considerable difference in the freight of a vessel.

32,142. Do you as an exporter try to get Spanish vessels to carry your fish?—Without exception Spanish vessels carry all our fish from here, on account of the differential duty, which precludes the possibility of sending it in English bottoms except at a great loss.

32,143. Do they come here in ballast?—Yes.

32,144. Just for that special purpose?—Yes; the 2*l.* 10*s.* leaves them a wide margin of profit.

32,145. You wish to bring before us the fact that there is that differential duty imposed?—Yes, in addition to the Spanish import duty.

32,146. These Spanish vessels do not come in the winter time?—They do come, but we find it very difficult in many cases to get them, and I have no doubt that a greater quantity of fish would be exported and consumed if the differential duty were removed, because it would make the freight 2*l.* 10*s.* less.

32,147. Would that lead to a large increase in the supply of fish?—Yes, there would be an increase in the consumption, and a consequent increase in the supply of fish.

32,148. Have you no fear that by increasing the number of boats employed upon the grounds the fisheries would in any way run out?—I have not the slightest fear of that. I believe the quantity of fish caught could be increased *ad libitum*.

The witness withdrew.

T. Anderson.

THOMAS ANDERSON called and examined.

32,149. (*Mr. Caird.*) Have you long been a fisherman here?—Yes, I have been fishing here for a long time.

32,150. Have you been engaged in cod-fishing?—Cod-fishing, ling-fishing, herring-fishing, and all sorts of fishing. I have been at every kind of fishing.

32,151. In your time has the yield of all the different kinds of fish increased or diminished?—The herring-fishing is getting worse now.

32,152. But all other kinds are improving?—The other fishing depends very much on the weather. The weather has been generally very bad, or else the fishing would have been good.

32,153. Is there no sign of the fishing grounds ceasing to yield plenty of fish?—I do not think there is.

32,154. (*Professor Huxley.*) Of what size were the largest herrings you have seen here?—The largest herrings ever I saw here were caught off the Norway coast; I should say they were 14 inches long.

32,155. Have you seen any as large caught here?—No, none.

32,156. What is the largest you have seen caught here?—I have never measured any of them, but I should say they would run from 10 inches to about a foot.

32,157. Did you ever take any herrings in the winter season—in January or February?—No; the only herring seen at the latter end of the season is the Norway herring.

32,158. Is that the principal time for the herring fishery in Norway?—Yes.

32,159. Have you been herring-fishing in Norway?—I never was fishing there, but I know that in Norway they never commence the fishing until the months of January and February.

32,160. Have you ever caught any at that time of the year yourself?—Yes, plenty. I did not catch them, I was only there and saw them.

32,161. What sort of condition were they in then?—They were full.

32,162. Full fish?—Yes, the same as they are here in the month of September.

32,163. What time did they become spent in Norway?—I do not know. At the end of the fishing the herrings were full, and they were full also when it first commenced. There was one year in Norway when the herrings were very plentiful. They have there a large net with a small mesh which the herrings cannot mesh themselves in. If they get among the herrings they scoop them round, pull the net round them, and take them in that way; then they have one particular day at which they are obliged to knock off the fishing in Norway, and if they do not happen to have got all of them out of their nets at that time they must let the rest go.

The witness withdrew.

J. Kennedy.

JOHN KENNEDY called and examined.

32,164. (*Mr. Caird.*) You have been for some years Fishery officer here?—Yes.

32,165. For how many years?—Thirteen.

32,166. Then you have a good knowledge of the interests of the fisheries in Zetland?—Yes, I ought to have.

32,167. Can you tell us whether during the time you have been Fishery officer the different descriptions of fish caught in these islands have been increasing, stationary, or diminishing?—I think they keep pretty equal.

32,168. Are they not increasing on the whole?—They may be a little bit, but not much.

32,169. Is there no kind of fishing increasing?—The Faroe fishing has increased, but not upon this coast. Some years it is better and some years worse.

32,170. Is the produce of the Faroe fishing brought here to be cured?—Yes.

32,171. So that it comes into your returns?—Yes.

32,172. Can you give us from the books in your possession the statistics of the number of boats, the number of men, their value, and the quantity of fish caught since the year 1855, up to the present time? Yes; I have not the year 1855. I commence with 1856. The return is as follows:—

Year.	No. of Boats.	Tonnage.	Value.	No. of Men and Boys.
			£	
1856	279	558	2,953	2,965
1857	669	1,327	6,279	2,990
1858	666	1,307	6,362	2,985
1859	653	1,218	6,077	2,929
1860	689	1,241	6,773	3,068
1861	681	1,241	6,144	3,055
1862	683	1,269	6,278	3,118
1863	672	1,224	6,280	3,136

32,173. That does not include the smacks employed in the cod and ling fishery. Have you any return of them?—Yes, but it is not here.

32,174. Can you give us the quantity of fish exported in the same time?—I can give you the cure from 1855, the cure of cod and ling, the quantity exported, and the cure of herrings.

LERWICK.

J. Kennedy.

4 August 1864.

32,175. You need not give us the quantity exported if you give us the cure. That includes all, does it not?—Yes; the return is as follows:—

Year.	Herrings cured.	Cod and Ling cured.
1855	14,760 barrels	47,235 cwt.
1856	10,200 „	44,548 „
1857	17,860 „	43,625 „
1858	11,926 „	43,146 „
1859	6,670 „	60,245 „
1860	10,550 „	55,960 „
1861	8,164 „	39,005 „
1862	3,720 „	51,706 „
1863	9,733 „	69,699 „

32,176. Can you give us the number of vessels engaged in the cod-fishing, commencing with the year 1855, and showing their tonnage and the number of men engaged?—Yes; the return is as follows:—

Year.	No. of Vessels.	Tonnage.	Men.
1855	56	1,368	561
1856	51	1,170	509
1857	57	1,493	613
1858	58	1,638	647
1859	64	2,008	737
1860	67	2,287	817
1861	65	2,471	752
1862	65	2,514	732
1863	68	2,391	781

32,177. Are those all the statistics you can give us?—Yes.

32,178. Are there many men from Shetland who go to the whale fishery?—Yes, a good many.

32,179. Is it an increasing number, or is it diminishing?—It is falling off.

32,180. Then the interest of Shetland in the whale fishery is diminishing?—Yes, rather; the men are employed better at Faroe.

32,181. Do you know anything about the whale fishery, whether it is increasing or diminishing?—It is falling off.

32,182. Do you know that of your own knowledge?—I have some little knowledge of it.

32,183. (*Professor Huxley.*) Do you exercise any inspection over the fishermen here?—Which class of fishermen?

32,184. The cod and ling fishermen?—No.

32,185. Do you exercise any over the herring fishermen?—Not much.

32,186. Is it part of your duty to examine the size of the meshes of the nets?—Yes.

32,187. You do that?—Yes.

32,188. And what is the average size?—Thirty-three meshes to the yard is about the size. It generally runs from 32 to 33.

32,189. You do not make a close examination?—It is not necessary unless the nets come below the size, which is an inch from knot to knot.

32,190. Do you make a regular examination of the nets?—I do not consider it necessary.

32,191. Then how do you know that the meshes are of the legal size?—I look at them in passing, but it is a rare thing to find any below that size.

32,192. Does the Fishery cutter come up here?—Occasionally, but not often.

32,193. Is there any inspection of the fishing exercised by the cruiser when she comes up?—Not much. She comes very seldom here.

32,194. Does she come in the herring season at all?—She never has been.

32,195. Is there no one to see that the French Convention is carried out here?—No, there are no foreigners fishing here.

32,196. But there are foreigners off the coast?—Yes, Dutch fishermen in the early part of June.

32,197. But there is nobody to see that the Convention is carried out?—The steamer comes up once a year.

32,198. What steamer?—The Fishery steamer.

32,199. The man-of-war steamer?—Yes.

32,200. Does she come up at the time the fishing is going on?—Yes, generally about that time.

32,201. Does she send her boats among the nets?—No, she only stays here one or two days.

32,202. Does she lie in the harbour here?—Yes, in the harbour.

32,203. Then she does not do much in the way of superintending the fisheries?—No. She never has been here when the Dutch fishermen were fishing on the coast.

32,204. Then in point of fact there is no superintendence over the fisheries here?—There is a Revenue cutter, but she does not interfere.

32,205. Then there is really no superintendence to see whether the Convention Act is carried out or not?—I should say not.

The witness withdrew, and the inquiry was adjourned until the 6th of August, at Stornoway.

Stornoway, the Hebrides, Saturday, 6th August 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

RODERICK GEORGE MACKENZIE called and examined.

STORNOWAY.

R. G. Mackenzie.

6 August 1864

32,206. (*Mr. Caird.*) You are a fish-curer here?—Yes.

32,207. Can you give us any statistics with regard to fish-curing here?—I have a memorandum here which perhaps will be of service to you. It gives the average takes of three successive years—1862, 1863, and 1864.

32,208. Are you speaking of herrings now?—Yes.

32,209. Can you not give us the whole take?—Yes, the gross take as well.

32,210. Then will you give it for each of the three years you have mentioned?—Yes.

32,211. Can you also give us the number of boats engaged in the fishery here?—Yes.

32,212–3. What is the number?—In 1862 there were 900 boats, and the average take was 70 crans, being equal to 63,000 altogether.

32,214. What was it in 1863?—In 1863 there were 800 boats averaging each 56½ crans, or equal to 45,271 crans altogether. In 1864 there were 700 boats averaging 85 crans each, or equal to 59,500 crans altogether.

32,215. Then the last has been a very good fishing season?—Yes, a very good season.

32,216. Can you give us the number of men engaged in each of those three years?—There were 4,500 in the first year of fishermen alone, in 1863 there were 4,000, and in 1864, 3,500.

32,217. In what proportion were they natives of the island, and in what proportion strangers who came here during the fishing season?—Do you mean of boats or of fishermen?

32,218. Of fishermen?—About 1,000.

32,219. One thousand were native fishermen?—Yes.

32,220. And the rest were strangers who came to the fishing?—Yes.

32,221. Has the herring-fishing been more frequented by strangers every year?—It has been on

STORNOWAY.

R. G. Mackenzie.

6 August 1864.

the increase during the last three years, and would have been considerably so this year but for the Baltic blockade.

32,222. What injury did the Baltic blockade do to the fishing?—It discouraged the fish-curers from entering into the trade.

32,223. Did they fear the loss of a market?—Yes.

32,224. Did it lower the price of the fish?—No, not eventually.

32,225. Then are we to understand that had it not been from a fear of the consequences of the Baltic blockade depressing the price of the fish there would have been a greater number of boats engaged in the take of fish?—Yes, exactly so.

32,226. There was no want of herrings then?—No, there was no want of herrings.

32,227. During what months is the fishing carried on?—From the 20th of May till the 15th of July.

32,228. Is the 20th of May the commencement of the open fishing time by law?—Yes.

32,229. Have you any observation to make to us with regard to the effect of the close time which has been established on the west coast?—The cod and ling fishermen complain that, in consequence of not being allowed to take herrings, they are unable to prosecute their fishing with success.

32,230. What time is that?—From January until the month of March.

32,231. Is it only on the score of the difficulty of getting bait for the cod and ling fishery that the complaint is made?—Yes.

32,232. Is there any desire on the part of the fishermen to get the herrings for the sake of the herrings themselves?—It was a serious loss to the island last winter that they were not permitted to take the herrings. There was a very large body of fish upon the coast.

32,233. At what time was there a large body of fish upon the coast that might have been taken?—In January and February.

32,234. Were the fish in good condition at that time?—Yes, pretty good.

32,235. They were good marketable fish?—Yes.

32,236. If they had been allowed to fish then would that have injured your May and June fishing?—No, I think not.

32,237. Were they not the same herrings?—No.

32,238. Were they different shoals?—They were a different quality of fish altogether.

32,239. From being precluded from fishing in the months of January and February, do you lose the fish altogether?—Decidedly so.

32,240. Do you desire to have a close time at all?—I think it desirable on the part of the curers especially, because the quality of the fish in May is not very good. They are not fit for human food or preservable, and it is a very desirable thing to make the early herring-fishing the starting point. I think they ought to begin on the 1st of June and continue the fishing as late as possible when the quality becomes such that the fish are a good and marketable article.

32,241. Then when would you commence the close time?—In the month of March.

32,242. At the beginning of the month of March?—Yes.

32,243. And continue it during the months of March, April, and May?—Yes.

32,244. You would have a close time for three months?—Yes, that I believe would suit both classes of our fishermen as well as the curers.

32,245. Do the fish not get in good condition before the beginning of June?—No, I do not think they do in my experience.

32,246. How late would you continue the fishing?—Until the month of August.

32,247. Then in fact you desire to have no close time until the month of March?—No.

32,248. You desire to have the months of March, April, and May as a close time?—Yes.

32,249. You would allow the fishermen to fish all through the other nine months?—Yes.

32,250. Do you think that could be done without any injury to the early fishing?—Yes.

32,251. Or without any injury to the general interests of the fishermen at Lewis?—Yes.

32,252. Has the winter fishing ever been attempted to be prosecuted as a matter of business here except for bait?—Not to any extent.

32,253. Do you think that a winter fishery could be created here?—Yes, I am quite impressed with that idea.

32,254. Do you think that if created it would become a valuable winter fishery?—Yes.

32,255. When the herring season closes here as at present in the month of July, what do the fishermen do then?—They go to Caithness to the fishing there.

32,256. Do they come from Caithness in the month of September?—Yes, in September and October.

32,257. They come home in September?—Yes.

32,258. Then when they come from Caithness in September what is their business during the rest of the season?—They make preparations for the cod and ling fishery.

32,259. When does it begin?—In some districts it begins in the month of November.

32,260. Does it continue during the winter?—Yes.

32,261. Until when does it continue?—Until July, the first week of July.

32,262. Through the period of the herring-fishing?—Yes.

32,263. Then all the fishermen are not engaged in the same fisheries at the same time?—Yes, they are engaged in both, and those engaged in both discontinue the cod and ling-fishing in the month of April or March.

32,264. Are you acquainted with the cod and ling-fishing here?—Yes.

32,265. Do you cure or purchase those fish?—Yes.

32,266. Can you give us any idea of the progress of that fishery of recent years?—Yes, I believe it has been on the increase.

32,267. What has been the average of the take?—The average would be from 500 to 800 tons.

32,268. On the whole, would you say that the cod and ling fishery is an increasing interest in Lewis?—Yes.

32,269. What would be the total take in a single season?—800 tons.

32,270. In what proportion are the cod and ling?—There is a much larger quantity of ling than cod.

32,271. Are they fished in the same manner and with the same lines?—Yes, and the same material is used.

32,272. Are they caught at the same time?—Yes.

32,273. Do the boats that follow the cod and ling-fishing continue on the fishing ground for some time; are they decked boats?—No, they are mostly all open boats.

32,274. Do they come in every night?—Yes, except during the summer season when the weather is fine. When the weather is fine some of them stop out all night.

32,275. Where are the best fishing grounds?—Off the Butt of Lewis; there is a bank there that is a very famous bank for cod.

32,276. Do those grounds continue to yield as well as they did in former years?—I think they do.

32,277. Is there no sign of those fishing grounds falling off in the yield of fish?—No, none whatever.

32,278. Are the fish brought ashore as they are caught, and gutted ashore?—Yes.

32,279. What is done with them then?—They are split up, put into vats, and cured.

32,280. And are they then dried?—Yes, they are then dried.

32,281. And then in a dried state are they sent to market?—Yes, they are sent to market dried.

32,282. Is there any haddock fishery on this coast?—I think the haddock-fishing has failed in the last few years. It has not been practised to the same extent.

32,283. Was it in former years a good fishery?—Yes, very good.

32,284. When you say it has failed, do you mean that the fish have ceased to be got in the same plenty as formerly?—They have disappeared within the last two years very much indeed.

32,285. Can you give us any idea of what may be the cause of that?—No, I can give you no idea of the cause.

32,286. Is there any other white-fishing practised around this coast?—Salmon is the only other fishing, I believe.

32,287. Do you not catch saithe?—Yes.

32,288. And tusk?—Yes.

32,289. Are tusk got here in large quantities?—There is a large quantity caught on the west side of these islands.

32,290. Are the tusk caught by the same fishermen who fish for cod and ling?—The tusk fishery is confined to a certain district of the islands.

32,291. Is it a considerable fishery here?—Yes.

32,292. Is it cured in the same way?—Yes.

32,293. And are the fish sent dried to market?—Yes.

32,294. Is there any lobster fishery here?—Yes.

32,295. Is that an increasing fishery?—I think it is.

32,296. Do you know if there are plenty of lobsters to be had round this coast?—Yes.

32,297. Might it be increased to a greater extent than it is at present?—I think so.

32,298. Is there any crab fishery here?—There is no crab fishery to any extent.

32,299. Are there any oysters?—I believe there are several beds of oysters.

32,300. Are they diligently fished?—I do not think they are fished at all.

32,301. Are the oysters found here good in quality?—Yes, I believe they are very good indeed.

32,302. Then would it not pay to fish oysters and send them from here to market?—Yes, I think it might.

32,303. Has that never been thought of?—It has never been made a trade of as far as I know.

32,304. Are the oysters found in particular localities known to the people here?—Yes.

32,305. Are they got occasionally by the dredge, as they are on the east coast?—I think they are.

32,306. Is not the bottom too hard for dredging?—They can get them without dredging at all in some districts.

32,307. Is that when the tide is out?—Yes.

32,308. Are there any regular oyster scarps on which the oysters breed largely?—I am not aware.

32,309. With regard to the question of a herring brand, do you use the Crown brand here?—No.

32,310. Are none of your herrings branded then?—None.

32,311. Do you send them to the foreign market?—We do.

32,312. Do they chiefly go into the foreign market?—Yes, the greater bulk goes to the foreign market.

32,313. How is it that you have no brand here when they have a brand on the east coast?—I cannot account for it; I think we are as much entitled to it as they are elsewhere.

32,314. Have you never sought for it?—No.

32,315. Do you think it would be of any advantage to you?—There is a diversity of opinion about that.

32,316. Then at present if you sell your herrings without a brand, and send them to the same markets as those to which the branded herrings go, you sell them solely upon your character as curers?—Yes.

32,317. Do you have foreign agents here?—Yes, there are foreign agents.

32,318. Do you consign principally?—Yes.

32,319. And sell abroad on your own account?—Yes.

32,320. And you never find any difficulty in disposing of your herrings in foreign markets on account of the want of a brand?—Not that I am aware of.

32,321. (*Prof. Huxley.*) What are your foreign markets?—Stettin, Dantzic, St. Petersburgh, Hamburgh, and other places.

32,322. Do you cure in the same way as the cures on the east coast?—Yes.

32,323. In fact, you compete with one another?—Our fish are a more delicate fish, requiring a more particular kind of cure.

32,324. But the general principle of the cure is the same?—Yes.

32,325. And you and the east coast fishermen compete in the same markets?—Yes.

32,326. There is not so much difference in the fish as to make you sell for a different market?—No, I do not think there is.

32,327. You were speaking about a close time?—Yes.

32,328. You recommended a close time to extend somewhat later?—Yes.

32,329. But I do not understand why you wish to have a close time here at all?—My reason is this, that the quality of the fish taken in the month of May is so inferior that it is neither fit for human food nor preservable.

32,330. Then why do they take the fish if it is neither fit for human food nor preservable?—The fishermen bring them to the market, and if one person will not take them another will.

32,331. Am I to understand that the competition among the curers to obtain the article is so great that they do not refuse to take whatever is brought to them?—They might refuse them, or not give such a high price for them.

32,332. Are they obliged to take them if they engage crews for a certain period?—Yes.

32,333. Why should they engage crews at a time when the fish is unfit for preserving; is it because there is so much competition?—Yes.

32,334. So that a close time would be a matter of convenience to the curers by restricting this competition?—Yes, it would be a matter of great convenience in enabling us to obtain the fish only when they were fit for food.

32,335. Is that what you regard as the convenience of a close time?—Yes.

32,336. It is not on account of the fish that you want a close time here?—It is on account of the quality of the fish.

32,337. Do you think that during those months when you say a close time ought to exist, the catching of fish would injure the supply afterwards?—No, I do not think it would.

32,338. Do you think that fish taken at that time are hurtful to the people who consume them; do they do them any harm?—I should not like to eat them.

32,339. Are you aware that there are people who do eat them?—Yes.

32,340. When you take them from the fishermen, you sell them again, I suppose?—Yes, we sell them in the market.

32,341. And they are bought?—Yes.

32,342. And you never heard of any inconvenience arising from it?—I have had complaints about the quality of the fish.

32,343. Still people buy them and eat them?—Yes.

32,344. If it were very injurious, they would hardly go on buying it?—No.

32,345. What is the condition of the fish here when you get them in July?—They are very good then.

32,346. Are they full fish?—They are generally mixed, sometimes full and sometimes thin.

32,347. Do you ever get spent fish here in January?—I am not aware of any.

32,348. Then they leave off catching the fish here before they become spent?—They leave off in July.

32,349. In order to go to the east coast?—Yes.

32,350. Is there any close time for lobsters here?—Yes, I think there are three months in the year.

32,351. Do you happen to know what months?—June, July, and August.

STORNOWAY.

R. G. Mackenzie.

August 1864.

32,352. Do you know under what authority that is?—I am not aware.

32,353. Are the oysters which are obtained here of good quality?—Very good.

32,354. Are they at all black in the gills?—No, I do not think they are.

32,355. Is there any thing about them, that would render them unsaleable?—I do not think there is.

32,356. Are you aware whether any of them are being sent for sale to the home market?—I am not aware.

32,357. Are oysters sent from here in any considerable quantity?—No.

32,358. (*Mr. Caird.*) What has been the range in the price of herrings within recent years; has it been increasing or diminishing?—Do you mean the price of the cran?

32,359. Yes?—In 1862, the price ranged from 15*s.* to 22*s.* with from 3*l.* to 5*l.* bounty. In 1863 it ranged from 15*s.* to 20*s.* with 3*l.* bounty.

32,360. Three pounds bounty to the men?—Yes, to the crew.

32,361. Is the price you are giving us now, the price you paid the fishermen for the herrings?—Yes.

32,362. What was it in 1864?—In 1864 it ranged from 12*s.* to 17*s.* with from 3*l.* to 10*l.* bounty.

32,363. There is a wide range there?—Yes.

32,364. What is the cause of that wider range than usual?—Several of the curers left off engaging crews in consequence of the Baltic blockade, and then the price got up in the course of the season.

32,365. Has the market price abroad increased in a similar proportion?—I believe some of the curers are discontented with the last season.

32,366. Have the fishermen of this country been making a good business of the fishing of recent years?—Yes, very good.

32,367. Is the price of cured and dried cod and ling on the increase?—Within the last few years it has increased.

32,368. And it was a remunerative price to all parties connected with it?—Yes.

32,369. Does the ling fetch a higher price than the cod?—Yes.

The witness withdrew.

Morison.

JOHN MORISON called and examined.

32,370. (*Mr. Caird.*) You have heard the evidence which has been given to us by Mr. Mackenzie?—Yes.

32,371. Is there any point on which you wish to offer further information?—No, I do not recollect any, except that I think the close time is too long.

32,372. What period would you desire to have for a close time?—From the 1st of April until the 24th of May.

32,373. Why do you exclude the month of March?—March is a good month for the cod and ling-fishery.

32,374. You would keep it open for bait?—Yes.

32,375. Is there any difficulty in getting bait here other than herring bait?—There is very great difficulty; they cannot get any fish without herring bait.

32,376. Will the codfish not take anything except herring?—Not with the same relish.

32,377. But in certain seasons are they not fished without herring?—Yes, but they always prefer the herring.

32,378. Does the cod and ling fishery continue during the month of March?—Yes.

32,379. Why do you say the 24th of May rather than the 1st of June; do you find the herrings in a good condition after the 24th of May?—They are not very good, but I am afraid that it would injure the fishermen to make the close time longer.

32,380. Do you think they might have a less quantity of the fish that would afterwards be caught?—Yes, I think if the fishermen were to have a portion of the month of May it would do no harm.

32,381. Do you think that the limitation of the close time in the way you have mentioned could be made without injury to the summer fishing?—Yes, I rather think it would be in its favour than otherwise. Since I commenced fishing we never had a June fishing until the close time commenced.

32,382. Have you found the close time of advantage to the June fishing?—Yes, a very great advantage. We have got herrings in more abundance in June since the close time than ever we did before.

32,383. When was the close time first established; was it two years ago?—No, more than three years ago, in 1860, I think.

32,384. Previous to that time was your summer fishing not as good as it is now?—Previous to that we got great quantities in May, but they were not fit for human food. Still we were obliged to take them from the fishermen.

32,385. Has the effect of making a close time up to the 20th of May been to enable you to get a better quality of fish in the month of June than formerly?—Yes, and to get more of them also.

32,386. That is after a very long close time?—Yes.

32,387. When does the present close time begin?—It lasts from the 1st of January until the 20th of May.

32,388. Do you think that the months of January, February, and March might be done away with from the close time without any injury to the fishing?—Yes, that is my opinion.

32,389. Do you not think that the fish caught in those months might injure the fishing in June?—They are not the same fish.

32,390 Are you quite sure they are not the same shoals of fish?—Yes, I am quite sure they are not the same. The fish we get then are more like the Caithness fish. Last year in particular they were like the Caithness fish in quality.

32,391. Have you anything to say to us in regard to the cod and ling-fishery?—Yes.

32,392. Are you engaged in it?—Yes.

32,393. Do you find it an increasing business?—I think so.

32,394. Do the fishermen make a good living by it?—Yes, I think they do.

32,395. Is it successfully followed in open boats?—Yes.

32,396. Have they never had occasion to use decked boats so that they might be able to keep at sea longer in bad weather?—No, not as far as I know.

32,397. The fishing grounds are near enough the harbour to which they can run with their open boats?—Yes.

32,398. Have you formed any opinion as to the advantage or disadvantage of the brand on herrings?—I am afraid the brand would not do for our herrings; they are a very delicate sort of herring, and if they were kept for a day in order to brand them, it would injure the cure.

32,399. Do you mean it would injure the cure if it had to be delayed on account of the brand?—Yes, they would have to be delayed ten days before they received the brand.

32,400. How is that?—They are delayed for ten days at Caithness before they are branded.

32,401. Is your process a more active and speedy one?—Yes.

32,402. If the brand were established here then it would very likely injure your herrings?—I am decidedly of that opinion.

32,403. Then of course you are not in favour of the brand?—No, I am not in favour of the brand.

32,404. I believe you find no difficulty in selling your herrings abroad without the brand?—No, not the least difficulty.

32,405. (*Prof. Huxley.*) Do you think that a winter fishing might be established here?—Yes.

STORNOWAY.

J. Morrison.

6 August 1864.

32,406. In the months of January and February?—Yes, I think so.

32,407. Might a great quantity of herrings be caught here then?—Yes, last year 60,000 or 70,000 barrels might have been caught.

32,408. Then was the close time injurious to the fishing here?—I think it was greatly in their favour, or rather I think a short close time would be greatly in their favour, but not a long one.

32,409. Do you think it would have done any harm to the summer fishing if the winter fish had been caught?—I do not think it would.

32,410. You mean a close time from the 1st of April?—Yes, until the end of May.

32,411. Your close time would allow of a winter fishing?—Yes, decidedly.

32,412. What condition were the fish in during the last winter?—They were very good.

32,413. Were they full fish?—Yes, full fish.

32,414. Did the fishermen altogether leave them alone?—No.

32,415. Was anything said about that?—Yes, a good deal.

32,416. Was there anything done in the matter?—Yes, a little.

32,417. But was anything done by the Fishery officer, for example?—Yes, he did what he could; he was a faithful servant, and he did all he could.

32,418. Did he do all he could to prohibit the fishing?—Yes, but the fishermen were too strong for him.

32,419. Was anybody prosecuted for a breach of the law?—I am not aware whether there was any prosecution or not.

32,420. Do you think you would have been aware if there had been?—There were several parcels of herrings seized and taken from the fishermen.

32,421. Were the fishermen themselves prosecuted under the Act?—I am not aware of it.

32,422. If the herrings were seized, it must have been known to whom they belonged?—I do not think they went to the utmost rigour of the law.

32,423. Do you know at what time the herrings were caught—what time of the year?—They were caught in January, February, and March.

32,424. All through the three months?—Yes, but perhaps there were fewer in March; they were getting poor then.

32,425. Were there any spent fish in March?—I am not aware.

32,426. Were the fish cured that were caught?—Yes, they were cured.

32,427. So that in fact the people here did not trouble themselves very much about the law?—They could have carried on the fishing to a greater extent if it had not been for the law. Those of the fish which were cured were ill cured, because they were afraid of the Fishery officer and of the law.

32,428. (*Mr. Caird.*) Was there any respect for the law?—Yes, for the letter of the law; but there was a strong temptation, the herrings were very plentiful, and the people wanted them for food.

32,429. (*Prof. Huxley.*) And you are of opinion that if the fishermen had been allowed to catch fish then it would not have had any effect upon the summer fishing?—Not the least.

32,430. Have you any difficulty of disposing of your cured herrings in the foreign market on account of their not having the brand?—No, we do not experience any difficulty.

32,431. Have you ever had them returned on your hands?—No; but I am sorry to say that we have got bad prices sometimes.

32,432. Do you pack your herrings in the same way as the branded herrings are packed?—Yes.

32,433. Do you put your own mark upon the barrels?—Yes; everyone has his own brand.

32,434. So that the foreign merchant would not be able to form a better judgment of your herrings than of the branded herrings; he must go by what he sees on the top of the cask?—Yes.

32,435. Does he take your herrings quite freely?—Yes; the foreigners would soon go against us unless the herrings were all right; they would soon find out whose herrings to take and upon whom they could depend.

32,436. Is there much difference in the quality of herrings cured here by one man and by another?—I am not prepared to say; sometimes some may take greater pains with them than others.

32,437. Has one man's brand a better sale in the foreign market than that of another?—Yes; some herrings will fetch a great deal higher price, perhaps double.

The witness withdrew.

KENNETH SMITH called and examined.

K. Smith.

32,438. (*Mr. Caird.*) Have you heard the evidence which has been given by the two previous witnesses?—Yes.

32,439. Do you concur generally in what they have stated to us in regard to a close time for the herring-fishing here?—Yes, pretty much; but I think that a close time from the month of April up to the 25th of May is very requisite, because the body of herrings caught on this coast in the summer time never make their appearance on the coast until the month of April; they are then seen in large bodies coming from the sea.

32,440. Coming from the north?—Yes, from the north, on the west side of the island. Perhaps they are very soon seen towards the southward on the west side. The same body are then seen 10 or 12 miles to the northward of that, and then they are seen finally at the Butt of Lewis. When the fishing begins here early in May that body of fish is frequently met by a million yards of net or so between the Butt of Lewis and Cape Wrath, and they were so caught up in consequence that we never had a good June fishing here. Since the close time has been established and this vast body of fish has been allowed to come into the Minch, there has been a good fishing both here and to the eastward.

32,441. Do you get your best fishing here in the Minch?—Yes.

32,442. That is the best summer fishing ground?—Yes.

32,443. Then is your objection to the early fishing that the shoals are broken by it?—Yes, before they come upon the proper fishing grounds.

32,444. Do you not agree with the previous witness, that the fish are inferior in quality in the beginning of May?—Yes.

32,445. What time are they of the best quality and fit for cure?—About the 28th of May.

32,446. What time would you recommend as a proper close time?—The 25th of May.

32,447. That is when the close time would end?—Yes.

32,448. When ought it to begin?—On the 1st of April.

32,449. That is the same close time as that recommended by the previous witness?—Yes.

32,450. Do you agree generally with the opinion expressed by both of the previous witnesses as to its being no advantage to you to have a Government brand for your herrings?—I do not think it would be an advantage to us; our herrings are of a more delicate nature than the east coast herrings; they could not bear the pressure; the quantity put into the barrels would destroy the fish.

32,451. You would rather be left to your own skill in packing the herrings?—Yes.

STORNOWAY.

K. Smith.

6 August 1864.

32,452. You think that being compelled to effect your cure in a certain manner would be injurious to your fish?—Yes.

32,453. You consider that you are the best judge of your own interests?—Yes; we use a small Liverpool salt in curing the herrings and the Spanish salt for packing, which is not used on the east coast.

32,454. You are guided in that by your own experience?—Yes; our foreign agents tell us what sort of packing and curing they like, and every curer likes to pack to the best of his knowledge in order to obtain the best prices.

32,455. Is there much difference in the price of different curers' herrings?—The price fluctuates very much.

32,456. Putting aside the question of a general fluctuation of price, is there much difference in the price one curer secures for his herrings above another?—I do not think there is; some curers get equally as good prices as others. Very often east curers' herrings are sold heavier than others, and yet they do not fetch as good prices.

32,457. I am speaking now of the curers of Lewis and am not comparing them with the curers on the east coast. Does the brand of one curer here, in consequence of his character, skill, or known intelligence in conducting the cure, bring a higher price than that of another?—Yes, decidedly.

32,458. If a Government brand were established would you not bring them all to one uniform level?—It might have a beneficial effect in that way.

32,459. But would it be a beneficial effect?—Yes, if the Government brand would bring them all to that degree of perfection.

32,460. Would it not be rather a lowering of the best quality to bring them to one uniform level?—I understood you the other way. I thought you meant that the Government brand would have the effect of bringing them all up to the perfection of the best curers.

32,461. Are you engaged in the cure of cod, ling, and tusk?—Yes.

32,462. Is that an increasing fishery here?—Yes.

32,463. Is there a considerable amount of money coming into the country from that fishery?—A good deal; the prices have ranged for the last few years in the market from 16*l.* to 20*l.* and sometimes as high as 21*l.* for cod and ling.

32,464. For the dried fish?—Yes, after sending it to the market.

32,465. To what markets do they go?—Glasgow and Liverpool chiefly.

32,466. To the home markets?—Yes.

32,467. You do not send to the foreign markets at all?—No.

32,468. Is there no cod sent to the foreign market?—There has been one cargo sent within my recollection; it was shipped, a few years ago, to Spain, but they are very particular. We salt rather heavily for the Spanish market.

32,469. And you find sufficient sale in the home markets for all you cure?—Yes.

32,470. Is there any cod sent fresh to market from these islands?—No.

32,471. Is that because the markets are too distant?—Yes.

32,472. Have you had any experience with regard to haddock-fishing here?—I was never engaged in the haddock-fishing.

32,473. Are there any soles caught here?—A few, but very few indeed.

32,744. There is no beam-trawling on this coast?—No.

32,475. Is there no fishing of that kind for flat fish?—No.

32,476. Do you know whether the oyster fisheries might be increased here with advantage?—I believe they might.

32,477. Has anybody turned his attention to it?—I have heard of no one who has. I believe they would pay very well.

32,478. Do you catch them for your own consumption?—Yes.

32,479. Is the quality such as you have seen in the oysters sold in large towns?—Yes, the quality, I believe, would take the market very well.

32,480. Are they easily got?—Yes, and the ground is very suitable for dredging.

32,481. Whereabouts are the oyster beds?—Between here and the Shiant Isles and Loch Shell and Loch Broom on the west side.

32,482. (*Professor Huxley.*) Do you agree with the previous witness that a winter fishing might be established here with advantage?—Yes.

32,483. Do you think it would have any injurious effect on the summer fishing?—None whatever.

32,484. I think you stated that one of your great reasons for wishing a close time was that catching the fish too early tended to break the shoals?—Yes.

32,485. On the east coast there is no close time?—No.

32,486. The fishermen there fish as early as they please?—Yes.

32,487. And the shoals are not broken in consequence?—The east coast is quite open, but here they come in in a narrow passage between Cape Wrath and the Butt of Lewis, and the number of nets they used to meet with scattered them and did not allow them to go upon the proper fishing ground.

32,488. Do they not go upon the west side of Lewis?—No.

32,489. Do you get your great catch in the Minch?—Yes.

32,490. You look upon this as almost close water?—Yes.

32,491. Is there any other reason, in your opinion, why the catching of the herrings at that time is injurious?—No, I have no other reason. I believe that if the shoals were allowed to come in even the catching of them would not diminish the quantity of herrings. The quantity of herrings is very large.

32,492. Do you agree with the previous witness, that the herrings are in such a poor condition that they would be injurious for food?—I do not say that they would be injurious for food, but they would not make very good food. I do not believe that they are unwholesome, but they are very poor food at that season of the year.

32,493. And notwithstanding that they are poor food, and would fetch a worse price, the curers here are compelled by competition one with another to take the fish if the fishermen catch it?—Yes.

32,494. What is the system pursued in hiring fishermen here?—They get so much per cran, and the bounty. They are just hired in that way. The price here has ranged from 14*s.* per cran and 5*l.* bounty up to 20*s.* a cran for a crew of five.

32,495. Is the bargain made before the season begins?—Yes.

32,496. Do you say "I will give so much to you to fish for me only"?—Yes.

32,497. And you call that a bounty?—Yes.

32,498. Is there a fixed rate for the herrings that are brought in?—Yes.

32,499. And the bargain is adhered to on both sides?—Yes.

32,500. Is the competition among the curers so keen that they cannot exactly fix their own time when the catch of fish shall begin?—They have never done so. It might be done, but I do not believe that it could be very well established.

32,501. If no curer, for example, would take fish before the end of May the fishermen would not go to the fishing, would they?—No, and I believe the early fishing now practised is injurious. Since the close time was established our summer fishing has been more abundant than in any previous year, and it is followed now further to the southward towards Harris, where there was no summer fishing at all. When there was no close time they had to give that up. The average never exceeded 50 crans, whereas

for the last few years it has been more than double, and they have been enabled to get from 100 to 120 crans. That has only been the case since the fish have been allowed to come in and go to the islands southward of this.

32,502. I do not exactly understand you. Do you mean that after the fish attain a certain age and get a little older that they do not mind being intercepted by nets?—No, but they keep more upon their course, but if the body of fish were met out as they were in the early part of the summer I believe the effect would be the same, and that the shoals of fish would be scattered.

32,503. In the month of June do not the fishermen go so far northward?—No, the fish come into the harbour then.

32,504. Do they fish the herrings off the harbour here then?—Yes.

32,505. Then fishing them off the harbour does not prevent them going further south to Harris?—No. The fact is that the great body have passed, and have been passing and repassing, and when they get into the lochs and Minch they remain during the months of June and July until they are in good condition.

32,506. (*Mr. Caird.*) Is the great catch of herrings from all the western coast, including Loch Broom, Gairloch, and the other lochs in which there are fishermen, in the Minch?—Yes.

32,507. Both from the mainland and from these islands you go to the same fishing grounds?—Yes.

32,508. Then in getting your opinion here we, in point of fact, get the opinion of all who are engaged in fishing the same ground?—I fancy so.

32,509. They all frequent the same ground?—Yes.

32,510. Does that apply also to the Harris fishery?—Yes.

32,511. Do the Harris fishermen also come up to the Minch?—Yes, there is a man here now from Harris.

32,512. Are there any curers at Ullapool, in Loch Broom?—I am not aware.

32,513. Is there any other large fishery station on the west coast except this?—At Gairloch there are a number of fishing boats.

32,514. But there is no regular local curer there?—No.

33,515. Or at Portree?—Yes, they do cure at Portree.

32,516. Is there much line-fishing at Gairloch?—There is a little, but it is not carried on to the same extent that it ought to be. A very good cod-fishing might be established at Gairloch, for the quality of the fish is very fine there.

32,517. You think it is not followed as it might be?—No.

32,518. What is the important fishery in the Gairloch?—Cod-fishing is the principal fishing there.

32,519. Do they cure them in the same way that they do here?—Yes.

32,520 Are there many boats there?—Very few.

The witness withdrew.

ALEXANDER MORISON called and examined. *A. Morison.*

32,521. (*Mr. Caird.*) You are a curer here?—Yes.

32,522. Have you heard the evidence of the previous witnesses?—Yes.

32,523. Do you generally agree with the statements they have made?—Yes, generally.

32,524. Is there any point upon which you desire to offer an opinion to us on their evidence, or in addition to what they have stated?—No.

32,525. Is there within your knowledge any mode of fishing practised on this coast which is injurious to the brood and spawn of fish?—I am not aware of any.

32,526. One branch of our inquiry is, whether there are any legislative restrictions that interfere with the fishing. Is there any legislative restriction which you would desire to see removed? That of course would apply to the close time as it has been established here; do you think it would be desirable to alter that?—Yes, I think it occasions a serious loss. There might have been between 50,000 and 60,000 crans of herrings taken here last winter if there had been no close time. I think a close time from the 1st of April till the end of May would be quite sufficient.

32,527. You would have a close time to last about two months?—Yes.

32,528. Are there any regulations enforced here arising out of the present state of the law which, in your opinion, impede the fishermen in the exercise of their business?—No, only the close time.

32,529. There is nothing else?—Nothing more.

32,530. There is no interference on the part of any authority which injuriously affects the fishing?—No, the Fishery officer is the only one who interferes in any way, and he only interferes when we break the close time.

32,531. (*Professor Huxley.*) You do wish to have a close time from the 1st of April till the end of May?—Yes.

32,532. What is your reason for wishing to have that as a close time?—I think the fish are not fit to be taken during those two months.

32,533. They do not sell as well then?—They may be caught, but they are not fit to be cured then.

32,534. But when they are cured they have a certain sale, have they not?—It is scarcely possible to sell those fish now, and if they are sold they are sold at a serious loss to the curer.

32,535. If fish of this bad quality are unsaleable, why do the curers make arrangements for taking them?—That is occasioned by the great competition among the curers.

32,536. Then is the close time for the convenience of the curers?—Yes, it is very desirable that it should exist. It has also this effect, that since the close time nearly double the quantity of fish is taken that was taken in former years. In former years there was no fishing, or next to none, in June; the fishing then was in May, when the fish were bad in quality.

32,537. Why do you think a close time has improved the fishing?—It has allowed the shoals of fish to come in through the Minch and all through the islands, whereas before the close time was established the boats went out in the early part of May, broke the shoals and scattered them so that they never returned again.

32,538. (*Mr. Caird.*) Is there any trawling for herrings on this coast such as is practised in Loch Fyne?—That is never done here at all.

The witness withdrew.

PETER MACFARLANE called and examined. *P. Macfarlane.*

32,539. (*Mr. Caird.*) You are a fish-curer here?—Yes.

32,540. Do you generally agree with the evidence of the previous witnesses?—Yes.

32,541. Is there anything which you desire to add?—No, nothing in particular.

32,542. Do you wish to say anything in regard to a close time?—I agree with what has already been stated, that there ought to be a close time from the 1st of April till about the 25th of May.

The witness withdrew.

STORNOWAY.

J. Macdonald.

6 August 1864.

JOHN MACDONALD called and examined.

32,543. (*Mr. Caird.*) You are a fish-curer here?—No, I belong to the other side of the country.

32,544. Are you a curer there?—Yes.

32,545. What is the name of the place?—Bernera.

32,546. What kinds of fish do you cure?—Cod, ling, and tusk, and nothing else.

32,547. Do you cure herrings at all?—No.

32,548. Is there any fishing ground near where you are?—Yes.

32,549. Do the men go and come every day?—Yes, in the winter. In the summer time they will be out for two nights together.

32,550. Do they bring the fish always on shore fresh?—Yes.

32,551. Without gutting them?—Yes, they are always brought in fresh, except when they get too many; in that case they will gut them outside, but not split them.

32,552. Do they frequent the same fishing grounds which they fished upon in former years?—No, they go 15 miles outside.

32,553. Do they use larger boats than they formerly employed?—Yes.

32,554. Are there any decked boats used in that fishing?—No.

32,555. Do you imagine that if they had decked boats it would be advantageous to the fishery?—I have seen them tried, but they did not do better.

32,556. There was no advantage derived from the men being enabled to stay out at sea at a greater distance?—Yes, but they could not have boats large enough; they were obliged to have them small so that they could hoist them on board in bad weather. The larger boats were not so fit for the long-line fishery.

32,557. Is it a long-line fishery?—Yes.

32,558. Not a hand-line?—No, the hand-line does not do so well. The London smacks have been there often, but they have gone away now; it did not pay them, and they have gone off to their own country.

32,558*a*. Is the number of fishermen engaged in that fishery on the increase?—Yes.

32,559. Is it found by the fishermen to be a remunerative business?—Yes.

32,560. Is it continued over a greater number of months than it was in former years?—No, it is just the same. From November till the end of June.

32,561. Is there a sufficient quantity of fish to admit of any great increase in the number of boats?—The quantity of fish caught is increasing, notwithstanding the increase of boats.

32,562. Is the take of each boat increasing?—Yes.

32,563. So that the fishing ground seems more prolific than formerly?—Yes.

32,564. What kind of bait is used?—They use haddock bait; they get haddock with the small lines, and bait the long-lines with it. Conger eels are the very best bait.

32,565. Can you get plenty of that bait?—Yes, and we could get herring if we were allowed; there are great shoals of herrings at all times. I believe they come round there first, and then go round to the Minch.

32,566. Do they come first on your side, and then go round into the Minch?—Yes.

32,567. From the west?—Yes, every kind of fish comes first from the west, from the ocean; we think they come direct from the Atlantic.

32,568. (*Professor Huxley.*) At what time do you get herrings on the west coast?—We see them plentifully in the month of May, when we are out with our long-lines.

32,569. Do you see them earlier, in the months of January and February?—I believe they see them in April.

32,570. Are there none in January or February?—They don't go so far out. There may be some shoals in the lochs, but they are not in the habit of trying for them.

32,571. Would it be a great advantage to the fishermen to be allowed to catch herrings for the purpose of bait in the month of May?—Yes, it would.

32,572. For bait or for sale?—They are not in the habit of getting herrings at all for bait. They begin with sand eels and limpets.

32,573. Would they use herrings if they were permitted to do so?—Yes.

32,574. Are herrings taken largely on the west coast?—Yes, principally for bait.

32,575. Simply for bait?—Yes, for nothing else.

32,576. Has the quantity of haddock remained pretty much the same during your fishing?—No, we don't get as many as we did some time ago.

32,577. Do you go further out to look for them?—No, we get them close on the land.

32,578. But the fish are not as plentiful?—No.

32,579. Are there many lobsters caught on that coast?—Yes.

32,580. Is there a considerable fishery there?—Yes.

32,581. How are they caught, in pots?—Yes, they gave up the iron hoops.

32,582. Do you find the pots pay best?—Yes.

32,583. They are less trouble?—Yes.

32,584. How many boats have you in the lobster fishing?—From 70 to 80 on our coast.

32,585. With how many pots would each boat be provided?—That is according to the size of the boat.

32,586. How many on the average?—On the average there would be a score, perhaps 30 or so, and sometimes 40.

32,587. Are you allowed to catch lobsters all the year round?—No.

32,588. During what months are you prohibited?—June, July, and August.

32,589. That is in accordance with the Act of George II.?—I believe so.

32,590. Does that prohibit fishing during these months on the Scotch coast only?—It is much in favour of the fishing whatever Act it is.

32,591. Do you think that it is a good Act for the fishing?—Yes.

32,592. Is it during that time that the lobsters breed?—Yes, and throw their jackets also.

32,593. They are not in such good condition then?—No.

32,594. They are not so good for the market then?—No.

32,595. If there was no close time would people get them?—Yes, but they would not live to go to the market. They would die on the way and would not pay the carriage.

32,596. Then the demand for them would soon cease?—Yes.

32,597. So that if there was no close time there would not be much demand for them?—No.

32,598. Is that the time the lobsters have the berry under them?—They have that every day in the year.

32,599. Do you sell those "berry hens" every day in the year?—Yes.

32,600. They bring the best price then?—Yes, in January and February.

32,601. Are they then full of berries?—Yes, but you will find them full of berries every day in the year.

32,602. Is there any sun-fishing on the west coast?—We see some of them.

32,603. Do you never get them?—No.

32,604. What time of the year do you see them?—In the summer, when we used to go to the Fern Islands. I have seen them following the boat for some time.

The witness withdrew.

DONALD SMITH called and examined.

32,605. (*Mr. Caird.*) You are a curer in Stornoway?—Yes.

32,606. Do you generally agree with the evidence which has been given by the previous witnesses?—Yes, I do generally.

32,607. Is there any point you wish to bring before us upon which you differ from them?—I have received a report from some of our foreign agents which I will hand in, in which they express an opinion as to our fishing season.

32,608. Foreign buyers seem to make objection to herrings caught in the first days of June?—Yes.

32,609. On what ground do they object?—They think that the fish up to the 5th of June are often not in a ripe state, but we would not wish to have a close time till that time for fear of hurting the fishermen. All we wish is to extend the close time until the 25th of May, and we would rather be sufferers ourselves than hurt the fishermen.

32,610. You would rather sell your early fish at a lower price?—Yes, than have a close time for all the time the foreign buyers want it.

32,611. They object to your herrings up to the 5th of June?—Yes, generally. They consider them not fit for human food.

32,612. They are not then of the best quality?—No.

32,613. But you yourselves, for the interests of the fishermen, would prefer that the close time should be extended to the 25th of May?—I think that to have it up to the 25th of May would be both for the interests of the fishermen and the curers. The close time should begin on the 1st of April and end on the 25th of May. I believe the fishermen would then get more fish, and that the curers also would be benefited.

32,614. Do you think that considerable loss arises to the fishermen of these islands from a close time existing during the months of January, February and March?—Yes.

32,615. Do you think a valuable fishery would be created if there was no such legislative restriction?—Yes.

32,616. (*Professor Huxley.*) Have you no market for fresh herrings here?—Yes.

32,617. Do you send away a large quantity of herrings fresh?—Some do.

32,618. What proportion of the catch goes away fresh to the market?—Perhaps one fourth.

32,619. Are those early herrings of which you have been talking, namely the herrings caught in the latter part of May, fit for consumption, fresh?—They are sent away for consumption fresh, but they are not fit for food.

32,620. Where are they sent to?—Principally to the home markets in Glasgow and Liverpool.

32,621. When you say that they are not fit for food, what is it that you mean?—They are eatable, but they are not good food.

32,622. Are the poor of Glasgow glad to get them?—Some of the poor are glad to get them at a very low price. The herrings are sold at a very low rate, and the poor are glad to get them then. I don't think they are at all injurious to them.

32,623. Is it not a great boon to the Glasgow poor to be able to get food like that?—No doubt it is.

32,624. Would the enforcement of a close time largely affect the supply of food to the poorer classes in large towns?—It would affect some of them, I admit.

32,625. Would it not cut them off to a certain extent from their supply of food?—Certainly, it must cut them off from the supply which they have been obtaining of early fish.

32,626. Do you think that the proportion of fresh fish, as compared with cured fish, has been becoming greater of late years?—I think so.

32,627. Is that on account of improved means of communication with Glasgow, for example?—I think that the quantity caught is larger.

32,628. I do not mean the quantity caught, but the quantity sent away fresh?—I don't think that. The facilities for getting them to market are certainly great; there are however a great many more prosecuting the fishing.

32,629. Are there no greater facilities for communication between this place and Glasgow than there were 10 years ago?—Yes, a great deal more.

32,630. How many steamers go in the summer time?—We have sometimes a daily steamer. The Hutchinsons send down two or three more than their ordinary number.

32,630*a*. Do they carry away with them large quantities of fresh herrings?—Yes.

32,631. Is there always a ready market for the fresh herrings that are caught?—Yes, there is always a ready market whatever our returns are.

32,632. Is this a report which you have handed in? No, it is a trade circular, issued in 1863 by some of our foreign merchants.

32,633. Have you found your foreign correspondents recommend that there should be a brand on the west coast?—No.

32,634. Do they not care about it at all?—No, every man cures to the best of his knowledge.

32,635. Are these the same people that buy branded herrings from the east coast?—Yes, they are the same people. We have a market different from the east coast; the St. Petersburg market, to which the east coast men send very few.

32,636. But as well as to St. Petersburg, you send to other markets where the east coast herrings go?—Yes.

32,637. And foreign merchants do not urge upon you the propriety of having a brand upon your herrings, in order to compete with the east coast herrings?—No, I don't think it would suit us, our fish are of so delicate a nature. When we have a large catch it would perhaps be a fortnight before the Fishery officer could complete his work, and we could not keep our fish during that time; whereas on the east coast the curers can keep them with the greatest safety for 12 months without injuring the fish in the least.

32,638. Does that arise from the peculiarity of the cure on the east coast?—No, it arises from the quality of the fish.

32,639. Could they not be inspected in time under such circumstances?—No, we could not keep them on hand.

32,640. Could that not be met by having an additional number of inspecting officers?—Yes, but we are not of opinion that it would add much value to the herrings.

32,641. What are the duties of the Fishery officer when there is no brand?—He is able to give statistics.

32,642. Is he chiefly a statistical officer?—Yes, exactly so; he also attends to the barrels, and sees that they are of the proper size, and so on.

32,643. Then so much of the regulations of the Fishery Board apply to you?—Yes.

32,644. Can the Fishery officer regulate the size of your barrel although he gives you no brand?—He always comes into our coopery and inspects our barrels.

32,645. Although you do not want the brand?—Yes.

32,646. Has the Fishery officer power to regulate the size of your barrels when he gives you no advantage in the brand?—He has interfered, but I have heard of no seizure. I am not sure whether he has any power to interfere, but nevertheless he always looks at the barrels.

32,647. Do you consider the Fishery officer to have power to regulate the size of the barrels, if you thought it convenient to use another sized barrel?—I am not sure whether he has the power or not. I never knew of any seizure. I have heard of no seizure.

32,648. (*Mr. Caird.*) Is the barrel an imperial measure of any kind?—There is a certain size fixed.

32,649. There is a legal sized herring barrel?—Yes.

The witness withdrew.

STORNOWAY.

GEORGE MACLEOD called and examined.

G. Macleod.

6 August 1864.

32,650. (*Mr. Caird.*) You can give us some information in reference to the lobster fishery on these islands?—Yes.

32,651. Is it an increasing fishery?—I believe it is.

32,652. On what part of the coast are lobsters found in great abundance?—On the west side of the island.

32,653. Are there many more boats engaged in it now than there were in former years?—Yes, a great many more.

32,654. Is it found a very remunerative fishery?—Yes.

32,655. Is it showing any signs of being overfished?—No.

32,656. It might be largely increased?—Yes.

32,657. Has the price of lobsters been increasing?—Well, the price of lobsters last season was lower than it was the year before last; but I believe that was all owing to the plentifulness of the fish.

32,658. The plentifulness of the fish here?—Yes, and in other places.

32,659. What market do you send them to?—The London market.

32,660. How do they go to London?—They go from here to Greenock, and from Greenock by rail to London.

53,661. Do they go from here to Greenock by steamer?—Yes.

35,662. Are they packed up in boxes?—Yes.

32,663. And are they repacked again at Greenock?—Yes.

32,664. Is there anything put into the boxes to keep them fresh?—No.

32,665. Nothing?—No.

32,666. Then are they again taken out and repacked at Greenock?—They are repacked and sent by rail to London.

32,667. Do they continue to live till they get to London?—Those which die are of no use.

32,668. Generally, they arrive fresh in the market?—Yes, particularly at certain seasons of the year.

32,669. Are any taken in wells?—Yes, those that can be taken in wells have three chances to one as compared with those we send in boxes and by steamer.

32,670. Is a large proportion sent by boxes?—Yes, the whole.

32,671. What then are sent in wells?—Those which go by the London smacks.

32,672. They go direct to London?—Yes.

32,673. Do men come with well-boats and fish off here?—There were two last season, and one was going occasionally with lobsters to London.

32,674. Are the smacks from London becoming greater in number?—I believe they are sweeping the coast and are going to Ireland in the same way.

32,675. Do they fish in the same mode that you do with lobster pots?—Yes.

32,676. When you talk of sweeping the coast, do you mean that they are clearing the lobsters away with them?—Yes, all they can get from the fishermen.

32,677. What do you mean by sweeping the coast?—They are coming round the coast and clearing all the stations where they have boats to get lobsters.

32,678. Are you acquainted with the salmon fishery on these islands?—Yes.

32,679. Is it increasing in productiveness?—That depends upon the season.

32,680. Does it fluctuate?—Yes; I came to this island 35 years ago, and the fishing in 1862 was the best I ever saw.

The witness withdrew.

M. Campbell.

MALCOLM CAMPBELL called and examined.

32,681. (*Mr. Caird.*) You are a curer in Harris?—Yes.

32,682. Has the herring fishery at your station been an improving one of late years?—Yes.

32,683. To what do you attribute that improvement; is it to any change in the law?—I attribute the increase of the fishing of late years to the close time. The fish are allowed to go south before they begin fishing hereabouts.

32,684. The shoals are not broken here at the earlier part of the season?—No.

32,685. During what months would you desire to have the close time?—From the 1st of April till the 25th of May.

32,686. Do you think there would be any winter fishing if the present close time were made an open time during the months of January, February, and March?—Yes, there would.

32,687. Are there many curers at Harris?—Two.

32,688. Is there a large quantity of fish caught at Harris?—We had 35 boats this summer with an average of about 80 crans.

32,689. Do you mean 80 crans to each boat?—Yes.

32,690. What might they have had about two years ago?—About the same quantity has been caught for the last three years.

32,691. How was it previous to that?—It was about 40 crans before then on the average.

32,692. Then the close time, such as it is, has been very beneficial to the fishing?—Yes.

32,693. But you think it would be more beneficial if it only existed in the months of April and May?—Yes.

32,694. Is there any cod, ling, and tusk fishery at Harris?—Yes.

32,695. Is it an increasing fishery?—No, I don't think it increases.

32,696. Is it not improving?—No, the principal fishing for that part of the country is saithe.

32,697. What is done with the saithe?—They cure them and send them to Ireland.

32,698. Are large quantities of saithe cured and sent to Ireland?—About 50 tons every year.

32,699. Is that an increasing trade?—No, I don't think it is.

32,700. Are there any oyster beds off Harris?—The oyster fishery is not prosecuted.

32,701. There are plenty of oysters, but the fishery is not prosecuted?—Yes.

32,702. Is there a lobster fishery there?—Yes, there is an abundant lobster-fishing.

32,703. Is it prosecuted?—Yes.

32,704. Is there a large lobster fishery in Harris?—Yes; they will have about 100 boats at the lobster fishery.

32,705. Is that on the east or west coast?—Harris comes to a narrow neck at Tarbet, and they fish on both sides.

32,706. Is that an increasing fishery?—Yes, of late years it has increased very much.

32,707. Is there plenty of cod to be found off Harris if it was diligently fished?—No, I don't think so.

32,708. Do you know if it is a good ground for the cod-fishing?—Neither for cod nor ling-fishing.

The witness withdrew.

N. Macleod.

NORMAN MACLEOD called and examined.

32,709. (*Prof. Huxley.*) In what part of Harris do you live?—In the village of Tarbet.

32,710. What is the principal fishing there?—I was born and bred there; I have lived there

since I was a boy, and have been at all sorts of fishing.

32,711. The herring-fishing ?—Yes ; herring, cod, ling, and lobsters. There are also oysters, but the fishery is not prosecuted.

32,712. You do not get oysters at all ?—There are plenty, but they are not taken.

32,713. Are they good oysters ?—Yes, first-rate oysters.

32,714. Is the bottom of such a nature that you could use a dredge ?—Yes.

32,715. It is not rocky ?—Only in one or two places.

32,716. Is there a lobster fishery ?—Yes, there is one smack which pays about 900*l.* every year in Tarbet for lobsters.

32,717. Does that smack come and buy the lobsters ?—Every week it comes and buys the lobsters, as there are gentlemen here who can certify ; they pay as high as 16*s.* or 18*s.* a dozen.

32,718. For the lobsters ?—Yes, for the dozen.

32,719. Is that the price the fishermen get for them ?—Yes, 16*s.* or 18*s.* a dozen.

32,720. Is that an increasing price ?—It is increasing according to the demand. When there is not much competition the fishermen get a less price, and when an opposition comes down they get a higher price for them.

32,721. Does there seem to be any sign of the lobsters being over-fished ?—No, there are plenty of them.

32,722. What time do you fish for herrings here ?—We used to fish at every time in the year until the close time commenced three years ago.

32,723. Did you fish for herrings all the year round ?—Yes, since I was a boy.

32,724. Did you fish for them in January and February ?—Yes, every day in the year.

32,725. In what sort of condition were the fish you got in January and February ?—In January they were beginning to get worse, and they commenced getting better again in May.

32,726. Did you get spent fish in February ?—Yes ; in February they began to spend, and a little more so in March, but they were not so bad until March.

32,727. Then did you get the herrings in abundance in July and August ?—We were not in the habit of getting herrings in July in the lochs at all.

32,728. You did not get herrings at all ?—They used to come in August, and then they were followed all the year round.

32,729. In what sort of condition were they in August ?—They were full fish in August.

32,730. Did you get spent fish in September again ?—Yes, of course.

32,731. Was it the practice four or five years ago to catch plenty of fish in the winter fishing ?—Yes.

32,732. Has the enforcement of a close time been injurious to your fishing ?—It made a loss to us last winter of many thousands of pounds.

32,733. That would be a great loss to the people of Harris ?—A great loss indeed ; as great a loss as I ever knew upon our coast.

32,734. Do you think the enforcement of the close time has done the summer fishing any good ?—I don't believe it has.

32,735. Has it made no difference ?—No.

32,736. The only difference it has made has been in your pockets ?—Yes.

32,737. Were the poor in the habit of depending much upon the winter-fishing for their supply of food ?—They are dependent all the days of the year on the sea coast ; they always depend upon the fishing ; they have no other source of support than that.

32,738. Do the poor people of Harris live largely on herrings ?—They live largely on fish of all sorts ; they depend altogether on fishing.

32,739. Were you allowed to catch herrings for bait in the winter months last year and the year before ?—Not unless we stole them and placed ourselves in the hands of the law, and of course we did that.

32,740. Then the close time did you harm in two ways ; in the first place it deprived the poor people of the herrings upon which they depended for food, in the next place it prevented you from obtaining herring as bait for catching cod ?—Of course it did.

32,741–2. Then it did you a double injury ?—Yes, it did a treble injury. There is a great call for the herrings all the year round, more than almost in any part of Scotland ; they were plentiful here, and we were not allowed to take them for bait for cod. Now the west coast of Harris and Lewis is quite different from the east coast. On the east coast they don't get any other bait except herrings, but on the west coast they can use haddocks, flounders, and eels, which are sufficient for catching cod and ling. On the east coast if we don't get herrings we can get no other bait, and therefore the fishing is very much injured. The ground is different from what it is on the west coast ; the herring is the only regular bait we have had since I have been here.

32,743. Then did stopping the herring-fishing on the east coast stop your supply of fish with it ?—Yes.

32,744. Whereas on the west coast it did not because they had other kinds of bait ?—Yes.

32,745. Then it was a more particular hardship upon you than upon any other people ?—Yes.

32,746. Was there much destitution among the people in consequence of the supply of fish being stopped ?—I cannot say that, because other persons were kind enough to supply them ; but of course the merchants are more out of pocket owing to the difficulty in obtaining bait than they would have been if we had been allowed to fish for herrings.

32,747. Do you mean by that, that in consequence of the state of things caused by the close time the poor fishermen were obliged to come upon the merchants for advances ?—Of course. That is what they do always ; they have done that for the last 28 years, ever since I commenced business.

32,748. Are you a merchant ?—Yes.

32,749. Have the advances since the close time was established been more than they were before ?—Yes, they have increased.

32,750. Have the people begun their fishing more in debt than formerly ?—Yes, from not being allowed to go to the fishing in the winter time. I think we should have the same law as that which exists on the east coast of Scotland ; we are in a free country and ought not to be more restricted in our fishing than they are.

32,751. You think it a somewhat hard case that the law on the east coast of Scotland should allow the fishermen there to catch herrings when you are prevented ?—That is my opinion and the opinion of most people here.

32,752. Do you think that the enactment of a close time has done any corresponding amount of good to the fishing ?—No, I believe that it has done no good.

32,753. You do not believe it has done any good ?—I do not know whether I am mistaken, but I do not believe it has. There were two stations in Harris this year, one from Wick and one from Leith, and they never got such a fishing as they did this year at Scalpa and at the mouth of Loch Tarbet.

32,754. What time of the year was that ?—In the early fishing.

32,755. Was it a particularly good fishing this year ?—Yes, first-rate ; we had an average of 80 crans for 35 or 40 boats, and if they had had more people and more curers they would have had more fish.

32,756. If there was a winter fishing permitted would the curers establish stations in the winter time ?—Of course they would.

32,757. Do you buy cod and ling ?—I buy every cod and ling I can get every day in the year and other kinds of fish as well.

STORNOWAY.

N. Macleod.

6 August 1864.

32,758. If there was a winter fishing would you purchase largely during that winter fishing?—I would purchase every one I could get.

32,759. That would send a good deal of money into the country?—Yes, but they did not fish much at all last year owing to the restriction in regard to the bait.

32,760. Who looks to the enforcement of the close time?—There are policemen here, and whether they have authority or not they look after the fishermen very sharply sometimes. I think they put themselves in danger of their own lives in prohibiting people who wish to have full liberty. I believe, as far as I can learn, that they had no authority from the Fishery Board for what they did last year.

32,761. Has the number of police on the island been increased since the close time was enacted?—No, but they are looking after the fishermen very closely. Last year they set nets unknown to the policemen.

32,762. Have any fishermen ever been convicted of breaking the law?—They wanted to take a high hand with them, but the police could not manage them because the people thought the course they were taking unnatural and unlawful.

32,763. Have any fishermen been brought before the magistrates and convicted under the act?—No, it did not come to that extent. They were only taking a few herrings for bait.

32,764. There has been no case of conviction?—No, I have not heard of one. I believe they took the nets from the fishermen.

32,765. The nets were seized?—Yes.

32,766. Do you know of your own knowledge any case in which the nets were seized?—I believe that some of the nets were burnt.

32,767. Was that done after due process before the magistrates, or by simple authority of the police?—They drew up the nets, brought them to Tarbet and burned them.

32,768. Were any of the persons who had the nets in their possession summoned before the magistrates?—Yes, I believe they were.

32,769. And their nets were burned?—Yes.

32,770. Was there any large quantity of nets seized?—No, only a few. When they saw that it had been done in one or two instances they gave up putting themselves in danger.

32,771. How many nets were burned?—As far as I can recollect I think there were three that were burned.

32,772. Have you anything to say with regard to the branding of the herrings?—With regard to the brand I go very much against that.

32,773. You object to the brand?—Yes, I am against sending my herrings to the market with the brand.

32,774. (*Mr. Caird.*) Was it by order of the sheriff that the nets you spoke of were burned?—So it seems, but I don't know on what authority the policemen did it.

32,775. (*Professor Huxley.*) You say that you desire to have no brand?—Yes, I think the Fishery Board should give the same chance to the east coast and the west coast and to all parties who are engaged in the fishery.

32,776. Would you like to see the brand here?—I should like to see the same weight of fish in the barrels sent to the market. Of course the brand should not go upon a light barrel when a heavy one should be sent.

32,777. (*Mr. Caird.*) Do you get a good market for your herrings now?—Yes. I don't think it a right law that enables the brand to be put on a barrel half full while another person sends a full barrel without the brand.

32,778. Do you think that the brand being placed upon a barrel half full would make it sell?—The Fishery officer should see that the quantity was in the barrel before he put the brand upon it.

32,779. (*Professor Huxley.*) Would you not suffer in your business if you sent barrels light?—Yes.

32,780. If you sent a barrel half full would not the foreign dealer reject or refuse to buy it?—No doubt he would refuse it, but we would like to have the same chance with our barrels as they have in Wick and Caithness.

32,781. Do you think that branded herring has an advantage?—I don't know that it has.

The witness withdrew.

A. McClellan.

ANGUS MCCLELLAN called and examined.

32,782. (*Mr. Caird.*) You are a fisherman here on the west coast?—Yes, at Malista.

32,783. Do you fish all the different kinds of fish that are caught on these islands?—No.

32,784. What do you fish particularly?—Ling, cod, and tusk.

32,785. Then you do not go herring-fishing?—No.

32,786. What months of the year do you follow the ling, cod, and tusk fishery?—From November.

32,787. Until when?—Until July.

32,788. Do you find the fish upon the same ground as you did five or six years ago?—Yes, but not on the same ground that they were before that time. We have to go further from land now.

32,789. You have to go further to sea in order to find them?—Yes.

32,790. And when you do go do you find plenty of them?—Yes.

32,791. Are your boats larger than they used to be?—Yes.

32,792. Does that enable you to go further to sea?—Yes.

32,793. Do you use the same kind of bait that you were always in the habit of using?—Yes.

32,794. What is it?—Haddocks, conger eels, and flounders.

32,795. Do you use herrings?—No, whenever use herrings for bait.

32,796. Has the catch for every boat increased within recent years?—Yes, it has increased.

32,797. There is no sign upon the fishing ground that the fish are begining to get scarce?—No, not out on the fishing banks.

32,798. There is plenty of fish to be found there?—Yes, there is plenty of fish on the banks.

32,799. Is the number of boats that frequent those banks increasing?—Yes.

32,800. There are more boats?—Yes.

The witness withdrew.

J. Stewart.

JOHN STEWART called and examined.

32,801. (*Mr. Caird.*) You are a fisherman here?—Yes, at Bible.

32,802. Are you a fisherman on the west or the east coast of the island?—I belong just to this parish itself down at Bible.

32,803. What kinds of fish do you catch?—Cod and ling.

32,804. Do you not follow the herring-fishing?—No, I have not done so for two or three years. I dropped it two or three years ago.

32,805. Are the cod and ling on the ground you frequent got in an increasing quantity?—Yes, except this year, when they have taken most out from the middle bank in the Minch; ours is on the mainland.

32,806. Is that the best fishing you have here?—Yes, from the middle bank.

32,807. Are there more boats engaged in the fishery than there were in former years?—There are not less at any rate.

32,808. They are rather on the increase?—Yes.

32,809. Does every boat get more fish than it was in the habit of getting formerly?—At one time when we had herring bait we could get more fish with it.

32,810. Do you find the herring bait of great importance?—Yes.

32,811. Has it been a great hardship to you to be prevented from obtaining herring bait in the winter months?—Without the herring bait we cannot do anything with the fishing compared with what we did formerly.

32,812. Then being shut up by law from getting herrings in the winter operates injuriously on your cod fishing?—We cannot get enough for sale in the first two months of the year, but we get herrings for bait in the months of March and April. Unless we can get herring bait on our side of the island we can do nothing at all with the cod and ling.

32,813. Is the cod and ling-fishing followed in April?—Yes.

32,814. Is that a good month for cod and ling-fishing?—Yes, in our place at any rate.

32,815. If you have a complete close time then in the month of April, and are not allowed to catch herrings for bait in that month, would it injure you as a cod fisherman?—Yes, unless we can get herring bait we might just as well stick our boats on shore.

32,816. Then I presume you are against any close time at all in the herring-fishing?—Yes.

32,817. You would not like to be prevented from fishing herrings for bait in any month of the year?—No.

32,818. Is there no other bait to be had on the east coast except herrings?—Not on our side of the island. We used to get some haddock, but for two or three years we have got none at all, and even if we did get it the fish would not take it as well as they take the herring bait.

32,819. Although herrings at that time of the year might not be in good condition for human food are they very good for bait?—It is the best time for bait altogether, only the fish are poor.

32,820. Is that the general opinion of the fishermen on the east coast?—It is on our side at any rate.

32,821. It is the opinion of all the fishermen who fish in the Minch?—Yes, for the poorer the herrings are the more they will stick upon the hooks.

32,822. (*Professor Huxley.*) Are you a herring fisherman yourself?—Not just now.

32,823. But you have been?—Yes, but for the last three years I have dropped it.

32,824. Have you ever fished for herrings in the early part of May?—Yes.

32,825. With drift nets?—Yes.

32,826. Have you ever found when you were fishing at that time that your catching of the herrings has broken the shoal?—Are you speaking of the winter herrings?

32,827. No, the summer herrings in May?—No, it does not spoil the fishing at all.

32,828. Are you of opinion then that the fishing early in May does not break the shoal of fish?—No, it does not break the shoal of fish.

32,829. When you were fishing were a large number of boats employed at the same time?—Not so many as now.

32,830. I mean when you were fishing early in May were there a large number of boats fishing with you?—There were not such a large number in those times as there are now.

32,831. Did you ever find the fishing early in May do any harm to the fishing afterwards?—No.

32,832. Did you catch as many fish afterwards as if you had not been fishing early in May?—Yes, and even last year though we were taking herrings in the winter time we did not spoil the summer fishing at all.

32,833. Are your boats open boats?—Yes, open boats.

32,834. What tonnage are they?—They are only small boats.

32,835. Have you different kinds of boats?—Yes.

32,836 What are the different kinds?—We have them of 18 and 20 feet in length for cod and ling, and from 30 to 34 feet on the keel.

32,837. Have any of those boats a deck?—No; some of the herring boats have decks, some of the new ones, but the old ones have no decks at all.

32,838. Have the boats increased much in size since you began to fish?—No, they are about the same.

32,839. How do you rig your vessels?—With a lug sail.

32,840. Only with one?—One; the big ones have two.

32,841. What is the size of the mesh of your nets; how many meshes are there to the yard?—The size varies, some of the nets have 31 to the yard, others 32 and some 33 or thereabouts.

32,842. Does anybody look after your nets to see if the meshes are of the right size?—The Fishery officer used to do that.

32,843. If there were more meshes than 36 to the yard would the nets be seized?—Yes, that was what they did formerly.

32,844. Do you put any lights in your boats when you go out to fish?—No, not at all.

32,845. None at all?—Not on this coast in the short nights.

32,846. Is it a very short night when you are fishing here?—Yes.

32,847. But in the winter fishing have you no lights?—They set them then on anchors in the bay and leave them there all night.

32,848. Is that the way you prosecute your winter fishing?—Yes.

32,849. You do not go out into the bay?—No, we just shoot two or three nets and leave them anchored.

32,850. Do you know whether any of the fishermen have ever had their nets seized for fishing in the close time?—No, I do not think they have.

32,851. Was there a little fishing going on in the close time this last winter?—Yes, plenty; there was a good deal of it.

32,852. Are there any oyster beds along your shores?—No.

32,853. Is there no lobster fishery?—Yes, they are fishing lobsters, but there are no oysters; they are fishing lobsters down at our place.

32,854. Are they getting many lobsters?—Yes, there are many getting them; in December they get most of them.

32,855. Is there a good lobster fishery there?—Yes.

32,856. Is there increased attention paid to that fishery?—I cannot tell you, I have not been much connected with the lobster-fishing at all.

The witness withdrew.

JOHN MACKENZIE called and examined.

J. Mackenzie.

32,857. (*Mr. Caird.*) Upon what part of the coast do you fish?—Bible.

32,858. The same place as the last witness?—Yes.

32,859. What months of the year do you find best for fishing cod and ling?—March, April, and May.

32,860. Those three months?—Yes.

32,861. Then if there were a close time in the herring fishery during the months of April and May, would it injure you as a cod and ling fisherman?—Yes.

32,862. Is there any other bait you could use during the months of April and May?—None.

STORNOWAY.

J. Mackenzie.

6 August 1864.

32,863. Does that apply to all the fishermen who fish for cod in the Minch?—Yes, I have been for 40 years fishing. I know them all very well, and they are all of the same opinion.

32,864. Is there a great quantity of cod caught in the Minch in the months of April and May?—Yes.

32,865. Are there any means by which herrings might be fished for bait without being fished for sale for food?—They generally fish there with their nets simply to get bait for their long-lines, and not with the object of sending any up to the market.

32,866. Would it be possible to adopt a restriction by which you could be allowed to fish for bait and yet be prevented from selling any herrings you caught for food?—I do not know.

32,867. Why do you not fish the herrings for food in the month of May if you have leave to do so?—It would be useless then except for bait.

32,868. Would the quality be very inferior?—It would be useless except for bait.

32,869. Would it be useless in the view that the fish would not be good for food?—It would be quite good enough for the fishermen themselves to eat but it would not be fit for the market.

32,870. You would eat them yourselves but not send them to the market?—Yes, we would eat them with pleasure.

32,871. Then why would it be useless except for bait if it is good for food?—It would be useless for the market.

The witness withdrew.

J. Mackenzie.

JOHN MACKENZIE called and examined.

32,872. (*Mr. Caird.*) Where do you fish?—At Mervey in the parish of Lewis.

32,873. Is that on the east coast?—Yes.

32,874. Do you fish in the Minch?—Yes.

32,875. What kind of fish do you follow?—Cod and ling and herring.

32,876. What brings you in most money, the cod, ling, or herring?—The herring.

32,877. Have you only one season for fishing the herring, namely, in May, June, and July?—We formerly fished the herring in the winter. We got it for bait when we could.

32,878. Did you find the winter fishery a good fishery?—It was very good sometimes.

32,879. Was the quality of the fish very good?—Yes.

32,880. Did you sell the fish for consumption?—Yes.

32,881. How late did you continue to sell the fish you got in the early part of the season?—Every day throughout the year.

32,882. Is there always a sale for them?—Yes.

32,883. As a cod and ling fisherman can you get any bait except herrings?—No, we never use any other bait but herring.

32,884. Then does the cod and ling-fishery depend upon the supply of herring bait?—Yes, just so.

32,885. And if there is a close time which prevents you from fishing the herrings at all would you be obliged to cease fishing cod and ling?—We must drop it at that time of course if we do not get liberty to catch herrings.

32,886. But I suppose you really do catch herrings, because you carry on your fishery?—Yes.

32,887. Is there a very large cod and ling fishery in the Minch?—It is not very large.

32,888. Are there as many cod and ling caught in the Minch as on the west coast?—Not as many; it is only a small fishing where I am; we get very few.

32,889. Then is your whole cod and ling-fishery a small matter compared with the herring fishery? Comparing the time you continue to fish for cod and ling and the time you continue to fish for herrings, is the cod and ling fishery of much less importance to you than the herring fishery?—It is just about the same, I think.

32,890. Do the cod and ling bring you in more money than the herrings?—No such thing.

32,891. Do the herrings bring you in most money?—Yes.

32,892. Then anything that injures the herring fishery would be more injurious to you than anything that injured the cod fishery?—Yes.

32,893. (*Professor Huxley.*) Some three or four years ago was there not a memorial signed by the fishermen here sent up to the Government in favour of a close time?—No, it was sent up by the curers.

32,894. It professed to be from the fishermen as well, did it not?—I do not know anything about it.

32,895. It is a petition that was sent up three or four years ago?—I do not know anything about it.

The witness withdrew.

P. Macfarlane.

PETER MACFARLANE recalled and examined.

32,896. (*Prof. Huxley.*) There was a memorial sent up to the Government three or four years ago?—Yes.

32,897. In favour of a close time?—Yes.

32,898. Do you recollect the precise tenour of that memorial?—I do not remember the words of it, but I know the substance. They wanted to have a close time to prevent the fishermen from fishing herrings during a certain season of the year.

32,899. Did the fishermen in any way join in getting up that memorial?—No, they did not; they knew nothing about it.

32,900. But was it left to be supposed that the fishermen were in favour of a close time at all?—The fishermen knew nothing about it, as far as I know.

32,901. Do you think if they had known anything about it, and if they had known it would have prevented their winter fishing of herrings, that they would have signed it or been in favour of it?—They would never have signed it. The close time injures the fishing very much. The heaviest fishing I ever saw in Lewis was in the month of February.

32,902. Was there not a public meeting convened in order to get up the petition?—The curers were called together, but not the fishermen.

32,903. Did the fishermen take no part in that agitation?—No.

The witness withdrew.

A. Ross.

ALLAN ROSS called and examined.

32,904. (*Mr. Caird.*) I believe you wish to make some statement to the Commissioners?—Yes.

32,905. What is it you desire to state to the Commissioners with regard to the interests of the fisheries here?—I am not interested in the question at all, but I am inspector of the poor in the parish of Lewis. I have no direct interest in the matter, but I know what has passed under my own observation during the last 50 years at least.

32,906. Can you tell us what has been the effect of the adoption of a close time during the last two years upon the interests of the fishermen?—It has had the very worst effect, in my opinion.

32,907. In what way?—It has demoralised the

people and brought them in contact with the law of the land.

32,908. The people do not regard the law, but go on fishing irrespective of it?—They believe there is no Divine law to prevent their taking the fish, and they act on that principle as far as they can. My belief is that if there had been sufficient officers to put down the fishing for herrings in Lewis last year there would have been riots and loss of life to a considerable extent.

32,909. Then those riots and that loss of life were obviated by the people breaking the law as it at present exists?—It was obviated by their being allowed to prosecute the fishing without interruption.

32,910. Which, in fact, was setting aside the present state of the law?—Exactly so.

32,911. Did anybody attempt to enforce the law?—The Fishery officer went once to Lewis with two or three policemen belonging to the town here, but their proceedings there were a mere farce.

32,912. They found they could not contend against the general feeling of the neighbourhood?—They were one to a thousand men determined to oppose them tooth and nail.

32,913. So they withdrew?—Yes.

32,914. Then the law, in fact, is a dead letter?—Yes, it is a dead letter to be sure.

32,915. Did they seize any nets?—They were not allowed to do so.

32,916. Then they did nothing?—They took possession of a boat, but the people took it from them again.

32,917. And then they retired?—Yes, they took to their heels.

32,918. Would the enforcement of the law have led to great distress among the people?—Unquestionably it would.

32,919. And to the loss of a very valuable supply of food?—Yes, not only what they required themselves, but thousands of barrels which they were enabled to export.

32,920. Did they export them?—Yes, to a large extent, in an underhand way.

32,921. They were obliged to adopt underhand modes of doing that which they would otherwise have done openly if the law had not been changed as it has been lately?—Decidedly. I have seen scores of vessels coming from the Clyde to the fishing here, and carrying it on all the winter, and the same would be the case now but for the operation of this law.

32,922. Do strange vessels and fishermen come here to follow the fishing?—Yes, they always did.

32,923. Do they do so now?—No, there is not one now.

32,924. Is that in consequence of the change of the law?—Yes, exactly so.

32,925. Then the result has been that the fish have been caught and the law has been set at naught, and the people have been demoralised by the present state of the law to a certain extent?—That is my opinion.

32,926-7. (*Professor Huxley.*) You would sum up the whole operation of the Act in this way apparently: that it has deprived the people of a considerable portion of what otherwise would have been their wealth, and that it has created a new branch of smuggling?—Yes. I saw the Fishery officer and the police under him in contact with the fishermen. They took possession of a boat in which they found the scales of fish, and they met a woman with a creel of herrings and made her a prisoner, as it were, and brought the herrings into the boat. The report was then that they were about to bring the boat to the town here. I saw the people collecting like madmen. They launched a boat and took hold of the one which the Fishery officer had. They tied the boats together and allowed them to drift towards the Minch. The Fishery officer and the police got alarmed, and besought the people to land them, which they did, and the boat in which they had gone out was left with the people. I believe the people never heard a bit about it since.

32,928. Did they put the Fishery officer and the police adrift?—They tied the boats together and allowed the wind to drive them out towards the Minch.

32,929. Then the policemen and the Fishery officer, finding themselves in that dangerous position, asked the people to put them on shore again?—Yes, they besought them to land them.

32,930. And when the people had done that they left them alone?—Yes. I believe there were a few nets burnt here.

The witness withdrew.

PETER CLARK called and examined. *P. Clark.*

32,931. (*Mr. Caird.*) Do you wish to make a statement to us?—I am anxious to state that three years ago, when the bill for a close time was before Parliament, there was a large meeting of fishermen in the Masons' Hall; it was a very large and crowded meeting, and the object was to petition against the bill, at least so far as this, that it should not extend the close time beyond the 15th of May. There was a very unanimous and strong feeling expressed by the fishermen present that that should be so. Their opinion seemed decidedly that the close time should not extend beyond the 15th of May.

32,932. Was there any opinion expressed as to when it ought to begin?—It was considered that it might begin, except for the purposes of bait, on the 1st of March.

32,933. Was there any opinion expressed as to when the fishermen desired the close time to commence?—I think, as far as I can recollect, that the expression they used was that they should be allowed to fish until some time in February.

32,934. Did the fishermen in that memorial object to a close time in January and February?—Yes.

32,935. Are you aware whether that memorial was presented to Parliament?—Yes, it was presented to Parliament; it was sent to Sir James Matheson, and in his absence was presented by the honourable member for Inverness.

32,936. Had the Act been passed?—Yes, or otherwise we believe their opinions would have been listened to.

The witness withdrew.

KENNETH SMITH recalled and examined. *K. Smith.*

32,937. (*Professor Huxley.*) Can you tell us who it was who wished to have a close time in January and February?—It was not the Lewis curers at all; they were overruled. I think a correspondence which took place on the subject is still in existence between Mr. Morison and the late James Methuen of Leith. The Leith men said they would have no close time at all, unless they could get the month of January, and in order to get a close time we agreed to that.

32,938. Then all of you here, whether fishermen or curers, have a decided objection to a close time in January?—Yes.

32,939. But you want a close time in April and May?—Yes.

32,940. You have never entertained a wish to have a close time in January and February?—No, I believe that a good winter fishery could be established here without any injury to the summer fishery

STORNOWAY.

K. Smith.

6 August 1864.

32,941. Then do you trace the injury which has been done to the fishery, entirely to Mr. Methuen and Mr. Morison?—Mr. Morison was not in favour of it, he was for having it open.

32,942. Then it comes down to Mr. Methuen only?—Yes, and the southern curers.

32,843. Do you mean the Glasgow curers?—The Glasgow and Leith curers.

32,944. (*Mr. Caird.*) You heard the evidence of one of the witnesses just now, that he would not be able to fish in March at all if he was not allowed to get herrings for bait?—In the month of April they give up the fishing and begin their farming. The quantity of ling and cod caught in the Minch altogether does not exceed 100 tons in the course of the year in the whole district beween the Lochs and the Point, whereas we get 70,000 or 80,000 barrels of herrings.

32,945. Of that 100 tons, how many do you suppose are caught in the months of April and May?—Perhaps one-fourth of it.

32,946. Then in point of fact the fishing in those months is nearly one-fourth of the whole cod-fishing in the Minch?—I think I go to an extreme, when I say as much as 25 tons are caught in April and May.

32,947. Then you hold the preservation of the cod-fishing in the Minch to be a minor affair compared to the advantage which accrues to the fishermen from the herring-fishing?—Yes.

32,948. (*Professor Huxley.*) Would you wish to have a close time for the herring fishery during those months?—On the west coast we never prosecute the herring-fishing at that time; we can get plenty of bait there, and we never try the herrings then. They are not fit for food, and there are plenty of other fish.

32,949. I understood there was some peculiarity with regard to the herrings entering the Minch?—They are never seen here until the middle of April; they come in large shoals to the west coast, and they come round and enter the Minch about the 15th of April.

32,950. Do they never go south and go up the other way?—They do go south; I am not prepared to say whether they leave the coast altogether or whether they circumnavigate the island.

The witness withdrew.

N. Campbell.

NAPIER CAMPBELL called and examined.

32,951. (*Mr. Caird.*) Can you give us any information about the general state of feeling in the island here in regard to a close time for herring fishing?—I was applied to in consequence of a disapproval existing with regard to the close time, owing to the length of time it lasted and its stringency.

32,952. Who applied to you?—Some persons from the parish of Lochs.

32,953. For what object did they apply to you?—They applied to me professionally, to try and get some alteration brought about by some means by an united movement if possible in the island.

32,954. Who were the parties who applied to you?—A Mr. Macdonald, a farmer of Crobeg, told me that he applied to me on behalf of a body of fishermen there.

32,955. Who felt themselves seriously injured in their business by the close time?—Yes.

32,956. Did he specify the particular part of the close time that was injurious to them?—He specified the months of January and February and the middle of March as very injurious.

32,957. Did you do anything upon that?—I had considerable correspondence about it, and being a stranger to the subject, and not anxious to go rashly into it, I wrote to the three ministers of the principal parishes here. I also corresponded with other ministers in other parts of the country in Skye and in different places, and I even wrote to the Fishery Board, and had some correspondence with the officials there.

32,958. What was the result of that correspondence, not with regard to the Board, but as to the feeling expressed by the different ministers within the island and in the neighbourhood, as to the injury sustained by the fishermen from the operation of the close time?—They were unanimous in stating that it was a serious injury, and they thought the close time ought not to be established before the middle of March; somewhere about the 25th, I think.

32,959. In what way was there a practical injury sustained to their fishing from the close time?—They put it upon a number of grounds, such as the demoralisation of the people, occasioned by the inauguration of a system of smuggling and taking the fish against the law. At this time there had also been some seizures, and some of the fishermen were afraid of a prosecution; they had the terror of the law over them and were evading it. On the other hand, the fishermen stated that they had been prevented from getting the large supply of cod which they would otherwise have obtained in the early period of the winter; they further stated that they could have got good curable herrings quite suitable for the food of the poorer people, and that to fish them they broke the law and set it at defiance.

32,960. Then they represented that there was an injury done, both by the demoralization of the people and also by the loss of food which the people would have obtained if the herrings had been caught?—Yes, certainly.

32,961. Did that represent correctly the general opinion in the different parishes of Lewis?—Yes. I put it in that way to the ministers, thinking they would have, naturally, the interests of the whole parishes at heart; they had large meetings in their parishes, and a public meeting was held at Stornoway in consequence.

32,962. When was that?—It was held on the 18th of February.

32,963. The 18th of February last?—Yes, a committee was appointed, some of whom have been examined to-day.

32,964. Can you tell us what resolutions were moved at that meeting?—One resolution was: "That "in the opinion of this meeting the experience of all "parties concerned in the herring-fishing on the "coast of Lewis has led to the conviction that the close "time fixed by the Act of 1860 has been found "adverse to the interests of all parties engaged in that "fishing."

32,965. Was that resolution carried unanimously?—Yes, it was carried unanimously; I have an account of the meeting as it appeared in the "Inverness Courier" of March the 3rd.

32,966. Were you present at the meeting?—Yes.

32,967. Is the report contained in that paper accurate?—Yes.

32,658. Then may we take it as part of your evidence?—Yes, it is as follows:—

A numerously attended meeting of those interested in the Lews herring-fishing was held in the Freemasons' Hall at Stornoway on Thursday the 18th February, at twelve o'clock, noon. Mr. James Mackenzie, jun., banker, magistrate, who was called to the chair, explained that the meeting had been called in consequence of the prevalent dissatisfaction with the present close time in the North.

The Rev. John Macrae, Lochs, as representing the views of about 3,500 people in his parish, all more or less interested in the fishing, and having ascertained the feeling in the parishes of Garrabost and Back, moved:—

That in the opinion of this meeting, the experience of all parties concerned in the herring-fishing on the coast of Lews has led to the conviction that the close time fixed by the Act of 1860 has been found adverse to the interests of all parties engaged in that fishery.

He warmly and eloquently supported this resolution. The Act, he said, was a snare. It demoralised the people,

who were living in open defiance of an unreasonable law. Providence sent shoals of excellent fish to their doors in winter, and he failed to see who would suffer by their being taken. The poor required food. The cod and ling fishery required bait. The curers might benefit by the law, but it was not all profit to them. The Act was not conceived in reason, nor did reason preside at its birth. He was almost tempted to condemn the law of close time altogether. It was, however, no wish of the fishermen to extend their interest to the loss of the curers. That would in the end hurt the fishermen. If the curers got good markets they could give good prices to the fishermen; this enabled the latter to pay their landlord and their merchant. He would, therefore, in conjunction with the curers, support a modification of close time.

John Macleod, fisherman, Lochs, seconded this motion, in Gaelic, and it was unanimously carried.

Mr. Malcolm Mackenzie, fish-curer, Stornoway, moved:—

That as regards the Lews fishing, on which a resident population of nearly 22,000 depends, the opinion is shared alike by fishermen, curers, and consumers, that too early operations in summer would be highly prejudicial to it, and to the herring fishery all along the coast, and therefore that some close time should be kept in force in the North, though it could safely be more limited than at present.

He said that he would not conclude from too short an experience that a close time should be condemned; but he admitted the pressure on other classes. He contended that the interest of fishermen and curers was identical, and that what was their real interest become indirectly the interest of the whole island, he might even say the nation. The consumer, also, had a right to be heard, and he quoted the report on the early caught Lews herrings from his agent at Stettin. From this report he demonstrated the effect which early operations had on the market, and thereby on the parties engaged in the fishing. It was ruin to the curer, and in the end a heavy loss to the fishermen. His belief was that if Parliament abolished close time altogether they would soon be called on, either by the people of Lews or elsewhere, to re-enforce it. If the close time were limited, however, to the time when herring were in the worst condition, it would no doubt be acknowleged as a great boon to the country, and less desire would be felt to break the law or disturb it. Great interests at stake would thus have some protection for the general good.

STORNOWAY.

N. Campbell.

6 August 1864.

Mr. John Fraser, baker, Stornoway, who, though no fisherman or curer, was a consumer, and indirectly interested, seconded the resolution, which was carried.

Mr. Kenneth Smith, merchant and curer, moved,—

That in the opinion of this meeting a close time from the 1st of April to the 25th of May would protect the herring while in a weak condition and unfit for market or human food, would otherwise operate beneficially on the herring-fishing, and would meet the views of all classes engaged therein of sufficient importance to claim a right of control.

He believed that it was of great practical importance rather to allow the fish to settle on the coast and get fairly into condition, than scare them away or scatter the shoals. The take throughout the season was steadier, and other parts of the coast would feel the benefit as well as the Lews. His experience as a curer was that it took the whole season to make up the loss of the early caught herrings, which he was compelled to buy and could not sell. Even a short close time would also clear the markets while protecting them from unsaleable fish, and with such protection he could afford a fair remunerative price, without loss. He read a letter from Mr. Munroe, chamberlain to Sir James Matheson, approving of the movement, and promising his influence.

Mr. Donald Macdonald, farmer, Crobeg, briefly seconded the resolution, and it was unanimously carried.

Mr. Alex. Morison, sen., ropemaker, moved, and Mr. Andrew Gibson, curer, seconded, the fourth resolution, viz.:

That this meeting do resolve to petition Parliament, memoralize the Board of Trade, and take such other steps as are best calculated to promote the above views, and that the following gentleman be appointed a committee, viz.—The Rev. Mr. Macrae, Lochs; Rev. D. Murray, Garrabost; Rev. D. Macniester, Bach; and Mr. D. Macdonald, Crobeg; and also Messrs. A. Morison, sen., Kenneth Smith, Andrew Gibson, and M. Mackenzie, fish-curers; and John Frazer, baker.

On being put to the meeting the motion was unanimously agreed to, and after a vote of thanks to the chairman the meeting separated.

32,969. Is there anything you wish to add to the evidence you have already given?—No, I think there is nothing further.

The witness withdrew, and the inquiry was adjourned until the 8th of August at Portree.

Portree, Isle of Skye, Monday, 8th August 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

THOMAS FRASER, Esq. called and examined.

PORTREE.

T. Fraser, Esq.

8 August 1864.

32,970. (*Mr. Caird.*) You are the resident Sheriff of Skye?—Yes.

32,971. You have been for many years in Skye?—Yes; almost 20.

32,972. And you are therefore intimately acquainted with all its interests?—Yes; I think so. I have had occasion to pay very considerable attention to all matters connected with the social welfare of the people, arising from the peculiar circumstances they have been placed in.

32,973. You being the resident magistrate of this part of the country?—Yes.

32,974. You have prepared a paper, I believe, which you desire to put in, in which you give your impressions on the whole subject of the fishing interest of Skye?—I think it would shorten the matter if I were to put that paper in.

32,975. Will you be good enough to read it?—I begin by referring to the letter which the Commissioners who sat a year or two ago had before them on their inquiry.

32,976. (*Professor Huxley.*) And which is published in their report?—Yes. The paper which I have prepared is as follows:—

"I beg to refer to my letter of the 12th September 1862, to the Chairman of the Commissioners acting under the Royal Commission of 1862, for inquiring into the operation of the Acts relating to trawling for herrings, and which letter is printed in the report of that Commission. To the views stated in that letter I still adhere, and I may, perhaps, be permitted to add that I have since been in communication on the subject with many persons connected with the herring-fishing, but never met with one who considered the existing legal close time necessary or perceptibly beneficial to the fishing. I may also add that I have every reason to believe that there would have been a very general agitation from this island and the west coast generally for the repeal of the close time, were it not for the general expectation entertained since the publication of the Report of the Commission of 1862, that the observance of the close time was no longer to be enforced. In point of fact, there has been no prosecution in Skye for contravention of the statute since 1862.

"I earnestly hope that this general expectation of an abandonment of the close time may not prove ill-founded, for I think its enforcement would be found to involve at all times, but particularly in those periods of severe privation which, unfortunately, are of too frequent recurrence in Skye, not merely the disadvantages indicated in my letter above referred to, but moral consequences hardly less worthy of consideration.

"To interfere in the way of prohibition with the accustomed food of a people without any very obvious necessity for such interference, and where the benefit expected from it appears, at best, but problematical, must be regarded by those who suffer from the prohibition, as a measure of wanton oppression; and if the prohibition be arbitrarily applied to the inhabitants of those coasts in the kingdom in which the means of life are most scanty, while the inhabitants of more productive and fruitful districts are carefully exempted from its operation, the measure must

PORTREE.

T. Fraser, Esq.

8 August 1864.

also be regarded as partial and unjust. The people of Skye are quiet, orderly, and habitually submissive to the laws. Amongst them smuggling and even poaching are almost unknown. I should regard it as a serious evil that such a people should be led, if not reasonably at least naturally and plausibly, to look upon the law in its dealings with them as oppressive and unjust, and be exposed to the temptation, and no slight one it would be in time of dearth, to contravene if not to resist a regulation which interposed between their wants and the food which the bountiful provision of nature brought to their shores.

"I need not now revert to the injurious effect of the herring-fishing close time upon the long-line or cod and ling-fishing, by curtailing the supply of bait at the best season for the long-line fishing, but I may remark that serious as is the disadvantage referred to at present, it will become still more serious, should the formation of the proposed railway from Dingwall to Skye lead, as in every probability it will, to a more extended and energetic prosecution of the cod and ling-fishing in the Hebrides.

"I am not prepared, indeed am not qualified to offer any suggestion as to restrictions or regulations likely to benefit any of the sea fisheries. My impression certainly is, that any such interference with the fishing will be found of very doubtful expediency, especially where the habits of the fish have not been well ascertained.

"I believe that much might be done to extend and increase the value of the oyster beds, but this is perhaps a matter more for private enterprise and care than for legislative interference.

"Large quantities of whelks are collected and exported from Skye, and the lobster-fishing is considerable, though I have been told a good deal less than it was a few years ago. I am not able to give you any statistics of the fishing, but they can, I presume, readily be had from the steamer proprietors, Messrs. D. Hutcheson & Co., of Glasgow, and the dealers in Greenock. It may be interesting to ascertain whether there be a falling off not only in the number but in the size of the lobsters taken.

"When I first came to Skye, now almost 20 years ago, there was little if any lobster-fishing in the island, but about that time, or shortly after, boats from Ireland and the east coast of Scotland began to fish lobsters on the Skye coasts, and ere long, Skye men followed the example thus set to them, and gradually engrossed the fishing.

"I have remarked that within the last very few years haddocks and whitings have almost entirely disappeared from the list of fish caught at Portree. Not long ago, very excellent haddocks used to be got in and near the loch, though not, so far as I observed, in any great numbers, and the whitings were very abundant and of good size; but for the last two or three years I cannot remember that I have seen either haddock or whiting taken. It would be interesting to inquire whether this has been observed at other parts of Skye, and whether such disappearances of once familiar fish are to be explained by the fish, either capriciously or from a falling off of food, abandoning their usual haunts, or by their being exterminated by their enemies, human, feathered, or cold-blooded. In the former case, protective measures are clearly out of place, and even in the latter, any that may be suggested would be probably found of doubtful and certainly of very limited efficacy.

"Whether something may not be done to promote the propagation of fish in the Hebrides, may be well worthy of inquiry.

"Nothing further occurs to me to state on the subject of the present inquiry, but more valuable evidence than any that I can give may be had from Mr. Mackinnon, of Corry, who lives close to Broadford, and Mr. Daniel Fraser, merchant, at Isle Ornsay, both which places the "Salamis" will pass on its voyage southwards. I regret that the shortness of the Commissioners' stay on this coast will prevent the Commissioners examining Dr. Nicol Martin, of Glendale, and Captain Allan Macdonald, of Waternish, under whose auspices and by whose tenants the fishing of cod and ling is carried on on the coasts of the parish of Durinish, on the north-west of Skye."

That is all; and I have just written it without knowing what are exactly the points upon which you desire information.

32,977. (*Mr. Caird.*) I think you have given us very valuable information. In the statement which you have laid before us, I see that you recommend that no close time should be adopted?—Yes; I do not recommend any close time.

32,978. You think there ought to be no close time?—I am not prepared to recommend any close time. I speak negatively.

32,979. Are you not prepared to speak on the subject at all?—I am quite clear against the existing close time.

32,980. And against any close time?—Against any lengthened close time.

32,981. Is there any opinion in the island in favour of any close time whatever?—I rather think not. I rather think there would be a disposition on the part of the people of the island to have such a close time as to prevent the Stornoway people from taking to the early fishing. They have a notion that the Stornoway fishing occurring earlier, interferes with the fishing here.

32,982. Do they think that it breaks the shoal of fish, and prevents them from coming up?—Something of that kind.

32,983. You have not heard any precise month mentioned as a close time which the people of the Isle of Skye would favour?—No, I am not aware of their favouring any close time for close time purposes. I am not aware that there is any close time the people of Skye would recommend for close time purposes; but there might be a close time which they would prefer in order to prevent the Lewis people from carrying on the early fishing.

32,984. For the purpose of benefiting the breeding of fish they have no desire for a close time at all?—No.

32,985. They are of opinion that it is not necessary?—Yes.

32,986. Are you aware whether the people of Skye subsist much upon fish during the winter for their food?—Yes, a great deal.

32,987. Then it is really a matter of great importance to them looking at it as a food question?—There is no doubt of it.

32,988. They are of opinion that they should be left to follow the herring-fishing during the winter season?—No doubt of it, considering that the herring is direct food, and also that it is the means of procuring other fish.

32,989. You mean that it can be used as bait for other fish?—Yes. On both these considerations they think they should be left to follow the herring-fishing during the winter.

32,990. Are you aware whether any serious hardship has arisen among the people in Skye from the close time at present established by law?—I am inclined to think that it was the occasion of very considerable hardship in 1861.

32,991. But since then the law has been a dead letter?—Yes.

32,992. There has been no interference on the part of the authorities to enforce the law as it at present exists?—Not since 1862.

32,993. And the people, in fact, have fished as they thought proper without any regard to the law?—They have not been prevented from doing so.

32,994. Has that liberty which they have taken for themselves removed the hardship under which they were placed previous to the publication of the letter you sent to the Commission in 1862?—There can be no doubt of it.

32,995. There has not been a similar complaint among the fishermen that they could not obtain fish for food since they took the law into their own hands and have done as they thought proper?—There may have been complaints as to the storminess of the weather, but none with regard to any legislative obstacle against their fishing.

32,996. Can you give us any information as to the extent of the oyster beds round Skye?—No, I cannot. But there are oyster beds in the Sound of Scalpa, and Loch Snizort, and Loch Grishinish. My impression is that there are very few lochs in which there are not more or less oysters, but upon that subject no doubt Captain Otter will be able to tell you more than I can. With regard to the loch in Portree there are an immense number of the shells of oysters on the strand, although oysters are no longer taken in the loch.

32,997. Were there many oysters at any time taken in the loch within your recollection?—No, not within my recollection.

32,998. You say that the haddock and whiting of recent years have disappeared from the neighbourhood?—Yes.

32,999. Have you heard any reason alleged for that?—No.

33,000. Have they fished them with the same diligence as formerly?—It was not a fishing for sale; the boats went to fish for general purposes, and they caught at particular seasons a great number of whitings, but it was not an established herring or whiting-fishery, or anything of that description.

33,001. Has there been an important haddock or whiting-fishery that has disappeared in recent years?—They have never been fished as a matter of exclusive fishing for trade, as has been done in some places, and therefore in that way there has been no trade; but the circumstance remains, as I have stated. Formerly we used to catch a great number of whitings and a considerable number of haddocks, but of late years we do not get them at all.

33,002. (*Professor Huxley.*) Do you know whether they are to be had by going out further to sea?—I do not wish to state positively, but I rather think the waters in which the whitings were got were not deep ones.

33,003. What sort of bait did you use for the whiting and haddock then?—They did use bait for them.

33,004. But what sort was it?—I believe they used cockles and mussels and sometimes small bits of herrings.

33,005. Has that description of bait become scarce?—No.

33,006. Then it is not owing to the difficulty of procuring bait?—No.

33,007. Is there any beam-trawling on this coast—I mean the large beam-trawling—is that practised here?—I do not know exactly what it is.

33,008. There are large vessels using a large net with a beam at one end of it?—No, certainly not. There is nothing of that sort here.

33,009. Has there never been at any time?—No.

33,010. Have the people ever practised scringing, or circle-net fishing?—No.

33,011. There has been nothing of that kind?—No.

33,012. Has the number of boats increased here of late years?—I do not happen to know that.

33,013. Have you eaten oysters here?—Yes.

33,014. Are they of good quality?—Yes, and they are eaten in great numbers.

33,015. We were informed in Edinburgh that they had a black appearance and that they were not saleable in the market?—I have never observed any such appearance. They are smaller than the oysters you get in London and Edinburgh.

33,016. Rather smaller?—Yes, I think so. We are in the winter very well supplied with oysters, and particularly when there is a bad year other people come all the way from Stronsea up to Portree to get a shilling or two by them. If potatoes are plentiful they are not willing to come ten or a dozen miles for that purpose.

33,017. You mentioned two curing establishments in Skye?—Yes.

33,018. Are there more than that?—I do not know. I mentioned two people I am aware of who carry it on. I am not aware of any others who carry it on systematically. There are one or two who practise it regularly in Loch Dunvegan and another in Loch Pooltiel.

33,019. Do they carry it on for some central European market?—I am not aware.

33,020. Is it cod and ling or herring that they cure?—It is not herring; it is cod and ling.

33,021. They do not cure herring at all?—No.

33,022. I thought there was curing of herring there?—The curing of herring goes on all over the coast wherever it can be caught.

33,023. But for the purpose of exportation?—Yes. I have occasionally seen a hundred sail of boats in the bay at Portree, and there is a large collection of ships of one kind and another to the south of Scalpa. Great numbers of ships come here and purchase; others come here and fish as well as purchase, and there used generally to be one or two or perhaps more persons resident in Portree who purchased.

33,024. The curing goes on all round the Island of Skye?—Yes.

33,025. Do the people cure in their own houses or in the regular curing establishments?—Generally speaking the boats sell their takes to the curers, and those curers cure either on shore or in the ships as they can find convenient opportunities; but as regards the details of these matters there are persons who know them much better than I do.

33,026. (*Mr. Caird.*) Was there any representation made from persons in the Isle of Skye who were in favour of a close time at the time that question was agitated?—I understand there was a petition, or something of the kind, but I never saw it, and I remember that shortly after the establishment of the close time there was a meeting in Portree and among other subjects the close time was brought under consideration. It so happened that none of the gentleman present had seen the petition, but on inquiry I ascertained that the petition had been sent round and had obtained a great number of signatures, which signatures were obtained on the representation that the petition was a petition to put down the trawl nets.

33,027. (*Professor Huxley.*) That is to say, circle-nets?—Yes, and none signed under the impression, or at least the notion, that it had reference to close time.

33,028. (*Mr. Caird.*) Do you speak the general impression of all in Skye when you say that whatever petition was signed on the subject they are now universally against the present close time as established by law?—I think so. I have been in communication with persons connected with the fishing and interested in the country. I have frequently heard the question discussed and I never heard one in favour of the close time as now established by law.

33,029. You are not aware whether the petition emanated from the people here or was sent here to be signed?—I imagine it must have been sent here to be signed. If it had emanated from the people here it would have come under my observation. Any petition got up here is got up by calling a meeting of the gentry, and they consider the question, prepare the petition, and sign it. Everything is public here.

33,030. The opinions contained in the petition were not shared, I understand you to say, either by the gentry of the country or by the fishermen?—No.

33,031. (*Professor Huxley.*) The petition could not have been got up by the fishermen without your being aware of the fact?—I do not think it could.

33,032. You say that they signed that petition under the impression that it was against trawling; I presume that by that you mean the circle-net fishing as practised in Loch Fyne?—Yes.

33,033. If no such fishing were practised in this island, why did they feel such an antipathy to it?—I cannot tell; but I speak more by hearsay of the petition than anything else, because I never saw it or heard of its existence until the close time was established.

33,034. Do you think that the people here have any considerable objection to circle-net fishing?—I do not know, except those who leave the country to seek for fishing elsewhere, and I do not think they know much about it. There is, however, a large proportion of our fishermen who go off to the fishing elsewhere.

33,035. Do they go to Loch Fyne?—Some go to Loch Fyne, some to the coast of Ireland, and numbers to the east coast. The numbers who go to the fishing vary. This year there will be a considerable number, and last year the number was comparatively small. It depends on various circumstances. Last year there was abundant employment on the railroads

PORTREE.

T. Fraser, Esq.

8 August 1864.

at high wages, and many people went and availed themselves of that employment who would otherwise have gone fishing. This year employment of that description is not so abundant or so remunerative, and further, there has been a good deal of sickness in the south, together with considerable apprehensions about small-pox and other contagious diseases. That has made the people unwilling to go to the south, and has increased the number who have gone to the fishing. That observation will also apply to some extent to the diminution of the lobster-fishing, because if the people find that they can make more money on the railroads than they can make by going about attending to those lobster boxes they will naturally give the preference to it. Fishing, trenching, and road-making seem to be equally to their taste here.

The witness withdrew.

Captain Henry Charles Otter, R.N., called and examined.

Capt. H. C. Otter.

33,036. (*Mr. Caird.*) You have for some years been engaged in a survey of the Western Islands, I understand?—Yes, for 20 years.

33,037. Then you are intimately acquainted with all the coasts of these islands?—Yes.

33,038. In the course of your observations have you turned your attention much to the fishery interests of the islands?—Not to the details of the fishing.

33,039. But to the existence of different kinds of fishing and the different kinds of fish that are found on the coast?—Sometimes my attention has been directed to those matters when they have been occasionally brought before me.

33,040. Have you formed any opinion as to the much vexed question of a close time in the herring fishery?—Yes, I have.

33,041. What is the opinion which you have formed upon that point?—My opinion is that in all those small lochs such as there are in Skye and on the west coast of Scotland in general, there ought to be no close time. The fishing is carried on in such a small way comparatively, seeing the way in which it is carried on at Stornoway and Wick, that it is not injurious to the fish coming upon the coast.

33,042. Then do you exclude Stornoway from the range to which your answer applies?—Yes, the boats there take more in one night than they probably take in Skye during the whole of the winter months.

33,043. To what part of the coast then does your answer apply?—From the coast of Mull.

33,044. To where?—To Cape Wrath.

33,045. But not including part of Lewis?—No, beginning at the lochs to the south but including everything inside Lewis. There is a very large fishery at Stornoway. To the south of Stornoway there is very little fishing going on except at a place called Lochs. All the other places are denuded of inhabitants and there is no fishing going on, so that it is really of very little consequence whether there is a close time or not.

33,046. But the fishermen of Stornoway tell us that on the east coast those who fish in the Minch find it idle to fish unless they get herring bait?—Yes, I believe that is the case.

33,047. Then would not your answer that there should be no close time necessarily apply also to the east coast of Lewis?—Yes.

33,048. And to all the west coast of Inverness and Sutherlandshire and Ross-shire?—Yes.

33,049. Down as far as the Sound of Mull?—Yes.

33,050. Beyond that you do not offer an opinion?—No.

33,051. Because you do not know anything about it?—Yes.

33,052. Then outside of that do you establish a different principle?—Do you mean outside the Lewis?

33,053. Yes; you said you would follow the line inside?—That would be of very little consequence because there is no fishing on the long island except there may be a few boats from Loch Rona.

33,054. Have you turned your attention to the mode in which it is supposed the shoals of herrings enter the Minch from the North Sea and the west?—No, I have not.

33,055. Then you cannot say whether the allegation of the fishermen is true that the early fishing is apt to break the shoals and prevent them proceeding down the Minch?—No.

33,056. You are against any close time on any part of the west coast of Scotland down to Tobermory in Mull?—As far as concerns the present mode of fishing in this place the fishing of Stornoway is on a gigantic scale, the nets cross over the Minch entirely from one side to another. They are closely packed and doubled and trebled all over. If there is anything at all in nets being injurious to the progress of the fish it must be in such an extensive fishing as that. But I do not believe that the fishing in Skye and in the Lochs which is carried on, comparatively speaking, on a very small scale can be injurious; in addition to which it is of the utmost importance to the food of the poor people in the winter that they should have the opportunity of fishing if they have any shoals coming into the Minch and passing along the Western Islands.

33,057. But where it can be practised on a large scale you think there ought to be a close time?—Yes, I think so.

33,058. Have you considered the question of what that close time should be?—I cannot say that I have.

33,059. Are you aware whether the winter herring-fishing is at all likely to be a valuable one on the coast of these islands?—I should think not, I mean to say valuable in a mercantile point of view.

33,060. It is valuable, you believe, as an article of food to the people?—Yes, most important.

33,061. Do you know whether the cod and ling-fishery on the coast of these islands is a progressive one?—I should rather think to the contrary.

33,062. To what particular part of the coast do you refer now?—To Barra and Eriskay; I would not speak positively about Skye, but I think the long-line fishing on that island is on the retrograde altogether.

33,063. Do you know any reason for that?—I think that the speculation which was carried on some two years ago demoralized the people so much by getting them into debt that they did not care very much whether they fished or not.

33,064. What was the nature of that speculation?—They were provided with all manner of things that they had no necessity for as well as those things which they did require, such as nets and boats, and they were run so much into debt that the fishermen of Barra, Eriskay, and the west coast generally have not recovered themselves to this day.

33,065. Was that debt incurred by advances made by the curers to the fishermen?—Yes.

33,066. In order to secure their services in the fishing?—Yes.

33,067. Was it done under a particular company, or was it a general thing?—Under a company.

33,368. A joint stock company?—Yes.

33,069. And you think that those advances led to embarrassments among the fishermen, and in that way they have rather deteriorated than improved the fisheries?—Yes.

33,070. They have not fallen off from any want of fish on the coast?—No; I do not think they have fallen off from that.

33,071. There has been no appearance of a decline in the number of fish on the different fishing banks on the coasts where they are usually caught?—

Occasionally there has been. In 1858 there was scarcely a fish taken in this county, but that was in consequence of large shoals of the small dog-fish. In that year scarcely anything was done by the long-line fishing.

33,072. And since then has it improved ?—Yes ; it has improved since then.

33,073. Are there any flat-fish taken on this coast to any extent ?—No.

33,074. Is there no sole-fishing ?—Turbot are taken at the north of the Butt in large quantities.

33,075. Is there no net-fishing for flat-fish ?—No ; there is no trawling.

33,076. No beam-trawling ?—No ; I never saw any except what I have done myself, and that has been on a very small scale.

33,077. Were you successful when you did it on a small scale ?—We broke the beam.

33,078. Is it not a suitable bottom for trawling ?—No doubt it is in many places.

33,079. Do you know anything about the haddock-fishing ; is it a fishing that is likely to yield well ?—I do not know.

33,080. We have been told that there are some valuable oyster beds along the coast of Skye, and on the coasts of the islands ; can you give us any information as to their existence ?—I only know the loch Mr. Fraser was speaking of, Loch Sligachan, where there is an abundance of oysters, and Loch Hourn.

33,081. Loch Hourn is on the main land ?—Yes.

33,082. Are those oyster beds fished by anybody as a matter of business ?—At Sligachan, I think they are, and they bring them into the market occasionally, but the beds in Loch Hourn are kept as private property.

33,083. To whom do they belong ?—The upper part of the loch belongs to Mr. Ellice, I think.

33,084. Is that a bed of sufficient importance to be worth attention for the supply of oysters to the great markets of the country ?—I should think it is. The shores of the loch itself are covered here and there with oysters, not attached to the bottom, but attached to the rocks along the sides of the loch as well as in many places along the bottom in the shoal water.

33,085. We were told by a witness at Edinburgh that in many other parts of the Isle of Skye in almost every loch he entered he could find oysters. Have you found that to be the case ?—I cannot say that I have.

33,086. Have you examined the lochs in such a way as to be able to speak positively upon the point ?—No, not on the south and west of Skye.

33,087. Do you know anything of the quality of the oysters ; have you tasted them ?—Yes.

33,388. Are they good ?—They are particularly good on the Long Island, and the Sconce oysters are very good.

33,089. Are they similar in quality to the oysters we find in the southern markets ?—I am not able to speak decidedly upon that point.

33,090. Is there a good lobster fishery on the coast of Skye, or might there be ?—I do not know much about it in Skye.

33,091. Is there on any of these coasts ? —On the Long Island or the outer Hebrides there is excellent fishing.

33,092. Do you think the lobster fishery in the outer Hebrides capable of a great increase and development ?—Yes, I should think it is.

33,093. I suppose at present it is very imperfectly fished ?—It is more perfectly fished than it was ; foreigners used to come to us, that is to say, men from the south, from the Isle of Man, from Ireland, and other places. They were in the habit of coming here and fishing, particularly in the western part of the outer Hebrides. People constantly came from different parts and fished here, while the inhabitants did nothing in the lobster fishery themselves.

33,094. What is the case now ?—The inhabitants in the different parts are now taking more to fish for themselves.

33,095. There is an important fishing in Barra ?—Yes, most important.

33,096. What description of fishing is it ?—Chiefly long-line.

33,097. Cod and ling ?—Yes.

33,098. Is there an important herring fishery at Barra ?—No, I do not think there is.

33,099. Is the cod and ling-fishing improving there ?—No, it is deteriorating.

33,100. For the reasons you have already given ?—Yes.

33,101. Is it capable of being increased ?—Yes.

33,102. (*Professor Huxley.*) Have you seen any foreign vessels fishing in the Western Islands, French or Dutch ? — No, I have never seen one fishing here at all.

33,103. Have you ever had occasion to try for soles, or have you caught them on the western coast ?—No, I never used the means except once.

33,104. Have you seen any kind of scringing or circle-net fishing practised on any of the islands you have visited ?—No ; except for sillocks ; when fishing for sillocks they throw a net round them.

33,105. That is the ordinary shore seine ?—Yes ; it is fished along the shore from the rocks.

33,106. Have you never seen any circle-net fishing or scringing practised for herrings ?—No, never.

33,107. Is there any large fishery at Barra ?—Yes, long-line fishing.

33,108. How many boats are engaged there ?—I can hardly speak as to that, but I should say that on the island of Eriskay, which I consider to be part of Barra,—it is in the Sound of Barra,—there must be 30 boats.

33,109. Are they decked or undecked boats ?—They are just open boats.

33,110. They fish with long-lines, not the hand lines ?—Chiefly the long-line.

33,111. Is the quantity of fish they take very considerable ?—Yes it is. It has been very good this year.

33,112. Has the number of fishing boats at Barra increased within your recollection ?—I think it has decreased, but I cannot speak from any particular knowledge of them myself, I only speak from what I hear upon that point.

33,113. However, I gather that it is your opinion that the decrease in the fishery which may have taken place there has not arisen from any falling off in the quantity of fish, but simply from want of fishing ?—Yes.

33,114. When you spoke of catching sillocks, you described the method of taking them as being by a kind of shore seine ?—Yes; it is a circle-net stretched on a large hoop.

33,115. Not by a seine ?—No; they lower it down with pieces of broken crab and other stuff in it.

33,116. You have visited most of the islands on the western coast ?—Yes.

33,117. Then you know the mode of living adopted by the people pretty well ?—Yes.

33,118. Do you consider that the fish they catch enters very largely into their food and forms an important element in their support ?—I think in the spring time that seaweed and shell-fish are the principal maintenance of a vast number of them.

33,119. Seaweed ?—Yes, seaweed and shell-fish. I believe their existence is just eked out with that, with the assistance of a little meal and potatoes which they may have left. If the seaweed and the shell-fish and the sillocks were taken away from them most of these people would be obliged to emigrate or else to starve.

33,120. Sillocks are not shell-fish ?—No ; but they are caught from the rocks. They do not require a boat to catch them.

33,221. What do you mean by shell-fish ?—Limpets, cockles, and that sort of fish.

33,122. Do the winter haddock and the codfish enter at all largely into their food ?—I should think so.

PORTREE.

Capt. H. C. Otter.

8 August 1864.

33,123. Is the catching of herrings a matter of importance to them in the winter?—I think it is.

33,124. Do they practice it on most of the islands?—Yes, in every loch, but to a small extent.

33,125. Only on a small scale?—Yes, to provide a few barrels for themselves, and that is of the greatest importance to them.

33,126. Would you look on any stoppage in the catch of these fish in the winter as depriving the people to a great extent of their food?—Yes.

33,127. Have you, on visiting the different islands, found any great discontent existing from the operation of the close time Acts?—No, because they are a people ready to suffer rather than show it by discontent and outrage, as they would in the south if the same thing were carried on there. When an Act of a similar tendency was put in force in reference to the Firth of Forth the law was broken and set openly at defiance, but the sheriff was obliged to put these poor people into gaol here even at the time that they were catching, selling, and eating illegal fish in Edinburgh.

33,128. (*Mr. Caird.*) Is there anything that occurs to you which you wish to offer to us as additional evidence in reference to the fisheries of these islands?—Do you mean in respect to improving the fisheries?

33,129. Yes?—It is very difficult to say what course one would adopt.

33,130. I suppose we may take it from the evidence you have given that there is a sufficient field for the employment of capital in the prosecution of the fishing in these islands, as far as is shown by the existence of the fish on the coast?—Yes.

33,131 We may take that to be the fact?—Yes.

33,132. Is there any mode of fishing at present practised which is injurious to the spawn of fish?—No, I do not know of any. The net fishing, in which the net is drawn ashore, and which is known as drag-net fishing, is so little practised here that I do not think the spawn is injured in that way.

33,133. Are there any fishing banks known to you as being prolific of fish which are not generally known to the fishermen?—I am not aware; there is the Shiant East Bank which a few years ago was not known generally to the fishermen.

33,134. Is that very prolific of fish?—Yes, at the proper season. During the season it is very prolific. It is a bank of a very large extent.

33,135. Looking at the map, what are the best fishing grounds for cod and ling?—I should say Kilda was one, 25 miles to the north of the Butt of Lewis, the Shiant East Bank, and the banks from South Uist, near Barra—those are the banks, I think, that are most prolific.

33,136. What average depth of water may there be on those banks?—From 14 fathoms to about 20, or perhaps in some cases from 10 fathoms to 25.

33,137. Are those banks mostly near the shore?—The banks at the Butt of Lewis are 25 miles off, the Shiant Bank is 12 miles off, and the Eriskay Bank is within a mile and a half of the shore.

33,138. Can most of those banks be fished to advantage by open boats?—Yes.

33,139. Would it be of advantage to the fisheries if there were decked boats placed upon any of them?—Not full decked boats certainly.

The witness withdrew.

W. Stewart.

William Stewart called and examined.

33,140. (*Mr. Caird.*) You are an agent for the purchase of shell-fish of different kinds in Skye?—I am not an agent, I buy myself.

33,141. You buy on your own account?—Yes, and I send them to market.

33,142. You are acquainted with the different kinds of fisheries which are carried on in the Island of Skye?—Yes.

33,143. And have been for many years?—Yes.

33,144. What kind of shell-fish do you export from here?—Nothing but whelks.

33,145. Where do you send them?—To London.

33,146. (*Professor Huxley.*) Do you mean periwinkles?—Yes.

33,147. (*Mr. Caird.*) Has that been an increasing trade?—Yes, but it has been getting scarce in consequence of so many people being engaged in catching them.

33,148. Do they all go through your hands?—No, there are many people who deal in them besides myself.

33,149. But do they all go through your hands?—No, they go from different places.

33,150. In the course of a season how many tons do you send off from here?—I may myself probably send away 300 bags or thereabouts in a season; that is exclusive of what others send.

33,151. Where do you send them?—To Glasgow and by rail from Glasgow to London.

33,152. You do not buy lobsters, do you?—Yes, sometimes, and herrings. Sometimes I deal in herrings, sometimes in lobsters, and sometimes in whelks.

33,153. Has the lobster fishery been increasing?—No, it is on the decline.

33,154. What is the cause of that?—It is my opinion that there are too many fishing them. There are more than there were formerly. At the commencement of the fishing there were too many fishing them, and the consequence is that the fishery now is on the decrease.

33,155. Where do they fish?—Round about the islands.

33,156. Are you speaking of the whole lobster fishery round the islands?—Yes.

33,157. And you think it is over-fished?—It is not over-fished, but the lobsters are a great deal smaller than they were 15 or 16 years ago.

33,158. Are there large quantities of them sent away every year?—Yes.

33,159. Does that fishery go on all through the year?—Not in the summer time.

33,160. Is there any crab or parton fishery here?—No.

33,161. Is the oyster fishery practised here at all?—No. There is a reason for that; the proprietors will not allow the people to touch them.

33,162. Is there no oyster bed open to the fishermen?—They do not prevent the poor people from lifting some for their own use, but they will not allow them to take them for the market.

33,163. Are there a good many oysters known to exist on different parts of the coast?—Yes, there are good lochs for oysters.

33,164. Would not the proprietors allow them to be fished on the payment of some lordship for the privilege of fishing?—I do not know anything about that. They are on the strand and they ought to be got on the shore in the spring tides; they can be got also at neap tides, but in the spring tides we can pick them off the shore.

33,165. Are they not dredged?—No, not one of them.

33,166. Is there no place where they could be dredged?—I dare say there is if it was tried, but I never saw it tried.

33,167. Is the quality of the oysters good?—They are not very big, but they are very nice.

33,168. Is there any objection to the colour of them?—I don't think there is.

33,169. Have you ever sent any to Glasgow?—Yes, but not many.

33,170. Was any objection made to them?—No.

33,171. If an arrangement could be made with the proprietors, could the oyster fishery be largely increased in the Island of Skye?—I dare say it could.

33,172. Do you think they are capable of forming a very large supply to the market if there were no obstacle to their being fished?—I suppose so. They

are like every other kind of fish, and you will find them spawning like other fish.

33,173. What opinion have you formed with regard to a close time for the herring fishery in Skye?—It is my opinion that there should be no close time at all, because it has injured the poor people greatly.

33,174. But practically they do not regard the law; they do not pay any attention to the state of the law, but go on fishing, do they not?—They do pay attention to the law.

33,174*a*. Then the law as it at present exists is observed to some extent?—Yes, to be sure it is.

33,175. If the law were altered, would it be a great matter for the poor people fishing here?—It would be greatly in their favour.

33,176. Would you have no law here at all in reference to a close time?—No, not in Skye, from Cape Wrath to the Mull of Cantire, would I have any close time because it is greatly injuring the poor people.

13,177. Are herrings found here in good condition in the beginning of May?—Not very good. They do not fish here in the beginning of May at all.

13,178. Even though there were no law against it, would they not fish in the beginning of May?—No; the herrings are poor then.

33,179. During what months are the herrings good in the winter time?—They are good all the winter.

33,180. Up to when?—All through the month of January. If we had a month longer to fish, it would do a great deal of good to the country.

33,181. It would be of advantage to you if you got leave to fish all through January?—Yes.

33,182. Would you not fish them longer?—No; the fishermen would have no desire to fish upon a bad system.

33,183. What objection have you to the herrings in November?—Their quality at that time is useless.

33,184. Do not people eat them then?—No; they are as poor as they can possibly be, and they can scarcely be used at all.

33,185. Is it for the interest of the people of Skye to have a close time extending from the beginning of February until the 25th of May?—I dare say it would be.

33,186. When would you propose to end it?—Well, the earliest they should be allowed to commence at Stornoway should be the 20th of May. If the fishing were put back there for some time that would be in favour of those lochs; for it is well known that since the Stornoway fishing commenced there has been no fishing here at all. I remember when the Stornoway fishing commenced they had a very good fishing here at that time. But there were not so many boats going to the Stornoway fishing then; and at first it did not hurt us here, but since the Stornoway fishing has so much improved, a great many more boats have gone there every year, and the fishing here has been much injured.

33,187. Have they collected at Stornoway from different parts of the coast?—Yes; so that there is no fish caught here at all now. The body of the herrings used to come this way, but the shoals now become broken in consequence of so many boats fishing amongst them and do not reach as far as this.

33,188. Have the fishermen of Skye come to any opinion as to what would be the most desirable time for a close time on the west coast?—As I said before, I think the 1st of February.

33,189. The 1st of February to begin with?—No; to close the fishing for Skye.

33,190. You would have the close time to commence on the 1st of February; you would have no fishing from the 1st of February?—No, up to the 30th of May, that would be the time I should fix.

33,191. Do you think that is the opinion generally of the fishermen of Skye?—I think so.

33,192. And you would take ten days in May in the hope of preventing the Stornoway fishermen from breaking the shoals as they are coming south?—Yes.

33,193. That is the reason you give for extending the close time throughout the whole of the month of May?—Yes; I do not think the fishing should be stopped altogether.

33,194. What time is your best herring-fishing here generally?—June, July, and August; but there has been nothing for the last five, six, or seven years.

33,195. Was there formerly a good deal more herring cured in Skye than now?—Yes, a hundred times more.

33,196. When did that great falling off commence?—It is five or six years since now.

33,197. Do you date it from the time the great fishing began in Stornoway?—Yes, I do.

33,198. And you attribute it to the shoals being broken as they enter the Minch?—I do, and it is the general opinion of competent fishermen. It does more harm than that also to the poor people who deal in them. The Stornoway herring gluts up the markets in every part of the south, from Glasgow down to London, and in every part of England all the markets are glutted up with Stornoway herring, and if I send herrings I shall not be able to get a market for them.

33,199. Are the Stornoway fish good fish?—No, they are not good fish, they are not half as good as the herrings caught here.

33,200. Do you mean the herrings caught early?—No, nor at any time. The quality is not as fine or as good.

33,201. Are they not rich fish that are caught at Stornoway?—Yes, but they are coarse fish compared with those which are caught here.

33,202. Can you tell us anything about the cod and ling fishery?—That is on the decline.

33,203. What is the reason of that?—It is more than I can say what the reason is.

33,204. Do the people find a better kind of business?—No, they are trying for the fish, and if the fish could be caught they would do very well, but the fish have failed and the people have had to give it up.

33,205. Are there not as many cod and ling to be caught if any person were to try it with perseverance?—I do not think there are. The fish are not to be caught, that is my opinion.

33,206. (*Professor Huxley.*) When you had winter fishing here before the close time was there much fishing?—Yes.

33,207. Was there much cod and ling caught then?—Yes.

33,208. Was there any quantity cured here then?—Yes.

33,209. Were there considerable quantities of fish caught in the winter before the close time Act came into operation?—Yes.

33,210. In what condition were the fish in January?—In very good condition.

33,211. Were they full fish?—Yes.

33,212. When did you get spent fish in the winter?—I never made any distinction.

33,213. You know what spent fish is?—Yes, a fish after it has spawned.

33,214. When did you get them?—In the spring if they were to be caught.

33,215. In what months?—February and March.

33,216. What time are the herrings full in the summer fishing?—In June generally.

33,217. As early as June?—Yes.

33,218. What time do you get spent herrings here in the summer fishing?—I never saw a spent herring in the summer time at all here.

33,219. Do you ever fish for herrings as late as August?—Yes, but I never saw a spent herring here then.

33,220. Do you understand the fishing for sillocks that is practised on this coast?—What sort of fish are they.

33,221. Young saithe?—Yes, I know them.

33,222. That is cuddy-fishing?—Yes.

PORTREE.

W. Stewart.

8 August 1864.

33,223. What sort of nets are used for cuddy-fishing ?—We have no nets at all.

33,224. How do you catch them ?—With a hook and bait on it.

33,225. You do not use any nets at all ?—No. We use sometimes a taaf net, that is the Gaelic word for it. It is a net with a hoop to it.

33,226. How big is the hoop ; how wide is it across ; is it a couple of feet ?—It is about that width (*measuring*).

33,227. That is about three feet ?—Yes, or I dare say four feet in diameter.

33,228. What is the size of the mesh of the net ?—About an inch, or scarcely an inch ; my thumb would go into it.

33,229. Is it half an inch ?—Perhaps.

33,230. How deep is the bag of the net ?—Some are deeper and some less ; perhaps about 2½ feet or thereabouts.

33,231. Is it worked from a boat ?—It is worked with a handle.

33,232. A handle ?—Yes, they stand on the quay and put it down in the water, and take it up again.

33,233. (*Mr. Caird.*) Are they able to take fish in that way ?—Yes, they put in some bait with it and they take it up with a spring or jerk ; they catch thousands in that way.

33,234. (*Prof. Huxley.*) Are they much eaten by the poor about here ?—Yes, and they are also very useful for light ; they extract oil from them.

33,235. Do they boil them down for the oil ?—Yes, they do.

The witness withdrew.

JOHN NICHOLSON called and examined.

J. Nicholson.

33,236. (*Mr. Caird.*) Are you a fisherman ?—I have not been fishing for more than 12 years ; I used to fish for about 30 years before that.

33,237. Then you are pretty well acquainted with all the fishing that is practised here ?—Yes, on the east coast.

33,238. Can you tell us whether the different kinds of fish caught here are on the increase or on the decline ; but in the first place can you tell us what are the fish caught here ?—Herrings, cod, and ling. There are herrings always here in the season beginning at the latter end of June.

33,239. Is the herring-fishing as productive here as it used to be in early times ?—It is not a hundredth part as good as it used to be.

33,240. What is the cause of that ?—As the other witnesses have told you, it is in consequence of what is caught in Stornoway, and on account of the Lewis fishing beginning so early and there being so large a fleet of boats engaged in it.

33,241. Would you desire that the Lewis fishermen should not commence so early ?—Yes.

33,242. When would it be for the interests of the people further south that the Lewis fishermen should begin ?—At the latter end of May or the beginning of June.

33,243. They do not begin until the 20th of May now ?—So I understand.

33,244. Do you think a great deal of harm is done in those ten days, from the 20th of May until the beginning of June ?—I think it has a tendency to break the body of the herring when they are using such a heavy fleet of boats. The fishing has been falling off every year, and it has been getting heavier in Lewis from that time.

33,245. Was the herring fishery a much better one seven years ago than it is now ?—Yes, it was a good deal better ; I may say that we got 100 crans then where we only get one now.

33,246. Were there more boats than there are now ?—Yes, there was a great fleet of boats here then.

33,247. Has that fleet gone now chiefly to the Stornoway fishing ?—Yes, it has gone off to the Lewis fishing.

33,248. The boats leave this and go away to the north to fish ?—Yes, they were coming here after leaving the Lewis fishing, but now they go the east coast fishing, and they get a great deal of fish.

33,249. Do they not come here at all now ?—No, there would be no use in their coming here.

33,250. Can you give us any opinion of your own as to the advantage or disadvantage of a close time for the herring-fishing ?—I know what the close time is.

33,251. Do you think it is injurious to the people here that it should be maintained for the whole winter from the 1st of January ?—I think it should be dropped until the beginning of February, but after spawning the fish get very poor.

33,252. Do you know anything of the cod and ling fishery, whether it is increasing or diminishing ?—I know the cause of some of its falling off has been since the close time was fixed at the beginning of January. There is a place they call Loo, and there was a person there who followed it, but he could not get bait because they were prevented from fishing for herring after the beginning of January.

33,253. He could not get herring bait ?—No.

33,254. Is that part of the cause of the falling off ?—Yes, I am sure and certain it is.

33,255. Are there plenty of cod and ling on the fishing grounds of these islands ?—I have heard, about January last, that they were getting hauls about here.

33,256. Can you tell us anything about the lobster fishery ; is the lobster fishery improving here or declining ?—It was very good last winter. There was a time when I saw them coming in with very good hauls. They were in the habit of coming in here with every one of the fish they caught, but since a boat has been running to the west of Skye there are not so many of them coming here as were in the habit of frequenting this place formerly.

33,257. Are the lobsters caught more on the west coast of Skye than on the east ?—Yes, they are at times.

33,258. Are oysters much fished on the coast of Skye ?—There are some about the Island of Scalpa.

33,259. Are they not dredged for in any way ?—No.

33,259*a*. Are they picked up at low water ?—Yes.

The witness withdrew

T. Fraser, Esq.

THOMAS FRASER, Esq. re-called and examined.

33,260. (*Mr. Caird.*) How many cases have been brought before you, as the resident magistrate, of persons accused of breaking the fishery law ?—I think about a dozen.

33,261. Who prosecuted ?—They were prosecuted at the instance of the procurator fiscal.

33,262. For the Crown ?—Yes, but generally speaking on the information of the Fishery officer.

33,263. Then they were prosecuted at the public expense ?—Certainly.

33,264. It was not the prosecution of any private persons believing that they were aggrieved in regard to any of their interests ?—No.

33,265. What was the result of those trials which took place before you on that information ?—Generally speaking there was a conviction. When I say a dozen, I mean a dozen individuals, but there may have been more than one included in the same charge. I think there were about three of the dozen against whom the charge was not successful ; the charge was

either abandoned by the procurator, or I found them not guilty.

33,266. Can you tell us what was the nature of the charge?—The nature of the charge was a contravention of the Act by fishing during close time.

33,267. What was the penalty inflicted upon those who were convicted of breaking the law?—The penalty inflicted was the smallest penalty I could impose by the law, being *5l.* with the *bonâ fide* expenses.

33,268. Was that inflicted upon each individual?—Yes.

33,269. Could they pay the money?—In two if not more of the cases the people went to gaol, and in one or two cases the fines were collected in some shape or other. I believe the money was borrowed, but it was paid. I only remember two individuals who went to gaol.

33,270. How long were those individuals kept in gaol for the non-payment of that penalty?—I can hardly say. If I had thought you would have required such information, I would have looked, and I could then have told you, because the number of days is specified. They are not to be confined till the fines can be recovered, if nothing is to be recovered from them, but they are to undergo a certain number of days imprisonment.

33,271. Did they take imprisonment in preference to paying the fine?—Yes, two of them.

33,272. Was the effect of the prosecutions against those twelve individuals to put a stop to fishing during close time?—Yes, at that time; that is to say, in the close time of 1861 there were, I think, about four prosecutions before me, and a conviction was obtained in most of the cases. That put another stop to the fishing in the close time of 1861. In 1862 there was not a single conviction, I think, or rather I think there was only one.

33,273. Were there several cases brought before you?—No, only two.

33,274. And in one of those there was a conviction?—Yes, those two cases were brought under a more recent Act. The first was a clear case that they had been fishing. In the second some signs of herrings had been found in their boats, and they could not give an account of how they came there; they were, therefore, held to have fished in the close time.

33,275. Was a penalty again inflicted?—Yes.

33,276. Were they poor people upon whom the penalty was inflicted?—Yes, they were very poor,—exceedingly poor.

33,277. Had that the effect of putting a stop to the fishing in the close time in the second year?—Yes. The fishing in 1861 was the first of the close time, beginning in January and ending in May.

33,278. Were those prosecutions really in the period of the close time?—Yes.

33,279. Do you know the date or thereabouts?—In January and February, and I believe the offences occurred within the first day or two of the year.

33,280. Is it within your knowledge that the penalty so inflicted has deterred the people from fishing during the close time, and that it was followed by any distress on the part of the people for lack of the food thereby lost to them?—I cannot add anything to what I have already stated on that subject. I think you will find, if you refer to my report, that I enter into that question. I know that the fines were generally paid by borrowing money.

PORTREE.

T. Fraser, Esq.

8 August 1864.

33,281. Leaving the people in a state of embarrassment?—Yes.

33,282. (*Professor Huxley.*) Was the minimum fine you could impose *5l.*?—Yes.

33,283. What, in the course of a year, would be the average earnings of a man in the position of a fisherman here?—I cannot say.

33,284. Have you any opinion of what he would be likely to earn?—No; I cannot tell you. Nothing can be more precarious than the earnings of a Skye fisherman; the earnings come from so many sources. They fish sometimes, and at others they can earn as much by going south to work on the land.

33,285. What would be the maximum sum?—You may take it for granted that *5l.* to the generality of Skye fishermen was the same as ruin. In one of the cases before me, they were men of a superior class that were tried, and the forfeiture of the boat was insisted upon. A Fishery officer was sent down here, not the one who was resident, but from a distance, to insist upon the forfeiture of the boat, on the ground that herrings were found in the boat. It turned out that the boat had been out at anchor, and that all the herring nets had been put ashore. A gale came up on the Sunday, and they were driven inshore, and before they put out on Monday fresh herrings were found in their boat. That was the ground of the prosecution, and the sole offence which had been committed. There was not only no evidence to show that the owner of the boat had any knowledge of the existence of the herrings in the boat or how they came there, but the evidence rather went the other way. They had evidently come there without the knowledge of the person owning the boat.

33,286. The wording of the Act is such, that in its strict construction, the boat under those circumstances was liable to be seized?—It was seized in fact, and brought up here.

33,287. From the mere fact of the herrings being there?—Yes; but the Fishery Act must be construed with something like reason, and if the owner of the boat brought evidence to show that it was in the last degree improbable that he could know anything of the matter, I thought that, considering that only three or four bits of herrings had been found in the boat when it was driven in by a storm, I was not bound to convict.

33,288. You stated in your former letter that the police force had been increased in order to enforce the close time more efficiently?—Yes.

33,289. Four additional policemen were added?—Yes; they are not additional to the police force of the country, otherwise than that four policemen from Argyleshire have been sent down for this special purpose. They are not policemen for all purposes in Skye, but they have been sent over for this special purpose, and they remain during the close time.

33,290. Who has paid the expenses of that police force?—I cannot tell. I can only guess that they have been paid by the Fishery Board.

The witness withdrew, and the inquiry was adjourned to Broadford.

Broadford, Isle of Skye, Monday, 8th August 1864.

PRESENT:

JAMES CAIRD Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

BROADFORD.

ALEXANDER KENNETH MACKINNON called and examined.

A. K. Mackinnon.

8 August 1864.

33,291. (*Mr. Caird.*) You are a resident proprietor here?—No, not proprietor.

33,292. You have been long resident here?—Yes.

33,293. And you are agent for Lord Macdonald's estate?—Yes.

33,294. And therefore you have good opportunities of ascertaining the state of the fishing interest on the

BROADFORD.

A. K. Machinnon.

8 August 1864.

coast of Skye, and also the condition of the people?—Yes. My father was a great fish-curer for many years.

33,295. Have the various kinds of fish caught on the coast of Skye been on the increase of recent years, or have they been stationary or diminishing?—I do not know how I can answer that question. We may perhaps be 20 years without fishing and then a great fishing will strike up, just as now.

33,296. Are you referring to any particular kind of fishing?—Yes, to the herring-fishing.

33,297. Has the herring-fishing been heretofore the most valuable to the Skye fishermen?—Yes, entirely. There are only two parts of Skye where they fish for cod and ling—namely, Loch Dunvegan and Loch Dunwood.

33,298. Is it increasing?—Perhaps for eight or nine years we hardly see any and then there comes a good fishing.

33,299. Has there been any change in the appearance of the shoals of fish on your coast?—None that I am sensible of. Their coming here seems to be very uncertain.

33,300. Have you had occasion to consider the question of a close time in the herring fishery as applied to the west coast of Scotland?—Yes. It gave us great concern at one time here, when the poor people were prevented from catching herrings.

33,301. At what time do you consider that a close time should be held?—I hardly consider a close time necessary at all, because at the fall of the year when the herrings are prohibited from being fished here, they appear to be all clean, with no spawn in them.

33,302. Then you consider that a close time at all is unnecessary?—I do not see any use for it. Perhaps in the spring months—in April and May—a close time may be useful, but the herrings have spawn in them at various seasons of the year. Except upon one occasion I do not remember seeing herrings with spawn in them at Christmas.

33,303. Do you consider that a close time in January and February is injurious?—Yes.

33,304. Is it very injurious to the people of Skye?—Yes, very injurious.

33,305. If it were strictly enforced, would it be a serious loss to them?—It would be so serious a loss to them if the Board of Fisheries were obliged to abrogate the system. Last year we had as many boats fishing as we ever had before.

33,306. Even when the close time was strictly enforced in 1860 and 1861 did some of the boats go out fishing?—Yes, I think so. I think some of them went out in 1861 and 1862.

33,307. During those years, while the close time was enforced, was the summer fishing not so good as it had been formerly?—There were no herrings at all.

33,308. Then, so far as the close time was concerned, it appeared rather to injure your fishing than to benefit it?—Yes.

33,309. How has it been this year, since it was winked at?—Do you mean 1863 or 1864?

33,310-1. I mean last January or February?—The law then was not enforced. The people killed a good many fish then. They did it upon the sly.

33,312. But not with the same freedom as if the law had not been in existence?—No. It was a sort of half smuggling, but the officers winked at it. I suppose they had got a hint from the Fishery Board.

33,313. Were there a good many fish caught during the close time?—Yes.

33,314. Was there a good fishing?—Yes.

33,315. If the fishing had been permitted to be carried on fully, would there have been a good fishing?—Yes. I have no doubt there would have been.

33,316. During the time it was prohibited, did the people suffer from that prohibition in consequence of the want of the usual supply of food and of fish for bait?—Yes. It was felt by them as a very great grievance.

33,317. Had they for a long series of years been much dependent for a supply of food upon the winter herring-fishing?—For seven years or so there had not been so much as formerly. The railway and other works had been very brisk in the south, and numbers of the herring fishers went and worked there. They came home and would have fished in the close time after leaving the south if it had not been for the infringement of the law.

33,318. I ask you whether, in consequence of the close time being enforced for the last two years in the present state of the law, the people of Skye suffered severely from the want of the usual supply of fish at that season?—They did very much. It was a time of scarcity at any rate, and it made them feel the scarcity more than they otherwise would have done.

33,319. Is the herring used much for bait in the other fisheries here?—Yes.

33,320. Are the other fisheries of importance here?—From Gairloch they come here and buy bait from the people.

33,321. Are there no good fishing grounds for cod and ling on this coast of Skye?—I have no doubt there are good fishing grounds here if the fishing was prosecuted.

33,322. But the fishing is not prosecuted?—No.

33,323. Then, from your own knowledge of the coast, would you suppose that capital embarked in the business would be remunerative?—Yes, I think it would.

33,324. Do you think that if there was a scarcity of fish in other quarters, that still many fish might be found here?—I believe there are many banks in Rona and on the Applecross coast. It is very shallow water here.

33,325. Has the haddock-fishing ever been followed here?—No.

33,326. Nor fishing for whiting?—Haddock and whiting have come in shoals. It is at particular times.

33,327. Have you noticed if they have left the grounds upon which they used to be caught?—No, I have not noticed that.

33,328. I believe there is no beam-trawling here for flat-fish?—No, none whatever.

33,329. Have you any good oyster beds here?—There is a very good oyster bed in this neighbourhood.

33,330. Is it much fished?—No. Lord Macdonald preserves it. He works it, and he has his own people to take away the oysters from it, but he will not allow strangers to come and take them away.

33,331. Is it regularly fished?—No.

33,332. Then what is it preserved for?—Just for the use of the country, and the oysters are in great numbers. It was once let to a man from Gravesend on a lease of 15 years, with a break at the end of three years. He gave it up at the end of the three years. The oysters obtained from it are small and dark coloured, and they did not take the south country market.

33,333. Did he take many oysters away?—He would take away about 50 tons altogether.

33,334. Was that many years ago?—About 10 years ago.

33,335. Did he make any complaint as to the quality of the oysters?—Yes.

33,336. He said they were dark coloured?—Yes, and very small.

33,337. Have you yourself eaten the oysters obtained from those beds?—Yes.

33,338. Comparing them with the oysters you are in the habit of seeing in the southern towns, do you think they are of inferior quality?—No. I think they are of superior quality here; at all events we do not object to the quality here.

33,339. Have they that dark colour which was complained of?—Yes; but they are much finer oysters than I see anywhere else.

33,340. Have you extensive oyster beds which by the employment of capital in making them larger

might be made very profitable ?—I do not think we have. There is an oyster bed in Loch Snizort, but it does not pay, I think.

33,341. Are there oyster beds here ? — Yes ; there is one on the west of Skye.

33,342. Are the people of Skye generally much dependant upon the supply of fish for their food ?—Yes ; upon the herring principally, and then upon the small codling which they have no market for.

33,343. Do you catch them in most seasons of the year ?—Yes ; in point of fact they catch them in all seasons for bait.

33,344. Are they going more or less into the business of fishing as a business now ?—Less, I think.

33,345. Is that because they find other things more remunerative ?—Yes, the herring-fishing is so uncertain.

33,346. And the want of agricultural labourers has increased ?—Perhaps so at this time of the year. I believe a considerable number who go as fishermen to Ayrshire and the Irish coast hire themselves as fishermen, and come back and do a little for themselves in the winter time.

33,347. Then do you conceive that the fishing interests of Skye admit of a large development with benefit to the capital of those who embark in them?—I am not much acquainted with the subject myself but there are a number of people who possess capital who come here to fish from Campbeltown, Rothesay, Greenock, and other places.

33,348. (*Professor Huxley.*) Do you think that the Stornoway fisheries affect the fishing here ?—I do not think they do.

33,349. The people here have a notion that they do ?—Yes.

33,350. But you do not think so ?—No, we have not had so many herrings here for the last 20 years as we have had this year.

33,351. You have not had so good a herring-fishing for the last 20 years ?—No, from the Butt of Lewis to Barra we have had just one mass of herrings this last year, and anything that might have been killed must have been quite inappreciable.

33,352. How are the herrings on the west coast of Skye ; are they abundant ?—Sometimes.

33,353. But more particularly in the Minch ?—Yes ; sometimes in the lochs here we find great quantities of herrings and then we may not see one for 30 years. My father built large curing houses, but they have been allowed to fall to the ground in consequence of the want of fish, yet this year the fishermen could get as many fish as they chose.

33,354. How many years ago is it since your father built his curing houses ?—About 40 years.

33,355. Were they built on the strength of the herrings which were coming in then ?—Yes.

33,356. Did they come regularly ?—Yes.

33,357. Are there any regular fishing stations in Loch Slapin ?—Yes; I have seen 40 vessels there curing herrings.

33,358. Did the herrings cease to come suddenly ?—That is beyond my recollection. I can only just recollect seeing the thing going on.

33,359. (*Mr. Caird.*) Do you think that the shoals of herrings come in from the west by Barra as well as from the north by Stornoway ?—They appear to me all to come from the north to the south.

BROADFORD.
A. K. Mackinnon.
8 August 1864.

33,360. Do you think they come in through the Minch or from the west ?—They all appear to come from the Minch ; they begin to come from Stornoway, then they are at Gairloch, then Portree, and they generally appear to be moving southward.

33,361. Then you do not think they come in by way of Barra ?—No.

33,362. Are you aware whether any mode of fishing is practised here which is injurious to the spawn or brood of fish ?—There is none that I am aware of ; there is no trawling here. The people are not allowed to use nets below a certain size, but I think that is a great mistake.

33,363. Is there a Fishery officer here ?—Yes. I consider it a great hardship that there should be extensive restrictions upon the fishing. A large herring is not known here at all, but only a fine small herring which can only be taken by nets with a small mesh.

33,364. The herrings you get here cannot be caught with a net with a large mesh ?—No.

33,365. You are not in favour of any legislative restriction upon the fishing ?—No, I think there should be free trade.

33,366. Do you think that everyone should be allowed to fish as he thinks best ?—Yes. Some four years ago the waters here from Cape Wrath to the Mull of Cantire were full of dog-fish. Where did they come from and where have they gone to ?

33,367. Was there a good herring-fishing that year ?—No, there was no fishing at all that year.

33,368. Do you think that the dog-fish injured the fishing ?—I have no doubt that they ate up the spawn ; but where are those fish gone to ? Why, they emigrate as regularly as the herring, and their coming and going are quite uncertain.

33,369. Are the herring in good condition in the winter when they are caught here ?—Sometimes they are in very good condition.

33,370. (*Professor Huxley.*) You were speaking of a small herring being found here ?—Yes.

33,371. In what lochs is it found ? — In Loch Hourn it is found in particular.

33,372. I have heard of this small herring before ; have you ever examined it?—Yes ; and I have some of them here now which you can see.

33,373. It used to be said that the Loch Broom herring was very small ?—I have seen small herring from there too. They are something like what we get here.

33,374. Have you ever seen this small herring full of spawn ?—Yes.

33,375. When they still retain their small size ?—Yes.

33,376. (*Mr. Caird.*) Are there any suggestions you wish to make to us in reference to the improvement or regulation of the fishing ?—No ; the subject is one that appears to me to be involved in a good deal of mystery.

The witness withdrew.

NEIL MCLEOD called and examined.

N. McLeod.

33,377. (*Mr. Caird.*) Have you long been a fisherman here ?—Yes.

33,378. Have you practised all the different kinds of fishing practised on the Island of Skye ?—Only after herrings, and some ling and small cods.

33,379. Do you agree with Mr. Mackinnon that the herring-fishing is a very fluctuating one ?—Yes. I suppose if I were to speak myself I could not speak differently from what he has done.

33,380. Has the cod fishery fallen off ?—It is just about the same ; some years it is better and some years worse.

33,381. Is the quality of the cod as good as it was in former years ?—Yes.

33,382. What bait do you use for catching them ?—Sometimes shelties and sometimes herrings.

33,383. What is the best kind for catching the fish ?—We catch them best with the herrings.

33,384. Have you been fishing for herrings during last year ?—Yes.

33,385. Do you fish them during the winter time ?—Yes.

33,386. Was there much fishing in the close time last year ?—Just a little.

33,387. Were the people afraid to go much into it ?—They did go into it.

BROADFORD.

N. McLeod.

8 August 1864.

33,388. But not as much as if they had had full leave and there had been no close time ?—Not a third or a fourth part as much.

33,389. Do they suffer much loss by that ?—I think they do.

33,390. Do they feel it a great loss themselves ?—Yes ; they could not get food.

33,391. At what time are the fish not in good condition ?—In the months of April and May, or you may say March, April, and May. They get better just in May. It is June and July when they are in good order.

33,392. Is the size of the boats increasing since your time ?—Yes, a great deal.

33,393. What is the size of the boats ?—They are now three times larger than they were.

33,394. And have they larger nets ?—Yes, larger and deeper nets.

33,395. (*Professor Huxley.*) Do you find that the close time damages you as a fisherman ?—Yes.

33,396. Is that the case generally, do you know, with the fishermen ?—Yes, with the whole of them.

33,397. Had you anything to do with the petition in favour of close time ?—No.

33,398. Do you know anybody who had ?—No.

33,399. Did you hear of anyone who signed a petition in favour of the close time ?—I don't know who signed my name to it, but my own name was signed to it, I believe.

33,400. Were you told that it was ?—Yes, but I did not sign it.

33,401. Then you heard of the petition ?—I heard that there was such a thing.

33,402. And you heard that your own name was attached to it ?—Yes.

33,403. But yet you never signed it ?—No; I heard them speaking about the close time in my own house, but I never signed the petition.

33,404. Are those people who were speaking about it in favour of the close time ?—Yes.

33,405. (*Mr. Caird.*) Were they people from the south ?—Yes, and from the north too.

33,406. Then if your name was put to that petition it was done without your authority ?—Yes, it was.

33,407. Was that the case with any other fisherman in Skye ?—I do not know whether it was or not.

33,408. Do you think that many of them are of opinion that there should be a close time ?—I think not. Those who signed it have long since repented of it.

33,409. Is there a great quantity of oysters in the beds here ?—I do not know. The ground is full of holes, so that they cannot be dredged, but at spring tides we can gather them.

33,410. Can you only gather them when the tide is out ?—Yes.

33,411. You cannot dredge them at all ?—No, very few of them.

33,412. Is it stony or rocky ground ?—The oysters are the only things which are lying on the stones.

33,413. Are they tangled with seaweed ?—Yes.

33,414. Then there must be a great quantity of oysters that was never caught ?—Yes.

33,415. Are there not some places where oysters never leave the ground ?—Yes.

33,416. They go on breeding there ?—Yes.

33,417. Is there any large body of them ?—Yes. In some years I have noticed a good season, then a bad season, and next season as many as there were before.

33,418. Did an Englishman come here and take that oyster bed and work it for some time ?—Yes.

33,419. For three years ?—Yes.

33,420. Did he work it with dredges ?—He only went as far as the sea would go out at low water.

33,421. Did he only pick them off the ground when the tide ran out ?—Yes.

33,422. He did not use the dredge then ?—No.

33,423. Did he not propose to bring a dredge and dredge them ?—No.

33,424. Then he only gave so much to the people for picking them up ?—Yes.

33,425. Did he get as many as he wanted ?—He got a good number, but it got worse and worse, and at last he gave up.

33,426. Was that what made him give it up ?—Yes ; his reason was that the oysters were of a small bad quality, and that they would not take in the south.

The witness withdrew, and the inquiry was adjourned until August 9th at Tobermory.

Tobermory, Isle of Mull, Tuesday, 9th August 1864.

PRESENT :

JAMES CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

TOBERMORY.

C. Campbell.

9 August 1864.

COLIN CAMPBELL called and examined.

33,427. (*Mr. Caird.*) You are the Collector of Customs here ?—Yes.

33,428. Are you well acquainted with the fishery interests of the Island of Mull and the coast ?—Yes, since I came here.

33,429. What is the principal fishery carried on at Tobermory ?—The most of the fishing carried on here is lobster-fishing.

33,430. Is there any important herring fishery here ?—No, only very little.

33,431. Has it declined within recent years ?—Yes.

33,432. Was it formerly of importance ?—There was a good deal of herring caught about Skye and about the north, and round about here at one time, but for the last few years there has been very little herring caught here at all.

33,433. Does your answer apply to the coast of the whole Island of Mull ?—Yes.

33,434. Then it has not been any recent decline, and has not been caused by any recent change in the law ?—No.

33,435. Is there any recent change in the law that you ascribe it to ?—No, I do not think so.

33,436. It is not a question of close time or the time when the Stornoway fishermen begin to fish ?—No, I cannot account for it, but the herring-fishing has fallen off.

33,437. Has it shown no signs of returning ?—No.

33,438. Are there very few herring fishermen here ?—There are some here, and most of the people here keep nets. If the fish come near the coast then they go out, but they do not go out to any other place as the herring fishermen do generally.

33,439. Do they fish for cod and ling here ?—Yes, but not a great deal.

33,440. Has that been a declining fishery here ?—No ; I think the cod and ling fishery has been increasing, but there are more boats looking after it. There are a number of east country boats which come here.

33,441. Do the people of the country not follow the cod and ling fishery much ?—There are some about Coll and to the south end of Mull, but there are very few about here.

43,442. The cod and ling fishery has never been much an object to them ?—I think it was better some years ago at the other end of Mull than it has been for the last few years.

33,443. And when did the strangers begin to come here ?—They began in January.

TOBERMORY.

C. Campbell.

9 August 1864.

33,444. Was January last the first time ?—No, they have been here for a number of years back, but they come at the beginning of January.

33,445. Have they decked vessels ?—No, large skiffs.

33,446. Where do they come from ?—From Peterhead, Banff, Buckie, and other places.

33,447. What part of the coast do they fish ?—Coll, Tiree, Lewis, and Barra.

33,448. Do they bring their fish ashore to be cured ?—Yes, they cure the fish ashore.

33,449. Is all the fish they catch caught for curing ?—Yes.

33,450. They are not sent fresh to market ?—No.

33,451. Is there no supply of fresh cod sent by steamer from here to Glasgow or the southern markets ?—I do not think there is.

33,452. But on the whole you think that the fishery is on the increase on these coasts ?—I think it is, but I think also that there are more looking after it now than in former years.

33,453. There is no want of fish, is there ?—I do not know ; they are complaining.

33,454. Do you know anything about the haddock fishery; has it ever been a matter of much importance here ?—Not a great deal hereabouts.

33,455. Is there any beam-trawling practised here ?—I do not think there is any of that.

33,456. Has there ever been any complaint with regard to the recent close time established by law in reference to the herring fishery ?—They have been complaining. What they want is to get the month of January, and they would like to keep the month of June. If they could get January they would like it. They complain as far as that goes.

33,457. With regard to the lobster fishery, you say it is increasing here ?—I cannot tell you much about it. I think the lobsters are getting smaller in size.

33,458. Are there any oyster banks here ?—There are a few.

33,459. Are they diligently fished ?—They are not fished at all, as far as I know. There are only the people round about who gather them, but there is no fishing.

33,460–2. Is there an important fishery of that kind ?—No, I do not think there is.

33,463. Do you think that the fishing interests of this coast might be properly developed by the application of capital to them ?—I do not know.

33,464. Do the fishermen complain of any legislative restrictions as affecting them injuriously ?—I did not hear of anything. They complain of nothing except that they are stopped too much from going to the herring fishery, and they want the month of January.

33,465. Is there any mode of fishing practised, which, in your opinion, is destructive of spawn or the brood of fish ?—No, I do not think there is.

33,466. (*Professor Huxley.*) What is the number of fishing boats ?—In this place ?

33,467. Yes, in Tobermory ?—I do not think there is a great number.

33,468. Are they registered by the Customs ?—There are 150 registered in the whole of my district, but a good many of those boats belong to crafters and merchants. If the herrings come off the shore they go out then with nets for them.

33,469. They are not large boats ?—No, only small skiffs.

33,470. Are there any decked fishing boats belonging to this place ?—There are some half-decked.

33,471. What will be the tonnage of the biggest ?—Eight or nine tons, and so on.

33,472. What time of the year do you get the herrings here ?—They commence early in June, when they do come into this bay.

33,473. They do not always come in here, do they ?—No.

33,474. Do they ever come in in the winter ?—They go to Lough Swilly in the winter, and the lochs round about there.

33,475. Is there any Fishery officer here ?—No.

33,476. Does anybody look after the size of the nets that are used here ?—The Fishery officer from the other places comes and takes a look round here sometimes.

33,477. Does he look after the size of the mesh of the nets, or do you do that ?—He does it.

33,478. Do the fishermen here ever try circle-net fishing—what they call trawling here—not beam-trawling, but the other kind of trawling ?—They try for saithe with scringe nets.

33,479. Are they used much along this coast ?—No, very seldom.

33,480. Have you ever heard complaints that they are destructive of fish—of the herring for example ?—They do not go near the herring. They have caught herring with them, but not since this new law came into force.

33,481. But it was formerly the practice ?—Yes.

33,482–4. Do the people complain of being prevented from fishing in that way ?—Those who keep nets do, but others do not ; they are against them.

33,485. Have you had any experience of that fishing before the new law came into force ?—Yes.

33,486. Do you think it a profitable or a good mode of fishing ?—No, I think it spoils the fishing.

33,487. How does it spoil it ?—A scringe net takes all kinds of fish, large and small. Before ever I entered the Customs or came to Mull, I was myself scringing, and I have taken the small fry, and frequently left them on the shore.

33,488. When you were scringing, did you draw the nets on shore ?—Yes.

33,489. Was that the practice of the people here ?—Yes.

33,490. You did not take them in boats ?—No.

33,491. Do you think that a disadvantageous mode of fishing ?—Yes.

33,492. Has it made any difference to the fishing here, your leaving off that mode of fishing ?—I do not know. It does no harm to the herring, because they do not go near them.

33,493. You have not been fishing then for herring in that way, but only for saithe ?—Yes.

The witness withdrew.

G. Ritchie.

George Ritchie called and examined.

33,494. (*Mr. Caird.*) Are you acquainted with the fishing interests on the coast of Mull in this neighbourhood ?—Yes.

33,495. Are you a curer of fish here ?—Yes.

33,496. And an owner of fishing boats ?—Yes.

33,497. What kind of fishing is principally practised here ?—Lobster-fishing is the sort of fishing that is followed more throughout the season, and herring-fishing.

33,498. Is the lobster-fishing the most important fishing to the fishermen of Tobermory ?—Yes.

33,499. From what part of the coast do they get the lobsters ?—All round the coast.

33,500–1. The coast of Mull ?—Yes; all round the harbour here and the adjacent islands.

33,502. On the opposite coast also ?—Yes.

33,503. Is the number of people employed in that fishery increasing ?—It has been increasing for some years back.

33,504. How many boats and men are engaged in it at present ?—I cannot tell.

33,505. Have you any idea at all ?—There are so many shifting backward and forward, and there are so many strangers coming and going, that I cannot state positively.

33,506. Can you give us any idea ?—Do you mean those who are engaged round the islands ?

TOBERMORY.

G. Ritchie.

9 August 1864.

33,507. Yes?—Perhaps there may be 300 or 400 boats altogether.

33,508. Do they follow the fishing all the year except in the warm summer months?—They do not discontinue the fishing even then; they continue it all the year round here wherever it is convenient to a shipping place for the steamers.

33,509. How often have you a steamer from Glasgow?—Three or four times a week just now, but in the winter time only once, and twice a week in the spring.

33,510. Where do you send the bulk of your lobsters to?—To London.

33,511. By steamer to Greenock and thence by railway?—Yes.

33,512. Does the fishery show any signs of exhaustion?—The lobster fishery?

33,513. Yes.—It certainly shows that they are over-fished, they get so very small in the winter time. They are cleared up in the summer time, and although they migrate a good deal, no doubt, to a certain extent, they are over-fished along the coast, but the number of boats employed being greater than it was formerly the supply is still sufficient for the market, together with the fact that they have discovered other places where they can fish now.

33,514. Does the increased number of boats make up for any decreased catch of the lobsters themselves?—Yes; but I do not think it will continue to do so.

33,515. Do you extend your field of operations as you find the lobsters getting scarcer?—They have been doing so. I never knew the island tried and fished so much as in the last two years back.

33,516. Is the coast on the Isle of Skye fished for lobsters?—Yes.

33,517. And all the Long Island?—Yes.

33,518. And all the outer Hebrides?—Yes; all except St. Kilda. They are all fished at the present moment.

33,519. When you speak of 300 or 400 boats engaged in the fishery, do you mean fishing for lobsters in the whole of the western islands?—Yes; in the whole of the Western Hebrides. Perhaps there may be more than that. I give it as a rough guess.

33,520. Do most of the lobsters caught in the whole of the Hebrides come to this point to be sent south?—No; they go in the same steamer chiefly, but they are sent away from all the different stations the steamers call at.

33,521. What quantity of lobsters may there be sent away in one steamer?—I have seen 120 boxes sent away at one time.

33,522. Those 120 boxes have been collected from different stations?—Yes; that was a steamer I commanded myself, the "Islesman." Perhaps there would be another one coming in, and running within the Sound of Mull.

33,523. On the same day?—Yes. The lobsters I speak of were collected at Islay and at different places round about at the same time, but the quantity would not continue at 120 boxes a day; that is the greatest quantity I ever saw.

33,524. Can you give us the least notion of what the quantity sent daily may be on the average?—Sometimes twice a week there will be an average of 100 boxes, but for the whole season round perhaps 100 boxes a week will be an average.

33,525. That must be a source of considerable revenue to the fishermen engaged in the fishery?—It is certainly a good thing for them.

33,526. Has the price increased?—The price has not fallen off, but the quantity caught by each boat is not as great as it was at one time, in consequence of the fish not being so plentiful, and there being more boats engaged in catching them. What I mean is, that each boat is not getting as many as when there there were fewer boats and they had the coast more clear.

33,527. On the whole do you find that they can be sent fresh to the London market?—Yes.

33,528. And arrive in good order?—Yes; it is very hot in London just now, and heat is very much against them, but taking an average throughout the season they are sent in very good order.

33,529. Is there a demand for them at all seasons and in every month of the year in London?—Yes.

33,530–1. Do you pay any attention to the state of the fish, to their breeding or otherwise?—No attention is paid to that here.

33,532. Do you know anything about the oyster-fishing on this coast?—Not much. I never wrought much at them, but there are oyster beds around the island.

33,533. Are they not fished for the northern market?—They are not much fished by dredges; they are just lifted occasionally on the shore, and sent to Ulva down Loch na Keal.

33,534. Is there any complaint of their being dark in colour?—Very little, I think.

33,535. Is it a fishery which might be much increased?—I think so.

33,536. Are there plenty of oysters to be found if the people looked after them?—Not so much as if the beds were improved, and a system of improvement carried on. I consider that they have been very much abused for a long time back.

33,537. Are there oyster beds that can be dredged?—Yes.

33,538. But the dredge is never used at all?—I do not know that it is used at all. It may have been used more or less, but not to my knowledge.

33,539. (*Professor Huxley.*) Why do you not fish at St. Kilda, you say you fish everywhere else?—It is so far out from the land that it is no good bringing them for the steamers. It is very deep off there, 100 fathoms in some places, so that there is no salvation for the crew if anything happens to them. There might be some fishing followed there for cod and ling.

33,540. Cod and ling?—Yes, I never saw a finer quality than the fish which have been got from there, 16 on an average made a cwt.

33,541. Do you think there is as much haddock as there was formerly on this coast?—This coast was never worked much for haddock-fishing, but in places where they were considered to be plentiful they are not so plentiful now. This coast, however, was never considered to be a good place for them. To my own knowledge I never saw any considerable quantity of haddocks or whiting here.

33,542. Have you been much interested in the herring-fishing?—Yes.

33,543. What effect has the enactment of a close time had upon your fishing?—I do not see much difference; the fishing had fallen off for some years back. I do not think that is the cause of the falling off.

33,544. Do you think that the fishing has fallen off since the close time was enacted?—Yes, and before then too. I do not think that had anything to do with it.

33,545. Before the close time was enacted did you ever practise the winter fishing?—Yes.

33,546–7. But since the enactment of close time you have not been able to do so?—No.

33,548. Then has it been a damage or a loss to you?—Yes, it has been a loss.

33,549. Has there been a corresponding benefit to the summer fishing?—None whatever, I think.

33,550. Then it has been a dead loss to the fishermen without any good resulting to anybody else?—Quite so.

33,551. Has it been a source of injury to ordinary fishermen who catch fish for their own consumption?—I do not see that it has made much difference to them, but the great injury has been done to those who are fishermen throughout the year. It is very much against them to be stopped in their fishing at the end of the season. In Skye and the Long Island, there was a great number of fish caught before the close time was enacted. They were very good fish

TOBERMORY.

G. Ritchie.

9 August 1864.

indeed, and those men had nothing else to depend upon during the winter.

33,552. On all these islands do the people depend on them in the winter?—Yes, in the Isle of Skye and the main land, but not so much in the outer islands.

33,553. Then being deprived of this portion of their food would affect them considerably?—Yes, and they have not been in as good and healthy a state as they were some years back; they have been reduced very much.

33,554. In what condition were the January fish here?—The fish are very good.

33,555. Were they full fish?—No, they are not full.

33,556. When are they full in the winter?—I suppose they are full in the month of March.

33,557. Do they get spent about then?—Yes, but there are no fish caught in the winter months, they are generally stopped from fishing about that time; generally we do not get fish in our part at that time.

33,558. Did you fish for them?—We always got herrings, but not full; they do not come in the lochs to spawn; we generally dropped fishing towards the end of February.

33,559. Were the fish getting pretty full about that time?—No, they were rather getting pretty lean. The fish were not getting full at all. I think there are banks away out towards the west where they spawn, and come in in the season again.

33,560–1. Did you ever fish in Loch Broom?—Yes.

33,562. What is the size of the herring that is got there?—It is generally a small herring, about 1,000 to the barrel.

33,563. That is not very small, is it?—It is not very small, but they have been smaller sometimes. I think they are about that size.

33,564. Did you ever see any small herrings there full?—No.

33,565. Have you had full herrings from Loch Broom?—No, I do not think I have.

33,566. (*Mr. Caird.*) Have you any suggestion to offer to us about the fishing here?—I would suggest whether it is not possible to alter the period with regard to the close time, and that they should be allowed to fish for bait around the island and along the coast.

33,567. You think they ought to be allowed to fish for bait?—Yes.

33,568. Bait for the long-lines?—Yes.

33,569. How could you distinguish between what was fished for bait and for sale?—The fact of the matter is, that those who would go out to fish for bait for long-lines would do so, and it would be well known whether they sold them or not. I think they would be quite content to get a barrel or two with their nets for bait, and fresh herrings for their own consumption.

33,570–2. Was the fishing followed chiefly for the purpose of bait during the months of February, March, and April?—Yes, if January were left as an open month, and they were allowed to fish for bait during February, March, and April, I think the 1st of June would be quite sufficient to open the regular fishing.

33,573. Do you think there is any absolute necessity for a close time at all?—I do not see that there is.

33,574. If there was none at all would it be injurious to the fishing?—Not at all.

33,575. Do you think the fish would be fished when they are out of season if there was no close time?—No, they would be fished if they could get a good market, or the fish were scarce, but if there was no demand they would not be fished.

33,576. Do you think that any injury could be done to the shoals of herrings which would be likely to come in the proper season?—None whatever, I believe.

The witness withdrew.

ARCHIBALD MCDONALD called and examined.

A. McDonald.

33,577. (*Mr. Caird.*) Are you a fish-curer here?—Sometimes I am fish-curing.

33,578. Are you an owner of boats?—Yes.

33,579. What fishery are you employed in here?—Lobster-fishing and herring-fishing.

33,580. Is the herring-fishing a matter of much importance?—I suppose so.

33,581. I mean is it a matter of much importance here?—Yes, sometimes.

33,582. Has it been increasing or diminishing in importance in recent years?—It was increasing five or six years ago, but it was not so good last year as it was before.

33,583. How many boats are there employed here in the herring-fishing, taking an average of seasons?—I suppose about 10 or 12 or so.

33,584. Have they increased or diminished in number?—They are increasing, I think.

33,585. Has there been any complaint on the part of the fishermen here with regard to the close time in the herring fishery as established by a recent Act?—Yes.

33,586. What is the nature of the complaint?—There is a complaint against the trawling.

33,587. What complaint is there about trawling?—They complain of trawling for herrings.

33,588. Do you practise trawling for herrings here?—Not just now.

33,589. But have you done so at any seasons?—No, not now.

33,590. I do not know what you mean then, if you complain of the present close time which has been established. Are you in favour of trawling for herrings or against it?—Do you mean the giving over of the herring-fishing in the winter?

33,591. Yes; the close time is the time when by law you are prevented from fishing herrings on the west coast.—There are no complaints against it from this place.

33,592. Do you not object to be excluded from fishing at all from the beginning of January until the 20th of May?—Yes.

33,593. Would you have the close time continued?—No, we would rather see it ended.

33,594. Is there any good fishing here in the month of January?—Yes, in some parts about here.

33,595. Are not the herrings in good condition then?—Yes, I have seen them in good condition sometimes.

33,596. Then, if the herrings are in good condition, would not the fishermen like to take them if they were allowed to do so?—Yes, they would.

33,597. But by the law as it is at present they are prevented from doing so?—Yes; I would rather see it ended for my own part.

33,598. For what reason?—That the poor might be able to earn something all the year round.

33,599. You wish that there should be no close time established?—Yes, that is my wish.

33,600. (*Professor Huxley.*) Do you know what trawling for herrings is?—Yes.

33,601. Do you mean circle-net fishing by trawling?—Yes.

33,602. Have you ever practised it?—No, never.

33,603-4. I mean before the Act was passed?—No.

33,605. Do you think it is a good mode of catching fish?—No, I do not.

TOBERMORY.

A. McDonald.

9 August 1864.

33,606. Have you ever bought fish which have been caught in that way?—No, I never had any herrings caught by trawling or scringing in that way at all.

33,607. Is there scringing practised on this coast now?—Yes; scringing cuddies and that kind of fish.

33,608. But not herrings?—No, not that I am aware of.

The witness withdrew.

A. M'Quarrie.

ARCHIBALD M'QUARRIE called and examined.

33,609. (*Mr. Caird.*) You are a fisherman here?—Yes.

33,610. What kind of fishing do you practise?—I do the most in lobster-fishing.

33,611. On what part of the coast do you follow the lobster-fishing?—When I am following them rightly it is on the Long Island and the Hebrides; but I have tried them all about here.

33,612. Where do you find the most lobsters?—We get most whenever we find a place where they have not been lifted before. They ought to have more time without being lifted; they should not be so clean fished.

33,613. You get most if you discover some place which nobody has found out before?—Yes; if we find such a place as that we can get plenty of them.

33,614. Are there plenty of such places to be found now?—No.

33,615. Is the fishery pretty closely followed?—Yes, it is very closely followed; there is a great number of boats at it now.

33,616. Are the lobsters beginning to get thin on the ground?—Yes, thin and small.

33,617. Is every part of the coast where the lobsters are to be found already known?—Yes, as far as the boats can go. We have tried them on the west of Barra and all round the west of these islands.

33,618. Do the fishermen make a good living by the lobster fishery?—They have not done so for a few years back.

33,619. Has it been falling off?—Yes, very much.

33,620. Has the catch of each boat been falling off?—Yes, and that must necessarily be the case when the number of boats is so many.

33,621. Have you ever tried the oyster-fishing?—I have often lifted a few, but not to make a trade of it.

33,622. Would it not pay to follow the oyster-fishing?—I do not know. I never tried to do so.

33,623. Have you been to the herring fishery?—Yes, I have been at it for some time.

33,624. Has the herring fishery increased or diminished within recent years?—I have seen it better six years ago; the last time I was at Skye following it was the best year we ever had.

33,625. Do the herrings not come into the Sound of Mull in any great quantity?—No, but they do go through the Sound of Mull and do not stop. There are some lochs on the west of Mull where they stop, Loch Scridain for instance.

33,626. Have you ever fished in January?—Yes, the year before the Act was passed.

33,627. Do the fishermen complain much of the present close time established by law on account of its preventing you fishing in January?—I do not think they do, but when I was away fishing one year at Loch Sunart I heard a little complaint then. They all approved of it as far as I know.

33,628. Approved of what?—Of stopping it, although they might at that time get a few more, if they were allowed.

33,629. Do you mean that all the fishermen here approve of not being allowed to fish in the month of January?—That is my opinion.

33,630. Were they never in the habit of fishing for herrings for their own food in the month of January?—They used to stop here in the month of January.

33,631. Do you mean the end of January?—Yes.

33,632. But now they are obliged to stop at the beginning of January?—I never saw much fish caught after January.

33,633. Did they not fish them for bait?—Do you mean for the big lines?

33,634. Yes.—There is no big-line fishing hereabouts, but in some of the lochs they did.

The witness withdrew.

J. M'Kay.

JAMES M'KAY called and examined.

33,635. (*Mr. Caird.*) Are you a fisherman here?—Yes.

33,636. What kind of fishing do you follow?—Lobster-fishing.

33,637. Have you fished on most of the coasts of the western islands?—Yes, I have fished on most of them.

33,638. Do you agree with the last witness that the fish are getting scarcer?—Yes, I do.

33,639. Do you think that scarcity will go on until it becomes a business that will not be worth following?—I do not know; but the fish will get fewer, I believe.

33,640. Do you think that the brood does not come on again?—Yes, I do. I believe the fishing will keep them down; it will keep them from becoming thick.

33,641. Have you followed the herring-fishing at all?—Not much; only for a few nights.

33,642. Then you do not know much about the state of the herring fishery here?—No.

33,643. (*Professor Huxley.*) In what depth of water do you get your lobsters here?—We do not go much deeper than 16 fathoms.

33,644. Sixteen fathoms?—Yes, we go about 16 fathoms to look after them.

33,645. Do you fish for lobsters with pots?—Yes, with creels.

33,646. Are they baited?—Yes.

33,647. Do you let them down in 16 fathoms of water in the lochs here?—Yes, according as the water is deep or shallow we put them in.

The witness withdrew, and the inquiry was adjourned until the 10th of August, at Campbeltown.

Campbeltown, Argyleshire, Wednesday, 10th August 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | Professor HUXLEY, F.R.S.

CAMPBELTOWN.

D. Macmillan.

10 Aug. 1864.

DUGALD MACMILLAN called and examined.

33,648. (*Mr. Caird.*) Have you long been a fisherman here?—I have been here I suppose for close upon 50 years engaged in fishing.

33,649. What kind of fishing have you followed here?—I went to the herring-fishing in the north islands when I was about 16 years old.

33,650. In the north isles?—Yes, north from this.

33,651. And have you also followed the cod and ling and other kinds of fishery as well as the herring fishery?—Yes.

33,652. Do you continue to do that now?—I don't work at anything but the herring fishery at present. I am getting old now and I have dropped the other things.

33,653. In your experience has the herring fishery been an improving or a declining business?—It has improved for the last two or three years.

33,654–5. Has the season for the herring fishery at all changed since you began to fish—I mean the time of the year when the herrings are taken?—We always fished here in the summer and winter just when we saw herrings on the coast. We were never stopped here from fishing.

33,656. At what time did you get them in the greatest abundance?—Just about this month.

33,657. The month of August?—Yes.

33,658. And in what month in the winter time did you get them in the greatest abundance?—In the months of January and February, and in March too.

33,659. Are they in good condition in the winter?—No, they are not near so good as they are in the summer. They are spent and poor herrings in the winter.

33,660. Are they not in good condition in the month of January?—Yes; in the month of January they are pretty good. I have seen very good herrings got in the month of January.

33,661. Do you continue to fish them here in the months of January and February now?—No; the close time has stopped us from doing that.

33,662. Has the close time been carefully observed here?—Yes; we dare not go fishing then, we should be punished if we did.

33,663. Do the fishermen approve of the close time?—No, they do not approve of it. There are a good many herrings required for the cod and ling-fishing, and also for catching eels, and skate, and turbot.

33,664. Do you mean for bait?—Yes.

33,665. You are not allowed to catch them for bait in the spring season?—No, we are deprived of that altogether.

33,666. Do the fishermen complain very much that they are deprived of this source of bait?—Yes, they complain greatly, because it has to a great extent injured the living of an immense number of people about here.

33,667. Then there has not been merely the loss of the fish for bait, but also the loss of the fish for food?—They do not use many of them for food here, but the great thing was to obtain them for the other fishing.

33,668. Did they send the fish they caught to the Glasgow or Greenock markets?—Yes.

33,669. Was there a good deal of money got by the winter fishery?—Yes.

33,670. Are you aware whether the opinion you express against the close time is the common opinion of the fishermen of Campbeltown?—It is the opinion of the great majority of them.

33,671. Are there some fishermen here who think it a good thing that there should be a close time?—I believe there are a few of the great and wealthy curers.

33,672. But not the fishermen?—No.

33,673. Have you found that there has been a better summer fishing since the close time was observed?—We think it is all owing to stopping the trawling that the summer fishing has revived here.

33,674. You do not think that it has anything to do with the close time?—No, I do not think it has.

33,675. But that it is owing to the stopping of the trawling?—Yes; we attribute it entirely to the stopping of the trawling.

33,676. Was there any trawling carried on in this neighbourhood?—Yes, a great deal when it was allowed.

33,677. In Campbeltown Loch?—No, not in the loch but outside.

33,678. On the same ground that you have your best herring-fishing now?—Yes, along the coast.

33,679. That has been entirely stopped?—Yes.

33,680. Have the fishermen who have been in the habit of trawling gone into the drift-net fishing now?—Yes; the whole of them had drift nets, but they would rather work at the trawling than the drift nets, because it was more beneficial to them. They get better hauls by trawling than by using the drift nets.

33,681. Were they not in the habit of trawling in the summer fishery?—No.

33,682. Then the summer trawling was never practised here?—No, it was never practised here.

33,683. Now, in consequence of the close time they can neither fish here with the trawl net nor the drift net?—No.

33,684. Is there any cod or ling-fishing off the coast?—There is a good deal in the season, in the spring of the year.

33,685. Is it much followed?—Yes, it is followed by all who can fit out boats for it. They come from Ireland to the cod-fishing here.

33,686. Is it an increasing fishery?—It was much better last season than it has been for some years back.

33,687. Is there a large quantity of cod caught here?—Yes, and of ling also.

33,688. Is it sent fresh to the market?—Yes, to Glasgow and other places.

33,689. Do you not cure any here?—No, none.

33,690. The whole of it is sent away fresh?—Yes.

33,691. Are there any haddocks got here?—Yes, a good many.

33,692. Is that fishery improving or falling off?—It has fallen off greatly for many years. Some years ago we had a good fishery for what we call white fish here.

33,693. Is it not as good now?—No.

33,694. Is there any fishery for soles here?—The beam-trawlers get a few of them but not many.

33,695. Are there beam-trawlers off this shore?—Yes, there are.

33,696. Where do they belong to?—They belong to this place.

33,697. Have they been long here?—Ever since I can remember they have been working at that work.

33,698. At what season of the year do they use the beam-trawl?—In the spring of the year.

33,699. What kind of fish do they catch in the trawl?—Flounders and flat-fish.

33,700. Do they catch any haddocks?—No; no round fish, they seldom get any round fish.

33,701. Do they get many soles?—No, not many, but flounders they get plentifully.

33,702. Are there many of these trawl-boats here?—I dare say that there are a dozen working at it here.

33,703. What is the length of the beam of the trawl?—I am not sure. I suppose it is about 40 feet or something like that.

33,704. Are they large decked vessels?—They are half-decked smacks. They have smacks which they work at the herring fishery.

33,705. You are surely mistaken in the length of the beam of a trawl-vessel of that size; they can scarcely carry such a long beam?—Yes, it is of that size.

33,706. Forty feet?—It is between 30 and 40 feet, I am sure; it is as long as the boat itself.

33,707. What is the tonnage of these boats?—About 20 tons, or even more than that; some of them are 25, and perhaps some of them will be 30 tons.

33,708. Are they increasing in number?—Yes, they are increasing greatly.

33,709. Do they make a good business of it?—Sometimes they do, but they did not do very much last season with them.

CAMPBELTOWN.

D. Macmillan.

10 Aug. 1864.

33,710. Do the other fishermen—do the long-line fishermen complain of the trawl fishermen injuring them?—Yes, they do, and they always have done.

33,711. Do they injure them?—Yes, they do. The trawls are like so many harrows going over the ground tearing up everything; they do twice the harm that any other mode of fishing does; they tear up the ground and do not allow the spawn to be upon it; they harrow it all up.

33,712. Do they trawl close in-shore?—Yes, they do not go into the deep at all.

33,713. In what depth of water do they trawl?—In 6 or 7 fathoms, and sometimes in only 3 fathoms.

33,714. What distance from the shore do they keep out?—Not more than a gunshot, or a quarter of a mile.

33,715. Do they not go out to the stormy part of the sea?—No.

33,716. Then they do not interfere with the deep-sea fishing?—No.

33,717. The deep-sea fishing has not been injured at all by this trawling?—No; they do not go near the deep sea.

33,718. Have you any lobster fishery here?—Yes, a good deal.

33,719. Is it improving or declining?—It is declining. It is so much wrought upon the coast, that most of the fish have been cleared away; they have tried this kind of fishing along the shores everywhere.

33,720. And are they not doing as well as they did in former years?—They are not.

33,721. Are there more boats employed in the fishery than there were formerly?—No; but there are a great many who work at it constantly.

33,722. Is there a fishery here for crabs or partons?—No, there is none of that.

33,723. Is there any oyster fishery?—There are a few oysters got at low tides, and a few men go dredging them, but that trade is nothing to signify.

33,724. (*Professor Huxley.*) When there was a winter fishery here, in what condition were the fish? were they full herrings in January?—No; they were not full then.

33,725. Were they full in February?—No; they were not full in the spring of the year at all. If we got any full herrings, it would be from this time until January.

33,726. Did you get no spent herrings at all in February?—No; from this time of the year until January is the principal time for herrings to be upon this coast.

33,727. Are there many herrings cured here?—No; none at all. They are all boxed and sent away fresh.

33,728. Do you think the stoppage of the winter fishery has been a loss to the fishermen?—It has been a terrible loss to them in many ways.

33,729. Was the Glasgow market largely supplied in the winter?—A great deal goes from here in the winter time.

33,730. Is there any cod fishery here?—A great deal.

33,731. That goes on in the winter time, I suppose?—Yes; in the season; in the spring of the year.

33,732. Are there any oysters?—There are a few got, but not many; there are only very few.

33,733. Do any foreign boats come fishing here?—No.

33,734. None at all?—No, none.

The witness withdrew.

J. McCoag.

JOHN MCCOAG called and examined.

33,735. (*Mr. Caird.*) Are you a fisherman here?—I was, but I am not now. I dropped it about six years ago.

33,736. Are you acquainted with the different kinds of fishing practised here?—I have been a good while working at the fishery in my time.

33,737. Has the herring fishery improved or diminished of late years?—I think it is in the way of improving now.

33,738. What do you think is the cause of that?—Many of the people say that it is owing to the trawling being stopped that it is improved.

33,739. At what time of the year was that trawling followed here?—It has been followed during the winter season mostly; but farther south it has been followed at all seasons of the year.

33,740. Here it has only been practised during the winter season?—Yes; and a little in the harvest time.

33,741. Were there a great many herrings caught by the trawl?—Yes; they catch a great quantity when they do come across them.

33,742. They practised trawling in the winter time?—Yes.

33,743. There has been no longer any winter herring fishery here since the close time has been established?—No.

33,744. Has that been any loss to the fishermen here?—I do not suppose that it has been.

33,745. Were they not in the habit of catching any fish in the winter?—Yes; they were in the habit of catching them in all seasons.

33,746. Then why do you think it is no loss to get none now?—Because the herrings are not in season when the close time is in force.

33,747. Are not the herrings in season in January?—Yes; they are pretty good in January and February, but after the month of March they are not worth much.

33,748. The men are not allowed to fish in January now?—No; the close time commences on the 1st of January.

33,749. Then two months' fishing during which the herrings are good is entirely shut off from them?—Yes; the herrings are pretty good in those months, but they are not so good as they are during the harvest time. Some shoals of them will be better than others.

33,750. Then would you say as a fisherman that it has been no injury to you to be deprived of your two months fishing in January and February?—I do not think so.

33,751. In what way do you make it up?—The fish are not in proper season, and we did not get a good price for them, and if the weather was rough, we frequently lost a good deal of our materials.

33,752. Were they fished at that time chiefly for sale as food, or principally for bait?—For both. They used a good many of them as bait for the codfish.

33,753. How do you manage to obtain bait now that you are not permitted to fish for them?—They get here what they call buckies.

33,754. Is that a good bait for codfish at that time of the year?—It is a very good bait, but not so good as the herring. They can fish longer in the winter with them than with the herring.

33,755. Do the fishermen prefer buckies?—No, they prefer herrings if they can catch them.

33,756. Is the close time strictly observed here?—Yes; very strictly.

33,757. Are there more boats now engaged in the summer fishery than there were in former years?—Yes; there are a great many more.

33,758. And all the fish are sent fresh to the market?—Yes.

33,759. Can you tell us anything about the cod and ling fishery?—There are several men here who work at it during the winter season.

33,760. Is it an increasing fishery here?—It has not increased much for some time back. There are not nearly so many working at it now as there were in olden times.

CAMPBELTOWN.

J. McCoag.

10 Aug. 1864.

33,761. What do you think is the cause of that?—I believe that the fish are scarcer than they were.

33,762. Is the price of fish as good as it was?—Yes, it is.

33,763. Have the people something better and more profitable to do?—I don't know about that. Some work at one thing, and some at another.

33,764. Do the fishermen's sons here generally become fishermen?—Yes, a good many of them.

33,765. You have had a long experience of the fishery, and are well up in years now?—Yes.

33,766. Then comparing your early days with the present, would you say that the fishermen now are as well off in their circumstances as they were in your early times?—I don't think they are. They could make a better living out of fishing in early times. The fish were more plentiful, and there were fewer people engaged in the fishing. There are some of them making a good livelihood at it now, but not hereabouts.

33,767. Do you consider that the sea in this neighbourhood has been overfished?—I cannot say anything about that, but we have blamed the trawling for ruining the fishing altogether.

33,768. The herring fishery?—Yes.

33,769. But not the cod and ling fishery?—No, I do'nt suppose it has hurt that.

33,770. Has the beam-trawling been injurious to the white fishery?—I cannot say, but the people engaged in it allow that it has broken up the spawn upon the ground.

33,771. Have you ever been on board a trawl-boat when you were fishing?—No; I never was on board a trawl-boat.

33,772. (*Professor Huxley.*) Have you yourself caught herrings in the months of January and February?—Yes.

33,773. What condition were they in?—I have got them also in the month of April when I was a young man. They were not in very good condition.

33,774. Were they full fish?—No; they were spent fish.

33,775. Were they never full?—Yes, sometimes; but very few full fish come along the coast now at all.

33,776. In which of the two months, January or February, did you get the largest proportion of spent fish?—In February; they are always on the decline after that.

33,777. What is the size of the mesh you use here for your herring nets?—I don't know exactly, but some of the men who work at the fishing will tell you the size.

The witness withdrew.

D. Galbraith.

David Galbraith called and examined.

33,778. (*Mr. Caird.*) Are you a fisherman here?—Yes; I have been a fisherman.

33,779. Can you tell us whether the herring fishery here has been an improving or declining fishery during the last few years?—I think it is rather gaining. There are both better fish and more of them too.

33,780. From what period do you date that improvement?—I think the reason is that no trawling is going on now. If trawling were still allowed to be carried on, there would not be a fish in the sea at all. They take off both the large and the small herrings.

33,781. In what season of the year was the trawling carried on here when it was practised?—It was carried on about Tarbert most of the season round, but not much here in the winter time. It was carried on here from February until the months of March and April.

33,782. And now there is no winter fishing at all, either by trawling or drift net?—None. The winter fishing has been put a stop to. When it was allowed, our herrings were always in poor condition at that time. They were all spent fish.

33,783. Did you not get any good fish in the month of January?—No; they were very poor fish.

33,784. Do you and the fishermen now experience any loss from that want of the winter fishery?—They may experience a little loss. They might make a little money by it, but I think they get more game in another way, in consequence of the herrings having liberty to grow up.

33,785. Are they the same herrings that come in the summer time that also come here in the month of January?—Yes, and they are better herrings then. For some years back they have been both larger and better in quality by a great deal.

33,786. Then in your opinion since the close time was established the summer fishery has improved?—Yes, it has done so for the last two years back. This year we caught a good deal more than last year.

33,787. Are you speaking of the fishing in Loch Fyne or the fishing along the coast?—The fishing along the coast.

33,788. Whereabouts are the herrings caught by the Campbeltown fishermen?—Away down here at Carradale and Skipness, and sometimes towards the Arran side.

33,789. Do they go to the north-west of the Mull?—No, but they will go out to Sanda if they find the fish out there.

33,790. Have the fishermen not found any want of bait when they cannot get herrings in the winter time for baiting their cod lines?—Yes, they have found a great want of bait.

33,791. Is that not a matter of much importance?—They would get more codfish if they had herring bait. They could haul their lines in half the time they are able to do with buckies.

33,792. Do you mean that they would catch double the quantity of fish?—Yes, if the codfish were on the coast. The codfish take the herring bait very quickly.

33,793. Are there more boats engaged in the cod and ling fishery than there were 10 or 12 years ago?—Well, I don't think there are. But if the cod fishery would pay them, there would be plenty of boats at it. But it has not been paying them well lately.

33,794. What has been the cause of that?—Because the fish are not plentiful on the coast, and on that account many fishermen do not go to it.

33,795. Are the fish not so plentiful as they were formerly?—No, they are not near-hand as plentiful. I have seen them getting 20 and 30 score, and now it is very rarely they can get eight score.

33,796. What do you imagine is the cause of that?—I cannot say.

33,797. Does it arise from over-fishing?—I cannot say whether the trawling has swept the young cod away or not, but it appears that it has.

33,798. You mean the circle-net fishing, not the beam-trawling?—Both of them have injured it, I think; they have injured the spawn; they have cleaned the ground and taken the spawn up.

33,799. Have you ever been on board a beam-trawler?—No, but I have heard plenty of talk about them.

33,800. Do the beam-trawlers make a good business of it?—Sometimes they do, but it does not long continue.

33,801. (*Professor Huxley.*) Do you think the herrings that are spent in February are the same fish that are full again in August?—They are mostly spent altogether in January and February. We used to get a great deal of herrings then, but they were very poor.

33,802. Do you think that they are the same fish that are full again in August?—If they were let alone they would be. They go out in the spring of the year, but whether they are the same that come back again, I cannot say, but we think they are.

33,803-4. You were speaking just now of the winter fishing affecting the summer fishing, on the ground

CAMPBELTOWN.

D. Galbraith.

10 Aug. 1864.

that the fish were not allowed to grow up into good fish?—The trawling I have no doubt would ruin the fishing, but I do not know that a few boats working with drift nets would do much harm.

33,805. Would they do any harm?—They would take a good deal of fish out of the water, and it is generally in the lochs here that we get them in the winter time.

33,806. For a good many years you were in the habit of having a winter as well as a summer fishery?—Yes.

33,807. Was it noticed then that the winter fishery did the summer fishery any harm?—We did not think much about it at that time, because it was only followde in January, and the boats only worked for a few weeks. When the herrings got scarce they dropped it again.

33,808. Is it your desire that the present close time should be continued?—Yes.

33,809. Throughout the whole extent of it?—Yes.

33,810. Why?—Because it allows the fish to become more plentiful, and they will be a better sort of fish. They would become full herrings bye and bye.

33,811. Did you not get full herrings in August when you had a winter fishery?—Yes, and a good many of them, but not when by trawling they were allowed to take them out of the sea.

33,812. I am not speaking of trawling, but of the close time, and the prohibition of fishing?—All that period in the winter time there were not many taken altogether. There were only a few small boats working then.

33,813. Has the herring fishery increased here very much of late years?—Yes, it has increased a good deal this season.

33,814. Are the boats larger than they were formerly?—Yes.

33,815. Do many of your boats go to the Isle of Man?—Yes, a good many.

33,816. Are there many of them there now?—Yes, a good many of the biggest boats.

33,817. What is the largest sized boat that is used here?—A boat of 40 feet keel.

33,818. Are they decked boats?—Half-decked boats, and they carry a good many nets too.

33,819. Are you aware whether any foreigners fish on this coast?—No.

33,820. Do the Irish boats come here at times?—They did come in old times since I can recollect. They came all along here, but they have got a better fishery at home now, and it is better followed up too. They have also better nets.

33,821. What is the size of the mesh you use in your nets?—When the net is new it is about $33\frac{1}{2}$ to the yard.

33,822. Does anybody look after your nets to see that the meshes are of the right size?—The Fishery officer is the man who ought to look after that.

33,823. Did you ever know of anybody's nets being seized because the meshes were not of the right size?—No.

33,824. You never heard of such a thing?—No.

33,825. Do you carry lights in your boats?—Yes.

33,826. What lights do you carry?—Lanterns and lamps.

33,827. Do you carry two lights or only one?—Only one, but they have a flambeau and lantern and they light the flambeau occasionally.

33,828-9. Is there any cruizer here to look after the fishermen?—None, except the steamer may come to Tarbert occasionally.

33,830. Do you mean the "Jackal"?—Yes.

33,831. Does she come down as far as this?—Yes, she comes some chance times, but not very often.

33,832. What does she do when she comes; does she look after the fishermen at all?—Yes, she gives a call among the fishing boats, and the police keep a good look-out among the fishermen too.

33,833. But the police do not go out to sea, do they?—I don't suppose that any of them go out to sea here.

33,834. (*Mr. Caird.*) Have you a very good harbour for running to?—Yes.

33,835. At all times of the tide?—Yes, at any time.

The witness withdrew.

W. Macmillan.

William Macmillan called and examined.

33,836. (*Mr. Caird.*) You are a fisherman here?—Yes.

33,837. Has the herring fishery improved or declined of recent years?—I should think it has rather improved.

33,838. What do you think is the cause of that?—It is allowed that the trawling in the spring of the year is helping it a great deal.

33,839. Stopping the trawling you mean?—Yes.

33,840. The Campbeltown men did not use the trawl in the summer time, did they?—No, it was only in the winter that they trawled.

33,841. Did the drift net-fishing in the winter do any harm, do you think?—I think not. When the close time was enforced, it stopped the people from getting bait, and prevented them from making wages, and the consequence was, that they were quite idle and could not support themselves.

33,842. Has that been an injury to the fishermen?—Yes, a great injury.

33,843. Do the people generally complain that they were prevented from fishing for herrings in any way in the winter?—Yes.

33,844. Are the herrings in full condition in the month of January?—By the month of January the herrings are rather declining, but they are fit for making into red herrings. The fishermen were able to get a very good market for them.

33,845. Are they used as food by the people themselves?—Yes.

33,846. And not for bait?—Yes.

33,847. For bait also?—Yes.

33,848. Are you against having a close time in the month of January?—Yes; I consider the best thing we could have is to have an open season the same as they have all round the east coast of Scotland and Ireland.

33,849. You are against having any restrictions whatever?—Yes; I would like to see them have an open season for the drift nets as before.

33,850. You would apply the law merely to prevent trawl nets being worked?—Yes.

33,851. Are you against trawl-fishing?—Yes, I am, and the principal part of the men standing here are against it also.

33,852. Your objection is not to fishing in the winter, but to fishing with the trawl?—Yes; just against the fishing with the trawl.

33,853. You wish to be allowed to fish in every other way throughout the whole of the season?—Just so.

33,854. In what way do you find that the trawling is destructive?—It kills a great number of the herrings which the drift net would not. They are destroyed or thrown away, not being fit for the market in any respect, and they are herrings which the drift net boats would not kill.

33,855. The trawl fishermen have no employment in the winter at all now?—No.

33,856. Do they not go to the white-fishing?—They go to the white-fishing, and they are making money the best way they can.

33,857. At the same time if they had an open season for fishing with the drift nets like what other

CAMPBELTOWN.

W. Macmillan.

10 Aug. 1864.

fishermen have they could work at it if there was no close time; when the herrings appear on the coast, they could go out and take them?—Just so.

33,858. Is it generally the opinion of the fishermen of Campbeltown, that it is a great hardship that they should be deprived of that right?—It is.

33,858*a*. Is it a great loss to them of their means of sustenance?—Yes; it is a great loss to them.

33,859. Did they get a good deal of money from the winter fishing?—Sometimes they made more money out of their winter fishing than they did out of the summer fishing.

33,860. And they are entirely deprived of that now?—Yes.

33,861. If that were restored and you were allowed to fish with the drift nets in the winter, do you think it would do any harm to your summer fishing?—I don't think it would. The herrings would be taken too, fit to eat. They would not be shovelled out of the boats good for nothing. Our drift nets only catch fish that are fit to be used, because the meshes are wide enough to let those unfit for use escape.

33,862. Have you been a cod fisherman?—Yes.

33,863 Is that fishery improving or declining now?—We cannot get fish as we did in former years; we dare not go to catch the bait now.

33,864. Has that been a great loss here?—Yes; a great loss indeed.

33,865. Has it caused the cod fishery to decrease?—I don't know. We cannot get bait. It is not every man who is able to get a lot of buckie creels for the purpose of catching bait. Where a man was formerly able to go out and get a few herrings that would enable him to earn a day's wages, he is now obliged to lay at home because he cannot get bait.

33,866. Would they make as good a fishing with buckie bait, as if they had herrings?—No.

33,867. Then the fishermen have not only lost the herrings, but to a great extent they have lost the means of catching codfish?—Yes.

33,868. Or white fish?—They used to get cod, ling, skate, haddock, and eels with herring bait, whereas they can only catch cod or ling with buckie bait now.

33,869. Is the haddock fishery declining here now?—No.

33,870. Is it a good fishery?—Three years back it was.

33,871. Then is there any sign of the sea having been over-fished with regard to any kind of fish here?—No.

33,872. (*Professor Huxley.*) Have any of the fishermen here been convicted under the close time Act?—There are some who have been imprisoned here for a mere trifle. It may be that they had a few herrings or herring scales in their boats. I have known them to be convicted even on that ground.

33,873. When was that done? Can you tell us a particular case?—Last year and the year before last, and for three years back that has been the case here.

33,874. Fishermen have been convicted for having herring scales in their boats?—Yes.

33,875. Can you tell us the name of any person who was convicted upon that ground?—Yes; there are two of them here now, John Carmichael and Peter Carmichael.

33,876. You were speaking about buckie creels just now, what are they like?—They are partly made of rods, and they are let down with ballast in them and some sort of bait to coax the buckies into them.

33,877. Do you catch the buckies readily in those creels?—Yes; we get them in from 10 to 20 fathoms water.

The witness withdrew.

PETER CARMICHAEL called and examined.

P. Carmichael.

33,878. (*Mr. Caird.*) You are a fisherman here?—Yes.

33,879. A herring fisherman?—Yes.

33,880. Do you follow any other kind of fishing also?—Yes.

33,881. Has the herring fishery improved within the last year or two?—It has improved within two or three years back.

33,882. What do you think is the cause of that?—I attribute it to the stopping of the trawling.

33,883. Is that your opinion?—Yes.

33,884. There never was any trawling in the summer season?—Very seldom.

33,885. Is it your opinion that the doing away of the winter fishing by the Act which caused a close time to begin at the commencement of January has been injurious to you as a fisherman here?—Well, I think so.

33,886. Do you find that the herrings are in good condition in the month of January?—No; they are in a bad state then. The herrings have fallen off then.

33,887. Would you desire to catch them when they are in that state?—We cannot get a market for them.

33,888. Has the want of bait during that season been much loss to you as fishermen?—Yes.

33,889. And also for food for your families?—Yes.

33,890. Have you yourself been prosecuted under the recent Act for infringing it in any way?—Yes, for catching bait for the big lines.

33,890*a*. Did you use a net for catching bait for the big lines?—Yes, a small net.

33,891. What time of the year was that?—About March, I think.

33,892. Will you tell us what happened?—We were seized for having herring scales in the boat.

33,893. Were there no herrings in the boat?—No.

33,894. Was there any proof that you had herrings?—Nothing but the sign of scales.

33,895. And you were convicted of having broken a law by the proof afforded by the presence of scales in your boats?—Yes.

33,896. What was the penalty inflicted upon you?—Thirty days imprisonment.

33,897. You were imprisoned for 30 days?—Yes.

33,898. With hard labour?—No.

33,899. There was no fine?—There was a fine of 20*l*., but we got clear of that.

33,900. You preferred imprisonment?—Yes.

33,900*a*. At what time were you imprisoned?—It was in the middle of the year. We went in on the 4th of May, and were let out on the 4th of June.

33,901. Then you missed that month's fishing?—Yes.

33,902. Would that be the first of the summer fishing?—Yes.

33,903. Was it a great loss to you?—Yes, I had a boat of my own, and she was ashore.

33,904. Was it a greater loss than the payment of the fine would have been?—I am not sure of that.

33,905. Had it the effect of preventing you and others from fishing for bait again?—Yes, we might have been out with the fleet on the 1st of June, but in consequence of being imprisoned we were kept from that.

33,906. Did it prevent you from fishing for bait in the spring time again during the close time?—Yes.

33,907. Were other people prosecuted in addition to yourself?—Yes, there were several.

33,908. How many?—I don't know.

33,909. How many were imprisoned?—There were a dozen or more from Tarbert.

33,909*a*. Were there many men from Campbeltown?—No, not many. There were a great many Tarbert men.

33,910. Did they all go to prison rather than pay the fine?—Yes.

CAMPBELTOWN.

P. Carmichael.

10 Aug. 1864.

33,911. (*Professor Huxley.*) Were the Tarbert men imprisoned for trawling?—Yes.

33,912. (*Mr. Caird.*) Was it the same accusation against them as against you?—Yes, something of the same sort. They had scales, and had been catching herrings in their boats.

33,913. You had not been trawling, had you?—Yes.

33,914. You used the trawl for catching bait?—It was a wee bit of a trawl, and we only used it for bait.

33,915. (*Professor Huxley.*) Was the trawl net seized at the time the boat was seized?—Yes.

33,916. The trawl then was in the boat?—Yes.

33,917. Then it was for trawling in point of fact that you were seized?—We went out for bait for our long-lines.

33,918. You caught it with a trawl?—Yes.

33,919. It was circle net fishing in point of fact?—Yes.

33,920. You did not catch herrings for sale?—No, just for bait to keep ourselves in employment.

33,921. Where did you catch them, up in the lochs here?—No, down in the bays.

33,922. Can you tell us if any of the men engaged in trawling in that way were endeavouring to catch herrings for the market, or only for bait for their lines?—Just for bait for their lines; I never heard of them selling their herrings.

33,923. They don't sell them in the winter time?—No.

33,924. Are you aware that in the summer time the Tarbert men were in the habit of trawling?—I know they were in the habit of selling them in the summer time.

33,925. But in the winter time they do not catch them for sale?—No, just for bait only.

33,926. These convictions took place, you said, last year?—Yes.

33,927. Were there any in the year before?—Yes, and there were a few the year before that.

33,928. So that there have been convictions each year?—Yes.

33,929. Yet they do not seem to have put a stop to the practice altogether?—No, the fishermen are like to have bait; there are many men idle in the spring of the year.

33,929*a*. I suppose if you had had no bait your boat would have been laid up as effectually as when you were in prison?—We should have been idle and we wanted employment.

33,930. Is there a considerable number of fishermen thrown out of employment in consequence of being prevented from taking bait in the winter time?—Yes.

33,931. Does that lead to any distress?—Yes, their families are a good many of them in a state of starvation in consequence of it.

33,932. Have you any notion of the total number of line men fishing here?—No, I have not.

33,933. (*Mr. Caird.*) Has the line fishing been much decreased in consequence of the difficulty of getting the bait in the winter time?—Yes.

33,934. Was there formerly a good line fishing here for cod in the winter?—Yes, in the spring of the year.

33,935. Are there fewer cod caught now in consequence of the want of bait?—Yes, if there was more bait to be had, there would be more men working at it.

33,936. Then you have lost both the herring and the cod in that way?—Yes, we are kept in and cannot go out after them.

33,937. Is there any means of catching the herring for bait, except by using the trawl?—Yes, we could use drift nets.

33,938. Would that be quite as effectual?—Yes, it would do quite well.

33,939. In that way you would not catch any small fish?—No.

33,940. By using the trawl in the winter do you kill a great number of young immature herring?—Yes, all that come into the net.

33,941. Is a large proportion of them young of that sort?—Yes, if the net is narrow a good many of them will be young fish.

33,942. What do you do with the young fish?—We heave them overboard again.

33,943. Are they alive when you do that?—Some of them are and the others are dead.

33,944. Do you use them for food?—No.

33,945. Or for bait, or sell them?—No.

33,946. Will the one half of the catch be of that kind?—Sometimes it will.

33,947. Sometimes will more than one half of it be of that kind?—Yes.

33,948. Then do you think it is a proper thing that the trawl should be entirely put a stop to?—Yes, I think so. I think the trawl ought to be stopped, but we should have an open season all the year through for the drift nets.

33,949. Would you think it advisable to have a close time at all for the drift nets?—No, I don't think there should be; the men should be employed all through the season with drift nets.

33,949*a*. Are fish to be had during most of the season?—Herrings are plentiful in the spring of the year.

33,950. At what time?—In March, April, and May.

33,951. Are they not in inferior condition then?—Yes, but there are a good deal of fish among them that are large. They are in a poor state, but we always find large herrings in the spring of the year.

33,952. Can you get a ready market for them here?—Yes, formerly we did very well in the spring time.

33,953. If that fishing were restored to you, do you think it would injure the summer fishing?—Not if it was followed with drift nets. Trawl nets might be of injury to it.

The witness withdrew.

J. Martin.

JOHN MARTIN called and examined.

33,954. (*Mr. Caird.*) You are a fisherman here?—Yes.

33,955. Are you in favour of the close time for the herring fishery as at present established by law?—No, not by any means.

33,956. Do you think it is injurious to the interests of the fishermen here?—I think it is, because hundreds of families have their children emaciated, distressed, impoverished, and reduced to mere beggary.

33,957. Then you are in favour of doing away with the close time during the whole of its existence from the month of January till the month of May?—You know that the law was established by the Honourable Commissioners of the Fishery Board, and each part of Scotland has different laws with regard to the time at which the season opens.

33,958. There is no close time at all on the east coast?—No. It would be a great convenience to the west coast if there was none there either.

33,959. You think you should be placed on the same footing as the east coast?—Yes, I think so, we are loyal British subjects on the west coast as well as on the east. We are quite as good and humble subjects on the west as on the east coast, and we ought to have the same privileges.

33,960. Do you think it is for the benefit of the fisheries that a close time should be established?—No. It is very much against them because it keeps many of the fishermen idle. It is not even a close time against the fishermen as regards the herrings, but it closes them up from catching any other kind of fish as well as herrings.

33,961. Is that owing to the want of bait?—Yes, not being allowed to use their nets.

33,962. Has that led to great distress?—Yes, I am certain that every man will state that it has been injurious both to the fishermen and their families.

in catching herrings?—I don't say much with regard to the use of it. I have been trawling myself and have been convicted of trawling and breaking the law. I would not say much for the use of the trawl, but it would be greatly to the advantage of the fisheries if the season was open as we had it formerly.

33,964. Have you no objection to the trawl system being done away with?—I rather think it should be done away with.

33,965. Is it injurious when it is practised in the summer fishing?—There is no mistake that it is. That is well known.

33,966. Why is that?—It takes the fish in great abundance at one time, and that is a great advantage to the party who gets the hauls of fish, but it impoverishes scores of other people. It breaks the eye of the shoal.

33,967. Have you observed that it had that effect, namely, breaking the eye of the shoal?—Yes, there is not a fisherman in Scotland who has not observed that to be the effect.

33,968. In what way does it do that?—The fish come in a sort of ball closely packed up together, and when the sweep of a large trawl net gets round them, it takes one third of the whole body of the fish.

33,969. Are the fish then in good condition?—Yes, in splendid condition, much before anything we can catch with our drift nets. They catch large fish by trawling that we should not get during the whole of the season, but perhaps we ought not to take them. I think they are the mother fish.

33,970. At that time, namely, the summer time, speaking of the August fisheries, is there any large proportion of all the fish that are caught by the trawl immature fish?—No.

33,971. They are all good fish?—Yes, I have been trawling myself for four or five years and never caught one fish that we did not take to market.

33,972. With the trawl?—Yes, I never caught any that I could not take to market. They always sold and went off both in summer and winter.

33,973. Then what harm did you do by catching fish in that way if they were always ready for the market?—I committed no harm at all; but the voice of the whole people of Scotland rose up against it. The fishermen never raised their voices against it, because there would be plenty of fishing if they were allowed to follow their business as they themselves think best. My own opinion is that they ought not to be restricted at all.

33,974. You think they ought not to be restricted?—No, it is a great grievance.

33,975. I thought you said a little while ago that you considered trawling injurious because it broke the eye of the shoal?—Yes.

33,976. But if it is injurious only by catching marketable fish is not that the general object of fishing?—It is injurious to the progeny of fish. It takes the large mother fish.

33,977. Do you not desire to get as large fish in the sea as you can?—Decidedly so.

33,978. Then you would not refuse the mother fish in the drift nets?—No, but we cannot get them there.

33,979. Nobody would refuse them there?—No, not one.

33,980. Then why should they refuse them in the trawl?—The trawl takes boatloads of them at one time. There would frequently be more in a single trawl than would be dispersed over 150 trains of drift nets.

33,981. The result seems to be that by trawling you can effect the object of catching fish at a much less cost than you can by drift nets. Is not that the result of it? Do you not tell us that a few men with trawl nets can catch as many as a great number of men with drift nets?—One person with a trawl net will catch as many as 300 drift nets will catch.

33,982. Then the trawl net fishing seems a more economical mode of catching fish?—There is no mistake about it.

33,983. And a more profitable mode of fishing?—Yes, much more profitable.

33,984. Then your objection is that men should not be allowed to use the most economical and profitable mode of fishing?—It always has been the opinion here. Our fishermen have a strong objection to fishing with the trawl in the summer season. They do not object altogether to those who are actually fishermen, but there are a great many people who sit at their homes all the winter and have other businesses to follow and who can go into this trade when the herrings are on the coast, whereas the regular fishermen must go to sea all the year round.

33,985. Where are the fishermen you speak of?—More than two thirds of the fishermen are in the Sound of Kilbrennan.

33,986. Do you think the winter fishing might be followed by the drift nets without any disadvantage to the summer fishing?—I think it might. The fishermen, who are actually fishermen, require to have summer and winter or they will be placed at a disadvantage. They are fishermen who have no other line of life, and if they are to follow their business properly they require to have the winter open.

33,987. (*Professor Huxley.*) Are you a Tarbert man?—No.

33,988. What do you think of the condition of the fish that are taken in the trawl?—I think they were just as good as when they were taken in any other way. I have used them cured and in every way, and I have seen them in as good condition as ever I saw herrings caught by the drift net and quite as fit for use.

33,989. You said just now that the trawl would catch fish which the drift net cannot catch?—Yes.

33,990. Do you mean very large and fine fish?—Yes.

33,991. Are they not as good for eating purposes as the others?—Yes.

33,992. Then if the fishing is restricted to the drift net alone, a great many fish cannot be caught at all?—Yes.

33,993. What is the total cost of a trawl net?—A trawl net will cost about from 20*l.* to 25*l.*

33,994–5. And you work it with two boats?—Yes; with four men to each boat.

33,996. What will the two boats cost?—The two boats will cost about 24*l.*

33,997. And there is no rigging worth speaking of?—No.

33,998. They are worked with oars commonly?—Yes, with oars, and occasionally with sails.

33,999. What will be the cost here of a drift net boat?—With drift nets?

34,000. Yes; the whole boat fitted up ready for fishing?—A boat, new and all fitted up, would cost about 200*l.*, or between that and 400*l.*, according to the size.

34,001. So that you may fit up a trawler for 60*l.* or 70*l.*?—Yes.

34,002. And a drift net boat with the fleet of nets will cost about 200*l.*?—Yes, from 200*l.* to 400*l.*, according to the size.

34,003. Then in that way you can set up a trawler with much less capital than you can set up a drift-net boat?—Yes, much less.

34,004. And yet the trawler would catch more fish?—Yes.

34,005. Then would it not be of great advantage to allow men to trawl?—Yes, there are no two ways about it; but this is a locality that is not adapted for trawling in the summer season. March, April, and May are the only months adapted here for trawling.

34,006. Can you practise trawling outside; there is no circle-net fishing in the sea, is there?—Yes, in deep water.

34,007. You cannot practise it in coarse weather as you can drift-net fishing?—No.

33,963. Do you object to the use of the trawl net

CAMPBELTOWN.

J. Martin.

10 Aug. 1864.

34,008. You must have pretty fine weather?—Yes; we are restricted to fine weather unless along the coast when the wind is off the land and it is smooth water.

34,009. When you practised trawling and got a good deal of money by it, did it not often happen that a good deal of that money went in drinking, and that the men stopped on shore till they got rid of it?—That is the case with the drift-net men as well as the trawlers.

34,010. But is it not more the case in trawling than in drift-net-fishing?—I do not think it is; there are some places more given up to drinking than others; I do not think Campbeltown is amongst them.

34,011. You do not think it is more the reproach of the trawlers than of the drift-net fishermen?—The trawlers are in a great way subject to getting very wet and draggled with dragging the herrings and nets, whereas the drift-net fisherman can put on a suit of oil cloth and can keep himself almost dry; no doubt they very frequently take a glass of spirits or whatever they choose when they come in.

34,012. But you do not think they get rid of their money readier than the drift-net men?—No, I do not think so.

34,013. That has been charged against the trawlers, has it not?—I do not believe it has; those who speak of it can take it whether they are drift-net fishermen or trawlers.

34,014. Which mode of fishing requires the more skilful and active men; the drift-net fishing or trawling?—The trawling.

34,015. It is rather hard work, is it not?—It is hard work and it requires practice and strong able men to go through with it, whereas in the drift-net-fishing there is not much work, especially early in the season; there is also only one time to shoot your nets.

34,016. Do the drift-net fishermen shoot their nets and go to sleep?—They do not always all go to sleep, there are one or two watching. It requires more exertion and more strength to follow the trawling than the drift-net fishing.

34,017–8. Then the trawl-fishing is a good deal more precarious than the drift-net fishing. Although the trawlers get a good haul now and then, are they not apt to go for a long time without getting a good haul?—Yes, that is often the case. I have often seen when the trawling has been carried on to the greatest possible extent, the drift-net fishermen making a better livelihood than the trawlers could, although they prosecuted their business with the greatest vigour.

34,019. Is not trawling apt to interfere a good deal with the drift-net fishing?—Yes.

34,020. If trawling is carried on in any part of the sea, drift-net fishing cannot be carried on there at the same time?—No.

34,021. Are the trawlers apt to get in the way of the drift-net fishermen?—Yes, if the trawling is carried on where the drift-net men are at work; it would not be so very injurious here, where the trawlers could go out and take a sweep and in half an hour be clear of the drift-nets; but it does great injury further north to the drift-net men to allow the trawlers in the very place where they are fishing.

34,022. Sometimes it is alleged against the trawlers that they, having light boats that will pull very readily, are not apt to trouble themselves whether they are clear or not, but if they fall in with the shoal they will cut away the drift-nets?—I have heard that reported.

34,023. Have you ever seen it done?—I never saw it done. I do not think it was the trawlers who did it; at the same time it may have been done, and I have heard it said so, but I never saw it.

34,024. Does it sometimes happen that the drift-net men cut away one another's nets and buoys?—Yes.

34,025. If they get foul of each other?—Yes. Since trawling has been stopped we have lost more nets and buoys than ever we lost before.

34,026. (*Mr. Caird.*) Were you prosecuted under the present Act?—Yes.

34,027. Did you also suffer imprisonment?—Yes.

34,028. For 30 days?—No, for eight days; it was the first case ever taken into consideration with regard to the trawling.

34,029. You got off with eight days?—Yes.

34,030. You did not revive the trawl-fishing after that, did you?—No.

The witness withdrew.

D. McInnis.

DONALD MCINNIS called and examined.

34,031. (*Mr. Caird.*) You are a fisherman here?—Yes.

34,032. Have you practised both the drift-net fishing and the trawl-fishing?—Only a little of the trawl-fishing.

34,033. Do you think the present law is advantageous to the general interests of the fishing?—Yes.

34,034. Do you approve of the close time?—No; I think we should have no more close time than other places; we ought to be placed on the same level as the eastern country.

34,035. Then you would have no close time at all?—Is there no close time there?

34,036. No.—I thought there was from the 12th of March.

34,037. No; there is no close time there?—Then we ought to have none here; we desire to be placed on the same level with them.

34,038. You do not think that the close time is of advantage to the herring-fishing?—I think it is of some advantage, but we should have the same liberty as the fishermen on the eastern coast.

34,039. It would not be of advantage to allow you to injure your fishing?—It would be a bad job to do it with the trawl.

34,040. Then what do you think is the disadvantage of the present state of the law?—I always thought there was a close time on the eastern coast, from the 12th of March.

34,041. Would you desire to have a close time here from the 12th of March?—Yes.

34,042. Until when?—Until the 1st of June.

34,043. Do you think that would be advantageous to the herring-fishing?—Yes.

34,044. Were you ever in the habit of fishing at that time?—Yes, I have fished through the month of March, sometimes with drift-nets.

34,045. Did you catch any valuable fish at that time?—No, they were in a poor state.

34,046. Did you ever fish in April or May with drift nets?—No.

34,047. Then, if there were a law in existence or not there would be little fishing with drift nets?—No, very little; there would be only a little, just for bait and such as that.

34,048. Do you desire that you should have the privilege of catching herrings for bait?—Yes.

34,049. Is it a loss to the fishermen that they are entirely deprived of that privilege now?—Yes, it is a great loss to them.

34,050. Do you disapprove of the system of trawl-net fishing for herrings?—Yes, very much.

34,051. Are you referring to the Campbeltown fishing only at this moment?—No, to all the fisheries along the coast.

34,052. But in regard to the Campbeltown system of trawling, it was only practised in the winter, was it?—Yes, in the winter time only.

CAMPBELTOWN.

D. McInnis.

10 Aug. 1864.

34,053. Is that injurious then ?—Yes.

34,054. Is it impossible that the two modes of fishing, the trawl net-fishing, and the drift-net fishing, can be carried on together ?—Yes, they cannot.

34,055. Why is that ?—Because if the trawlers get foul of you, they will haul up your nets and cut them away.

34,056. Are the trawl-boats better manned than the drift-boats ?—There are four men to each boat, and they have two boats.

34,057. And how many are there in the drift-boats ?—Four.

34,058. Do the drift-boats never go in company together ?—No.

34,059. Are they generally alone ?—Yes.

34,060. If they go in the bay to fish will there only be one drift-boat fishing ?—Of course that would be different, but they are not handy alongside of one another; they are generally lying on to their nets, and cannot go to help one another.

34,061. Do the trawl fishermen interfere with the drift-fishermen in the way you mention ?—Yes. I should have to haul up my nets if they came across me, or they would cut them away.

34,062. Have you ever done that ?—Yes.

34,063. You have had to haul up your nets ?—Yes, to let them have room.

34,064. Where did you move ?—I moved further out.

34,065. Has that happened to you often ?—No, not very often.

34,066. Speaking from your own experience and with consideration of what you are saying, is that a thing that does often happen between the two classes of fishermen ?—It does happen at times, but not very often ; it has happened to myself.

34,067. Is it really the case that the trawlers try to frighten the drift-fishermen from the place they are occupying ?—It was done once with me.

34,068. How many years have you been a fisherman ?—I have been a fisherman since the year 1832.

34,069. And during all that time this happened to you only once ?—Yes.

34,070. Were they fishing in the bay at that particular time when you went into it, or were you the first there ?—I was the first there.

34,071. And they came and told you to leave the ground ?—Yes, to leave the ground.

34,072. Supposing that that sort of interference were put a stop to, is there any other difficulty that would make the two kinds of fishing impossible to be carried on together ? Supposing the trawl-net fishermen were prevented from interfering with the drift-net fishermen in the way you speak of, is there any other way in which they could injure your mode of fishing ?—They could take away our nets, as some of them have done to myself ; I blame no person but the trawlers for that.

34,073. Do you think they disturb the shoals in any way ?—I think they do very much.

33,074. Do they catch more fish than you do in the drift nets ?—Yes, of course, they catch double as much as the drift nets.

34,075. Then they take a different way to attain the same end that you are anxious to attain ?—Yes, they take a different way, they haul them ashore, and take what they like, and leave the rest on the ground.

34,076. Do they leave good herrings on the ground ?—Yes, plenty of them.

34,077. Then would it not be worth your while to lift them ?—We could not. They fill their boats, and leave the rest on the ground.

34,078. Does that happen very often ?—It happens occasionally.

34,079. You say that you yourself have practised the trawl-fishing ?—Yes, a little.

34,080. Why did you give it up ?—I thought it was very grievous, and there were so many working at it, and we were making nothing of it. One might make a good fishing, and another nothing. There was also another thing, I had a boat and drift-nets.

34,081. Was it a more precarious mode of fishing than drift-net fishing ?—Yes, I might go for a month and get nothing, and then get a good haul in a short time.

34,082. (*Professor Huxley.*) I suppose the trawlers interfere with you only when you are fishing in towards the bay ?—I have seen them interfere with us outside also.

34,083. Outside the Mull ?—No, outside in the Channel.

34,084. In the Firth ?—Yes, in the Channel, a mile or two from the shore.

34,085. If you were further distant from the shore would they injure you ?—They are not so apt to interfere with you there.

34,086. If you were four or five miles from the shore, would the trawlers ever go as far out as that ?—No, but if we come within one or two miles of the shore then they interfere with us.

34,087. Did you ever see the trawling fishers outside the Mull in the open sea ?—No.

34,088. That would not suit their operations ?—No.

34,089. Their operations must be confined to narrow waters ?—Yes, pretty near the shore.

34,090. What distance from the shore does your drift-net fishing take place generally ?—Perhaps half a mile or a mile, or perhaps three quarters of a mile, or from that to a mile and a half and two miles.

34,091. When you are outside, how far off the shore will that be ?—Do you mean outside here ?

34,092. Outside the Mull ?—We do not go outside the Mull at all, but we generally go outside here.

34,093. Do you not go outside the Mull herring-fishing ?—No.

The witness withdrew.

WILLIAM COOK called and examined.

W. Cook.

34,094. (*Mr. Caird.*) Are you a fisherman here ?—Yes.

34,095. What is your opinion with regard to the trawling; do you consider it injurious or otherwise to the herring-fishing ?—I think it would be a great help to the whole fleet on the west of Scotland if the trawling was stopped.

34,096. Do you approve of having a close time during the whole of the winter by which you are prevented from fishing for herrings by any means ?—I approve of the close time, but I think the fishermen ought not to be prevented from getting bait.

34,097. How could the fishermen manage to get bait if there is to be no herring-fishing during the time they wish to get bait ?—They might make an allowance for a small net in order to catch a few herrings for bait.

34,098. A small drift net ?—A drift net or a trammel net or anything.

34,099. Would you allow a trawl net to be used ?—I would allow a small net but not a large one ; but they could be taken in trammels, which are set nets.

34,100. What size is the mesh of the trammels ?—It is about the same size as that of the other nets.

34,101. Could only full-sized herrings be meshed in the trammels ?—Yes, none but those could.

34,102. Could there be no immature fish caught ?—No.

34,103. Would it be a benefit to the fishermen ?—It would be of so much benefit that it would keep them from starving in the winter.

34,104. Has the establishment of a close season had the effect of causing a great deal of hardship to

CAMPBELTOWN.

W. Cook.

10 Aug. 1864.

the fishermen here?—I have known men who have not had a bite for three days together this winter.

34,105. On account of that?—Yes.

34,106. There were fish to be caught at that time?—Yes, if they could have got bait.

34,107. Then it has injured the cod-fishing as well as the herring-fishing?—Yes, a great deal.

34,108. Then you are against having a close time in the winter season?—I am in favour of the close time so far as sending fish to market is concerned.

34,109. But you are against it so far as it affects obtaining fish for bait and food?—I object to it so far as it interferes with obtaining bait for codfish.

34,110. Do you not desire to have the fish then for food?—When we can get bait we can get plenty of other fish.

34,111. Then is it only for bait that you require it?—Yes.

34,112. Has the summer fishing been improved by the establishment of a winter close time?—Yes, I am sure of it.

34,113. Has that resulted from the close time or from putting down the trawl-net fishing?—From both. There is not a fisherman in the place who could not give evidence that the fishing has been better for the last three years than it was before when trawling was allowed to be carried on.

34,114. Cannot trawling and drift-net fishing be carried on together?—They could be, but they will always be quarrelling one with another.

34,115. Is there anything in fishing by trawls that is injurious to the drift-net fishing?—Not if they would leave the drift nets alone. It is injurious however in this way, that they break the ball of the herrings with the trawl.

34,116. Did the trawl fishermen make more money in the course of a season in the summer than the drift-net fishermen?—Sometimes they did.

34,117. (*Professor Huxley.*) One of the reasons for which you approve of the stopping of trawling is that it breaks the shoal of fish?—Yes.

34,118. Have you ever seen that take place?—Yes, I have.

34,119. You have seen the shoal broken owing to the fact of fishermen having trawled among it?—Yes.

34,120. When was it that you saw that take place?—I have seen it every winter when the trawling was carried on. I have seen the water stinking with herrings they had left after they could take no more in their boats, and I have see the fish flying away from the place.

34,121. Were those herrings in-shore that were left?—Yes, in about four or five fathoms of water. At one time you might have felt the stench of the herrings for a month or two afterwards. More herrings were destroyed than were taken. They were killed and left to lie stinking on the ground.

34,122. Did they drive the herrings away?—Yes.

34,123. Did you get no fishing at all afterwards?—No.

34,124. Did they drive them out of the loch altogether?—Yes, from that part of it.

34,125. But not from the loch altogether?—No. They wrought up and down, but they went away from that part of the loch; and that has been done often and often.

34,126. What is the good of a close time apart from trawling?—I think the fish from January until the end of June are not in proper order for food.

34,127. But are there not plenty of people who will eat them?—Yes, plenty; but they are not good for food.

34,128. If people like to get fish of an inferior description, why should they not have it?—They might if the law allowed it, of course.

34,129. If a person preferred to get inferior herrings, why should he not have liberty to do so?—There is hardly anybody who eats them.

34,130. But you always get a good market for them?—Yes, as good a market as there is now.

34,131. Somebody eats them then?—Yes.

34,132. So that there was, at any rate, somebody who was glad to pay the price asked for them, and to eat them?—That was the case, but I never found them good for food.

34,133. You yourself?—No.

34,134. Have you any other reason for wishing for a close time than that?—I think it is a great hurt to this town: the want of bait during the close time.

34,135. That is the only reason you have against the close time?—That is the only objection I have against it.

34,136. But I ask you now for your reasons in favour of it?—My opinion is that it is a good plan.

34,137. And the principal use of it you think is to prevent inferior herrings from being taken?—Yes, just that.

34,138. Have you any reason except that?—I should only like to be allowed a little for bait, and if we got 200 a boat or the like of that, we should get three times more fish.

The witness withdrew.

N. Macmillan.

NEIL MACMILLAN called and examined.

34,139. (*Mr. Caird.*) You are a buyer of fish here?—Yes.

34,140. What kinds of fish do you buy?—All kinds I can get hold of: herrings, skate, turbot, and all I can get hold of.

34,141. Do you send them all fresh to the market?—Yes, they all go away fresh.

34,142. Is there no curing carried on here?—I may almost say none.

34,143. Have you been engaged for many years as a buyer?—Yes.

34,144. Is the number of fish you can get and send to the market on the increase?—Yes, of net herrings.

34,145. And of cod and other white fish?—The cod have diminished greatly. For some years there was a kind of scarcity of herrings on the coast, but they have increased within the last two years.

34,146. Are there as many people engaged in the cod-fishing now as there were formerly?—Yes.

34,147. And in all other kinds of fishing here?—They have rather decreased. But with regard to the scarcity of whitings, that cannot be attributed to the herrings in any respect.

34,148. What is it attributed to?—I cannot account for it. I just think they have taken some other course.

34,149. Do you get many lobsters here?—They are not very plentiful.

34,150. Is the quantity increasing or diminishing?—I cannot tell. I never dealt in them.

34,151. What have you to say with regard to the close time for the herring-fishing?—During the close season the herrings are of a very inferior quality.

34,152. Have you ever bought them in January?—Yes, from January until May and June.

34,153. What condition were they in in January?—Whatever time they were caught in the winter fishing they were inferior spent herrings.

34,154. Was there any difference in the quality according to the month of the year they were caught in?—I cannot say.

34,155. When did you find the quality improving?—They improve in quality from the latter end of May.

34,156. Does that improvement go on progressing?—Yes, we consider it does because we get them better in June, and in the middle of June they are better again; we then consider them in their prime.

34,157. When does the summer fishing cease here?—Do you mean about Campbeltown?

34,158. Yes?—The boats leave us before the herrings leave us; there are still a good many herrings

on the coast at present; we consider the fish to be on the coast until October.

34,159. From the beginning of June until October?—Yes.

34,160. Have you any desire to commence the fishing earlier than the beginning of June?—No, not for my part, but the fishermen are the best judges of that.

34,161. What do you think of the close time?—I think the close time must be beneficial both to the fishermen and the inhabitants, because the fish caught during the spring months are of inferior quality, and on the other hand there are always curers who wish to get their stocks cleared out, so that they can give an advanced price for the new herrings when they come in.

34,162. Do you consider it is of great advantage to diminish the supply?—Yes; during the spring months only it is of great advantage, because the herrings are of inferior quality; I have got herrings here for 1*s.* 3*d.* a 100 in the winter season, which I may have to give 12 shillings for in June.

34,163. Have you as a buyer spent much money in the winter months in payments to the fishermen for herrings?—Sometimes I have spent a good deal and have made very little by it.

34,164. But have the fishermen made a good deal by it?—They were always making something and now they are making nothing, unless they are making it by other fishing.

34,165. Is there a difficulty in getting bait?—When they cannot get bait here the general run of our fishermen are in a state of starvation in consequence of the want of it.

34,166. What kind of bait?—A few herrings.

34,167. If the close time is rigidly observed they cannot get bait?—Yes; I think a clause ought to be inserted in the Act to give a little liberty, so as to enable the fishermen to catch herrings for bait; they ought to be punished if they took them for any other purpose.

34,168. You would let them get them for bait?—Yes; because without that they are very destitute.

34,169. Then the strict observance of the close time has been prejudicial to the fishermen here with regard to obtaining bait?—Yes.

34,170. And also in preventing them from obtaining cod, which fish might otherwise have been caught?—Not codfish alone, but turbot for the gentry and skate for the poor people. They have been deprived of all those fish from the want of herring bait in the close season. It would be just as well if they and their families were put into prison all the time, when they cannot get herring bait. That at any rate would keep them from starving.

34,171. You think it would be better to put them in prison?—Yes, they would not starve then.

34,172. It would be better to do that than that they should starve?—Yes; the want of herring bait is half starving them in the winter season.

34,173. Do you think it would be for the general advantage that there should be a relaxation in the close time with regard to procuring herrings for bait?—I know it is desired by them unanimously.

34,174. To be allowed to fish herrings for bait?—Yes.

34,175. Did the herrings form any great article of subsistence for the fishermen in the winter time?—The herrings alone?

34,176. Yes.—No, I do not think they did.

34,177. You do not think they used the herrings they caught at that time for food?—I think they scarcely used them at all.

34,178. (*Professor Huxley.*) When there was a winter fishing, did you get a ready sale for the fish you bought of the fishermen?—I sent them off to Glasgow and let them do the best they could with them.

34,179. Did they sell them there?—I expect they did.

34,180. Were the poor glad to get what fish they could?—Yes, it was the same as in Campbeltown.

34,181. Then was the supply of winter fish a benefit to them?—I cannot tell.

34,182. But you sold them?—Yes; and if they got any quantity at all they used them I believe as red herrings.

34,183. Did you get a ready market for your January and February fish?—Yes, and for the March and April fish; we took them at all times.

34,184. Then why do you wish to be prevented from having that advantage now?—I earned very little money by it, and persons ought to look to their neighbours a little.

34,185. What benefit is it to your neighbours to put a stop to it?—It would be depriving my neighbours of a benefit to go on with it.

34,186. Was it not a benefit to yourself to have the market open to your fish in January and February?—Yes, and in the spring months, March and April likewise.

34,187. Was it not an advantage to you to be able to sell fish in the Glasgow market at that time?—Yes.

34,188. Then on what public grounds do you wish to have that privilege taken from you?—Because I know that I should sell rather more in the summer.

34,189. Do you think they are the same fish that come in the summer?—They are of the same quality. They are all the same fish that come down from the lochs and swim round the coast with the strong tides.

34,190. Do you think that the winter fishing injures the summer fishing?—I certainly do; I suppose there is hardly room to dispute that.

34,191. On the east coast are there two fishings, a winter and a summer fishing?—Yes.

34,192. Neither of those fishings hurts the other, does it?—It is considered that they come in different shoals from what they come in here.

The witness withdrew.

ROBERT HICKS called and examined.

R. Hicks.

34,193. (*Mr. Caird.*) Can you give us the number and tonnage of the boats employed in the fishery here?—I can give you the number only; the tonnage is not taken.

34,194. Can you give us the number of men in each?—Not the number of men, only the number of vessels.

34,195. Can you give us the number for several years?—From 1860.

34,196. Then will you give us the number of vessels employed in the fishery from 1860 to the present time?—In 1860 there were only 25; in 1861 there were 143; in 1862 there were 161; in 1863 there were 179, and in 1864 there were 200.

34,197. There are now altogether 200?—Yes.

34,198. Then there has been an addition each year of about from 20 to 25 per cent.?—Yes.

34,199. Can you give us any further information with regard to the fishing here?—I can only make the same remarks which have already been made. It has been reported here constantly that there is great complaint along my district that the fishermen are not allowed to take herrings for bait. The fishing operations in point of fact have almost entirely ceased on account of that difficulty. They do not seem here to be discontented with the operation of the close time so far as it has put a stop to trawling. On the contrary, they think it rather beneficial in that respect, and that it tends to improve the fishing, but they complain of all their other fishing operations being stopped on account of the want of herring bait.

34,200. According to your own observation and your own knowledge, is that a great complaint among the fishermen here?—Yes, and in a great part of the

CAMPBELTOWN.

R. Hicks.

10 Aug. 1864.

district there are not even buckies to be got, so that there is no bait at all.

34,201. Then is the white-fishing stopped entirely?—Yes, it ceases entirely.

34,202. Do these returns include other ports besides Campbeltown?—There is no other port. It only includes the port of Campbeltown, but it includes an extensive district.

34,203. Name the other places which it includes?—I can give you a list of the places and also the number of boats at each.

34,204. Will you be good enough to do so?—The return is as follows:—

	Half-decked.	Open Boats.
At Campbeltown - - -	75	34
Carradale, Saddell, and Torrisdale	16	16
Skipness - - - -	17	22
Gigha - - - -	6	6
Muasdale - - - -	1	0
Ballachontie - - -	1	2
Pans - - - -	2	0
Southend and Island of Sanda -	2	0
	120	80

Total 200.

34,205. Is there any other matter connected with the interests of the fisheries on this coast which you desire to mention to the Commission?—Nothing more than you have already heard. You have put one or two questions as regards the lobster fishery. That fishery I believe has really very much decreased along the whole district, and as far as I can learn I understand that it is in consequence of fishing the lobsters throughout the whole of the year. They are fished in this district principally in the close season, because in the winter season, when lobsters are generally taken, the weather is so bad that it is impossible to work it to any great extent.

34,206. Then do you attribute the falling off in the lobster-fishing to their being fished in an improper season?—Yes, they admit that themselves; they fish them in the breeding season.

34,207. (*Professor Huxley.*) What time of the year is the breeding season for lobsters here?—During the summer season.

34,208. Do they observe no close time here?—None at all.

34,209. Not for lobsters?—No, they fish them all the year round.

34,210. Is not the hen lobster very much in request when she is full of eggs?—Yes.

34,211. If a close time were enacted to prevent the fishermen from catching them when in that state, they would not get as good a market for their fish?—The hen lobster is at all times the best fish, and fetches a proportionately large price.

34,212. There was something said a short time ago about a fishery police here; can you tell us what that means?—The police are formed under the Fishery Convention Act, and they go through the whole district.

34,213. Do you mean the Convention Act or the Close Time Act?—The Herring Fishery Act, the Close Time Act.

34,214. How many police are there in this district in consequence of that?—Two are stationed here. I cannot tell where else they are stationed. The two stationed here take a considerable district, and go through it constantly.

34,215. Who pays those police?—The Fishery Board at Edinburgh.

34,216. And is it their sole duty to see that the Act of 1861-2 is not broken?—Yes.

34,217. And that the close time is duly enforced?—Yes.

34,218. And that trawling is put down?—Yes, it is their duty to detect it if it is carried on.

The witness withdrew.

E. Munro.

EDWARD MUNRO called and examined.

34,219. (*Mr. Caird.*) Do you belong to the county police?—I belong to the fishery police.

34,220. Are you not connected with the county police?—We are under the same control as the county police.

34,221. You are under the superintendence of the county police?—Yes.

34,222. And under their orders?—Yes.

34,223. Do you take your instructions from them?—Yes, at times; but we have a Fishery officer here along with us, and we act under his instructions.

34,224. Have you any other duty to attend to than the regulation of the fishermen?—No, except anything happens in our district when we may perhaps go to it.

34,225. Then you act as criminal officers as well as fishery police?—Yes, we assist the rest at any time we are asked.

34,226. Are you stationed at certain places?—Yes.

34,227. What is the nature of your instructions as a fishery police?—We are stationed to look after the fishing, to see that no trawling is carried on in the open season or in the close time. We also look after the boats to see that they are properly numbered, both on the bows and mainsails.

34,228. Have you any instructions with regard to the size of the mesh of the nets?—Yes.

34,229. And you look after the strict observance of the close time as fixed by law?—Yes.

34,230. Have you been on this station for some time?—Yes, I have been backward and forward on this station for some years. I have been also in Loch Fyne, and I was in the Kyles of Bute last year.

34,231. Have you had occasion frequently to interfere with the fishermen in pursuance of your instructions?—With nothing but their numbers, and if they were fishing out of season.

34,232. Has there been any attempt this season, either to fish in the close time, or to fish with the trawl net?—There were two smacks seized for having fresh herrings on board in the close time.

34,233. Were they fishing with drift nets?—I believe they were fishing with the trawl net. We found a trawl net on board one of the smacks.

34,234. What was done upon that occasion?—They have not been tried yet. They got their smacks out for the fishing under security.

34,235. They have gone to the fishing?—Yes.

34,236. And the trial has been postponed?—Yes.

34,237. Was it postponed at their desire, or by the desire of the Fishery Board?—I cannot tell you, but the Inspector of the Fisheries was down, and when they gave security, he allowed them to have their boats until the case could come on. The case has not come on yet.

34,238. Has there been any seizure for attempting to fish with the trawl net hereabouts?—Not since the fishing has been carried on.

The witness withdrew.

A. McCann.

ARCHIBALD MCCANN called and examined.

34,239. (*Mr. Caird.*) Are you a fisherman here?—Not in the town of Campbeltown.

34,240. But in the neighbourhood?—Yes.

34,241. What kind of fishing do you follow?—Herring-fishing.

34,242. What is your opinion with regard to the close time, its advantages and disadvantages?—It is my opinion that it is an advantage.

34,243. What is the advantage?—The advantage is that the fish are out of season altogether in the

CAMPBELTOWN.

A. McCann.

10 Aug. 1864.

spring months of the year, and yet at that time they were scattered about by the trawlers, and all the country was running after them. In the spring of the year they lie very close into the land occasionally, but they got at them with their trawls, and dispersed them altogether.

34,244. Suppose there was an end put to the trawl-fishing, would there be the same objection to the winter fishing then?—I do not approve of winter fishing here.

34,245. Not at all?—No.

34,246. Has it not been a loss to you that you have not been allowed to fish for bait or for food in the winter time?—I say nothing about that. I do not follow any other kind of fishing except herring-fishing.

34,247. Then is the loss of bait no loss to you?—No.

34,248. You are not a regular fisherman all the year round?—No.

34,249. Do you follow some other business?—Yes.

34,250. Have you anything to bring before us in addition to what has already been stated to us by the other witnesses?—I have to state that I am very much against trawling altogether.

34,251. What is your reason for being against it?—Because I think it destroys the drift-net fishing.

34,252. Does the summer trawling in your opinion destroy the drift-net fishing?—Yes; in more than one way it does so.

34,253. Will you tell us the different ways?—There is one thing it does, and that is, it chokes up the market. If they get a heavy haul with their trawls, I may be fishing away with my drift nets, and when I get into the market, I shall only be able to get a few pence a hundred for the fish I have brought, in consequence of the market being choked up with trawled herrings. They can sell them much cheaper, because they catch them in a much greater abundance.

34,254. Are theirs as good herrings as yours?—Their herring is sometimes a better herring.

34,255. Are they ever worse?—Yes, they are, because they catch them both small and great; they get all sorts in the trawl.

34,256. Are there small herrings to any great extent caught in the trawls in the summer season?—I have seen them caught small and great. I have seen them too small to be sold in the market, and smaller than any drift net would catch them.

34,257. What are your other reasons for objecting to trawling?—I think it is altogether disadvantageous to the fishing, I think it disperses the fish and scatters them abroad. They do not get the slightest rest; they have no peace. They are not allowed to go along the channel, and when they do come in a bay, the drift men dare not go near hand to them, because the trawl men will cut their nets away or play some mischief with them. All the trawlers I have had to deal with I have found to be very unreasonable men.

34,258. The trawl net cannot be used except where the fish pass along the coast? Does the drift net in any way disperse the shoal?—There is no mistake that it does.

34,259. Then it has the same effect?—Not the same effect; the drift-net gives the fish fair play; it is a different thing to shoot a bird sitting, and to give him liberty to go on his wing; no regular sportsman would fire at a bird asleep.

34,260. Have you any other objection?—That is all I have to state.

34,261. (*Professor Huxley.*) What time do you shoot your drift nets here, is it before sunset?—Not at all, the regular time is when the cutter takes down the flag, then we shoot our nets, but at home there is no such thing, we shoot when we think the herrings will go into the nets.

34,262. Do you ever shoot an hour or two before sunset?—We do actually spoil ourselves some nights, when the fleet is too heavy, by doing so. For instance, if you have a good fishing in a limited spot one night, the fleet will gather there next night, and will not have room to fish. Every man will wish to have the first shot, and frequently by shooting their nets too early, they spoil the fishing for that night totally.

34,263. If you were inclined to shoot your nets two hours before sunset would you do so?—Not at all.

34,264. Why not?—I do not approve of it.

34,265. But there are other fishermen who do it?—Yes, I have seen them do it.

34,266. Did nobody interfere with them for doing it?—I never interfered with them.

34,267. Did you ever know of any one interfering; does the commander of the cutter interfere; is there a Revenue cutter down here?—It is not down here early in the season, but it is up about Loch Fyne, further north.

34,268. Is there anything to prevent a man from shooting his net when he likes?—There is a steamer up in Loch Fyne, well manned, I believe.

34,269. Did you ever know anybody interfere with you down here for shooting your nets when you pleased?—No, I never knew of anybody.

34,270. The trawl nets are always used late at night are they not?—Late at night and in dark weather. In moonlight they are seldom of any use, I believe.

34,271–2. They are never used by daylight?—I do not think they are, they have never been used in daylight to my knowledge.

The witness withdrew, and the inquiry was adjourned until the 13th of August at Peel, in the Isle of Man.

Peel, Isle of Man, Saturday, 13th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

LESLIE LOCKHART called and examined.

PEEL.

L. Lockhart.

13 Aug. 1864.

34,273. (*Professor Huxley.*) You are Collector of Customs here?—I am principal coast officer. I do the duties of Collector of Customs here.

34,274. Are all the fishing boats registered in the Customs?—They are not all registered.

34,275. What rules are observed by you for registering the boats?—All vessels carrying cargoes are obliged to be registered, but fishing boats do not register in all cases.

34,276. Are not the boats numbered by the Customs?—They are all numbered in the port but they are not all registered. All the vessels that carry cargo are obliged to have registers. The fishing boats do not all register because they do not take cargoes; they simply fish.

34,277. Still they are all numbered?—Yes.

34,278. So that you are able to give a notion of the total number employed?—Yes.

34,279. How many fishing boats are there here?—170. There are a few old boats that are not numbered, in fact they are useless, but there are 170 boats belonging to the port.

34,280. And can you give us the number of boats belonging to the other ports in the Isle of Man?—Fishing boats?

34,281. Yes.—I am not able to give that accurately. I believe there are none at Douglas or Ramsey to my knowledge.

34,282. How many are there at Castletown?—About 120.

PEEL.

L. Lockhart.

13 Aug. 1864.

34,283. How many at Port Erin?—They are included in the return for Castletown.

34,284. And Port St. Mary?—They are included also.

34,285-6. Then are there altogether under 300 boats in the island?—I should say that about 300 will be near the number; that is of boats from 15 tons and upwards—fishing boats. There are a great number of four-oared boats, but they are under 15 tons, and the law does not require them to register under 15 tons.

34,287. Do the small boats have no numbers?—No; they are merely four and two-oared boats, but they go out and fish with long-lines during the winter months.

34,288. Are all the boats engaged in the herring-fishing numbered?—Yes.

34,289. So that you can form a notion of the number of boats employed in the herring-fishing?—Yes.

34,290. Apart from those employed in the long-line fishing?—Yes.

34,291. What is the average tonnage of those boats?—From 16 up to 30 tons.

34,292. Are they decked boats?—There are some which are decked, but the decks are sometimes taken off. They put on decks when they are going to carry cargo during the winter months, but when they fish they take them off. All the fishing boats are half-decked boats. They have a forecastle deck. The crew are under the forecastle, which is simply a shelter for the crew.

34,293. Do the boats carry any particular kind of vane at the masthead?—No, nothing of that sort that I am aware of in particular.

34,294. Do foreign boats fish off the coast of the Isle of Man—French or Dutch boats?—No.

34,295. Do you never see any foreign boats here? No, I never saw any foreign boats.

34,296. Have you long known the Isle of Man?—For about 17 years I have been connected with the Customs.

34,297. Has the number of herring boats increased much within your knowledge?—They have increased at Peel.

34,298. Have they increased in other ports?—I think they have increased in Port St. Mary also.

34,299. Has the tonnage of the vessels increased too?—The boats are of a larger class than they were formerly.

34,300. And are they more expensive?—Yes, they are more expensive.

34,301. What is the average cost of a herring vessel now, with all her nets and fittings?—I am not aware.

34,302. Perhaps some of the fishermen will be able to tell us better?—Yes.

34,303. Are you aware whether the length of the fleets of nets has increased or diminished of late years?—I believe it has increased but I cannot say to what extent.

34,304. Still it has increased?—I believe so.

34,305. Do the Customs pay attention to the size of the meshes of the nets here?—No.

34,306. Does anybody?—There is a Fishery officer who resides in Douglas and attends to those matters.

34,307. He is not in Douglas now?—No, he has gone down to Scotland to attend to a fishing station there.

34,308. Are you aware whether there are any local regulations about the fisheries here—any laws proper to the Isle of Man?—No; I never heard of any particular regulations that affect the fisheries.

34,309. I presume you are not yourself practically acquainted with the fishing?—No.

34,310. (*Mr. Lefevre.*) Is there not an admiral appointed here by the local government?—Yes.

34,311. And paid by the local government?—I believe he is paid out of the harbour fund by the government 5*l.* a-year.

34,312. Does he go out with the fleet of boats every night?—He is master of a fishing-boat, and he generally goes out with them. I have frequently seen him going out.

34,313. Does he give the order for shooting the nets?—Yes. He is in attendance now.

The witness withdrew.

R. Corrin.

Robert Corrin called and examined.

34,314. (*Professor Huxley.*) You are a boat owner here, Mr. Corrin?—Yes, I am.

34,315. And a net manufacturer also?—Yes.

34,316. Have you been long employed in that way?—Yes, for a good number of years.

34,317. How many?—Twenty years as a boat owner and net manufacturer.

34,318. Have you paid any attention to the fisheries?—Yes; I have paid some attention to them.

34,319. Can you tell us what the average cost of a herring-boat is with all its fittings?—With nets included?

34,320. Yes, with everything included so that it might be ready for work?—The cost of a fishing-boat at present would probably be about 240*l.* or 250*l.*, and of the nets about 150*l.*

34,321. A little under 400*l.* for all?—Yes, about 400*l.*

34,322. So as to be ready for sea?—Yes.

34,323. Is that a greater sum than was invested in a boat and nets 20 years ago?—Yes, it is nearly 100 per cent. greater.

34,324. And the capital invested in boats and nets is now double what it was 20 years ago?—Yes.

34,324*a*. And have the boats increased in value?—Yes. Our fleet at present, compared with what it was 20 years ago, including materials, is considerably more than double in value. It is nearly three times more valuable. I should say it has increased three-fold in value at the very least.

34,325. Can you tell me if there are any local regulations here respecting the fisheries?—The only local regulation I know of is, that we have an admiral here and another at Port St. Mary. They are subordinate, I believe, to the water-bailiff, who resides on the island; and if any dispute arises between the fishermen, it is their duty to refer it to the water-bailiff. Beyond that I am not aware of any regulation. I think formerly, the year before the Crimean war broke out, we were favoured with the visits of the Fishery cutter, which attended every year, but since then it has not paid us a visit at all. Perhaps its presence may have been convenient in preventing disputes that might arise from time to time.

34,326. Is there any close-time enforced here?—No.

34,327. What time does the fishing begin here?—About the 1st of June or perhaps the 20th of May.

34,328. What condition are the fish commonly in then?—They are very inferior.

34,329. Are they poor and thin?—Yes, thin and small.

34,330. Where do they get a market for them?—The few that are caught so early are chiefly sold on the island. Very few are exported at that time.

34,331. Is there any large number of boats employed then?—No; there are not so many then. The fleet does not generally go to the fishing until the commencement of June.

34,332. But a sufficient market is obtained for the

fish to make it worth the fishermen's while to catch them ?—I do not think it is of any advantage to them.

34,333. Do you think it is of no advantage ?—Well, these men live on the island and they are poor. They have nothing to do, and when they get into their boats they have a comfortable home and plenty to supply the necessaries of life.

34,334. They must earn that then by what they catch ?—Yes, they must.

34,335. Then it is a certain advantage to them to be able to go to the fishing ?—It is an advantage in one respect, but a disadvantage in another. My own opinion is it would be better for them if they only went after and took the herrings in their prime, but as there is no law to restrain them they will go.

34,336. Do you not think that the fact of their going shows that there must be a certain demand for the fish at that time ?—But if they were got in any quantity they would hardly be saleable at all. If they were sent to the English market they would scarcely pay the carriage.

34,337. Will not the fact that they are not worth anything in the English market operate as a natural check ?—Yes, but only small quantities are taken, and they are able to dispose of them on the island at a comparatively low price. The fish caught later in the season are worth much more money, nearly 150 per cent. more, and the fishing to which I refer has this bad effect : that when the early fish are sent into the market in a bad condition the gentlemen who get them on their tables are so disgusted with them that the result is, when the good fish come in they are not saleable. The consumers have not been pleased with the bad fish, and they think the good fish are as inferior as those which they have had before. The result is that the market is not as good as it ought to be. We are of opinion that the early fishing has a bad tendency in that way.

34,338. (*Mr. Lefevre.*) Have you found the market falling off for the good fish ?—At first we have.

34,339. (*Professor Huxley.*) Is it not the case with regard to all other commodities that the people depend on the quality of the things sent to secure a market ?—Very true ; but if this fishing was not proceeded with so early, but was allowed to rest until the 1st of June, when the fish were caught, they would be much more valuable and would be likely to produce 2*s.* instead of 1*s.*

34,340. Are you in favour then of some close-time being enforced ?—I am, at the commencement of the season.

34,341-5. If you had a close-time enacted what do you think would be the proper limit for it ?—Our late fishing ends about October. It should be a close-time then from October until the 15th or 20th of June.

34,346. Would you prevent all catching of herrings between October and the 15th and 20th of June ?—We have not found it profitable to follow them from October until June.

34,347. If it is not found profitable to practise the fishing does not that operate as a sufficient check without any legislative interference ?—It does to a great extent, but from the middle of May until the 15th of June there is a certain amount of temptation which some of the fishermen cannot resist. There are a few hundreds of fish to be caught of inferior quality, and the boats go out to sea in order to catch them, and although it does not pay them, yet they are well fed in the boats, the stores being taken out of the gross earnings. They are employed during that time and they are well fed, and there is, therefore, a strong feeling which induces them to go earlier than it is profitable for them to go.

34,348. How are the arrangements made between the fishermen and their employers; are the boats the property of the fishermen, or are they generally the property of employers ?—Both.

34,349. Do you know what kind of bargain is made between the employers and the fishermen ?—Most of the boats are on shares ; there may be eight owners or only one, and the fishermen may own two, three, four, or five, or even the whole out of the eight. They have 20 pieces of net which count as 10 shares ; each man has one share—has his own share. There are seven men and a boy, which make seven and a half shares. Then the boat takes two shares and a half ; that, with 10 shares for the net, makes altogether 20 shares ; that is about the rule, there may be a few over or a few under. The earnings are divided into 20 shares.

34,350. That is the gross earnings ?—Yes.

34,351. Are the stores first taken out of the gross earnings ?—Yes, the nets then get 10 parts, the crew seven and a half, and the boat two and a half.

34,352. If the men commence too early do they diminish their own profits ?—Yes, I think they do.

34,353. But they get the benefit of it nevertheless ?—They get some slight benefit, but if the earnings are not equal to the expenditure for the time being, there must be a loss.

34,354. Then would you have the close-time from the beginning of October until the middle of June, or somewhere thereabouts ?—What I should like to see is this, that none of our boats should be allowed to proceed to the sea for the herring-fishing until the 15th or 20th of June. I would allow the winter fishing to guard itself, but I think it would be to the interests of the fishermen themselves if they did not go to sea to the herring-fishing earlier than the 15th or 20th of June.

34,355. But suppose the herrings should make their appearance in large quantities on the coasts of the Isle of Man, as they do in other parts of the British Islands in January and February, would you prevent them from going out ? There are many parts of the British Islands where they appear in large shoals at that time. Would you think it proper to stop them from fishing then ?—By no means.

34,356. You would not wish to have any close-time that would prevent that ?—No.

34,357. In what condition are the herrings when they are first taken here ?—They are very inferior.

34,358-9. Are they fat fish ?—No, they are very thin.

34,360. What time do they become fat ?—About the middle of June.

34,361. When do you get them full ?—From the month of September on to October ; they go on to the banks then in a full state to spawn.

34,362. Whereabouts on the coasts of the island do these fish spawn ?—I believe the fish that are off here spawn off this district. My own idea is this, that there are different shoals of fish about the island which localize themselves in different districts in the water. There is a shoal of fish that inhabits the waters of the bay here and we find that class of fish every year ; we go round the island to the Tower and we find a different class of fish. A few miles to seaward and on towards the Calf of Man, we have the largest class of fish that frequents this part ; they are found along the different reefs of coral, and we believe that they go on those beds of coral and spawn there. When we go round to the Douglas fishing, at the commencement of September, we get another description of fish, different in flavour, colour, and size.

34,363. Do you get any fish off Douglas now ?—We are commencing to get them there now.

34,364. But you do not get them as early as you do here ?—No, those fish come in from extreme points off the mainland from St. Bees on the one side and Holyhead on the other. There is little or no coral to be found in all that district, and they come in to the coral at Douglas being the nearest beds for them. Nature has given them sufficient instinct

PEEL.

R. Corrin.

13 Aug. 1864.

to teach them that that is the place to go to for spawning, and as I have already told you there are a far larger class of fish there, but it is difficult to get at them in consequence of the coral.

34,365. The fishing you practice is drifting on the surface principally ?—Yes.

34,366. When they begin to spawn do you sink your nets ?—Not always; they do sometimes to fathom the bottom.

34,367. Do they do that on the other side ?—At Douglas, but they do not do it here.

34,368. Do you get spent fish on both sides of the island ?—I dare say they do; but as soon as they fail to get first here they go round to Douglas. The water is very deep here, there are few places where they spawn in this locality. They spawn off Douglas on the large coral reefs, and I think that is all our fishermen know about them.

34,369. Has there never been any winter fishing here for herrings ?—No.

34,370. Nor any signs or appearance of herring at that time ?—Frequently in those months we get herrings out of the belly of the cod and other fish.

34,371. Do you see any flights of gulls or gannets after the fish ?—We do see gulls here; they breed here.

34,372. But they are not after the fish as they are when the herrings come ?—No.

34,373. Is it a matter of fact that nobody has practised the winter fishing here ?—Yes.

34,374. What becomes of the herrings which are taken on this part of the coast at the summer fishing? —They are chiefly sent off to England.

34,375. Do they go fresh or are they cured ?—Some are sent away in a fresh state, and some with a little sprinkling of salt over them.

34,376. How are they conveyed ?—By steam vessels and by sailing cutters.

34,377. What is the chief market to which you send them ?—To Liverpool.

34,378. Is there a market in Liverpool for any quantity that can be caught ?—Yes, I think there is.

34,379. Are any of them cured?—Only very few of them.

34,380. Are they similar in quality to the Loch Fyne herrings ?—Yes, they are very similar.

34,381. What becomes of those which are caught at Douglas ?—They are chiefly cured.

34,382. Are they made into red herrings or cured? —Both.

34,383. Is it by reason of that that you have a Fishery officer here ?—I think so.

34,384. Have you ever cured herrings yourself ?—No.

34,385. Is the brand given here ?—No. It is used at Douglas, I think.

34,386. Is there much line-fishing practised here ? —There is a great deal.

34,387–8. In the winter time ?—No; in the spring of the year, commencing at the latter part of January. There is line-fishing also here by small boats during the entire winter. As soon as the herring-fishing season is over they put their long-lines on board and go out to sea and they follow that fishing until January. It is what our men call the low-sea fishing. By the end of that time they draw their small boats up and go out to the deep-sea fishing—cod-fishing—with larger boats.

34,389. What do they catch principally in the long-line fishing ?—Cod.

34,390. Any haddocks ?—Not many haddocks, but they do catch a few.

34,391. Was there ever much haddock-fishing here ? —Some years there has been, but it has been chiefly carried on with hand-lines.

34,392. Have you any reason to believe that the haddocks have fallen off here ?—Yes, and the cod-fishing for many years. We have not had much for a dozen years or so. In former times, in some years, we had great quantities of them.

34,393. Is there any trawling off the coast here ?—Not immediately off this coast.

34,394. Is it a bad bottom,—a rocky bottom ?—Yes.

34,395. (*Mr. Lefevre.*) Is there any trawling off Douglas ?—Yes, a good deal from Liverpool.

34,396. (*Professor Huxley.*) Where do the trawlers come from ?—Liverpool chiefly, and also from Whitehaven.

34,397. (*Mr. Lefevre.*) You recollect the fishing here for 20 years ?—Yes.

34,398. Has the quantity of fish taken increased ? —I do not think it has.

34,399. You do not think that the whole quantity of fish taken has increased ?—I doubt if it has. If you take the average of 20 years I do not think it has increased.

34,400. Then does each boat catch a smaller quantity than a boat would catch 20 years ago ?—No, I think not.

34,401. The whole bulk is not greater than it was ? —I think not.

34,402. When did the spring fishing commence ?— The cod-fishing do you mean ?

34,403. No, the herring-fishing. When did they begin to fish, was it in May ?—They did not begin to do that until about 14 years ago. There was a close-time many years ago. I think about 35 years ago. Then the fishing did not commence until the 15th of July, I think.

34,404. Was that by law ?—Yes.

34,405. Was that law repealed ?—I do not know, but it was obsolete at any rate.

34,406. Does the law still exist, but has become obsolete in practice ?—Yes.

34,407. Has there been any petition from the seamen to the Tynwald to enforce that law ?—Not that I am aware of.

34,408. Until 12 years ago was it fairly enforced ? —I am not sure that it was. I am rather inclined to believe that it has not been enforced during my memory.

34,409. I think you said that the admiral was appointed by the water bailiff ?—Yes, I think he is.

34,410. Is he paid out of the funds of the Island ? —I believe he is.

34,411. Then in former times did he give instructions to the fishermen to prevent them from going out before the time fixed for commencing the fishing ?— The regulations respecting the admiral are all embraced in the statute which now lies before you. The admiral receives the small sum of 5*l.*, and the vice-admiral 3*l.* The admiral is appointed over the Peel district, and the vice-admiral over the south district. Their duties are almost nominal, but the regulations are derived from that statute.

34,412. I see there is a clause in this Act of the Tynwald to this effect: "And lest that some person "should be too forward to fish before the fish well "ground about the land, and so might frighten it "away, it was also provided that no person or persons "whatsoever should attempt to shoot for the fish till "after the 16th of July, which then was propounded to "be the season for such fishing." Is that the clause to which you refer ?—Yes.

34,413. You say that regulation has now become obsolete ?—Yes; but that date, the 16th of July, is the old style; it is now the 5th of July.

34,414. The fishing begins now three weeks sooner than that ?—Five or six weeks sooner.

34,415. Do any boats come from a distance before the 5th of July ?—Yes, but not before the earlier

PEEL.

R. Corrin.

13 Aug. 1864.

period, the middle of May. The Cornish fishermen come down on the 9th or 10th of June.

34,416. Then those who commence before June are not confined to the island?—No, the whole fleet commence before that time.

34,417. Can you tell us at all what the authority of the Tynwald is over the sea adjoining the coast?—I am not prepared to say what it is, but I suppose the statute will explain it.

34,418. Has it any effect over the fishermen who come from England?—I am not prepared to say. A difficulty has arisen, and I believe that is the reason that the statute is inoperative.

34,419. How long is it since boats came from a distance to this island to fish?—Do you mean the Cornish boats and the Scotch boats?

34,420. Yes.—Before my time, 30 or 40 years ago.

34,421. Have they much increased of late years?—Yes. We have now 200 sail down the Channel.

34,422. Twelve or 14 years ago were there a considerable number fishing?—Yes; perhaps 100 or 150 sail.

34,423. Have they increased relatively more than the boats of the island?—I do not think they have. I think the increase is about the same.

34,424. Do you think the fact of the law becoming obsolete has had any effect upon the number of boats which come from a distance to fish here?—I think it has.

34,425. Namely, the difficulty of enforcing it?—Yes.

34,426. Enforcing it against strangers?—Yes.

34,427. Do the boats coming from a distance pay attention to the orders of the admiral with regard to shooting the nets at night?—They are supposed to do so.

34,428–9. But do they in fact?—I am not able to say. I am not often on the fishing-ground, and I am not prepared to answer the question.

34,430. Is there any regulation as to the size of the mesh?—There is.

34,431. Is that regulation attended to here by the fishermen?—Yes, it is.

34,432. Have you found that there has been any falling off in the size of the mesh of late years?—I am not aware that there has been.

34,433. You are a manufacturer of nets yourself?—Yes.

34,434. Are they all of the same size as formerly?—Yes.

34,435. What is the size they are ordered?—About 32 rows to the yard, but they gradually shrink to 33, 34, or 35, according to age.

34,436. Is there any demand for herrings early in the season for bait for catching the cod?—No, not here.

34,437. Do they not use the herring for bait?—No, they do not.

34,438. Is there any increase in the price you get for the fish now compared with what it was 20 years ago?—I am not sure that there is any difference; I think they are rather lower.

34,439. They are rather lower?—Yes, I fancy so; but it depends on circumstances. If there is a great take for two or three days in succession the market becomes depressed, but if the fishing is more slight then the fish are more valuable.

34,440. Since the introduction of steam is the supply more regular than it was?—Yes.

34,441. How do you account for the fact that, a considerably larger capital being invested in the fishing and the price having fallen, the quantity of fish taken is not greater than it was?—The presumption is that the fish are scarcer than they were 20 years ago.

34,442. Are the wages paid to the men the same as they were formerly?—They chiefly work on shares.

34,443. But on the average do the men make as much as they did?—I do not think there will be much difference. There is a great deal more nets used. Twice the number of nets are used that were used 20 years ago.

34,444. I understand you to say the whole capital invested has nearly trebled in the course of 20 years?—Yes.

34,445. And the number of foreign boats has doubled?—Yes.

34,446. And the price of fish is lower?—Yes, if anything, but there is not much difference.

The witness withdrew.

ROBERT JOHN MOORE called and examined.

R. J. Moore.

34,449. (*Professor Huxley.*) You are the chief authority here, I think?—I am high bailiff or chief magistrate of the town.

34,450. What are the limits of the authority of the Tynwald at sea—how far does it extend?—I think three leagues from the land.

34,451. Three leagues?—Yes, nine miles.

34,452. Then is that authority exclusively confined to natives of the soil of the Isle of Man, or does it extend over other British subjects fishing within these waters?—It ought to extend to all, but the difficulty is to bring it home to them. That Act to which you have referred is inoperative in consequence of the difficulty of bringing the question home to foreign vessels.

34,453. (*Mr. Lefevre.*) A question of jurisdiction has arisen, I presume?—Yes.

34,454. (*Professor Huxley.*) There is this difficulty, the Act of the Tynwald enforces a close-time up to the 16th of July?—Yes.

34,455. Now, I hold in my hand an Act of Parliament to carry into effect a Convention between Her Majesty and the King of the French which affects all British subjects, and the 27th article states, that "the fishing is free all the year round"?—Yes.

34,456. I do not know if this particular difficulty has ever arisen, but it clearly might arise. If under the Convention a French fishing vessel came and fished in your waters at the time the Act of the Tynwald forbids your own fishermen to fish, what authority would the Tynwald have to carry out that regulation?—No doubt there would be great awkwardness if such a case did arise. The Act of Parliament would override the insular act, provided the Isle of Man is named in it.

34,457. (*Mr. Lefevre.*) Not otherwise?—No.

34,458. (*Professor Huxley.*) Then unless the Isle of Man were specially named in the Act you think the authority of the Tynwald would predominate?—We hold in the Isle of Man that unless the Isle of Man is specially named in an Act of Parliament we are not bound by it; that has been held over and over again.

34,459. Is it your impression that under the authority of the Tynwald you could expel a foreign fisherman and prevent him from fishing within three leagues of your coast?—We should be glad to do so, but there is great difficulty and doubt whether we could do so.

34,460. Would the difficulty and doubt be so great?—Yes, so great that no authority in the Isle of Man would attempt to enforce the regulation.

34,461. (*Mr. Lefevre.*) Is the water bailiff here?—No, he resides at Ramsey. He is the sole judge of the Admiralty Court.

34,462. Does he appoint the admiral and the vice-admiral?—Yes.

34,463. Have any penalties under this Act been enforced against the fishermen?—Yes.

PEEL.

R. J. Moore.

13 Aug. 1864.

34,464. In the Water Bailiff's Court ?—Yes.

34,465. With regard to the time of shooting the nets ?—Not in my time with respect to the time of shooting the nets.

34,466. But with respect to disputes among the fishermen ?—Yes.

34,467. Cutting away one another's nets, and so forth ?—Yes, constantly.

34,468. Do you recollect any case of a penalty having been enforced 12 or 14 years ago, before this Act became obsolete, with regard to close-time ?—No, I do not. It was not in my time. I think there were two suits, though, two years ago before the water bailiff by the admiral for shooting before sundown.

34,469-70. Where was that ?—At Port St. Mary.

34,471. Has there been any petition on the part of the fishermen with regard to close-time ?—There has been no petition that I am aware of, but the general impression is it would be very desirable and beneficial if they were prevented from going until about the time mentioned by Mr. Corrin.

34,472. Do you think the 5th of July too late ?—Yes.

34,473-4. Would considerable hardship be inflicted by enforcing that ?—Decidedly, there would be a great loss ; but I think there ought to be a time limited, and I think the most intelligent fishermen are of that opinion, namely, that they ought to be restricted.

34,475. There is a regulation as to not fishing from Saturday morning until Sunday night observed here ?—Yes.

34,476. Is it observed by foreign boats ?—Yes.

34,477. Do the foreign boats pay attention to the regulation as to shooting at sunset ?—I think they do.

34,478. Do you know whether any question has arisen with respect to them before the water bailiff ?—I am not personally aware that any question has arisen. The admiral will be able to answer that question.

34,479. (*Professor Huxley.*) I suppose that this regulation about not fishing before the 5th of July must have been made by the Tynwald after careful consideration ?—Yes.

34,480. And after the interests of everybody had been considered ?—Yes, but it is 250 years ago.

34,481. Then it is to be assumed that at that time it was considered by practical men to be an exceedingly necessary resolution, and that, therefore, it was made law ?—Yes.

34,482. Nevertheless it turns out either that matters have so much changed, or else that the necessity of the case was so much mistaken, that such a regulation would be injurious ?—It would be injurious certainly.

34,483. I will put this case to you. Suppose that legislation were to take place now, based in the same way, upon the best opinion of persons practically engaged, is there not a possible risk that they might be as far wrong 100 years hence as those who framed this law were ?—Yes.

34,484. Is that not one of the great dangers of legislating on matters of this kind ?—Yes, it is.

34,485. It is quite clear that in this case it would be extremely injurious to enforce the law ?—Yes, there cannot be two opinions on that subject.

The witness withdrew.

T. Quirk.

THOMAS QUIRK called and examined.

34,486. (*Professor Huxley.*) You are admiral of the fleet at Peel ?—Yes.

34,487. Is your jurisdiction confined to Peel or does it extend to the rest of the Isle of Man ?—It extends all round the island, wherever the fish are to be got.

34,488. Your jurisdiction extends over the whole fishing of the Isle of Man ?—Yes.

34,489. Will you tell us what your duties are ?—When there is any notice necessary to be given to the fishermen, as there was three or four weeks ago, I send the bellman round to give such notice, so as to let them know how they are to fish.

34,490. The first thing you do is to give notice to the fishermen ?—Yes.

34,491. When it is a proper time to fish ?—I do not do that, but I let them know when is the time for shooting their nets. They have to shoot their nets about sunset, and my commission is not to let any man shoot his nets across the nets of another man, or to cut the nets, or do any harm. I also require them to give civil answers at sea.

34,492. Do you regulate the arrangements for the fishing ?—I have been a long time fishing myself.

34,493. Do you give orders to the fleet under you as to when they shall begin to fish ?—No, I cannot do that.

34,494. How long before sunset do you allow them by your authority to shoot their nets ?—Just at sunset I hoist a flag, and lower it when the time has arrived for shooting the nets.

34,495. Do you keep your flag up until it is sunset ?—Yes.

34,496. And then you haul it down ?—Yes.

34,497. And after it is hauled down they are allowed to shoot their nets ?—Yes.

34,498. If any man shoots his nets before your flag is hauled down what do you do with him ?—I can punish him if I like.

34,499. In what way can you punish him ; can you fine him ?—I can summon him before the water bailiff.

34,500. And make a complaint against him ?—Yes.

34,501. After you have made a complaint what does the Water Bailiff do ?—He gives judgment against the fisherman.

34,502. Does he fine him ?—Yes.

34,503. Can he seize his boats and nets ?—I am not sure of that, but if the men do shoot their nets before sunset they are the cause of all the damage that is done.

34,504. Is it an injurious practice to shoot nets before sunset ; do you think that it hurts the fishing ?—Yes, I do think so.

34,505. Do any of the fishermen wish to shoot their nets before sunset ?—Yes, some of them.

34,506. How long before sunset ?—If there is not anyone there they will shoot their nets an hour or half an hour before sunset.

34,507. How long have you been admiral of the fleet ?—For 30 years.

34,508. How many people have you brought before the water bailiff during that time for shooting their nets before sunset ?—I am not sure how many.

34,509. Half a dozen ?—I dare say I have.

34,510. Have you had occasion to bring up people for other misdemeanours, such as fouling each other's nets ?—If they did that I should bring them before the water bailiff.

34,511. How do you find out who does the damage ; do you ply about in a small boat among the fleet ?—No.

34,512. Do you engage in fishing yourself ?—Yes.

34,513. Then you cannot tell who does the damage ?—No ; but they can tell themselves.

34,514. Do you prefer their complaints to the water bailiff ; they could do that themselves if they liked, could they not ?—Yes ; but I bring them before the water bailiff.

34,515. You do not seem to have very much to do in your office of admiral ?—Sometimes I have.

34,516. You are not a very severe commander ?—No.

34,517. Is your office a paid office ?—Yes.

34,518. What is the pay attached to it ?—*5l.* a-year.

PEEL.

T. Quirk.

13 Aug. 1864.

34,519–20. (*Mr. Lefevre.*) Have you ever summoned any of the fishermen coming from a distance?—No; some of them were taken up when there was a cutter here.

34,521. A Revenue cutter?—Yes.

34,522. But you yourself never summoned any fisherman from a distance?—No; they come here sometimes and shoot before the Manx fishermen, but they go away again and we can hardly get up with them. They are Scotch boats and boats from other places.

34,523. Do many Irish boats come here?—Sometimes they do.

34,524. Are those boats larger than the Manx boats?—Yes, and larger than the Scotch boats.

34,525. Are the Scotch boats larger than yours?—About the same size; some of them are not so large as the Manx boats.

34,526. Are the people that come from a distance troublesome, do you get any trouble from them?—Some of them are and others are not.

34,527. You have not proceeded against them?—It is hard to get up with them. Perhaps they will be off to Ireland or some other part next day, and we cannot take them.

34,528. You have been engaged for 30 years in the fishing?—I have been for more than 30 years fishing; I have been about 50 years fishing.

34,529. Do you agree with the last witness that the whole quantity of fish taken is not larger than it was?—It is just about the same I think only at the beginning of the season the fish are not as large in size.

34,530. I mean the quantity, not the size; do you think there are more fish caught on the whole now than were caught 20 or 30 years ago?—Some years back, but it is a good while ago; there was a very good fishing about the Isle of Man and Peel, in the big bay as we call it.

34,531. But taking one year with another are there more fish caught now than there were in your early days?—I daresay there are; there are more boats now and the nets are better adapted for fishing.

34,532. Do you work more nets than you were in the habit of working formerly?—Yes, a good deal more.

34,533. Do you agree with the last witness that the price of the fish is not larger than it was?—I have seen the price larger and sometimes less, the price goes up and down.

34,534. But taking the average, is it not larger than it was?—No.

34,535. (*Professor Huxley.*) Do you agree with what was stated to us by Mr. Corrin, that the size of the boats has become greater and the fittings of them more expensive?—Yes.

34,536. What was the class of boat when you began fishing, 50 years ago?—There were no such boats then as we have now going to the fishing; they were smacks with one mast.

34,537. Were they smaller boats?—Yes, they were not as long on the keel as they are now.

34,538. And how was it with regard to the length of the fleet of nets?—We use three times the quantity now.

34,539. And is the number of fishermen greater than it was 50 years ago?—Yes, there are more now.

34,540. Is it a customary thing for fishermen to begin as boys on board fishing-boats and gradually to become the owners of fishing-boats?—Yes, the fishermen become owners of boats.

34,541. They become owners themselves?—Yes.

34,542. So that the capital which has been formed for the increasing quantity of fishing-boats has come out of the fishing in some way or other?—Yes.

34,543. Are you engaged in the long-line fishing at all?—No.

34,544. Not at all?—No.

The witness withdrew.

B. Gregor.

Benjamin Gregor called and examined.

34,545. (*Professor Huxley.*) Are you a fisherman belonging to this place?—Yes.

34,546. How many years have you been fishing here?—I suppose about 28 years.

34,547. Is there anything about the fishing that you wish to remark upon?—I do not know that there is very much. I have nothing to say further than I think that about the 5th of June would be a fair time for the boats to go to the herring-fishing.

34,548. Do you think it would be a good thing to have a restriction as to the commencement of the fishing, and that the fishermen should not be allowed to begin to fish until a certain time?—It would be better in one sense.

34,549. In what sense?—It would be better for them when they began to take any quantity of fish. They would then have a better market for them and a better price; what they have been getting a few years back early in the season has only been doing harm to the market, and getting the fish a bad name.

34,550. The fishermen catch them I suppose because they get some price for them?—Yes, they get some kind of price, that is to say, some do, but others get nothing at all.

34,551. Then why do they go on fishing?—Well you see the way is this, some begin sooner and others do not think it worth while to go after them, the fish are so small then that they go through the nets.

34,552. But surely they would not fish if it did not pay?—I can only say that it does not pay.

34,553. Then do not all the fishermen do it now?—There are two or three boats that do it, but if the whole fleet went out at the same time when those two or three go, there would be nothing at all for anybody.

34,554. Then is it not pretty sure that they will not practise the fishing without any special law on the subject?—I do not know about that.

34,555. What time do you go out yourself?—I went out this year about the 29th of May; I was out with the rest.

34,556. Would you like to see some law or regulation established to prevent the people from fishing before the 5th of June?—Yes, I think it would be better for the fishermen, that is what my judgment is.

34,557. If it would be to your interest to do that, why do you not agree among yourselves not to go out before the 5th of June? You do not find it necessary to make laws to prevent people killing their pigs before they are fat?—No, it would do very well as far as that is concerned, but then there are strange boats that would come here and they would be entitled to go out at any time among the fish; it would be very hard under such circumstances for our boats to be kept in the harbour while the strange boats are all going out receiving the benefit of anything they can get.

34,558. But would they do it if it did not pay them?—It is not likely; I should think not. I have seen at the first of the season, about seven years ago, all the vessels going out and then being obliged to come back again and take their nets on shore and abstain from fishing for another fortnight.

34,559–60. Have you ever seen the fish in May in such a good condition that they would fetch a good price?—No.

34,561. What do you think about the price of the fish, is it the same now as when you began fishing, or is it higher?—Yes, it is about the same; it fluctuates, but it is pretty much the same; it is sometimes more and at other times less, just according to the markets

PEEL.

B. Gregor.

13 Aug. 1864.

34,562. But, on the average, taking one year with another, do you get as much for your fish as when you commenced fishing?—Yes, just about the same.

34,563. On the whole, are there more or less fish caught?—As to more fish being caught I do not think there are.

34,564. And yet there are a great many more boats employed?—Yes.

34,565. And the fishing materials are much improved?—Yes, I went myself to sea not very long since and if I had had the same kind of gear which was used by the fishermen years ago, I need hardly have gone at all. We should hardly get as much as would pay our expenses if we used the old gear. The nets formerly were about 200 meshes deep and 72 yards long.

34,566. Is that each net?—Yes, that is what it used to be.

34,567. And now what is the length?—From 200 meshes deep it has increased to 300 and 400.

34,568. And at the same time the fleets of nets are much larger?—Yes, but at the same time I have seen more fish at one time in one of the smaller nets than I ever saw in one of the big nets.

34,569. If the fish remain at the same price and you get no more, where did the money come from that has gone to pay for the larger boats and larger nets?—Formerly the nets used to run three shares of nets to one man and now there are only two. The net now is half a share and a man is twice as much as a net, while it used to be three nets against a man.

34,570. The point I put to you is this, that if the total quantity of fish taken has not increased, and if the fish has remained at the same price, the total amount of money the fishermen have received year after year must have remained the same?—I cannot say that there is much difference, because the nets we used to have were 72 yards long but there were three of them against a man, but I have had as much fish in one of them as I could get now in the ones we are now using.

34,571. That is to say that the proportion of fish per man has really diminished?—Yes.

34,572. If that has been the case, and the total quantity caught has not increased, and the price has not increased, where has the money come from which has gone into your larger boats and larger nets. That is a difficulty I have at present. I think you must have taken more fish than you think, or otherwise if the fish has always been at the same price one cannot see where the money has come from?—I do not think that any boat has made more money at the latter end of the season for a share then used to be made in former times.

34,573. Has not the whole quantity taken been considerably more?—The nets and men have no larger share, but the number of boats has considerably increased.

34,574. Do you go long-line fishing at all in the winter?—Yes, I have been cod-fishing, but I have not been cod-fishing for the last five or six years.

34,575. What sort of bait do you use?—What we call mud lugs. They are a kind of whelk, or buckie as they call them here.

34,576. Do you get that bait in plenty?—Yes.

34,577. Is it better than herring bait?—We have no herrings at the time of the codfish.

34,578. Do you never use herrings then?—No.

34,579. Is the bait you use better than mussels?—Yes.

34,580. Do you ever use mussels for cod bait?—Yes.

34,581. Do you think that whelk is better than mussel?—We could not supply ourselves with a quarter of the quantity of mussels we should require here.

34,582. Is there any oyster-fishing off this coast? No.

34,583. None at all?—We have sometimes got some when we have been out here dredging for scollops when the haddocks were here. Sometimes then a man would dredge for oysters, and would perhaps get a dozen, or fifty, or something like that, of big oysters.

34,584. Did you use the scollops for bait?—Yes, for haddock bait.

34,585. Were they better than anything else?—Yes.

34,586. Has the haddock disappeared?—Yes, for a good many years now.

34,587. Was it ever found in great quantity off this island?—Yes.

34,588. How many years is it since it disappeared?—I suppose it would be in the teens of years now, 12 or 15.

34,589. Have they gone further out to sea, or what has become of them?—They have gone off the coast altogether.

34,590. You cannot get them now?—It is five or six years since we got any great quantity at the south of the Maughold Head Edge, but there are not many got here at all. Formerly I have seen great quantities here.

34,591. Is there any lobster-fishing about the coast here?—Yes.

34,592. Is there any considerable quantity of lobsters obtained?—No; they do not follow it up.

34,593. Do they catch the lobsters with lobster pots?—Yes, with cages.

34,594. Do you think it would be a productive fishery if it were followed up?—No, I do not think so.

34,595. Why not?—They are not very plentiful. Sometimes they get five or six, and sometimes only one or two.

34,596. Is there any crab-fishing?—Yes.

34,597. Is there much of it?—Not very much.

34,598. Then the great fishing here is the herring-fishing?—Yes; herring and cod.

34,599. Where do you get the cod in the greatest abundance?—We begin first to shoot half a mile and from that to two or three miles off.

34,600. On this side of the island?—Yes; that is for the small codfish, then when we commence the large cod-fishing we go about five or six miles off.

34,601. In what months do you follow that fishing?—In the months of February, March, and April.

34,602. Do you fish for them with long-lines or hand-lines?—Long-lines.

34,603. Has the length of those lines increased since you were first acquainted with the fishing?—Yes.

34,604. And also the number of hooks?—Yes.

34,605. Do you catch about the same quantity of cod or more?—Some years they do and in other years they do not get so much.

34,606. Taking one year with another has the cod fallen off on the whole?—It has not been so plentiful for the last two or three years as I have known it.

34,607. How many boats go to the cod-fishing?—Sometimes seven go out from here.

34,608. Not more than that?—No, and there are five big boats. Perhaps a dozen of the small boats will go.

34,609. Out of the port of Peel?—Yes.

34,610. How many go from the other ports?—From the other ports sometimes a score may be going after the big fish.

34,611. Are they large boats?—Yes.

34,612. So that there may be as many as 60 or 70 boats fishing?—No, not so many as that; perhaps between 20 and 30.

34,613. (*Mr. Lefevre.*) Is there any mackerel-fishing here?—No, there is not much mackerel-fishing; there is only what they catch in the nets sometimes.

34,614. In the herring-nets?—Yes.

34,615. Have you no boats that go out fishing for mackerel?—No further than that the fishermen may go out to catch some for bait.

34,616. For what do they use them as bait?—They use them to catch what we call carp.

34,617. Is that in the spring of the year?—In June, July, and August.

34,618. (*Professor Huxley.*) Have you noticed that a good herring season is followed by a good cod season?—No, I never noticed that.

34,619. Can you tell me what it is they call here the "veeskaddin"?—Some make it out that it is a herring or rather the herring fry.

34,620. Is it a smaller fish?—I have seen two kinds of that fry; there are some small and others four or five inches long. They are in shape like a herring. I have seen them tangled in one of the slack threads that may be found in a new net.

34,621. Some of them are four or five inches long?—Yes.

34,622. Did you ever find them in the stomachs of the herring?—No I cannot say that I ever did.

34,623. (*Mr. Lefevre.*) Where do you find the herring early in the season?—Out off here.

34,624. Just off this port?—Yes.

34,625. And later on in the season do you find them further down the coast?—No, we find them much on the same ground, but they shift according to the times of the tide.

34,626. Do the two tides meet here?—No. I mean the spring and the neap tides. We have them at the full and at the change here.

34,627. Do not the two tides coming down the Channel meet off here?—Yes, at the Contrary Head, about a mile from here.

34,628. Does that affect the fish?—I do not think it does.

34,629. Do you lose many nets from bad weather?—Yes.

34,630. Where do you run to when you have a north-westerly wind?—Sometimes we have to run to the other side of the island.

34,631. To Port St. Mary?—Yes.

34,632. And when you are at Port St. Mary do you find a strong tide against you and a difficulty in getting back?—Yes, I have seen some of the boats lost in trying to go forward.

34,633. Going round the Calf of Man?—Yes, one or two have been lost in some years.

34,634. Would it be a great advantage to the fishermen here to have the harbour at Port Erin improved?—Yes it would.

34,635. They would not be obliged then to run down by Port St. Mary?—No.

34,636. The harbour here is hardly large enough? No, it is difficult to come here in a gale of wind.

34,637. And Port St. Mary is much exposed?—Yes.

34,638. Are they going to improve the harbour here?—Yes.

34,639. Do you think you could take more fish if you had better harbours for your vessels?—Yes, we could get to sea more nights, whereas now we are obliged to remain in port.

34,640. Do you think the fish are here in great quantities if you could only get out to catch them?—Generally there are more fish on the other side than there are out here, and they are closer to the land.

34,641. Where is that?—At Port Erin; they may be got within a mile or two miles of the coast.

34,642. What time do you go round to the other side of the island:—In September.

34,643. After September do you not fish on this side at all?—No. Some years they fish here until October. I saw a very good fishing here on the 10th of October not very long since. It was as heavy a fishing as there was in the whole year.

34,644. On the 10th of October?—Yes, a few years ago.

34,645. But as a general rule you find it more advantageous to fish on the other side late in the year?—Yes, we generally go there to fish then and we find spawn fish. It is ground fish we find there.

34,646. Taking one year with another, do you make as much in wages now as you did formerly by fishing?—Well I think not, in a general way.

34,647. Do you yourself fish all the year round at one kind of fishing or another?—Not now, I did at one time.

34,648. Do you confine yourself now to the herring-fishing?—Yes.

34,649-50. Do you make as much now in the herring season as you did formerly?—Well I do not think that I do make altogether as much.

34,651. What is the difference?—We have more expenses to bear now.

34,652. Do you yourself own any nets?—Yes.

34,653. Do you own a boat?—No, not the whole of a boat, but I own part of one.

34,654. Have many of the fishermen here shares in the boats?—Yes, a good many of them.

34,655. Most of them?—Yes, most have got shares now.

34,656. Do many of the boats belong to the capitalists or do most belong to the fishermen?—I can hardly say, but I think the fishermen have as heavy a share in them as anybody else.

34,657. Twenty years ago do you think that the fishermen mostly owned the boats?—No

34,658. Were they owned by capitalists?—Some of them were.

34,659. Have any changes taken place in that respect during the last 20 years. Do you think the fishermen own more shares in the boats now than they did?—I think there are more fishermen who have shares in the boats than there were when I first went fishing.

34,660. Has this been a good season for the herrings?—No.

34,661. Did it begin early this year?—Yes, it did.

34,662. (*Professor Huxley.*) There are a good many trawlers off the Douglas coast, are there not?—Yes.

34,663. Do any of them put out from Douglas?—Yes.

34,664. How many sail?—I think there are two or three.

34,665. Are they large vessels?—About 40 tons I suppose.

34,666. When you are fishing off the Douglas coast do you ever find yourself interfered with by the trawlers?—Yes.

34,667. In what way?—They come with their trawl ropes across our nets.

34,668. Have you ever suffered any damage from that?—No, but I was with two boats last year and a trawler came right down between two trains of nets but he did not touch them as it happened.

34,669. How do you light your boats at night?—We have a lantern and a man on deck watching.

34,670. Have you only one light or two?—Only one.

34,671. Do you keep it burning all night?—Yes.

34,672. Then the trawlers could see where you were?—Yes; in the case I just mentioned the trawlers went down before dark.

34,673. And he did not get out of your way?—No, that trawl-boat belonged to Douglas.

34,674. Does it often happen that drift-nets are carried away by trawlers in the night-time?—No, not at Douglas; there are not so many of them fishing then.

34,675. But the trawlers that come from the English coast, do they get much in your way?—No, not very often.

34,676. What is the character of the bottom where you are fishing for herrings; is it a soft bottom fit for trawling?—It is a gravelly bottom and there are coral reefs.

34,677. Can the trawlers work over the coral ground?—Yes, it is a warty coral ground.

34,678. Do the trawlers do you any other mischief?—Some persons say that they break up the coral and disturb the beds at the time the fish are spawning.

34,679. Has there been much increase in the number of trawlers of late years?—No.

PEEL.
B. Gregor.
13 Aug. 1864.

34,680. Have you been able to trace any failure of the fisheries to trawling?—No.

34,681. Do you think that the fishery has not failed?—No.

34,682. There is no evidence that they do much harm?—No further than when they trawl on the ground in the spawning season. They do harm then because they fill their bags full of the spawn.

34,683. Have you ever seen that?—No, but I have heard the men say so.

34,684. Do you think it was herring-spawn they took?—It was fish-spawn.

34,685. But you have not seen it yourself?—No, but I have heard some of the men who have been trawling state that when they were on the beds they had the bags full of spawn.

The witness withdrew.

W. Kelly.

WILLIAM KELLY called and examined.

34,686. (*Professor Huxley.*) Are you a fisherman here?—Yes.

34,687. How long have you been fishing?—For about 20 years.

34,688. What kinds of fishing have you practised; line-fishing?—No, herring-fishing.

34,689. Only herring-fishing?—Yes.

34,690. Do you not fish all the year round?—No.

34,691. Is it usual for fishermen to cultivate land during part of the year and go fishing the rest?—Some of them do.

34,692. Is that your case?—No.

34,693. What do you do when you are not engaged in the fishing?—I am a carpenter by trade.

34,694. But do a good many cultivate land during part of the year?—Yes.

34,695. You heard what the previous witnesses stated with regard to the fishing here?—Yes.

34,696. Do you agree with what they have said?—Yes, what they have told you is near about the truth.

34,697. Have you anything you can tell us in addition?—I don't think I have.

34,698. What do you think about a close-time?—I think it would be good to have a close-time, but all the fishermen should be obliged to observe it. I would not let one fish and close the fishing to others. There are some men who come and fish within eight or nine miles of the place, and I don't think it would be right to allow those fishermen to continue fishing at the time when we are prevented from going to it.

34,699. Would you like to see a close-time?—Yes, but I would not like to have it too close.

34,700. What is your notion of a close-time?—Until about the 10th or 12th of June. That would be time enough to begin.

34,701. What do you think is the use of a close-time?—To enable the fish to grow bigger.

34,702. Why do you take fish if they are not in such good condition and you can get a better price for them afterwards?—Some men will not hold back and then we are all obliged to go.

34,703. Do you compete with one another?—Some wish to go and others do not.

34,704. Do you think that those who go do much harm to those who remain behind?—I can't say; they fish in other parts very early; in Orkney they fish in May, and all round the coast within 60 or 70 miles of here they fish in the month of June.

34,705. (*Mr. Lefevre.*) What time do you yourself begin the fishing?—The 1st of June.

34,706. (*Professor Huxley.*) For how many years have you begun at that time?—Within the last two or three years, that has been the earliest time with me. Formerly we never went before the 7th or 8th, and sometimes the 12th or 13th, until within the last couple of years.

34,706*a*. But the last two years you have been out on the 1st of June?—Yes.

34,707. What was your reason for going earlier?—I went out with the others to catch fish.

34,708. Did you catch fish at that time?—Yes, we did.

34,709. Did you get a fair price for it?—We got from 25*s*. to 30*s*.

34,710. Where were you fishing then?—Off Howth.

34,711. You got that fish not off the coast here but off Howth?—Yes, off that coast, 10 or 15 miles from Howth.

34,712. What time do you come here?—About the latter end of July.

34,713. What time does the fishing begin off Howth?—I don't know; whenever they think they can get fish.

34,714-5. Then as a rule it begins earlier there than it does here?—There is no rule there, each man goes when he likes.

34,716. Do you think that a wasteful destruction of spawn is going on in the bays and creeks around the island?—I don't think there is.

34,717. Is there much seining practised here?—No, I never saw any here.

34,718. Are there any small trawls used in the bays?—No, not about here; they have them in Douglas I believe.

34,719. I am speaking now of trawling here for fish?—No, I never saw any further than the trawl-boats at Douglas.

34,720. Do you mean large trawl-boats?—Yes.

34,721. Do you think they do you any harm?—No, the only harm they do is by taking the young of the herring.

34,722. Have you ever been on board a trawler when the trawl was hauled up?—No.

34,723. (*Mr. Lefevre.*) Do you use seine-nets in the bays?—Yes, I have seen small nets just for trawling on the beach.

34,724. In the bays on this side of the island?—On both sides.

34,725. Do they catch many small fish in them?—I have seen them catch blockins.

34,726. Are they fish large enough for the market?—They would be but they are caught too small; they are six or seven inches long.

34,727. Are there any young turbot?—No, nothing of that sort.

34,728. No mullet?—No.

34,729. Then what other fish?—Blockins, gilpins, flukes, and flounders.

The witness withdrew.

R. Quirk.

RICHARD QUIRK called and examined.

34,730. (*Professor Huxley.*) Have you been fishing here for many years?—I am a fisherman all the year round.

34,731. How many years have you been fishing?—For 27 years.

34,732. Do you do nothing but fishing?—Not a ha'porth.

34,733. Then you maintain yourself entirely by that?—Yes.

34,734. Do you fish for herrings in the summer?—Yes, and for codfish, conger eels, and all kinds of fish.

34,735. What do you think about a close-time; do you wish to have a close-time for herrings?—No,

not at all, I would rather leave every man to his own chance as it is now.

34,736. What is the earliest time you begin herring-fishing ?—I have been out on the 29th of May.

34,737. Have you ever been earlier than that ?—No.

34,738. Do you ever want to go earlier than that ?—That is just according to how we find the fish. If we are out with our long-lines fishing in the deep sea, we have nine or 10 men in a boat who want something to do, and if we see the fish jumping out of the water it is natural that we should go after them. Of course we want to go as early as we can get a fishing.

34,739. What is the earliest date in May that you have seen the herrings in good condition ?—I have seen very good herrings on the 1st of June.

34,740. But I was asking you about May ; what is the earliest date in May that you have seen herrings in good condition ?—We don't see very many of them good in May.

34,741. Then do you not go to the fishing in May as it is ?—We don't make a regular practice of it, but some men go a little earlier than others.

34,742. You go according as you see fish ?—Yes.

34,743-5. But it appears there are some people who fish the herrings earlier ?—Yes, there are some who fish them earlier than others.

34,746. Do you know any fishing as early as the 15th of May ?—I have fished earlier than that, but it is a good many years ago; once I fished on the 12th of May.

34,747. But that is not done generally now ?—No.

34,748. Was there any fishing last season as early as the 15th of May ?—No, I think not. About the 25th or 27th was the earliest.

34,749. If there is no sign of the fish do they not begin as early as that ?—No, they begin as early as they can because they think that a shilling or two earned is as good then as now.

34,750. (*Mr. Lefevre.*) Was your boat one of the earliest out this year ?—No, we were not the earliest. It was about the 1st of June that we went. There were others earlier.

34,751. (*Professor Huxley.*) Do you think that if the fishermen looked to themselves they would not fish too early ?—Yes. The fishermen know when to go to fish. They are not altogether so stupid as not to know what is best for their own interest. I think they ought to know best ; there is no mistake about that. If you were following a trade you would know better what to do than others who were not following it.

34,752. You would rather let things be as they are ?—Yes.

34,753. You would rather let everybody have their chance ?—Yes.

34,754. Is that the general opinion among fishermen ?—Yes ; we should like to have the fishing in our own hands.

34,755. Are you of opinion that if the fish are not in good condition and will not fetch a good price that they would not be worth catching ?—If the fish are good the markets are good, and if the fish are small the markets are not good.

34,756. Is there anything else you wish to bring before us ?—No, except that the trawl-boats in Douglas frequently work over our long-lines.

34,757. Do you fish on the Douglas side ?—Yes; 14 or 15 miles off from the light ship at Douglas.

34,758. What sort of bottom is it there ?—A sandy bottom.

34,759. Do you get cod on the sandy bottom ?—Yes, any amount of cod. Sometimes we fish as far as St. Bees Head.

34,760. Do the codfish generally like a rocky bottom ?—No, a sandy bottom. I think they come to spawn upon the coral beds in January and we begin to fish for them then.

34,761. Is it good ground for trawling over ?—Yes ; the trawlers do us a great deal of harm. One of our linescosts about 2*l.* and we have 10 men in a boat, and they take the lines away as well as annoy the crew.

34,762. Do they carry away anything besides the long-lines ?—Yes, the long-line buoys also.

34,762*a*. The lines are properly buoyed ?—Yes.

34,763. Cannot the trawlers see the buoys ?—Yes, but they take no notice of them. They don't trouble themselves about the buoys. They will not take the trouble to look out, and they will pass over our lines and break them all.

34,764. Cannot you find out who does that ?—We could find them out but it is of no use to do so.

34,765. Have you no means of getting the number ; could you not bring him up ?—That would be of no use.

34,766. Surely if you could bring it home to him you would get a remedy ?—All you would get would be a lot of jaw.

34,767. What do they catch in trawling on that ground ?—Ray, flukes, and several kinds of fish.

34,768. Flat-fish generally ?—Yes.

34,769. Do they get much cod ?—No, them chaps are too wide-a-wake for them.

34,770. Do they get out of the way again ?—I don't know if they get out after they get in.

34,771. At any rate they do not catch much cod ?—No, they got a deal of haddocks formerly ; they have thrown away tons of them.

34,771*a*. Was not the haddock a good fish for them ?—Yes.

34,772. Why did they not take them to port as they caught them ?—They did.

34,773. I thought you said they threw them back again ?—No, bless you. If they get plenty of haddocks they do well.

34,774. Do you get as many as you used to do ?—No, not for years.

34,775-6. How many years is it since they have fallen off ?—About seven years ago, in the month of September, after our boats came home from Douglas.

34,777. What is the reason of that falling off ?—I cannot tell.

34,778. Has the quantity of cod fallen off on the cod banks ?—Yes, they are not as plentiful as they used to be.

34,779. To what do you ascribe that falling off ?—I don't understand it. I cannot tell.

34,780. Is the damage done by the trawlers confined to sweeping away your lines ?—Yes ; they do much mischief in that way.

34,781. Do they damage the bottom ?—Yes, they break the coral beds where the cod and herring go to spawn. They break it all up and tear it away.

34,782. Have you ever seen the contents of a trawl net as it was hauled up ?—I have never been close to them, but I have seen them hauled up from a distance.

34,783. Did you ever see spawn in them ?—No.

34,784. Then what makes you think that they take the spawn ?—They have a beam, perhaps, 50 feet in length, and there is no mistake that that takes up the spawn. It goes across the coral beds and brings the spawn up ; it tears it all away. I have seen plenty of young fish and herring spawn myself.

34,785-6. Is there anything else you wish to tell us ?—I cannot tell you anything else with regard to the long-line or the herrings.

34,787. (*Mr. Lefevre.*) Do you fish for congers ?—Yes.

34,788. Where ?—About the middle of the Channel.

34,789. When do you fish for them ?—Four weeks after we finish the cod-fishing.

PEEL.

R. Quirk.

13 Aug. 1864.

34,790. Are they in great abundance?—Yes, some get good shots and others have them light enough; it is according to the tides.

34,791–2. What bait do you use for the conger?—Bits of himself.

34,793. How many boats go after the conger?—Six or seven.

34,794. How many after the cod?—Seven boats go from Peel, and 14 or 15 from Port St. Mary. They don't come to fish on this side; they go to the Douglas side.

34,795. Have you lost lines?—Yes.

34,796. How often?—Several times.

34,797. What amount of damage has been sustained in that way; how much would they be worth?—About 2*l.* a piece. There are 10 men in a boat and each has a line which costs about 2*l.*

34,798. Have you tried to get the names of the trawlers that have taken away your lines?—As I told you before it would be of no use. I believe they are the biggest blackguards in the world.

34,799. Are they Liverpool boats?—They are English boats.

34,800. Are they numbered?—Yes.

34,800*a*. Have you not tried to take their numbers?—I could not be bothered with them; it is of no use at all.

34,801. How many herring-boats do you think go out as early as the 15th of May?—I don't know of any who go out as early as that. I did not say that they were going out then. Some go out between then and the 29th, but their regular time is from the 1st to the 20th of June.

34,802. I thought you said that you yourself went out this year on the 29th of May?—Yes.

34,803. How many boats went out then?—Very few; two or three. They don't make much of it and most of the fleet remains in.

34,804. Then the quantity of fish taken by them is very small?—They are not so small. There are some marketable and some not.

34,805-9. They do not make a regular practice of it until the proper time?—No, they just go out for a shot or two for trial. The fleet does not go out until about the right time, namely, from the 1st of June until the 20th. Then you will see them all out.

34,810-1. (*Professor Huxley.*) At what time do you generally shoot your nets?—At sunset. There is one thing in connexion with that that I should like to see done away with; some of the fishermen shoot much too early in the night, and frighten away the fish.

34,812. Do you not wait for the admiral?—We wait for the admiral, but there are a good many others who do not.

34,813. Do you think it does harm to shoot your nets before sunset?—I believe that many hundreds of pounds are lost by that.

34,814. How does it do harm?—If you shoot your nets by daylight don't you think the fish would leave the place?

34,815. We want to know what you think?—That is what I think. If you shoot your nets early in the daytime you will find no fish in the water.

34,816. Do you think it breaks the shoal?—I can't say that.

34,817. Are there many persons in the habit of shooting their nets before sunset?—Yes, there is no mistake about that.

34,818. You would not allow them to shoot their nets until half-an-hour before sunset?—No, not if I had anything to say in the matter.

34,819. How long before sunset would you allow them to be shot?—I would not allow one net to be shot until the time that every boat according to the present practice has shot its nets.

34,820. You would not allow them to be shot before dark?—Yes; at sunset, but not before.

34,821. (*Mr. Lefevre.*) I suppose the persons who are damaged by shooting their nets before sunset are the fishermen themselves?—Yes, I believe that they lose a good deal of money by it. Fishermen are anxious to get their fleets of nets into the water, but I believe we lose more than we gain by departing from the rule.

34,822. Would you prefer shooting at sunset?—Yes.

34,823. You do not think it is advantageous to you as fishermen to shoot before sunset?—No.

34,824. Are there others who think that it is more advantageous to them to shoot before sunset?—Yes; I think there are. You don't seem to have a bad idea of it.

The witness withdrew.

F. L. M. Gelling.

FREDERICK LA MOTTE GELLING called and examined.

34,825. (*Professor Huxley.*) Have you been a practical fisherman?—I have not. I am an advocate, but I have been paying attention to the fisheries for some time back, and have been endeavouring to direct public attention to them.

34,826. How many years have you been paying attention to the fisheries?—All my lifetime. I was brought up partly in this town, where I was accustomed as a little boy to fish in a small way. I have paid attention all my time to the fisheries.

34,827. Is it your opinion that the fisheries are falling off; is the yield diminishing?—There are some seasons in which it has been bad indeed. I attribute that to the fisheries not being properly protected.

34,828. What mode of protection would you suggest?—I would have a close-season.

34,829. For all kinds of fish?—Yes; when in certain stages of spawning they should have protection. I have a letter here which I published in the "Manx Sun" on that very subject.

34,830. Would you apply that rule to the herrings?—Yes; I would enact a close-time for the herrings at least until the 14th of June.

34,831. On what ground would you do that?—On the ground that when the fish come here they are not in a state of perfection. In fishing them much at that time you would be apt to startle the fish and cause them to leave the coast.

34,832. Would you protect the fish during the time they are spawning?—Yes.

34,833. Are you aware that the herrings are not spawning then?—Yes, I am quite aware of that. They are only young fish not come to maturity.

34,834. If it is necessary to protect the fish when they are spawning would it not be necessary to enact a close-time which should be in operation when they are spawning?—Yes.

34,835. Then you would have another close-time in August?—Yes, when the season of spawning is on. When they are caught in August they are full of spawn; the spawn falls from them. It is not raised up with the fish but detaches from them.

34,836. Are you aware that fish are caught in Scotland in enormous numbers in that very spawning season, and that that is the condition upon which the full Crown brand is attached to them?—I may be wrong, but I attribute the falling off to that.

34,837. What I wish to put to you is, whether you consider that there is evidence that the catching of fish in that state does any harm to the fisheries, seeing that it has been going on the east coast of Scotland for a great number of years?—Yes, on the same principle that killing a laying hen would destroy the brood. I attribute the diminution here to that cause. I cannot say anything about Scotland; I am not acquainted with the fisheries there.

34,839. You heard the statements of the fishermen who have been called before us?—Yes, I heard their evidence.

34,840. They do not speak of any falling off; they say that the average catch is about the same?—I think a few years ago the catch was larger.

34,841. But taking one year with another the herring-fishing is very variable everywhere?—Yes.

34,842. But the average catch here has remained pretty much the same for some years?—That may certainly be, and yet the average catch might have been greater if the fish were protected at the proper time.

34,843. It has been stated to us that the fisheries have fallen off, and if such be the case we must endeavour to ascertain what the cause of the decrease is; but the evidence brought before us does not seem to show that the fishery has fallen off. You have heard the evidence which has already been given?—Yes.

34,844. As a matter of fact it does not show that there has been a falling off?—It stands to reason that if you destroy the spawn you diminish the quantity of fish.

34,845. Whatever may stand to reason it seems to be the fact that the fishery has not fallen off?—Yes, I believe so.

34,846. It is rather premature to seek the cause of a falling off when the falling off does not seem to exist?—Yes. Do you limit your inquiries to the herring-fishing alone?

34,847. No, it extends to all kinds of sea fisheries?—Then there is a salmon fishery.

34,848. We have nothing to do with the salmon fishery?—There is also an oyster fishery.

34,849. Are you of opinion that the other fisheries have fallen off?—Yes; the haddocks have very much decreased, but I don't know the cause of that. I remember that not many years ago, perhaps seven or 10 years ago, there were excellent takes of haddock, and most excellent fish they were, next to the whiting. There is another circumstance of great importance to the fisheries. A breakwater is now being constructed at Douglas, and greater takes of whiting have been got there than we have ever known before. Everybody says that that is owing to the breaking up of the ground which enables the fish to get the little animalculæ there.

34,850. Do you think that trawling is injurious?—Yes.

34,851. On what ground do you think that it is so?—On the ground that it is injurious to the young fish. I have seen a trawl-net hung up to dry. I have seen a number of small worthless fish and small flukes not worth collecting lying under the nets. They were so small that they would not be worth taking home. They were left there to waste.

34,852. Has trawling been going on in the bay of Douglas for any length of time?—Yes.

34,853. Is there the same number of trawlers there now that there was in former times?—I don't know. I have lived in Castletown for many years.

34,854. Is there any trawling on that side of the island?—No, I think not.

34,855. (*Mr. Lefevre.*) Is there any ground for trawling on this side of the island?—No, the trawling is principally at Douglas.

34,856. You are aware that soles are supplied mainly by the trawlers?—Yes.

34,857. Would there be any other method of supplying the market with soles if trawling were stopped?—I think not.

34,858. Is that a considerable article of consumption in this island?—Yes, they always fetch a high price.

34,859. Do you think the destruction of other fish is so great as to counterbalance that advantage?—I think so. They destroy quantities of small fish and I think they are sold by the measure.

34,860. Do the poor buy them?—Even the poor will scarcely buy them; I have seen them almost altogether wasted for want of a purchaser. They were so small that they were sold by measure. I have seen quantities of such fish brought to the market, but how they had been caught I am not certain.

34,861. When you used the word trawling just now did you mean the seine-nets or beam-trawl?—I don't think that there are any seine-nets here.

34,862. Then you spoke of beam-trawling?—Yes, I mean trawling on the beach.

34,863. Then what you mean is not beam-trawling?—What I refer to is trawling in the bay. They take a lot of small fish on shore which are considered almost worthless.

34,864. Is that largely practised in the bay of Douglas?—I cannot say; I was never out with a trawler at all.

34,865. Then what you object to is in reality shore seining; is that largely practised here?—Not very much; but I know that it is practised.

34,866. Do you think that in the limited extent to which it is practised it has done harm?—Yes, I do. I have heard fishermen complain of it in Castletown In that town you will be able to get a good deal of evidence on that subject from experienced fishermen. I will hand you in a newspaper published in May 1849, which gives a report of an inquiry on that very subject.

34,867. Did any legislation take place in consequence of that report?—No, it was never followed up.

34,868. This inquiry was as far back as the year 1849?—Yes.

34,869. Was it not followed up because the legislature did not think a case had been made out?—No, it was not pressed; it fell through in some way.

34,870. Has nobody taken it up since?—Nobody that I am aware of.

34,871. Then the fishermen themselves do not seem to be aware that their interests are so much damaged by it?—It is very difficult to get a fisherman to complain.

34,872. The fishermen here to-day have not brought forward that as a matter of complaint?—I think the fishermen on that side are more likely to go into it.

34,873. Are there any Castletown fishermen here?—No, I could bring before you many who would give you valuable information on the subject. May I ask if the lobster-fishing comes under your notice?

34,874. Yes; notice has been sent to different places that we were to hold a meeting here, so that it is the fault of the fishermen themselves if they have not attended?—I am aware that notice has been given.

34,875. (*Professor Huxley.*) Did you give evidence yourself in 1849?—No, the inquiry did not come under my notice at all at that time. A gentleman sent me that paper, finding I took an interest in the fisheries, and I have retained it ever since.

34,876. Can we take this report in the "Manx Sun" as an account of what took place?—Yes.

34,877. Will you put it in?—Yes, I will read it if you think it necessary. I believe it to be perfectly correct.

34,877*a*. That is not necessary.

The following report was then handed in:

We whose names ensue being a Committee appointed by the Tynwald Court on the 10th April 1847, to inquire into and report upon a Bill pending before the said Court, ntituled, "An Act for the better Preservation of the

PEEL.
F. L. M. Gelling.
13 Aug. 1864.

"Spawn and Fry of Fish, and to prevent the taking of young "and unsizeable Fish:" and having taken the opinion of several of the oldest and most intelligent fishermen, beg leave to report. That the using of any seine, trawl, or drag-net in any of the bays, harbours, creeks, or inlets upon the coast of this island, or in the fresh water portion of any river within this island, is most injurious to the spawn and fry of fish; and that the placing or setting pots, creels, or baskets upon the fishing banks contiguous to the sea coast of this island, or within the distance of four miles of the coasts thereof, for the purpose of catching whelkes or buckies, is most injurious and destructive to the hand-line and long-line fishing upon those banks; and that the only description of net which appears to them unobjectionable is the stake-net, with meshes of not less than two inches between knot and knot, to be measured on each side of the square, allowing four knots to each mesh.

That this Committee also beg leave to report, that there ought to be some restriction as to the times and seasons of taking lobsters; and they would suggest that they should not be taken during the summer months, when they come into shoal water and in the holes of rocks.

This 18th April 1849.

JOHN MOORE.
JOHN KELLY.
R. HARRISON.

At Castle Rushen, the 20th May, 1847.

Present,—WATER BAILIFF, HIGH BAILIFF of Castletown, HIGH BAILIFF of Peel.

MINUTES OF EVIDENCE taken under a Resolution of the Governor, Council, and Keys, dated the 10th April 1847, with regard to the enactments of a Bill pending before the Legislature, intituled "An Act for the "better Preservation of the Spawn and Fry of Fish, "and to prevent the taking of young and unsizeable "Fish."

HENRY KERMODE, of Port Erin, in the Parish of Rushen.—He has followed the hand-line fishing and trawling for thirty-five years, in the bay of Erin and upon the coast adjoining. He has caught all kinds of fish—mullet, blockin, cod, fluke, and turbot, of all size; sometimes he has taken turbot and fluke not larger than the size of his hand. He has caught also in the trawl cartloads of gilpins or carwhites, which are principally young "kellegs" and "blockins," (whiting pollock); the young fish were sold by the kishen for the price of fourpence or sixpence. There is no trawling now, nor for the three years past on Port Erin Sands, in consequence of the farmers having carted away the sand, which has also prevented the fishermen getting sand-eels and lug (a kind of worm for bait). The net he used was formed of very small meshes, considerably smaller than the mesh of a herring-net; and he has not seen sand-eels caught in it. Trawling commenced in the harvest, and ceased before the winter set in. The hand-line fishing is not so good as it used to be; and on the bank of Miln-e-Killey, near the Calf, where turbot some years ago were very plentiful, there are none to be got. Witness has been engaged in fishing lobsters for upwards of thirty years. He has taken them the whole year round when the weather was fit. Lobsters come near the shore and into shallow water in the summer season, and into holes in the rocks. He has caught them full of pea or roe at all times and seasons. He has heard old fishermen say that lobsters were always scarce in the month of May, because they then went into the holes of the rocks to change their shell. He has no idea where they lay their spawn; but he is sure that lobsters are male and female, and he knows the distinctive marks; the cock lobster has larger claws, and the hen lobster has a broader tail; the pea is also a certain mark.

The HIGH BAILIFF of Peel suggests that trawling on banks inside of the Heads ought to be prevented. Also, a regulation to prevent dead shell-fish, used for bait, being thrown into the sea.

Mr. JOHN KELLY, of Derbyhaven.—He has been a lessee of the salmon fishery at Derbyhaven, and the coast and shore adjoining, for nearly thirty years; and he has been engaged in trawling at the proper seasons during that period, and is still a lessee of the Crown of the said fishery. He is owner of a trawl-net by which salmon are taken; the net is 120 yards long, and its depth at the centre of the net is 4½ yards; the mesh is not larger than the mesh of a herring-net, except at the ends of the net for about 20 yards where the mesh is 1½ inches or thereabouts, This net will take and has caught fish of all kinds and every size; thousands of flukes not larger than a penny, and other fish the size of exceedingly small trout, commonly called "Jack Sharps," or "Breck Fiddher." Meases of "gilpins," which were sold by the kishen, have been left on the shore, which the men employed in trawling did not think worth their time to carry away. There was great destruction of the small fish at all times of drawing the net. Complaints have frequently been made by the hand-line fishermen of the bad effects of trawling; and the witness knows that the hand-line fishing is very much diminished, not only in the bays but also upon banks without the Heads. Within the period of 20 years, 10 boats and 40 men were employed at Derbyhaven in hand-line fishing, and it afforded to them and their families sufficient employment and maintenance, but it is not now worth following. Witness thinks that a mesh of 2½ inches would be a very good measure, the small fry would thereby escape, and sizeable fish would be caught. In his opinion it would be a great public benefit if the trawl-net was not allowed to be used. The Scotch mode of fishing salmon, introduced by Cowan, lessee of the fishery at Douglas, is the best mode of fishing with nets in the bays, not only for salmon but also for other fish. With regard to lobsters, the witness is of opinion that there ought to be some restriction as to the times and seasons of taking them; and his experience enables him to say that lobsters should not be taken during the months of summer when they come into shoal water and in the holes of rocks near the shore, where he has caught hundreds of them.

MARK FAYLE, of Castletown.—He has followed the hand-line fishing 35 years. When he commenced fishing it was as good an employment as a poor man could wish to follow. The fishing has been gradually getting worse; and it is now so bad that it is with great difficulty and labour that a man can maintain himself alone, without a wife and family. In the opinion of the witness, this decrease is to be attributed to the destructive mode of trawling upon the shores. He thinks that a trawl-net with a mesh of 2½ inches would draw a very small fish on shore; and he thinks the mesh of a trawl-net ought to be larger; and it would be much better if they were not used at all. He has followed the lobster-fishing 30 years; they have decreased in number since they commenced fishing; but for the last 10 or 12 years the quantity has continued pretty much on an average. In the summer and harvest there are not many pea-lobsters caught; but from the middle of October to about Christmas the pea-lobsters are much more numerous, and he thinks in the proportion of five or six to one, than in the preceding months, from which he concludes that the period from October to Christmas is the time of spawning, and that during that time (if protection is necessary) protection ought to be given. Small lobsters are caught, but those under eight inches are thrown back into the sea. He takes lobsters during all seasons of the year. The distinctive marks of the male and female lobster are well known to witness; the male has larger claws, and the tail is much narrower, and also the body, than that of the female; and from the inside of the tail part where it joins the body there are two small horny protections that are not in the female fish. Turbot-fishing, which was very profitable, is now nearly extinct.

THOMAS DINWOODY, of Castletown, roper.—He is owner of a trawl-net, which is 120 yards long and six yards deep: the mesh is 1¼ to 1½ inch from knot to knot, and all the meshes of the net are the same size. Some years ago he used a net the meshes of which were much smaller, especially near the centre of the net. The net he uses has taken fish of all kinds and all sizes; it has drawn to the shore gilpins and very small fluke, the fluke much smaller than his hand. The net was turned over when drawn upon the sand, and the small fish left on the sand to give them a chance of escaping.

JOHN KELLY, of Castletown.—He has followed the hand-line fishing for 30 years. A man might at that time (30 years ago) earn a good living by fishing in the bays; it has been getting worse every year, and now scarcely worth following. Four or five four-oared well appointed fishing-boats belonged to Castletown harbour within 20 years, and now there is not one. The fishermen go to fish singly and solitary in Norway skiffs. This change of things is attributed by him and others to the destructive mode of trawling in the bays. On the ground where the trawl-nets were spread to dry the witness has seen large quantities of different kinds of fish, so small as to be utterly useless, even needle-fish among them. He thinks a mesh of 2½ inches too small, the drawing of the net would shut a mesh of 2½ inches. He thinks that trawling should be done away with altogether, as a mesh of even a very large size would be no protection. He was present when a kishen of gilpins, which were caught in a trawl, were purchased for fourpence; they were counted out, and the kishen contained 200 fish. He has been catching lobsters upwards of 30 years. From his experience he has come to the same conclusion, and formed the same opinion respecting the protection of lobsters and theseason for catching them, as mentioned by Mark Fayle, who has been examined by the Committee.

Mr. William Bell, of Surby, in Rushen Parish.—He lives upon and farms his own land; has been engaged in all kinds of fishing for 24 years, especially in the fishing for lobsters. Two boats are employed by him occasionally, and always one. His cleeves (creels or baskets) are made of osier, black sally, and the currant tree. He sets his creels along the shore from Fleshwick to Glenmeigh during all seasons of the year, except from the middle of May to the middle of August; he believes that lobsters cast their shells at all seasons, but chiefly in the month of May, and during the summer, when they crawl into shoal water and into the holes of rocks; and he thinks that if any protection be necessary, that protection should be given from May until August. He hopes there will be no interference to hurt the poor man's earnings. He knows it is not worth following the lobster-fishing in the months of June and July, on the coast where he is accustomed to place his creels; at the present time and generally his boats are employed from May until August in fishing for crabs, which are large and abundant. Restrictions from fishing in June and July would not hurt the poor man; there being no regulation or prevention as to the season, some persons fish all the year through. In the summer the pea of the lobster becomes red, and at that time the lobster loses the pea, and, he supposes, deposits its spawn. He has seen the same process occur in the winter season also. Small lobsters, or lobsters that would not weigh more than half a pound, are, when taken, thrown back into the sea; this is a practice strictly observed by witness. He takes on an average about six dozen in each week, during the season, which he sells for the price of 9*s.* a dozen; the purchaser sends them to the Liverpool market. He finds lobsters to be more plentiful every alternate season. There ought to be some regulation to prevent the taking of young fish of any kind, which the fishermen themselves might adopt, if they would, and if they were careful. He has never been engaged in trawling, but is of opinion, with many others, that it is a most injurious mode of taking fish. Much damage is done to the hand-line and long-line fishermen by the farmers, by their carting away to their farms the sand from the shore at Port Erin, and at the chapel shore near Port St. Mary, whereby the fishermen are deprived of bait; those sands abounded some years since in sand worms and sand eels. Herrings are now used for bait when they can be got. A kind of shellfish commonly called buckies (whelks) are taken up at sea by creels, and used as bait in the cod fishery; and the witness has to complain that the persons who are employed to catch those fish carry to the shore the small as well as the large, those fit and unfit for bait, whereas he would desire to have some regulation by which the fishermen may be compelled to throw the small shellfish which cannot be used for bait back into the sea, to give them the chance of coming to maturity. The distinctive marks of the female lobster are as well known to him as those of the crab, about which there can be no mistake.

At Peel, the 12th December 1848.

Present:

Mr. Moore, Mr. Harrison.

Further Minutes of Evidence taken under a Resolution of the Governor, Council, and Keys.

Henry W. Burn, Esq., of Peel.—He has followed the hand-line fishing as an amusement for 20 years. That fish were much more plentiful some years ago in Peel Bay and along the coast than they are at present. That the system of trawling or dragging a seine along the shore is decidedly injurious to the small fry of all kinds of fish; and he is clearly of opinion that trawling ought to be done away with altogether, as a mesh of 2½ inches if craftily dragged would enclose very small fish; and he thinks it would be more beneficial to the interest of the fishermen and to the public generally if the system of fishing with a seine were abolished. That the buckie creels, placed on the low banks along the coast are a perfect nuisance and most detrimental to the hand-line fishing, as the smell is the most acute sense possessed by fish, and consequently any impure or offensive matter placed upon those banks has the effect of banishing fish from their usual feeding ground. Placing long-lines upon the low banks will also have the same effect. The witness suggests that the in-shore banks along the coasts should be preserved.

H. W. Burn.

John Quilliam of Peel.—Has followed the hand-line fishing for upwards of 30 years. Fish were much more plentiful than they are now. That the system of trawling on the beach is utter destruction to the fry of all kinds of fish, and he is clearly of opinion that the system ought to be abolished altogether. That the witness is clearly of opinion that buckie creels left on the inner banks along the coast are most injurious to the hand-line fishing, and shooting long-lines on the said banks has nearly the same effect. That he suggests that all the banks within four miles ought to be protected from the injurious effects of buckie creels, or shooting long-lines thereon.

John Joughin.—Has been a hand-line fisherman for about twenty-five years. That in his opinion the system of trawling upon the beach is most destructive to the fry of all kinds of fish, and the system ought to be abolished altogether. That the system of setting buckie creels on the inner banks is very injurious to the fishing, as the smell frightens the fish from off the banks. That witness suggests that all within four miles from the coast ought to be protected from the injurious effects of the buckie creels.

Edward Bailey. — That a year this last summer the witness was present shortly after a seine had been drawn ashore, and there were thousands of flukes and soles about the size of a penny lying on the beach; and he is quite sure the system of trawling is most detrimental to all kinds of fish. That there are not now one-third the number of flukes in Peel Bay that there were a few years ago.

34,878. (*Mr. Lefevre.*) Do you know anything about the oyster fishery in the island?—I believe they have never been properly attended to.

34,878*a*. Has there not been some recent attempt to cultivate oysters here?—There has not been anything except a little attempt I have been making myself here.

34,879. Where?—In Castletown.

34,880. With what result?—I cannot tell until next month.

34,881. Have you laid down any oysters?—Yes.

34,882. Have you a lease of the ground?—I applied for one and they told me that my claim would be considered.

34,883. Does it belong to the Crown?—Yes.

34,884. Are they ready to grant leases?—There is some difficulty about granting leases. No leases have been granted yet, but they have been applied for. Leases have been granted for the salmon-fishing only, but I do not believe any leases of this description have been granted.

34,885. Are there no natural beds around the island?—There are none cultivated. There are situations well suited for beds. I know of several myself. I am trying one just now in reference to which I intend to apply for a licence. There are several gentlemen who have agreed with me to do so.

34,886. Within what distance of the shore is your bed?—It is between high and low water. It is rocky, and completely sheltered on all sides.

34,887. Is it adapted for dredging oysters?—No.

34,888. Only for fattening them?—For breeding and fattening them too. I am not, however, very experienced in the matter.

34,889. Are there no natural beds on the island which have been fished of late years?—There is one off Laxey where there are very large oysters.

34,890. Is it fished?—The large oysters are brought into Douglas from that bed and they are taken off with the dredge.

34,891. Where do they dredge them?—At Laxey, about half way between Douglas and Ramsey. There is a large bed there I am told.

34,892. But you do not know yourself?—No; I have seen specimens of large oysters brought into Douglas which they told me came from there.

34,893. When do you consider that the spawning season for herring commences?—At the latter end of September or the beginning of October.

34,894. Is it on this side of the island or the other that they spawn?—The fish generally go to the other side of the island to spawn. They are not to be found at any other place except off Douglas where there are coral beds.

34,895. Is it the result of your observation that the fish go there to spawn?—The boats follow them there.

PEEL.
F. L. M. Gelling.
13 Aug. 1864.

34,896. But are the fish on that side of the island the same shoals which you see on this side?—I am not aware. I have only noticed the fishermen following the fish.

34,897. Your observation is only drawn from that?—Yes, from the boats coming into Douglas harbour frequently loaded with the spawn of the fish.

34,898. Then you cannot say whether it is a different kind of fish on this side of the island as compared with that which is found on the other side?—My own impression is that when the fish are about to spawn they go to the localities where there are coral beds.

34,899. Then would you enforce a close-time from the end of October?—Yes, as far as I am myself concerned, I would enforce a close-time from the period when the fish are in full spawning season up to the time when they have ceased to spawn.

34,900. What do you consider to be that time?—The fishermen will tell you that better than I can do.

34,901. Have you not paid any particular attention to the time of spawning?—No.

34,902. Then you do not know what effect the enforcement of a close-time would have on the fishing?—No, but my impression is that it would increase the number of the fish.

34,903. You speak as a theoretical man, and not as a practical man?—Yes, of course.

34,904. You have not given much attention to fishing?—No; I have occasionally been out with the boats, that is all.

34,905. (*Professor Huxley.*) Would you permit the taking of spent fish?—That is questionable. I don't think spent fish do any harm.

34,906. Would it not be awkward to arrange your close-time?—I admit it would. Fish are apt to become spent at different seasons. I have known good fish taken in October.

34,907–8. Would it not be rather difficult to legislate on a matter of that sort?—Yes; I have known good fish taken at the end of October.

The witness withdrew.

J. Higgins.

Joseph Higgins called and examined.

34,909. (*Professor Huxley.*) Are you interested in the fisheries?—Only as a tradesman in the town. From my observation of the fisheries during the last 15 or 20 years I should suppose that the fishing must have increased amazingly.

34,910. You are a tradesman in the town?—Yes.

34,911. What induces you to arrive at that conclusion?—I arrive at it from the fact that there are boats and property here to a large extent in the town, now, which was quite unknown 20 or 30 years ago.

34,912–3. I put several questions to the fishermen upon that point, but they all say that the fish have not increased?—I imagine that they are quite mistaken. They may not have more cash in their hands but they have been continually buying boats and building houses. They are now living in their own houses, where 30 years ago they had no houses at all. The men themselves are gentlemen in comparison with what they were at the time I speak of. That evidently shows that the fish must have increased, and that the money derived from the fishing must also have increased, although it may have been so imperceptibly as not to be known to themselves. I am connected with a society here.

34,914. What society?—A loan society in the town, and a short time ago we had 80 sovereigns brought down to us as a deposit by a fisherman. I know that many of the fishermen here would be perfectly amazed if I were to disclose the name.

34,915. Was that the deposit of one man?—Yes, and the deposit is still there.

34,916. Was it the result of one season's fishing?—I do not know that, but as a tradesman well acquainted with the fishermen I must say that the fish must have increased from the comfortable circumstances in which the men are now placed.

34,917. That is the result of your observation extending over a large number of years?—Yes, for 15 or 16 years I have been intimately acquainted with them as a draper in the town, and I know the position both of themselves and their families. I believe their improved circumstances have arisen from the employment of a superior class of boats and nets, and also from the higher moral standard which the men themselves have attained. They are now sober and industrious.

34,918. We have no desire to pry into the circumstances of the fishermen, and we asked these questions merely to solve the question whether the quantity of fish has increased. Your impression is that the quantity of fish must have increased?—Yes. Perhaps they have earned no more, but at any rate they have spent less. If it is within your scope I should be glad to notice that there is one thing we should like here in reference to the fishermen. They are often detained and prevented from going to sea in consequence of bad weather, and in this town there is not a single institution to encourage reading or provident habits.

The witness withdrew.

T. J. Greaves.

Thomas Joshua Greaves called and examined.

34,919. (*Professor Huxley.*) You are a boat owner here?—Yes.

34,920. Is it your opinion that the capital invested in boats, and the fittings of boats, has largely increased of late years?—Yes, very much indeed.

34,921. You say that from your experience as a boat owner?—Yes.

34,922. Are you a boat builder?—No. I am not a carpenter by trade but I have built boats sometimes, or got them built.

34,923. To what do you ascribe that surplus capital?—It is my opinion that the take is greater from the fact of a much better class of boats and nets being used here now. I think if the fishing had been falling off we should not have seen so much improvement.

34,924. Has the increased disposable capital arisen from absolutely greater earnings or from more economical and prudent habits on the part of the men?—From both.

34,925. Both?—Yes, both combined.

34,926. Are the fishermen now more temperate in their habits than they were?—Yes, very much more so indeed.

34,927. Does that enable them to put more money into the business?—Yes.

34,928. But do you ascribe the whole of the increased disposable capital to that cause; do you consider in addition to the temperate habits that they have had better earnings?—Yes, they have had a greater number of nets to catch the herrings, and it is my opinion that there is a greater quantity caught now and that prices also are better.

34,929. Is there any account kept here of the quantity of herrings exported to England?—The Fishery officer at Douglas is supposed to keep the account.

34,930. Can he give us a return for the last ten years?—Yes, they are published by the Scotch Fishery Board annually.

34,931. (*Mr. Lefevre.*) I suppose that the prosperity of the town mainly depends upon fishing?—Yes.

PEEL.

T. J. Greaves.

13 Aug 1864.

34,932. Has it increased of late years ?—Yes, very much indeed.

34,933. Are the tradesmen generally well to do ?—Yes, I think they are much better off than formerly.

34,934. (*Professor Huxley.*) Do you know anything about the price given by the buyers of fish to the men ?—Yes.

34,935. Has it remained stationary or has it increased or diminished ?—I think it has increased.

34,936. It has somewhat increased ?—Yes, I think so.

34,937. Has it increased largely ?—Yes.

34,938. Within the last 20 years do you think the fish have become dearer ?—Yes, I think so.

34,939. Dearer to the buyer ?—Yes.

34,940. Is that on account of the better communication with the markets ?—I think it is. They find better markets on the other side; there is better railway communication.

34,941. Is that increase in the price sufficient to account for the increased earnings of the fishermen without supposing that the catch has been larger ?—I think it is.

34,942. And according to that you do not seem to think that the catch has been large ?—The catch has been large.

34,943. It has been large as well ?—Yes.

34,944. (*Mr. Lefevre.*) Are the fish bought and sold on the beach ?—They are bought on the beach, and sometimes sold to vessels in the bay; they are put on the vessels in the bay, and sometimes they are brought ashore to be shipped off by land by the steamers.

34,945. Are they taken by smacks direct to Liverpool ?—Yes, to Liverpool and Whitehaven.

34,946. Would those fish be included in the return from Douglas ?—He requires from each vessel in the trade the quantity of fish taken.

34,947. The Fishery officer does that?—Yes, he gives them a printed form to fill up every year.

34,948. Is there a large quantity of fish sold on the beach to be distributed in the country round about?—Yes, there are great quantities.

34,949. Is that trade increasing do you think ?—I think it is.

34,950. Do the people round about live mainly during the season upon herrings ?—Yes, solely, and a close-time would in my opinion be very advisable.

34,951. A close-time at the beginning of the year?—Yes.

34,952. That would be advisable ?—Yes.

34,953. Do you agree with some of the witnesses that only two or three boats go out before the 1st of June ?—No, a great number go out, far too many.

34,954. How many ?—Fifteen or 20 and sometimes 30 or 40.

34,955. That is only a small proportion of the whole number that fish is it not ?—Yes, it is.

34,956. It cannot much affect the whole take of fish ?—The only thing is, that the fish are caught before they are worth anything. They are not eatable sometimes, they are so small.

The witness withdrew.

HENRY WILSON BURN called and examined.

H. W. Burn.

34,957. (*Professor Huxley.*) Have you been resident here long ?—Yes, since 1832.

34,958. Have you paid much attention to the fisheries here ?—I have been an amateur; I have gone out to the herring-fishing, to the cod-fishing, to the haddock and whiting-fishing, and I have also gone to the carp-fishing.

34,959. Do you wish to add anything to the evidence which has been given to-day; have you heard it ?—Yes.

34,960. Is there anything you wish to add to it ?—I think there are one or two points about the nets. I heard it stated that the nets now are very much finer than they were formerly. Formerly the weight of the nets was very great. It is far less now, even with regard to the nets carried by the larger boats.

34,961. They are made now of cotton ?—Yes.

34,962. They were formerly made of twine?—Yes, cotton has superseded both flax and twine.

34,963. Are they made of cotton now since the cotton famine ?—Yes.

34,964. Then the price has increased ?—Yes, very much.

34,965. In consequence of the cotton being finer more fish are caught, is that not so ?—I should say so.

34,966. The fishermen have set up nets of that sort because they consider them more advantageous ?—That is not so clear. Some of them were for keeping the old nets. They were of a very heavy class formerly, and I do not think the fish would face them now; but the fine nets they use now have done wonders.

34,967. We have heard that that is the same on other parts of the coast ?—Yes, it is so.

34,968. What do you think about the close-time ?—I think that what Mr. Corrin stated is reasonable, namely, that there should be a close-time until the 1st or the 5th of June. The fish are small previous to that and the complaint is that fishing them then breaks up the shoal; it drives the fish to and fro and frightens them off.

34,969. We have not heard that from the fishermen here ?—I believe it has been the custom of the Tynwald when it assembled on the 5th of June to take a number of the leading men from each of the herring boats and form them into a sort of jubilee ; the date at which the fishing should commence was then fixed.

34,970. Here is the Act which fixes it at the 16th of July ?—That is too late.

34,971. Would it not practically put an end to the fishing here ?—It would create great commotion.

34,972. You think that Act could not be carried out ?—No, it would be broken at once.

34,973. Is there much harm done by in-shore seining ?—Yes, that is the very point which is touched upon in the evidence in 1849.

34,974. You state, I see, in that evidence that the system of trawling or dragging a seine along the shore is decidedly injurious to the fry of all kinds of fish ?—Yes.

34,975. You are clearly of opinion that trawling should be done away with altogether, as a mesh of $2\frac{1}{2}$ inches if craftily dragged would inclose very small fish ?—Yes.

34,976. You think it would be more beneficial to the interests of the fishermen and to the public generally if that system of fishing were totally abolished ?—Yes.

34,977. You are of opinion that the buckie creels placed on the low banks along the coast are a great nuisance and most detrimental to the hand-line fishing ?—Yes.

34,978. And that as the smell is the most acute sense possessed by fish, consequently any impure or offensive matter placed upon those banks has the effect of driving the fish from their usual feeding ground?—Yes.

34,979. You think that placing long-lines upon the low banks will also have the same effect ?—Yes.

34,980. You further suggested that the in-shore banks along the coast should be preserved ?—Yes.

34,981. These were your opinions in 1849 ?—Yes.

34,982. Are they your opinions still ?—Yes, I think now just as I did then.

34,983. Nothing came of the movement that was made at that time ?—No, there is a tale hangs thereby. The legislature found that they had made a premature move. The bill was made compulsory in the whole island, whereas it ought only to have affected certain localities, such as Castletown. The fishing in the bay there had been all destroyed by seines—

PEEL.

H. W. Burn.

15 Aug. 1864.

there were bushels and bushels of gilpins and small blockins taken.

34,984. What fish is that?—It is the coal pollack—the black pollack or coal fish; that is the Manx name for it; these same fish when they are taken are about as long as my finger, and they were sold by tinsfull for so many pence, whereas good pollacks will make good fish if allowed to grow up. At Castletown the pollack-fishing merely kept a parcel of poor men and boys employed. They were brought up as boys to it, then they were converted into fishermen, and then when they get old men past their work and unable to go to the herring-fishing they take again to the in-shore fishing in order to maintain themselves.

34,985. That fishing was carried on so generally that the Castletown fishermen complained?—No, the legislature was moved, and if the measure had been permissive instead of compulsory it would have been carried out. It was the Jurby people who applied for a re-hearing, and ultimately the bill fell through.

34,986. What people?—The Jurby people. They got a lot of mackerel and other fish at the same time; but in those bays the in-shore fishing has broken up the best fishing.

34,987. You would have passed the Act leaving it to the local authorities to enforce it or not?—I should make it a permissive bill. If any one applied for it, let him have it in that district, and if they were disinclined to have it then it should not be operative.

34,988. As a matter of fact it did not come into force?—No, the one neutralised the other—the after-Commission destroyed the first.

34,989. Is there any blockin-fishing going on here?—Not that I am aware of, none except the sea-coast fishing outside; that is the young blockin which follows the herrings, and is taken with the hake and ling. A very good steak-fish they make.

34,990. Was the blockin-fishing ever very important here?—Not more than the ling or the hake.

34,991. (*Mr. Lefevre.*) Do they continue to use the seine-nets in the bay here?—It is not much followed, but that kind of fishing is so worthless that it could not be continued.

34,992. How many seine-nets are there used here? There are only a seine-net or two.

34,993. How many are there at Castletown?—I do not know the place very well now. At Kirby-Haven there is a seine-net occasionally used.

34,994. (*Professor Huxley.*) Is there any further point you wish to bring under our notice?—Have you any wish for information as to the hand-line fishing? It brings out our boys and makes them fishermen, and the old men support themselves by it when they can go to no other fishing. It is, therefore, of consequence to the people here. Therefore, I think that there should be no lobster-pots or things of that sort put upon what we call the marks here. If lobster-pots or creels or nets are set over the marks, you only obstruct other kinds of fishing; you take very little yourself and destroy the living of others who I think ought to have a preference.

34,995-6. Would it not be a very difficult matter to organise any police to regulate that?—Strictly speaking, we have no police of the seas here.

34,997. It would be difficult to enforce any restrictions that might be made?—Yes. The law here is almost the law of common sense, and it is generally speaking sufficient.

34,998. What law obtains with regard to the fishing here?—There is no statute or common law that I know of; it is merely custom.

34,999. (*Mr. Lefevre.*) Was the bill you speak of which was prepared by this Commission intended to prohibit seine-fishing altogether?—It was in certain localities, but they swept the whole island with it as it were. Persons who found it to their interest to take mackerel on the coast between this and the parish of Ayre, when the fish came in in great bodies to the shore, applied for an alteration.

35,000. Was it proposed to prohibit it altogether or to make some regulation with regard to it?—The bill broke down because it swept all the island. It would have been a very good bill and would have shown why the decay of such and such fishings had occurred if it had not been compulsory and so extensive.

35,001. Would it not be possible to continue the use of the seine-net, and at the same time to prohibit the catch of small fish?—I do not know what other fish they could catch; they go for them.

35,002. Do they only fish for small fish?—That is the principal thing they catch.

35,003. Do the mackerel ever come into the bay here?—Yes, they are in the bay now.

35,004. Do they catch the mackerel in the seine-nets?—No, they are too far out for that, but they sweep the beach.

35,005. Do they come in near enough every night?—Sometimes they do.

35,006. They do this on the other side and not here?—Yes.

35,007. Do they take large catches of mackerel?—Yes, and that is the reason they protested against the bill.

35,008. The opposition from the other part of the island was too strong for you?—Yes, it has neutralised the whole matter. It should have been a permissive bill; it would then have taken effect where it would have been of use. I gave evidence before both Commissions. Mr. Heywood was on the after Commission.

35,009. Upon the first Commission the evidence appears to be all one way?—It appeared to me to be so.

35,010. There is no evidence of damage having been done by enforcing such regulations in other parts of the island?—No.

35,011. The only evidence produced was the evidence from this place and Castletown?—Yes.

35,012. And was there a subsequent Commission which brought forth the evidence on the other side?—Yes. It interfered with the rights of others, it was found to be too sweeping and it broke through. The Deemster was at the head of it. It was open to me to give evidence, but I declined doing so; I merely made a statement. There is one point in connexion with the herrings I wish to mention. We sometimes get the pock gut herring here. The gut falls away and you cannot cure it.

35,013. That is what they call on the Scotch coast gut pock?—Yes.

35,014. The French have another name for it?—Yes. We have occasionally a shoal of that sort of fish, but not often.

The witness withdrew.

R. Corrin.

ROBERT CORRIN recalled and examined.

35,015. (*Professor Huxley.*) You are anxious to make a further statement to us?—Yes; there seems to be an impression that more fish are caught now than formerly, but there are 300 boats now engaged in prosecuting the fisheries about these islands; they are also supplied with more nets than they formerly had, and of a much superior quality, better adapted for catching fish. I apprehend the question you want to arrive at is, whether the absolute quantity of fish caught on this coast is greater than it was. For the last four or five years we have had but few strangers; there has been here occasionally a Cornish fleet of 200 boats, and 100 Arklow boats as well, so that there have been 400 or 500 boats fishing at one time. Taking into account the quantity of fish they have caught in conjunction with the quantity caught by the Manx boats,

PEEL.

R. Corrin.

13 Aug. 1864.

and comparing it with the quantity caught by the Manx boats now, the evidence will not be in favour of an increase. I mean this by way of explanation.

35,016. (*Mr. Lefevre.*) Do you refer to foreign boats which have come here only casually, or generally to the island?—They used to come generally to the island in the season. There was our Manx fleet, the Irish fleet, and the English fleet, amounting altogether perhaps to about 600 boats; but you have had evidence to-day only of 300. They have told you that half the fleet catch more than they were in the habit of doing. That I admit, but I think you ought also to take into account the quantity caught by the Irish and English boats, which have not been here for the last four or five years. What I say is, that 10 or 15 years ago there was a much larger quantity of fish caught than has been caught within the last four or five years. The Fishery officer however will give you the precise returns.

35,017. The returns of the Fishery officer will probably verify what you say?—Yes.

35,018–19. (*Professor Huxley.*) If there are 1,000 boats in a given area and they are catching a certain quantity of fish, 500 boats would not be able to catch as many?—No.

35,020. The fact that 500 boats did not catch as many as 1,000 would not show that there had been any falling off in the total quantity of the fish?—No, but it shows when 600 boats were prosecuting the fishery there were more caught than now that there are only 300 boats following it.

35,021. Are there not as many boats fishing here as can get into the harbour?—Yes.

35,022. More could not be accommodated?—That is so far as Peel is concerned, but it is not true with regard to Castletown; 20 years back every Saturday there were 100 or 200 sail of Cornish boats in Castletown harbour, and four or five years ago there were very few indeed. It has been the same with the Arklow boats.

35,023. Do the Campbeltown boats come here?—They are chiefly at Howth, and the reason they do not come here now is that the fishing during the last four or five years has been much better at Howth.

35,024. The fishing is better on their own coast?—Yes.

35,025. (*Mr. Lefevre.*) Is it not within your knowledge that there has been a representation made to the Government that if a harbour were made at Port Erin the fishing would be vastly increased owing to the time that is now lost in rough weather?—I am not prepared to say much about Port Erin. I do not hold as high an opinion as some do in reference to that port and I am not prepared to say much about it. I think the improvement in the moral standard of the fishermen has been the chief means which has enabled them to increase their wealth. Twenty years ago every fisherman spent nearly every shilling he earned in the public-house, his family was in a state of destitution, and he himself was in the same condition. Since then many of our men have become teetotalers, and as a matter of course they have become more saving in their habits. They have more money to save and if they do spend they spend in a more prudent manner. The result is they have acquired for themselves houses and furniture and a reasonable amount of domestic comfort, and they have better boats and nets.

35,026. They did not go out every night in the week in the days you speak of did they?—Yes, I suppose they did; but when they came in on the Saturday and each man got his share they went into a public-house and spent it.

35,027. (*Professor Huxley.*) Is there any reason to suppose that the quantity of herrings visiting this coast has fallen off?—I think it has decidedly.

35,028. What is your ground for that opinion?—In the first place the nets we used 15 years ago were inferior and the catch was greater.

35,029. You base your judgment on the catch?—Yes.

35,030. That is rather a complex matter; is there any more direct evidence than that?—I am afraid not. It would be a difficult thing to arrive at, for although the catch has not been particularly good for one year it might be very good the next. But I think if you were to try an average of 10 years you would be able to take that as a fair test.

35,031. The amount of additional capital invested in the boats and gear of late years is a very large sum indeed; yet you look upon it as being absolutely the result of smaller takes, but say that the yield of those takes has been economised by the better habits of the people?—I think so.

35,032. All we wish is to get accurately at what is the real state of the matter?—It is my own impression that the quantity of fish in the Channel is less than it was 20, 30, or 40 years ago. We begin to believe that the fish are local. We rather disbelieve the old theory, and have disbelieved it for 12 years or more.

35,033. The migration theory?—Yes; I quite disagree with Mr. Mitchell in his book.

35,034. (*Mr. Lefevre.*) Do you think there is a different class of fish caught on this side of the island from that which is caught on the other side?—Yes.

35,035. Do you think the time for spawning is different too?—Yes, I believe the fish here spawn several times in the season. I am not sure whether the same fish spawn more than once in the year, but some fish spawn here during several months. We have had full fish and prime fish together, one ready to spawn and the other in the best condition, not ready to spawn for a month or six weeks.

35,036. Is the spawning early here?—Yes, I believe it is. I believe the fish spawned some months ago.

35,037. Do any of them spawn in February?—I am not aware. It may be so.

The witness withdrew, and the inquiry was adjourned until the 15th August, at Port St. Mary.

Port St. Mary, Isle of Man, Monday, 15th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

PORT ST. MARY.

W. Bell.

15 Aug. 1864.

WILLIAM BELL called and examined.

35,038. (*Professor Huxley.*) You are a Custom-house officer here?—Yes.

35,039. Have you been long in that position?—About eight years here but altogether about 14 years in the island.

35,040. Do you see to the numbering of the boats?—It is the Collector at Castletown who numbers them, but I have the numbers in a book here of all between this and Castletown.

35,041. Are all the herring-boats numbered?—Yes.

35,042. Then you will be able to tell us pretty well what the number of herring-boats has been during the past summer?—Yes, I have had as high as 77 here.

35,043–4. Seventy-seven boats?—Yes, but there are a dozen that belong to Castletown which I know nothing about.

PORT ST. MARY.

W. Bell.

15 Aug. 1864.

35,045. Is that a larger number than you had 10 years ago?—The fishermen say that they think the boats have not increased.

35,046. Have you a record extending back as far as eight years?—I have not the numbers as far back as eight years. It is only latterly that the boats have been numbered.

35,047. How many years have they been numbered?—Only two years. There was an application from some of the Irish ports to the Government to have these boats numbered. There is no law in the island which compels them to be numbered, excepting when they are fishing on the Irish coast.

35,048. From your observation do you think that the number of boats has increased?—I think not.

35,049. How is it about the quantity of fish; is it greater than it was in former years, or less, or how is it?—This year it has been rather under the average.

35,050. But taking one year with another has there been much alteration?—There have not been so many fish here for the last four or five years. About seven years ago we had a good market. More fish were sold here then than in any port about here.

35,051. (*Mr. Lefevre.*) More than at Peel?—Yes, there generally have been more here than at Peel, although they have a larger number of boats. They have somewhere about 150 there.

35,052. What time do they begin the fishing here?—They commence about the 20th of May.

35,053. Do they think that that is the best time to begin the fishing?—They have been rather soon.

35,054. What sort of condition are the fish in when they catch them then?—They are rather small.

35,055. Do they find a good market for them of that size?—Yes.

35,056. They are sold principally, I suppose, in Liverpool?—Yes.

35,057. And do the fishermen find a ready sale for them?—Yes.

35,058. Would it be an improvement to the fishing to prevent them being taken so early as May?—Yes, I think so, and that is the cause of the fishing having been so backward for the last four or five years. When I came here first they did not leave for the fishing till somewhere about the 12th of June.

35,059. Do you think the early fishing has done harm?—Yes, and I have heard some of the old fishermen say so.

35,060. How does it do harm, do you suppose?—I think they are disturbed before they come to maturity.

35,061. Do you hear the fishermen here complain of anything?—Yes.

35,062. What do they complain of?—They complain that they go too soon to the fishing.

35,063. That is in their own hands; they need not go unless they like?—Yes, but if one goes all will go.

35,064. Would they go if they had not got a ready market for their fish?—Yes.

35,065. What would be the good of giving themselves the trouble if they could not sell their fish?—They have never so much as thought that about it.

35,066. If they cannot get a good market for the fish, what is the use of their going to get them?—They generally can get a market for their fish at any time.

35,067. They can readily sell the fish?—Yes.

35,068. It is that they can get a price for them in the market that is an inducement for them to go out?—Yes.

35,069. So that there is somebody who is glad to get the fish?—Yes.

35,070. Has the size of the boats increased here since you have known the place?—Yes, a great deal.

35,071. Are they larger in the measurement?—Yes.

35,072. And of greater tonnage?—Yes, of greater tonnage.

35,073. Is the fleet of nets larger?—I believe it is. It is a great deal larger, three or four times I believe.

35,074. Is it within your recollection of the place that the capital invested in the fishing has increased very much?—I think so. I can tell you the date when the first boat went out fishing here.

35,075. The date it went out this year?—Yes, I find that they were out as early as the 23rd of May.

35,076. How many boats went out then?—Only three at that date.

35,077. (*Mr. Lefevre.*) Take a week later, how many went out then; take the 30th of May?—On the 24th some more went out.

35,078. (*Professor Huxley.*) What went out then?—There was only one.

35,079. When did the great mass of them go out?—On the 27th, 30th, and 31st of May. There were five that went out on the 30th.

35,080. So that the boats did not go out in any considerable number until the beginning of June?—No.

35,081. You are clear that the tonnage of the boats, their size and capabilities, have increased of late years?—Yes.

35,082. (*Mr. Lefevre.*) Has the number of men in each boat increased?—I think not.

35,083. Do they fish over the same ground as the Peel boats?—Generally.

35,084. Do they join the Peel boats?—Sometimes.

35,085. In the early part of the season do they take their fish to Peel, or here?—They bring them here.

35,086. Do they have to come round the Calf of Man in the early part of the season?—Yes, it is off the Calf they catch them.

35,087. We were told at Peel that the boats were off Peel now?—Yes.

35,088. Do the boats from here join them off Peel?—Yes, between the Calf and Peel; they are not confined to a few miles for distance.

35,089. Does the fishery extend from Peel down south as far as the Calf?—Yes.

35,090. What do they do in the latter part of the season?—The fishing vessels go down as the fish come along the coast.

35,091. In the latter part of the season do the Peel boats come round the Calf and bring their fish here?—That depends on the weather.

35,092. Have any boats from Ireland or Cornwall come here within the last few years?—Yes.

35,093. Are there many boats here now?—No.

35,094. What time of the season do they come?—About this time.

35,095. They have not been here yet?—Yes, I have seen some. The Irish boats have been coming during the season.

35,096. Have there been increased numbers coming within the last few years?—No.

35,097. Are there any seine-nets used in the bay?—No.

35,098. Are there any trawlers?—No, none.

35,099. Do the men make as good earnings by the fishing as they used to?—I think so.

35,100. Do they make as good earnings as they did eight years ago, when you first came here?—No, there was a better fishing at that time than there is now.

35,101. Do you think the men made more in the season than they do now?—I think so.

35,102. Do you think the price of fish has increased?—The price of fish has I think increased, but the quality has not increased.

The witness withdrew.

PORT ST. MARY.

T. Qualtrough.

15 Aug. 1864.

THOMAS QUALTROUGH called and examined.

35,103. (*Professor Huxley.*) Have you been harbour master here for many years?—I have been harbour master here for 10 years.

35,104. What do you think is the condition of the yield of fish now compared with what it used to be?—The yield is greater, generally speaking. Last year it was pretty good, but for three years previous to that the yield was not very good. Last season, however, was a pretty good season.

35,105. Do you think the falling off observed before last year was owing to the weather, or to what cause was it attributable; was the weather bad?—No, not particularly bad.

35,106. Do you think there was a less quantity of fish to be caught?—I can hardly tell you. It depends a good deal upon the shoals of fish on the coast and how they are followed up. Some years the fish are better than in other years. There is no particular cause I can assign for the scarcity previous to last year. Generally speaking, for the last few years it has been as good as it was 15 years ago. I believe the yield is on the increase, and that a greater number of fish are taken.

35,107. Do you agree with the previous witness, that the tonnage and size of the vessels have increased?—Yes, they have much increased.

35,108. And the length of the fleets of nets?—Yes, that has much increased.

35,109. How much larger are the fleets of nets than they were 10 years ago?—Eighteen yards formed the piece at that time, and it will have increased one-half. Now, I suppose, taking the last 50 years or even 30 years, there are two-thirds more nets used.

35,110. Has the depth of the nets increased?—Yes, both the depth and the length.

35,111. What is the length of a fleet now for each boat?—Each will be 40 fathoms long and there will be eighteen forties.

35,112. That will be 720?—Yes, that is the average length at present.

35,113. 720 fathoms?—Yes, that is the back—the sling.

35,114. Are the fishermen here exclusively engaged in fishing, or are they employed in any other manner in the course of the year?—A few of them are employed in other ways, but the great bulk of them are solely engaged in fishing.

35,115. After the herring-fishing is over, do they go to the long-line fishing?—After the herring-fishing is over here they go to the Irish coast.

35,116. To fish for herrings there?—Yes, in November and December.

35,117. Do they catch herrings on the Irish coast as late as that?—Yes.

35,118. When the herring-fishing is over what do they do?—When it is over they repair and mend their nets and go out on the 1st of February to the cod-fishing.

35,119. Is the cod-fishing practised off here?—Yes.

35,120. Are there cod-banks off here?—The principal are off Douglas.

35,121. Do they fish with hand-lines or long-lines?—With long-lines.

35,122. Do they catch many haddock?—No.

35,123. Did they ever catch much haddock here?—The small boats got particularly good takes for a time, but not generally.

35,124. Have there been as many haddocks taken as were taken formerly?—The last few years there have been scarcely any taken.

35,125. Have you any reason to think that there are less fish on the coast?—It is not followed up as it was formerly.

35,126. Is the take of cod as good as it used to be?—It is rather on the decrease, I think.

35,127. Is it sent fresh to the market?—Yes.

35,128. Do you send most of the fish fresh to the market?—Yes, except for the home consumption here.

35,129. Is there any large home consumption here?—Yes, there is a quantity of fish consumed in Ireland. The Manx people are also fond of fish, and a great many are stored up for families. They will take a thousand maze and make them up for the winter season.

35,130. Is there no winter fishing for herrings here?—No, our fishing commences at the beginning of June; this year they commenced a little earlier.

35,131. Have you ever seen herrings here in January and February?—A few have been seen, and they have been taken accidentally.

35,132. But you have never seen any great shoals?—No.

35,133. What condition are the herrings in at this time of the year?—The condition of the herrings is good from the 1st of June till about the 1st of September; then they begin to get heavy, and they commence spawning.

35,134. They commence spawning in September?—Yes.

35,135. When do you find spent fish?—In October.

35,136. As late as October?—Yes.

35,137. Do the shoals remain here until October?—The fishing commences here to the northward of Peel and goes towards the south of the Calf from the 1st of June till September, and then on to a week or two in October. They go then to the eastward and the herring moves away on to the coral banks; that is the spawning ground.

35,138. Previous to that time do they drift on the surface?—Yes.

35,139. And in the beginning of September they sink their nets?—Yes.

35,140. Do they catch the fish when they are spawning?—Yes, there are fish taken with the deep nets when they are spawning.

35,141. How do you sink them; what depth of water are those banks in?—Perhaps from 13 to 15 fathoms.

35,142. Do the herrings lie packed close to the bottom?—Yes, and they want to get the net as deep as they can to clear the ground.

35,143. Has it been the practice to catch fish every year when they are spawning on the banks in that way?—Yes.

35,144. For how many years?—A good many years. According to history I believe I may say for many hundreds of years. There was at one time here a great deal of export to the Mediterranean, and the fishing was carried on then more than it is now.

35,145. Are there not old records of the fishing in this place?—No, except Mills' Statute Laws of the Island. Some information is to be obtained out of that. I believe the landed proprietors had to prepare the nets in those days; the fishermen had not money to buy them. Flax was grown, spun, and twisted; that was used in the manufacture of the nets, but of late years the cotton mesh has been introduced. In those days the farmers, according to the land they held, were expected to supply so many nets.

35,146. Were there at any time any considerable curing establishments here?—Not in my day.

35,147. Is there no curing now in any way?—No, the fish mostly go away fresh.

35,148. Is there any lobster-fishing about here?—Yes.

35,149. Is there much of it?—No, it is not followed up closely; there are only a few boats.

35,150. Is that because it is not worth while to follow it?—No, I think not.

35,151. Are there many boats that follow it?—Perhaps there may be a dozen boats here on the coast.

35,152. Is there any complaint that the lobsters have fallen off?—No. It is a fishing that there is

PORT ST. MARY.

T. Qualtrough.

15 Aug. 1864.

not much notice taken of with regard to its increase or falling off.

35,153. Do the trawlers work off here?—Not much on this ground.

35,154. Is there no complaint with regard to them here?—No, except by our fishermen who go to the eastward to fish off Douglas. They say it is destructive to the coral banks and to their nets. Their assertion is that the trawling breaks up the coral and destroys the beds for spawning. They also say that there is a great deal of spawn destroyed as well.

35,155. Are there any oyster beds about here?—No, I believe not. I have heard it said that there was a small oyster bed, but oyster-fishing is not followed up.

35,156. There is no fishery?—No.

35,157. Do you fish whelks or buckies?—Yes, buckies.

35,158. For bait?—Yes.

35,159. Do they use herring bait for cod?—No, the cod-fishing is not followed up at the same time as the herring-fishing.

35,160. Then you do not find that the cod require to be fished with herring-bait?—No, but the cod would take herring bait. We use it on the hand-lines and get cod and conger.

35,161. Is not the herring-bait found a particularly good bait for cod; is it not a very killing bait?—I do not know that it is. We do not get the cod in the same season as the herring.

35,162. (*Mr. Lefevre.*) What do you use for cod?—Buckies or whelks.

35,163. How many men go in a herring-boat?—Six men and a boy, or seven men.

35,164. And there are 77 boats here?—About that number.

35,165. And that will be between 400 and 500 men?—Yes.

35,166. How many of those men are fishermen, and spend their whole time in fishing all the year round?—Perhaps two-thirds; but they are not following the fishing all the year round. They may be employed, some of them, in repairing their nets at home. There are only about two-thirds of them you can call fishermen.

35,167–8. Is the other third employed in agricultural pursuits when the fishing season is over?—Yes.

35,169–70. How many boats go out in the cod season?—About 20 boats; that is of the larger class of boats; there are many other small boats as well.

35,171. Do any boats go to the Irish mackerel fishery early in the season?—Yes.

35,172. How many?—Five of them.

35,173. Do any go for the herring-fishing before the season sets in here?—Some of them have been going off to Lewis and Stornoway.

35,174. Before the season commences here?—Yes; but this year none have been down.

35,175. Do you find, in the latter part of the season, that the herrings fetch as good a price as in the early part?—In the early part of the season, in the months of July and August, the quality of the fish is poor.

35,176. When they are full of spawn do they not fetch as good a price?—That is no drawback with regard to the price of the fish; but I believe the greatest drawback is the number caught then.

35,177. Is there any account kept of the number of fish caught?—Yes, by the Fishery officer.

35,178. Does that include the quantity got in the bay?—Yes.

35,179. By foreign vessels from a distance as well as by vessels belonging to the place?—Yes, the total quantity.

35,180. Has the condition of the fishermen here much improved?—Yes, very much; in their circumstances as well as in their character.

35,181. Is that due to their making more money?—Yes, and the men have become more civilized, and do not take so much drink.

35,182. Is that due in part to better earnings?—Yes. In early times the boats did not belong to the fishermen; they had no particular interest in the fishing. Now, the boats and nets are almost wholly owned by fishermen.

35,183. Was there not in former times some law which enforced the ownership of nets by the farmers, with the view of benefitting the fishing?—Yes.

35,184. That is not the case now?—No, it is not the case now. They are all anxious to get nets now. It is a strife between the owners of the vessels and the fishermen who shall have most nets. The nets pay best in respect to the shares.

35,185. Are the fishermen getting more money now?—Yes, they are earning more than they did many years ago.

35,186. Do you think the number of fishermen has increased of late years?—I do not know as to that. I do not think there is any great difference in our island.

35,187. But has the number of people who devote themselves wholly to fishing increased?—Yes.

35,188. There are more men who devote themselves exclusively to fishing?—Yes; formerly they followed it on the coast of the island only, but now they follow it up both north and south.

The witness withdrew.

T. Karran.

THOMAS KARRAN called and examined.

35,189. (*Professor Huxley.*) Have you been a fisherman here?—Yes, I have been sometimes fishing and sometimes buying for the last 25 years or so.

35,190. Then you know pretty well what the state of the fishery is here?—Yes, but I do not look into those things as much as I did.

35,191. Do you think the amount of fish has remained stationary, has increased, or fallen off?—I cannot say anything about that. There were good seasons many years ago.

35,192. But how has it been, taking one season with another?—It has been as good for the last two years as ever I recollect it.

35,193. How has the price of fish been; has that remained the same or has it increased?—I think the price is as good too.

35,194. Has it not increased?—I cannot say. That is all according to the take.

35,195. Does it vary very much?—Yes, very much.

35,196. But, taking one year with another, would the average of five years be the same as it was 20 years ago, or would it be more or less?—It is as good now as ever it was within my recollection.

35,197. You do not think it has increased?—I should not say that it has taking the season through.

35,198. Is there anything here that the fishermen have to complain of; are there any regulations that interfere with them?—I have heard a good many complaints made about their shooting their nets too early in the evening.

35,199. Before sunset?—Yes.

35,200. How much before sunset do they shoot their nets?—About half an hour or three-quarters of an hour.

35,201. Three-quarters of an hour?—Yes.

35,202. Do you think that an injurious practice?—Yes, I have heard it said so. I have heard the fishermen upbraiding one another about it.

35,203. It there not a Manx law against it?—I believe they brought some parties up about it, but they did nothing in the court with it.

35,204. Was that the admiral we saw at Peel?—Yes.

35,205. Is there an admiral belonging to this place?—No, there is an admiral and vice-admiral from Peel.

35,206. Did the admiral find that he had no authority?—According to the Manx law they are not to go out shooting their nets before sunset. The admiral carries his flag and he dips it whenever the boats are to shoot. A jury should be sworn in the early part of the season, and all cases should be brought before that jury; but for a few years past there have been no cases brought before the court. Last year there was a case and no jury having been sworn they could not proceed with it. This year a jury has been sworn, but there has been no case. The men last year were imprisoned, but they were dismissed.

35,207. Then the law was not carried into effect, not because it could not be enforced, but because there was a technical difficulty?—Yes, there was a want of regularity in the proceedings. It was much complained of at the time.

35,208. What was complained of?—Their fishing before sunset.

35,209. Is there anything else the fishermen have to bring forward as a matter of complaint?—I cannot say that there is.

35,210. What do they think about beginning the herring-fishing before June; do they want a close-time here?—They did talk about that some time ago, but I heard them say that the fish were as good as ever they had seen them early in the season.

35,211. In that case it would be a disadvantage to have a close-time enforced?—Yes.

35,212. Were the fish in a good condition on the 1st and 2d of June this year?—They were the best that ever I saw so early in the season.

35,213. Were they good marketable fish?—Yes, and they sold well in the Liverpool market.

35,214. Would it have been a great injury to the fishermen if they had been prevented from taking fish this year before the 9th or 10th of June?—Yes, it would have been a great deal of loss.

35,215. It does not appear that a great majority of the boats begin their fishing earlier than June?—No. In my recollection they did not begin before the 9th and 10th of June, but just now the fish have begun to come a little earlier, and the fishing earlier has done very well for the fishermen for the last two years.

35,216. From what you know of the fishing and of the fishermen here, you do not think it is necessary to have a close-time enforced?—No. It would have been a great loss both to the buyers and to the fishermen if there had been a close-time until the 20th of June.

35,217. According to the old Manx law they were not allowed to fish until the 5th of July?—I have heard about that, but that would never do. I think the reason they fixed upon the 20th of June was that the herrings had been rather small for some years, then the herrings began to get larger, and it would have been a pity if the fishermen had been prevented from going after them.

35,218. If they had made a regulation prohibiting them from fishing before the 20th of June, do you think they would have repented of it?—Yes.

35,219. What is the size of the herring-mesh used here?—It is an inch mesh.

35,220. Does anybody look after that?—There was a man who did; the Fishery officer. He is the only person who is expected to do that.

35,221. (*Mr. Lefevre.*) But does he look after it?—Yes.

35,222. (*Professor Huxley.*) Are the boats lighted in any particular way when they go out; do they carry lights?—They never carry more than one show of a lantern.

35,223. One lantern?—Yes.

35,224. Where do they put the lantern?—They set it on a stand on the forecastle-deck.

35,225. Do the boats carry any vanes?—No.

35,226. Nobody ever troubles you about that?—No.

35,227. Are there any Frenchmen ever fishing off here?—I never saw any.

35,228. (*Mr. Lefevre.*) How many seasons have you been purchasing fish?—About eight seasons, taking one time and another.

35,229. Do you give as good a price in the early part of the season as you do throughout the year?—Yes.

35,230. Do the Castletown boats bring their fish here early in the season?—Yes, and principally throughout the year.

35,231. Do any Peel boats bring their fish here during the season?—Yes, if there is a northerly wind.

35,232. And do they find any difficulty in getting into this port from the fishing-ground?—Yes, sometimes. The tides flowing at ebb-tide or flood-tide in the evening will stop them.

35,233. Are there any fishing-boats belonging to Port Erin?—Not in that harbour; they come here.

35,234. Will it be a great convenience to the fishermen of Port St. Mary when there is a harbour there?—Yes.

35,235. Do you think it will enable them to catch a larger quantity of fish?—They will be able to get out many a night when they are obliged to be in harbour now.

35,236. (*Professor Huxley.*) Is there anything else you wish to suggest to us?—No. Some say that the boats carry too large a train of nets, and others would have them carry as much as they can, so that I do not know what to say about that.

35,237. Cannot they regulate that according to their own interests?—I suppose there is about a quarter of the nets which go down lost every year.

35,238. Why do they wish to restrict the length of the train of nets?—There is a power of nets lost now. When they come across a heavy quantity of fish they lose a good deal.

35,239. But why do they take so much if they lose it?—One man might bring in the whole of his fish, and a very large quantity too, while another man might lose half his nets.

35,240. They do not want the Government to step in and interfere in that matter?—I think some would like an interference.

35,241. (*Mr. Lefevre.*) One man does not like to see another boat with longer nets than he has?—No, and the consequence is that if they get among a great quantity of fish they lose their nets. The nets lie with the buoys to them, when another boat will come and drag across the buoys; in that way the nets are torn and sunk; a power of nets is destroyed in that way.

35,242. (*Professor Huxley.*) The people who lose their nets in that way must pay a heavy penalty for it?—Yes, they are at the loss of their nets.

35,243. That is a tolerably heavy fine is it not?—Yes.

35,244. (*Mr. Lefevre.*) Are any of the boats that come to fish here from a distance larger than the Manx boats?—No; I think the Manx boats are the largest going now.

35,245. Has the number of fish buyers here increased of late years?—Yes, there is a greater number.

35,246. Can you tell us how many there are?—They are principally vessels taking fish to market. They buy on speculation; there will be about 100 vessels engaged in taking fish to the market.

35,247. A hundred smacks?—Yes.

35,248. Ten years ago how many were there?—For the last 10 years there has not been a great deal of difference in the number.

35,249. When did the increase you speak of take place?—I think a few years ago the number was

PORT ST. MARY.

T. Karran.

15 Aug. 1864.

hardly as great. Last year they took the number and calculated it at 100 vessels.

35,250. All from Port St. Mary ?—No, they were English, Irish, Scotch, and Welsh boats; none of them were from here.

35,251. But do they come and take their fish from this place ?—Yes, and they will be as often here as at home.

35,252. Do they mostly go to Liverpool ?—Yes, and a great many of them to Wales.

35,253. As compared with 15 years ago, what has been the increase ?—There were not as many then. I do not think there were then one-half what the number at present is.

35,254. (*Professor Huxley.*) Would it not pay to have a steamer to take the fish more quickly in a fresh state ?—No, it would not answer. The expense is very great, and for a few days there may be no fish.

35,255. (*Mr. Lefevre.*) Do the smacks take the fish in fresh ?—Yes.

35,256. (*Professor Huxley.*) Do they just scatter salt over them ?—Yes.

35,257. (*Mr. Lefevre.*) They salt the fish then ?—Yes.

35,258. Is there any curing here ?—Sometimes there are a few barrels cured.

35,259. In former years was there more curing than there is now ?—Yes, a great deal.

35,260. Was it exported or sold in the island ?—Exported principally.

35,261. Is there no export of cured herrings now ?—No, it goes all fresh to the market.

The witness withdrew, and the inquiry was adjourned until the 17th of August, at Dublin.

Dublin, Wednesday, 17th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

Mr. EDWARD HORNSBY called and examined.

DUBLIN.

Mr. E. Hornsby.

17 Aug. 1864.

35,261*a*. (*Professor Huxley.*) You are, I believe, Secretary of the Board of Commissioners of Public Works here ?—Yes.

35,262. That Board, I think, was constituted in 1831 or 1832 ?—In 1830 or 1832.

35,263. By an Act of William the Fourth, the 1st and 2nd of William the Fourth ?—The Act was passed on the 15th of October 1831.

35,264. Among the other duties of the Board was included the superintendence of the Irish fisheries ?—Yes.

35,265. Those duties having been formerly under the superintendence of the Director General of Inland Navigation ?—Yes.

35,266. How long have you been Secretary to the Board ?—I was appointed Assistant Secretary August 1846, and Secretary May 1849.

35,267. The superintendence over the fisheries first exercised by the Board consisted in aiding in the erection of piers ?—Yes.

35,268. And nothing further ?—No.

35,269. There were no fishery regulations, properly so called, made by them ?—No.

35,270. The report of the Board for 1835 states, that the whole business of the fisheries in Ireland was practically without regulation ?—Yes.

35,271. Then in the year 1836 it appears that a Committee was appointed to inquire into the fisheries, which was added to the Board ?—I believe that that is correct, although I was not at that time connected with the Board.

35,272. That Committee reported in 1837 or thereabouts ?—Yes.

35,273. Have you a copy of their report in your office ?—Yes; I can obtain a copy for you.

35,274. Are you aware whether the Act of 1842, the 5th and 6th of Victoria, was based upon that report ?—I am not quite sure as to the date of that report, but the Act will recite it.

35,275. All the previous Acts relating to the Irish fisheries, with some specially named exceptions, were repealed by the Act 5th and 6th Victoria ?—Yes.

35,276. That Act was passed in the year 1842 ?—Yes.

35,277. Under the second section powers were given to the Commissioners of Public Works to appoint officers and to fix their salaries ?—Yes.

35,278. Can you state what officers were then appointed ?—The two Inspectors of Fisheries.

35,279. Were any other officers appointed ?—None that I am aware of.

35,280. At what salaries were those Inspectors appointed ?—First at 300*l*. a year, and subsequently it was increased to 600*l*., at dates with which I can supply you.

35,281. Has the organization of those offices remained the same from that time to this ?—The duties have remained the same, but the name was altered by the 2nd section of the 11th and 12th of Victoria, chapter 92, which enacts, that the two existing Inspectors of Fisheries are to be Inspecting Commissioners.

35,282. Did that give them an increased salary ?—Their salary was increased after that.

35,283. And the authority of the Inspectors then became co-ordinate with that of the Commissioners ?—Yes, as far as the fisheries are concerned.

35,284. They had no voice in other matters ?—No.

35,285. Previously their reports had been made to the Commissioners ?—Yes, and so they are now. The Inspectors reported to the Commissioners, and now the Inspecting Commissioners also give a report of their proceedings and investigations during the year to the Board, which appears as an appendix.

35,286. (*Mr. Lefevre.*) That is so; and then they draw up a joint report with the Board ?—Yes.

35,287. There is now only one Inspecting Commissioner ?—Yes.

35,288. Since when has that been the case ?—Since Mr. Ffennell was appointed the English Inspector.

35,289. His place has not been filled up in the Board ?—No.

35,290. (*Professor Huxley.*) The practical result of the change of name was that the Inspector acquired a voice in the action of the Board ?—Yes.

35,291. Not only the power of advising, but the power of voting ?—Yes, certainly. I may mention that for some time after Mr. Ffennell was removed to England Mr. Brady was appointed specially as Acting Inspector. He exercised all the duties of the office, and visited all the localities in which his presence was required. He further reported to the Board as Acting Inspector. He filled that post until he was appointed Secretary of the Special Commission for Salmon Fisheries under the Act which passed in August last. He was never a Commissioner, but he was the Acting Inspector of the Fisheries.

35,292. Was that an additional office that did not exist before ?—It was to supply the deficiency created by Mr. Fennell's retirement, or removal to England. That left only one Inspecting Commissioner, and Mr. Brady was appointed to discharge the duties of Acting Inspector.

35,293. But not with the power of sitting at the Board?—No.

35,294. Nor with the same salary?—No.

35,295. Has the office Mr. Brady held been filled up?—No.

35,296. What is the reason the office has not been filled up?—It was not considered necessary to fill it up, the salmon fishery business being transferred to a Special Commission, by the Act 26 & 27 Vict., c. 114.

35,297. How long has it been vacant?—It has been vacant since last November, when he was transferred.

35,298. The powers of the Board appear to be very extensive. I will not trouble you with the details of all the special Acts, but there is one particular clause in the 5th and 6th of Victoria which I will read, and then ask what has been the general action of the Commissioners with regard to it. The 91st section says:—"And be it enacted that it shall be lawful for the said "Commissioners, from time to time as may become "necessary, to make and ordain such byelaws, rules, "orders, and regulations (in addition to those herein "specifically required to be made) as to them the said "Commissioners shall seem expedient for the more "effectual government, management, protection, and "improvement of the fisheries of Ireland, and the "registry of all boats engaged therein, and from time "to time to repeal, rescind, or vary the same, and "substitute others in lieu thereof, and to impose and "prescribe any conditions and restrictions for the "regulation of the said fisheries, and the preservation "of good order among the persons engaged therein, "and in relation to the times and seasons at which "the taking the several species of fish shall commence "and cease, or the times and places or the manner "at and in which any trammel, trawl, or other net "or nets, engine or engines to be employed in the "said fisheries shall be used, and also as to the "description and form of nets to be used in the "said fisheries, and the size of the meshes thereof or "to the prohibition thereof, or of any practice what-"soever, tending in the opinion of the said Commis-"sioners to impede the taking of fish, or to be in any "manner detrimental to the said fisheries, or as to "any other matter or thing which shall in any "manner relate to the government and protection of "the said fisheries; and it shall be lawful for the "said Commissioners to impose any penalty not ex-"ceeding 5*l.* in all cases where any penalty is not "fixed by this Act for any breach of such byelaws, "rules, orders, and regulations, and to direct that all "nets, engines, or other instruments whatsoever used "contrary to any of such byelaws, rules, orders, or "regulations shall be forfeited, destroyed, or removed, "as the case may require: Provided always, that all "such byelaws, rules, orders, and regulations be not "repugnant to any law or statute in force in Ireland, "and shall not injure the effective working power of "any mill or factory, and shall be approved of and "confirmed by the Lord Lieutenant or other Chief "Governor or Governors of Ireland, for the time "being in Council, and all the said byelaws, rules, "orders, and regulations, when so approved and con-"firmed, shall be binding and conclusive on all per-"sons as if the same had been contained in and "enacted by this Act." It is obvious that that clause gives exceedingly large powers to the Board?—Yes.

35,299. In fact, it would be almost difficult to say what they might not do under that clause. Having these large powers, can you tell us what has been the practical policy of the Board in exercising them?—The best mode of explaining that policy will be to read extracts from the annual reports of the Board. The first passage I will read is contained in the first annual report of the Commissioners. Speaking of the Act 5 & 6 Victoria, chapter 106, they say, "By a reference to the Act it will be per-"ceived that the principle adopted has been one of "non-interference by Government; to make the pro-"visions as definite as possible, to the effect that the "public in general might have the power of causing "it to be enforced, the intervention of the Com-"missioners being only admitted as an authority for "deciding matters that are of a nature varying "according to localities or circumstances, and that "consequently could not be defined in the Act." Upon the next page the Commissioners say, "The "introduction of trawls and trammel nets has for "years been regarded with great jealousy by the "fishermen along the coast of Ireland, who felt "inclined to continue their long established habits, "or were unable to pursue the new system. Pre-"ceding Acts of Parliament so far conceded to their "views as to admit of trawls and trammels, to be "used as an exception, that is, in such places only as "might be formally authorized. The present Act, "however, is founded on a different principle, and "makes the restriction on any mode of fishing in the "sea the exception, and consequently admits of these "implements being used everywhere, excepting "where they shall be formally prohibited by a bye-"law. The consequence has been applications to "the Commissioners from several of the principal "fishery communities on the coast to apply restric-"tions to their employment, or rather to prohibit "them altogether in those several localities. Thus "there have been applications against trawls from "Dublin and Galway, and against trammels and "trawls from Kinsale and Dungarvan. In all these "cases we have, by ourselves or our inspectors, "made every necessary inquiry on the spot, usually "calling a meeting by public notice for the pur-"pose of obtaining information, and having the "matters discussed; and the general result we "have come to from the information so collected, "and from printed documents, and more parti-"cularly from the Report of the Commissioners of "Inquiry into the State of the Fisheries in 1836, "from whose opinion on this subject we see no "reason to dissent, is:—1. That the greatest cau-"tion should be used in applying restrictions on "any mode of fishing in so vast a field as the "open sea, and that it should only be done on very "certain grounds; 2. That the extent to which "the trawls and trammels are used prove that they "are productive and profitable modes of fishing, and "consequently should meet with encouragement on "public grounds; 3. That the arguments put forward "for an absolute prohibition of them are founded on "prejudices and vague theories, not by any means "confirmed by facts; 4. That, although it would "be greatly to be regretted that the extension of "the use of these or any other improved modes of "fishing should injure the interests of any other "class, by increasing the produce and lowering prices, "particularly if that should be a poorer class, such "reason cannot be admitted as an argument for "their being suppressed. At the same time, there "are cases where we have considered that a certain "degree of restriction ought to be applied, such as "of small bays of comparatively shallow water, or "the narrow entrances of deep inlets; the indis-"criminate use of trawls or trammels in such confined "spots might tend to prevent the fish from congre-"gating in these sheltered spots (where they can be "most easily followed), and partially from entering "them; it would be therefore tantamount to reducing "by so much the available extent of coast, while at "the same time a restriction in such places is of no "great consequence to the parties using those im-"plements, and has a great incidental advantage of "protecting, for a great extent, the poorer class of "line fishermen, who have only small boats, from "the injurious effect of trawls on their lines. The "use of trawls in Dublin Bay has been restricted on "this principle by byelaw, which, having been made "the subject of appeal to the Privy Council, was "confirmed. Arrangements are making for fixing "the limits for trawls and trammels at Galway, "Kinsale, and Dungarvan, in a similar manner." In the second annual report of the Commissioners, they say:—"We have been frequently urged to "restrain particular modes of fishing, on the plea of "their being injurious, whereas, in general, it was "their effective results and novelty that occasioned

DUBLIN.

Mr. E. Hornsby.

17 Aug. 1864.

"the complaints against them; the objections chiefly "arising from the competing interests of persons or "communities who had habitually pursued different "and probably inferior systems; and occasionally "originating in some old established prejudices or "assumed peculiar rights." Then again, at page 5 of the same report, the Commissioners say, in reference to trawling and trammel nets, "We have still "had occasion to resist the opposition to trawling and "trammel nets; but the applications against them "are much less frequent, arising from a wearing "away, in consequence of the discussions that have "taken place, of the impressions against them, even "in the minds of the fishermen themselves, and from "a growing experience that they are really a valuable "resource, and do not effect the injuries imputed to "them. To show how far prejudice against a novelty "may be carried, we received the most pressing "remonstrances from the fishermen in the Bay of "Galway, because a single yacht had occasionally "fished with a trawl in those extensive waters; "drawing an inference that because the ordinary "fishing season happened to be bad during the year "of the introduction of this trawl, the evil was "created by it. We hope to see these modes in-"creased, with every confidence that it would be "attended with the same success as in other coun-"tries, where experience proves them to be advan-"tageous to the undertakers, and in no degree "injurious to the breed of fish. We have thought it "right, however, to apply limits to the trawling, in "some cases, on application, confining it in bays to "the outer parts; so that the numerous class of the "poorer fishermen, with small boats, who cannot go "far from land, or to the open sea, may follow their "business without the risk of having their lines "carried away by the trawls, a frequent cause of "ill-blood in this country."

35,300. The restrictions which have been applied are wholly in the nature of police regulations?—Yes.

35,301. Every year something of the same kind is done?—Yes. In the Third Annual Report, at page 4, under the head of "Trawl net fishing," the Commissioners say:—"There has heretofore existed a strong "feeling of hostility against this mode of fishing, as "well as against that with trammel nets but it is on "the decline, and is now chiefly confined to localities "where the superior efficiency of the engine appears, "to the poorer class of fishermen, to give an undue "advantage to those using it, they not being at "present in a position to avail themselves of its "advantages. This is more especially the case on "the western coast, where the remoteness from good "markets brings the abundant produce of the trawl "net into injurious competition in the immediate "locality with the more scanty supply obtained by "the hook and line."

35,302–3. Again, there is a passage in the Report of the Commissioners for 1849, in which they say, in reference to trawling:—"We have exercised the "restrictive powers entrusted to us very sparingly, "and chiefly in cases where, without real detriment "to these modes of fishing, it proved desirable for the "preservation of peace and order that limits between "conflicting parties should be defined. In questions "of this and a similar nature connected with the "fisheries, where the array of facts upon which to "found just conclusions is very limited or little known, "and, consequently, ample scope is afforded for con-"jecture and imagination, we find a proportional "diversity of opinion, and a degree of heat and deter-"mination, so that it is very difficult for a body acting "impartially on general principles to preserve con-"sistency and resist the impetuous claims of contend-"ing parties in different localities. But we have been "supported in the course we have adopted, apart from "the natural history portion of the question, by a con-"sideration of the vast extent and illimitable supply of "the ocean, and by the experience attained in all "fishing communities for a number of years, at the "same time that there is a total absence of proof of a "reduction of fish taken, but, on the contrary, evidence "of its positive increase, in proportion as these de-"structive modes of capture are more used." Do the passages which have been read express the opinion of the Board as contained in successive reports?—Yes.

35,304. What have been the steps which have been taken in reference to making byelaws?—No byelaw is made except upon the application of parties interested in the fisheries of the locality to which the byelaw is to refer. Upon such application, a meeting is called by public notice, an inquiry held, and the evidence of all parties taken,—this is the voluntary act of the Commissioners. If the byelaw is deemed necessary or advisable upon this public inquiry, it is framed according to the circumstances, printed, and copies deposited with the Clerks of the Peace for each county in which the byelaw is proposed to be enforced, and also with the Clerks of Petty Sessions for each district in which it is proposed to be enforced, and a notice of such lodgment is posted at the usual places for posting notices in each such Petty Sessions district. This lodgment and notice must be one month, at least, before the byelaw is submitted to the Lord Lieutenant for approval. During that time any party feeling aggrieved by the intended byelaw can appeal to the Lord Lieutenant in Council. If there be such appeal, the case is heard and determined by the Lord Lieutenant in Council, both parties, the Commissioners and the appellants, being represented. If there be no appeal, the byelaw is approved as a matter of course. When the byelaw has been approved by the Lord Lieutenant in Council, either upon appeal or without it, it is printed, and a copy is deposited with the Clerks of the Peace of the county or counties where it is proposed to be enforced, with all the Coast guard officers at the different stations, and with the Clerks of Petty Sessions in each district where it is proposed to be enforced; and printed copies are reserved for parties applying for them; and notice of this publication, and of the place or places where the byelaw may be obtained, is given for three successive months, in such local papers as the Commissioners may select, and for the purpose of convicting under the byelaw, after the expiration of these three months a printed copy obtained from the Clerk of the Peace, or the Clerk of Petty Sessions, must be taken as conclusive evidence of the existence and due publication of the byelaw.

35,305. Then, as far as we understand you, the Board has always endeavoured to legislate in accordance with local objects and desires?—Yes, in accordance with what has been proved to be, or what they consider, best for the interests of all parties.

35,306. And at the same time it has exercised a judgment of its own as to whether the local requirements were reasonable or not?—Yes.

35,307. The Board would not feel it necessary to frame a byelaw at all unless it was satisfied that the desire for regulations was based upon satisfactory grounds?—No; but if it considered the application reasonable, it would frame a byelaw to meet the requirements of the case.

35,308. Has the Board in any case, made its byelaws of its own motion, or has it always waited until it received an application from the locality requiring regulations?—The Board has been put in motion by applications from the locality; either a complaint on the part of one side or the other.

35,309. Is there any case you can mention, since the Board has had that power, in which it has exercised it without being put in motion by a petition from the locality?—No.

35,310. Is there not a list of the byelaws contained in one of the reports?—There is.

35,311. (*Mr. Lefevre.*) The last report contains a list, and also a list of all the licences?—It does.

35,312. (*Professor Huxley.*) The Board has promulgated no scheme of regulations, in virtue of this power, for the regulation of the whole fisheries of Ireland?—I think they have decided only in accordance with the requirements of the locality, those requirements differing very much in one place as contrasted with another.

35,313. Has the Board thought it advisable to abstain as much as possible from interfering?—I think so, as little as possible in a restrictive sense.

35,314. The next Act, the 7th & 8th Vict. cap. 108, gives in the 5th section a special power to the Commissioners to suspend for a fixed period the oyster fishery in any particular locality, for any period not exceeding three years. Do you know why that special power was given?—I believe it was in consequence of information having been received that a great number of the beds had been exhausted and fished out, but you will see by the section referred to that the Commissioners could only act upon an application being made to them.

35,315. Has that been acted upon?—No order has been made prohibiting the fishing for oysters for an entire year, but an extension of the close season has been made at Carlingford and other places, and regulations framed to prevent exhaustion by over dredging and the capture of small oysters. These orders and regulations relate to Carlingford Lough, where the close season was fixed from the 1st March to 1st November, and the capture of oysters of less dimensions than $2\frac{1}{2}$ inches at the greatest diameter was prohibited; to Tralee Bay where the close season was fixed from 1st April to 1st November, and the same regulation made as to the size of the oysters; to Clew Bay, Achill Sound, and Blacksod Bay, where the close season was made from the 1st April to 1st October with the same limit as to the size of the oysters taken in the open time and prohibiting dredging at night; to Cork harbour, fixing the same dimensions and prohibiting dredging by night; and to the Wexford coast where the least dimensions were fixed at three inches diameter. These orders also contained provisions as to throwing ballast upon oyster beds, and to returning to the water all gravel and shells raised by the dredge.

35,316. Can you tell us whether the Board would act upon the report of its Inspector? Suppose, for example, that one of the Inspecting Commissioners reported that, in the course of his observations, he had noticed particular oyster beds to be overfished would the Board, upon receiving such a report, suspend the fishing or dredging there?—No; they would cause a public inquiry to be held and take the evidence of the parties, but before doing so an application should come from some person or persons interested.

35,317. Are you aware whether anything of the kind has taken place; has any fishing or dredging been suspended?—No. There has been no total suspension, but the close season has been extended and other regulations made to remedy or prevent exhaustion.

35,318. The 7th section of the same Act permits the use of the seine net for herrings; can you say why that clause was inserted?—That section gives permission for fishing for herrings by daylight with seines except in such places as should be prohibited by the Commissioners, and the section says that such permission was found expedient.

35,319. You are doubtless aware that the use of the seine net for catching herrings has been a matter of great controversy upon the coast of Scotland?—Yes.

35,320. It would appear as if there had been a discussion of the same kind in Ireland, and that this special clause had been inserted in the Act as the result of the judgment of some persons that the use of the seine net is not injurious?—It would appear so; but I cannot at the present moment say how it was that that clause was inserted in the Act.

35,321. Can you obtain information upon that head; it has a very important general bearing upon the whole question of the fisheries in this country?—In the appendix to the report on the subject of trawling for herrings on the coasts of Scotland, page 35, this information is supplied by Mr. Barry, who says, "The 7th section of the 5th and 6th Vict. c. 106, inter- "dicting the capture of herrings between sunrise and "sunset, rendered the seine net for herrings utterly "illegal by day, but the complaints against this "restraint from persons who could only use them by "day were so numerous that it was judged expedient "to relax the regulation, and the use of the seine net "for herrings was permitted by day by the 7th section "of the 7th and 8th Vict. c. 108.

35,322. The next Act is the 8th and 9th Vict. cap. 108. The 15th clause states, that the Commissioners may permit the use of trammel or other nets during the day time; that is a case of the like kind to the use of the seine net for herrings. The question has evidently been discussed, and whoever was the framer of this Act came to the conclusion that this practice was permissible and not injurious?—This section was to empower the Fishery Commissioners to allow the use of the trammel net during the day, when, in their opinion, it can be employed without injury to the fisheries, the object being principally to allow these nets to remain out during the day off islands and remote portions of the coast, away from harbours or ports which, on short days of winter or or of strong weather, could not be safely reached.

35,323. The 17th, 18th and 19th clauses all relate to a power given to the Board to license the making of oyster beds; they provide that persons stealing from such beds shall be guilty of larceny, and they give power to dredge during part of the close time for oysters to supply the beds. Can you tell us upon what grounds those clauses were inserted?—The only reason I can give for the clause, is the desire to afford encouragement to the artificial formation of oyster beds, and to enforce the close season prescribed by law for the prevention of over-fishing or of fishing at improper times, and the punishment of the offender.

35,324. Was not the Board of Works here largely consulted about these Acts by the Government?—Yes, they were, but some of the clauses may have been brought in by private members, and in such cases, unless a clause was felt to be injurious in its tendency, the Board would hardly have made a representation to the Government without being called upon.

35,325. Then the Acts relating to the fisheries of Ireland have not been the result of the movement of the Board here?—Most of them have been, and they have been altered and amended according as it has been found necessary to introduce alterations.

35,326. You perceive that on the face of the matter the Government, having empowered a Board to look after the interests of the fisheries here, it would seem natural that they should consult the official body, intrusted with looking after the fisheries, in reference to any new legislation that might be desirable?—Just so.

35,327. Therefore I imagine that all these clauses were brought forward after consultation with the Board?—The Board made representations either directly or by their Inspectors, and subsequently by their Inspecting Commissioners, in regard to the details of these clauses, as to the effect of seine nets or trammel nets. The officers of the Board whose whole attention was directed to the subject would supply more reliable information than I can. Of course, in my capacity, it is impossible for me to give you details, or enter into the reasons why some of these clauses were proposed.

35,328. The Board, I believe, has granted a number of licences?—Yes.

35,329. (*Mr. Lefevre.*) Are not all those licences given in the annual reports?—They are detailed in the annual reports.

35,330. And the Report for 1863, which has not yet been presented to Parliament, will contain all that have been granted up to the end of last year?—Yes.

35,331. Have there been many granted during this last year?—Yes, several.

35,332. (*Professor Huxley.*) Under what section of the Act does the Board consider itself entitled to suspend or disallow trawling? Is it under section 9 of the 5th and 6th Victoria?—Yes; the 9th clause says, "Be it enacted that any person who shall use any "trawl or trammel net, at any season or any place, or "within the tideway in any estuary, when or where "the use of the same shall have been prohibited by

DUBLIN.

Mr. E. Hornsby.

17 Aug. 1864.

"any byelaw to be made as herein-after mentioned, "shall forfeit every such net so used, and shall for "every such offence also forfeit and pay any sum not "exceeding 20*l.*"

35,333. It may also arise from the 6th section of the Act, which enacts that no net by which unsizeable and young fish may be taken or destroyed shall be used?—I suppose that both clauses will have a bearing one upon the other.

35,334. (*Mr. Lefevre.*) But the power to make regulations is given, I think, by the 91st clause?—Yes; by the 91st clause the Commissioners are empowered to make byelaws for the protection and improvement of the fisheries, and the powers under that are very general.

35,335. (*Professor Huxley.*) The 7th clause provides that no herring or other nets, save those specially mentioned, shall be shot or left floating in the day time. That amounts to a prohibition against shooting the nets before sunset?—Yes.

35,336. That question is practically answered in the Third Annual Report of the Commissioners of Fisheries, under the head of "Daylight fishing with seine nets?"—Yes, they say, "The grievance complained "of and alluded to in our last report, under this head, "has been remedied by the 7th section of the Act "7th and 8th Vict., cap. 108, to the general satisfac- "tion of those engaged in the seine fishery."

35,337. Are you aware whether the Board has ever fined any person for shooting herring nets before sunset?—No, I am not aware.

35,338. Would the Inspecting Commissioners look to a point of that kind?—Yes, I think they would, if their attention was called to it.

35,339. (*Mr. Lefevre.*) Has any question arisen before the Board as to a conflict of jurisdiction between the law of England and Ireland in regard to that point?—No, not that I am aware of. When the English fishermen come over here they conform to our laws. I am not aware that the question has ever arisen.

35,340. (*Professor Huxley.*) How far does your authority extend out at sea?—I believe that that is all defined by the byelaws. For instance, we prohibit trawling within certain marks. This, however, is a question more for our solicitor than for me.

35,341. You are aware that, according to the ordinary law in England, the jurisdiction is limited to three miles beyond the coast line?—Yes.

35,342. But in the case of foreign fishermen fishing here what would you consider to be your authority over them? Would you have any authority at all under your Acts?—Do you mean at a certain distance out at sea.

35,343–5. No; anywhere?—Certainly, upon the coast we should. Suppose we say, as an illustration, that a fisherman here commits some breach of the law; we cannot punish him or lay hold of him until he comes into port. Then he would have to be summoned before a bench of magistrates, and whatever he had done would be set forth, and decided upon evidence *pro* and *con*.

35,346. Suppose that herring-fishing is going on 10 miles from the land, does your authority extend as far as that?—There is no statutory enactment fixing the limit of our authority.

35,347. No case of that kind seems to have arisen?—No; not within my recollection.

35,348. The Convention Act does not apply, I think, to Ireland as long as any foreign boats are not fishing here?—I think not. I have never heard it quoted, or known it to be relied upon in any case which has come under the notice of the Board.

35,349. We find no evidence in the reports of the Commissioners of a close time for herrings ever having been enacted for Ireland. Was that ever the case?—No; I think not.

35,350. There has been nothing of the kind here?—No.

35,351. And you seem to have nothing here analogous to the brand system in Scotland?—No.

35,352. Is there any considerable export of cured herrings from Ireland?—There is an export of herrings from Howth in the season, but I believe they are not cured, merely salted.

35,353. I mean regular curing, such as they have on the east coast of Scotland?—No; there is none here, that I know of.

35,354. I think the Board, at one time, did specially encourage the curing of herrings on the west coast?—Yes; the curing of all fish.

35,355. And they went so far as to advance funds for the establishment of curing stations?—Yes; they established curing stations at,—

Baltimore,	opened	March	1847,	closed	May 1848.
Castletown	„	May	„	„	Nov. „
Inniscoe	„	Sept.	„	„	June „
Valentia	„	May	„	„	Feb. 1849.
Belmullet	„	Jan.	„	„	Jan. „
Killybegs	„	Jan.	„	„	Feb. „

A sum of 8,000*l.* was advanced by the Treasury for these establishments,—full details are given in our 17th Report.

35,356. (*Mr. Lefevre.*) I think there was some return to the Treasury?—Yes; 800*l.*

35,357. (*Professor Huxley.*) Was the business found un-remunerative?—The time had arrived when it was thought right that Government should close those establishments. They were brought into operation when it was considered necessary, to afford employment and provide food, that the plan should be tried as an experiment.

35,358. (*Mr. Lefevre.*) Was it considered that they had been a success?—They were successful, to a certain extent.

35,359. In promoting the formation of similar curing establishments?—Yes, for a time; they were followed by establishments for fish-curing at other places.

35,360. In the report of the Inspecting Commissioners there are a good many statistical details. What is the method by which they are obtained?—Do you mean, in what way?

35,361. For example, you give the number of boats, the number of fishermen, and the quantity of fish caught. How is all that arrived at?—As regards the boats, they are all registered. That is done by us, through the Coastguard. We issue certain forms of registry, and they are supplied by the Coastguard officers in every district to the fishermen. They send up to us returns of the number of boats, and the number of men and boys employed, each boat being numbered.

35,362. What persons are returned as fishermen? The number struck us as being exceedingly large. Who would be registered as a fisherman? How much time given to the employment would make a man a fisherman?—I expect that every man whose calling is that of catching fish, and who goes out with a boat, would be called a fisherman.

35,363. But I presume that many of these persons only fish during part of the year, and employ themselves in cultivating the land during the remainder?—I think that is so in certain parts of Ireland.

35,364. What fraction of a year would make a man a fisherman?—That is difficult to say.

35,365. I see in the report of the Commissioners that they themselves seem to have some doubt as to whether the number is to be relied upon?—We take the best means we can to obtain the information, but we cannot always vouch for its accuracy.

35,366. Are the Coastguard officers paid for these services?—No.

35,367. (*Professor Huxley.*) There are no resident Fishery officers in Ireland?—No, none.

35,368. Not at the different ports?—None.

35,369. Then the persons from whom these details as to the yield of the fisheries are obtained must be fishermen themselves?—As regards the quantity of fish caught, we ascertain that from the railway and steam companies, who supply us every year with the number of tons of fish they bring from the various localities.

DUBLIN.

Mr. E. Hornsby.

17 Aug. 1864.

35,370. (*Mr. Lefevre.*) Are those statistics given in the reports presented to Parliament?—Yes, they are.

35,371. Are there any statistics with regard to the whole quantity of fish exported from Ireland?—No; I do not know exactly how we could get at that.

35,372. Has it been the duty of the Fishery Inspectors to make tours round the coast?—Yes.

35,373. Every year?—Yes.

35,374. Each year going round the whole coast, or only taking a part of it?—Taking such parts of the coast as they consider necessary, in order to obtain information for their reports.

35,375. They have made reports every year to the Commissioners?—Yes.

35,376. And upon those reports the Commissioners have drawn up a report for the House of Commons?—Yes; upon those reports, and other information of their own.

35,377. Since the appointment of the Fishery Inspector as Commissioner, he has also presided at all meetings held in the country preliminary to the making of byelaws?—Yes; but sometimes it has been considered necessary for other members of the Board to preside with him.

35,378. By whom were their reports generally drawn up?—They either drew up a joint report or each of them draw up a separate report.

35,379. They drew up the report mainly upon the report of the Inspector?—Yes, upon his report and the evidence taken at the inquiry by the reporter.

35,380. I see that it has also been usual for the Inspecting Commanders of the Coastguard to send up short reports every year from their several districts?—Yes, in respect to certain information required of them by the Board.

35,381. A series of questions are asked of them every year?—Yes.

35,382. I think it was in the year 1845 that power was first granted to the Commissioners to set apart oyster beds. That would be the 8 & 9 Vict. c. 108, and there was a proviso that that power should no be exercised in cases where the public themselves had been in the habit of fishing for oysters?—Yes.

35,383. Was there any proviso in the licence that in case of the right not being used it should cease to exist?—Lately there has been a proviso added, that if the object for which the licence was granted was not carried out within a certain time, fixed according to circumstances, the licence should be withdrawn.

35,384. When was that proviso first included in the licence?—Recently.

35,385. Was it found necessary in consequence of licences having been granted and no action taken upon them?—Yes.

35,386. Have many of the beds which have been formed in pursuance of the Act been successful?—I believe they have, and I think I can give you some information upon that point.

35,387. Before the Act of 1845 was passed was not the law in Ireland, relating to public and private oyster beds, the same as in England?—I am not sure.

35,388. I see that the same Act also gave power to suspend the law with regard to the close time for oysters, for the purpose of replenishing and supplying private beds with oysters during the close time?—Yes.

35,389. Have there been many cases in which that power has been granted by the Board?—There has been a case at Arklow, where the month of May was opened in the year 1846. Owing to the excessive quantity taken for exportation to France and to Wales Mr. Barry visited the place from time to time, and he felt himself obliged to recommend the shutting up of May again, but the question was a very difficult one to deal with. The fishery gave an enormous amount of employment to the Arklow fishermen, who got a great price for these oysters.

35,390. Was any action taken by the Commissioners upon that report?—There was not; the remedy seemed to be a very difficult one to arrive at.

35,391. Was it a case of oysters exported from Arklow to foreign beds?—Yes, to France, Wales and England.

35,392. Not to private beds in this country?—No; it was to supply beds in England, Wales and France.

35,393. In that case had the Commissioners given a licence to remove the oysters during the close time?—Yes; there is a clause in one of the Acts which enables them to do that for the purpose of supplying and replenishing private beds.

35,394. And they had in this case granted a licence under that power?—Yes, they made an order opening the month of May.

35,395. Have many applications been made to the Board which have not been granted for regulations, byelaws, and licences?—I can give you a list of the applications which have been made.

35,396. Have there been many inquiries held by order of the Commissioners which have resulted in refusing the applications which have been made?—There have been some, and I will give a list of them as an answer to the question.

The witness withdrew, and the inquiry was adjourned until the 18th of August, at Kingstown.

Kingstown, Dublin, Thursday, 18th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman.) | G. SHAW LEFEVRE, Esq., M.P.

KINGSTOWN.

Capt. W. Hutchinson, R.N.

18 Aug. 1864.

Captain WILLIAM HUTCHINSON, R.N., called and examined.

35,397. (*Professor Huxley.*) You are harbour master here?—I am.

35,398. Have you been harbour master here for many years?—Since 1823.

35,399. Then you have, doubtless, been acquainted during that time with the condition of the fishery at Kingstown?—Yes, I have.

35,400. What is the present number of fishing vessels from this port?—There are 15 or 20 hand-line fishing boats.

35,401. About 15 or 20 sail of hand-line boats?—They do not sail; they are only four-oared skiffs.

35,402. How many trawlers are there from Kingstown?—About a dozen. There is that number of trawlers here constantly. About nine fish out of this port.

35,403. The line-boats are open boats and rowing boats?—Yes.

35,404. Of what tonnage are the trawl-boats?—From 40 to 60 tons.

35,405. When you were first acquainted with Kingstown, was the number of boats as great as it is now?—No. There were no trawlers here whatever; they were all hand-line fishing boats.

35,406. Was the number of hand-line fishermen greater than it is now?—I think there were more then.

35,407. Has the number shown any marked difference?—I think they were more numerous.

35,408. Was the number strikingly greater?—No. I should say there were more, but I could not exactly say how many more.

35,409. Was the number of men the same in each boat?—Yes; four men in each boat.

35,410. And was the equipment of each the same?—Yes.

35,411. Do you remember when trawling began in this harbour?—Trawling first began in Dublin. My uncle was one of the originators of it. He brought over a trawler from Cornwall to this place.

35,412. How many years is it since trawling com-

KINGSTOWN.

Capt. W. Hutchinson. R.N.

18 Aug. 1864.

menced here?—I cannot say exactly the year it commenced, but it is more than a quarter of a century ago. Perhaps between 40, 50 and 60 years ago. There was a company formed, and before that there was no trawling in the Bay of Dublin. Trawling was confined to the Skerries and Balbriggan. The fish were then so high in price that six gentlemen clubbed together, and brought over six trawlers. They commenced trawling. The Company effected their purpose in bringing over those trawlers, and others followed. The Company then sold their vessels, and a general trawl fishery took place.

35,413. Then the considerable trawling in Dublin Bay here is only a matter of recent standing?—About 25 years. I think it was in 1818 when the Company was first formed.

35,414. In 1818?—Yes.

35,415-6. At that time, did the trawlers work in Dublin Bay or outside of it?—Off the Skerries and Balbriggan. It was all carried on in wherries.

35,417. Of what size were these vessels?—Forty-five tons. They were large cumbersome ugly looking craft, with schooner sails.

35,418. Were they open vessels?—No; they were decked vessels.

35,419. Where did they trawl—over what ground?—Not in the Bay of Dublin, but along the coast.

35,420. Why did they not trawl in the Bay of Dublin at that time?—They were not allowed.

35,421. Has the tonnage of the trawlers increased since you first knew the practice to be carried on here?—The boats, certainly, are larger, and they are a finer class of vessels.

35,422. Do they cost more money than they did?—I am not aware of the cost.

35,423. You do not recollect what may have been the cost of a trawler when they first began to work here?—They were brought from Cornwall, and they followed the example of the Cornish fishermen. The vessels have since increased in tonnage and symmetry.

35,424. After the example set here by the Company, did other people take it up?—Yes. The men who purchased the boats from the Company were masters and others interested in the fishery.

35,425. Did they purchase the boats out of their earnings?—Yes.

35,426. Has the number of trawlers gone on increasing?—They have, until we have now 50 or 60 boats out of Dublin.

35,427. Is there any complaint that the supply of fish by trawling is falling off?—I understand that the trawlers cannot get the quantity of fish they formerly did.

35,428. What is the market for that fish?—Dublin.

35,429. Does it all go to Dublin?—Yes.

35,430. With respect to the line-boats, their number is not changed, or if anything has fallen off?—The haddocks have disappeared altogether.

35,431. But how is it with regard to the boats?—There is about the same. They also fish and ply sometimes.

35,432. Has the equipment of those boats become more expensive?—No; it is about the same. They have a better description of boat. The carpenters build very nice boats now; they are somewhat in the form of the Norway yawl.

35,433. Is there any complaint as to the falling off of the yield of fish by line-fishing?—I think there is a great falling off. The haddocks have disappeared.

35,434. When did they disappear?—Five or six years ago. The only fish these men catch now are flat-fish, soles, plaice, and flounders, and sometimes they get a few cod.

35,435. Do you hear any complaint against the trawlers for working over the long-lines?—There have been some complaints.

35,436. Do they complain that the trawlers carry away the long-lines?—There have been some complaints; but I do not think the trawlers go much into the bay now. The Revenue cruiser keeps a sharp look out for them. I have, however, seen them trawling in the bay.

35,437. How long ago was that?—I was on the West Pier one day when a fleet of trawlers went out, and they shook a stick at me. Whether they knew me or not I do not know; but they went out in the bay, and trawled in spite of everything. I was pilot master then. I tried to get some of the Dunleary fishermen to go out in a pilot-boat with me, and take the numbers of the boats, but they would not.

35,438. (*Mr. Lefevre.*) Was there no Revenue cutter here then?—No.

35,439. (*Professor Huxley.*) Do you hear many complaints from the line fishermen about the trawlers?—There have been complaints, but I think they have subsided. They do not persevere now in trawling in the bay, because there was a clause inserted in an Act since passed that no vessel is to trawl between the Bailey Lighthouse at Howth and Mugglins and Dalkey. Mr. Watt, the late Queen's Proctor, consulted me and got a clause put into the Act to prevent trawling inside the headlands.

35,440. Does that appear to be satisfactory to the fishermen?—It was at that time.

35,441. They do not complain of trawling outside the limits?—No.

35,442. Is the cod-fishing in the winter by hand-lines or long-lines?—By long-lines.

35,443. How does the supply of cod keep up?—I was speaking to some fishermen of Blackrock Castle, and they say it has fallen off. When I lived at Blackrock Castle, I could get a good cod for 1*s.* 6*d.* Now, that is not the case.

35,444. Is that because it has fallen off?—Yes.

35,445. May it not have been on account of a much readier communication with the interior of the country, by means of railways, carrying away the fish?—I believe the codfish are all sent to Dublin. The haddocks were formerly sent to Liverpool. There was an immense quantity caught here and sent off to Liverpool as fast as it was caught. The hand-line men made a great deal of money in that way.

35,446. What other fisheries are there here; are there any lobsters caught?—They catch a few about Blackrock, but it is only a small quantity. I think they destroy the brood by catching the small things. People come down in the summer time to fish, and they get a small description of crab for bait, which must destroy the entire brood.

35,447. Are the lobsters diminishing here?—I do not think they catch as many as formerly. Formerly there used to be a great quantity of boats coming from Wexford to Blackrock, and they went away with a large store of lobsters to supply the market of Dublin, but now they do not come.

35,448. Is there any herring-fishing from Kingstown?—Yes; it is now commencing.

35,449. Are there many boats employed?—Several. I do not know exactly what the number is, but the Cornish fishermen, by coming here, have induced our men to turn to that business. They have done a great deal of good. Last winter, there was a man named Lacey, who bought a boat. He paid 190*l.* for her. He went out this season, and in one week caught 200*l.* worth of fish.

35,450. Do you happen to know how many fishing boats there are here?—About six of them.

35,451. Is there any mackerel-fishing here?—The mackerel do not visit this bay very frequently. Sometimes they come in in large quantities, but not often. They come in great quantities, but do not visit the bay regularly.

35,452. Are they caught by the hook and line, or by the seine?—By the hook and line.

35,453. Is there any seining in Dublin Bay?—Yes, there is.

35,454. Ground seining?—Yes, by drag nets.

35,455. Is it habitually practised?—No; sometimes when the mackerel come in they take advantage of the circumstance and get some in the seine nets. There is only one seine-boat in the bay.

35,456. Do sprats ever visit this bay?—No, not any.

KINGSTOWN.

Capt. W. Hutchinson, R.N.

18 Aug. 1864.

35,457. (*Mr. Lefevre.*) Do the fishermen go from here to Howth for the herring season?—They go from this place along the coast to any place where the herrings are.

35,458. Do they habitually go from here for the season at Howth?—They follow the herrings.

35,459. Are most of the fishermen here fishermen throughout the year, or do they turn to other employments?—During the summer a great number of them enter the yachts.

35,460. Do they take to the long-line fishing during the winter?—Yes.

35,461. Can you tell us what the number of fishermen is here?—I cannot tell you exactly; there are at least 50 or 60.

35,462. Are there not more?—Perhaps 80 men.

35,463. How many of those are employed in fishing all the year round?—Very few now; about 15 all the year round.

35,464. Do they mostly fish with the long-line in the bay, or do they go outside?—They go outside towards Lambay and towards Bray Head.

35,465. I suppose the haddock was the principal source of profit here formerly?—There were none such haddock as were caught here for years; they were not large haddock, but they were very excellent in quality.

35,466. Before the disappearance of the haddock, was it the principal source of profit to the fishermen here?—Yes.

35,467. What has been the principal source of profit to the fishermen since their disappearance?—I think they make very little in any way now; they catch the flat-fish and bring them in in the morning, but it is merely existing.

35,468. Can you give any reason for the disappearance of the haddock?—No, I cannot.

35,469. Are there any oysters in the bay?—There are, but there is no regular catch of them.

35,470. (*Professor Huxley.*) Are there any oysters off this port?—There used to be capital oysters in Dalkey Sound; we used to catch large quantities there, and very fine oysters too, but I do not see any boats there now.

35,471. Are there no oyster dredgers from this port?—There is only one man named Godden who makes it a trade; I believe he catches a good deal of large oysters.

35,472. Is there not the same quantity of oysters that there was formerly?—Yes, I think there must be.

The witness withdrew.

JOSEPH EDWARDS called and examined.

J. Edwards.

35,473. (*Professor Huxley.*) Are you a trawl owner here?—Yes.

35,474. How long have you been in that capacity here?—For 30 years.

35,475. Have you yourself ever been engaged in trawling?—Yes.

35,476. Do you trawl now?—No.

35,477. Were you acquainted with trawl fishing here when it first commenced?—I was rather young then, but I recollect it ever since I have been to sea.

35,478. How long is that?—For the last 30 years.

35,479. Has trawling been going on for the last 30 years?—Yes.

35,480. How many trawl-vessels were there here when it first began; I am speaking of the boats at this port?—Do you mean the boats that stop here?

35,481. Yes, the boats trawling from this port.—I don't think there are more than one or two hailing from the port, but there are more belonging to this place, because the owners live here.

35,482. How many belong to this place?—About 30.

35,483. Over what grounds did you trawl when you first commenced?—We trawled from the mountain's foot off Carlingford down to Helvick Head, off Dungarvan.

35,484. About what distance is that in miles?—I suppose about 180 or 200 miles.

34,485. Is it all soft ground along there?—No, it is not.

35,486. You cannot, then, trawl over the whole length of it?—No, we cannot.

35,487. Suppose you put together the ground you can trawl over, how much will it be,—not as much as 200 miles, of course?—No.

35,488. Will it be one half of that?—I should not wonder if it would be about one half of that.

35,489. What breadth of bottom can you trawl over right and left, from east to west?—On this ground, from the mountain's foot, we can trawl 30 miles.

35,490. From east to west?—Yes.

35,491. Will that be the breadth everywhere?—It is not as wide down to the southward.

35,492. On the average, would you get a breadth of 20 miles?—I dare say we should.

35,493–4. Then we should not be very far wrong in assuming that the ground you trawl over is 100 miles long, and 20 miles broad?—Yes, taking all parts of the ground right through.

35,494–5. What is the length of the beam you have to your trawl?—About 40 or 42 feet.

35,496. Do you find that the most convenient size?—Yes.

35,497. It depends upon the length of your vessel?—Yes, partly.

35,498. Do you haul your trawl in with every tide?—No, not every tide. Sometimes we go two tides, and sometimes nine hours, which is a tide and a half.

35,499. Has there been trawling constantly on this coast for the last 30 years?—Yes.

35,500. Is the quantity of fish you can get now, as great as when you first began?—No.

35,501. It is not as great?—No.

35,502. Has it fallen off much?—It has fallen off a great deal.

35,503. What is the proportion caught now, compared with what you were formerly in the habit of catching?—Not above one half.

35,504. Has the number of trawlers very much increased since you first began?—It has.

35,505. How many are now working here?—We count above 50 boats.

35,506. When you began, 30 years ago, how many were there?—About 30.

35,507. The number has not doubled, then?—No, it has not.

35,508. When was it that you first observed the diminution you speak of in the quantity of fish caught?—It has been greatly diminishing for the last six or seven years. The haddocks went away all at once.

35,509. Were you in the habit of catching large quantities of haddock with the trawl?—Yes, we did.

35,510. What other fish did you catch in great quantities?—Cod and plaice.

35,511. Did you catch much cod in the trawl?—Yes.

35,512. Did you catch any turbot?—Yes; but there is not a great deal of difference in the quantity of turbot caught.

35,513. How is it with regard to soles?—They are not as plentiful as they were.

35,514. Do you catch many skate?—Yes, we do.

35,515. Do you find any falling off in other fish except haddock?—Sometimes in the season we do, and sometimes we do not. Sometimes we catch a good quantity at this time of the year.

35,516. Taking the average at one time of the year, and comparing it with another, do you think, leaving haddock out of the question, that you can catch as much other fish as you could catch in former times, or not?—No, we do not.

KINGSTOWN.

J. Edwards.

18 Aug. 1864.

35,517. Then the whole catch of every kind of fish has fallen off?—Yes.

35,518. Do you think that is the experience of all trawlers?—I am sure it is.

35,519. Did the falling off commence six years ago?—Yes; that is, the falling off in the haddock.

35,520. How has it been with regard to the falling off in the other kinds of fish?—They have been getting scarcer by degrees. Down at Dunmore, off Waterford, there is another trawling ground, where there used to be as much fish as we could catch. We used to go down there about the month of January, and there would be as much fish as we could catch; but in the course of a few weeks all the fish would go away. Then we go off Dungarvan, and if there were no trawling there at all the fish would go away in a few weeks.

35,221. The fish seem to be capricious?—The fish come and go in the season.

35,522. Do you recollect, during the first 10 years you were fishing,—between 20 and 30 years ago,—any complaint of the same kind, of a falling off in the fish?—No. The fish are always plentiful and scarce at different times of the year, but they have been scarcer for a few years back.

35,523. Then the scarcity in the supply commenced about six years ago?—Yes; of haddock.

35,524. Not of other fish?—No.

35,525. The other fish have had a slower decrease, apparently?—Yes.

35,526. To what do you ascribe that falling off,—what is the cause of it?—That I cannot say. What we think occasioned the falling off of the haddocks was a gale of westerly wind setting in.

35,527. For how long in the season do you trawl,—for how many weeks?—All the year round.

35,528. Without intermission?—Yes.

35,529. Do you find that you take less fish at one particular period of the year than another?—No; there is a general fishing right through. At different periods of the year we go to different grounds.

35,330. Do you leave one ground and go to another because the fish leave it?—Yes.

35,531. Have you any reason to believe that a large number of trawlers engaged in fishing have fished out any particular place?—Not to my knowledge; I never found it so.

35,532. How long altogether do you work in one place?—Sometimes six weeks, sometimes a month, and sometimes two months. It is just according to the manner in which we find the fish. From the month of November till January we fish more to the northward. Then, at this time, we go off Lambay, and then we go off the light ship, Dunmore, Wexford Bay, and wherever we think we can get most fish.

35,533. Do the whole of the 30 generally work over one patch of ground?—No; some in one place, and some in another.

35,534. How many sail will be working over one patch of ground?—Sometimes 20, and sometimes 30, at odd times, but not often. Sometimes we have some of them working off the light ship, others off Lambay, and others off the Skerries. They are not all together; they are very seldom all together.

35,535. If you have been fishing together for a week or a fortnight over one patch of ground, do you find the fish get scarce?—No.

35,536. Do they seem to take off suddenly?—Yes; when they go away, they go away altogether.

35,637. All at once?—Yes.

35,538. You can go on for three, four, or five weeks fishing, and get the same quantity of fish day after day?—Yes; perhaps in the last week we may get more than in the first.

35,539. Then they suddenly go away?—Yes.

35,540. Does that apply to all fish, soles and everything else?—No, not to all.

35,541. Do they generally go in one night?—Sometimes we may catch some, but, generally speaking, they all go away.

35,542. Have you any notion of the causes which lead the fish to desert the grounds in that way?—No. With regard to the haddocks, they went away in one night, and we have never found them there since. That was after a westerly gale of wind, and the other fish followed after the same gale; but we have found all the others come back again, but not the haddock.

35,543. What quantity of fish will you catch in a day?—Sometimes not more than two baskets in a week; at other times, 25 or 26 baskets in a week.

35,544. What is the most you get in a day's fishing?—We have sometimes got more than 20 baskets in a day's fishing.

35,545. How much will the whole of that weigh?—More than two tons.

35,546. What is the smallest quantity?—We don't get more, sometimes, than a quarter of a basket.

35,547. Would it be a fair estimate to say that the catch was half a ton a day, taking one day with another?—No.

35 548. Is that too much?—Yes.

35,549. Would a quarter of a ton be too much?—A quarter of a ton a day would be a fair average. It may be over the mark; I cannot say, exactly.

35,550. We are speaking now of a rough estimate. You think you will not be far wrong in giving that as an estimate of the quantity you catch? Each vessel averages a quarter of a ton in a day's fishing?—No; I hardly think we catch as much as that.

35,551. Will you say three hundredweight?—Yes; I think we catch that.

35,552. Then, as you have 30 or 40 sail of trawlers working off here—We have 50.

35,553. Then, in that case, there is a considerable supply of fish every day to the Dublin market by trawlers?—Yes.

35,554. (*Mr. Lefevre.*) Do you send your fish in every day?—Mostly every day, especially in the summer time, when it is an object to get it in fresh.

35,555. Do smacks come out to you?—No; we go in ourselves.

35,556. You come in and go out again?—Yes.

35,557. (*Professor Huxley.*) In that case, it will not be over the mark to say that seven or eight tons of fish come in every day to the Dublin market from the trawlers?—Yes, on the average.

35,558. Do you take many young fish in your trawl?—Yes, we do.

35,559. What do you think is the proportion, on a rough average?—Mostly the sort of fish we catch of a small kind is small flukes, about half the size of my hand. There are no other kinds of small fish scarcely.

35,560. Do you catch small turbot or small haddocks?—No, very seldom.

35,561. Small soles?—Yes we do catch small soles.

35,562. What becomes of these small fish?—The small flukes we heave overboard again.

35,563. Are they of no good to you?—No.

35,564. You have no sale for them?—No.

35,565. What do you do with the other kinds of small fish?—They are all saleable fish.

35,566. Have the whiting disappeared?—They have. The whiting went away at the same time, but I think they got scarcer before then.

35,567. Do you ever take up spawn in your trawl?—I never saw any kind of spawn but whelk spawn and squid spawn.

35,568. You get squid spawn sometimes?—Yes; it all hangs in bunches. I have got two or three tons at a haul at certain times of the year.

35,569. Did you ever see herring spawn in your trawl?—I never did.

35,570. What size of mesh do you use in your trawl net?—The smallest mesh is a three-inch mesh.

35,571. Is it the result of your experience that small fish can get easily through that mesh or not?—I don't think they can go through it.

35,572. You don't think they can?—No.

35,573. Not as you bring them up along with the larger fish?—There may be a quantity of small fish which goes out of the big mesh, but we catch no small fish of any kind to make any money of.

35,574. Do you work over the same ground as that upon which the long-line fishermen lay their lines?—Yes.

35,575. Have they buoys attached to their long-lines?—Yes, they have.

35,576. Do you work in the day time?—Yes.

35,577. And at night?—Yes; the same as they do.

35,578. In the night you cannot possibly see the buoys?—No.

35,579. You may trawl over them without knowing it?—Yes.

35,580. In the day time are the buoys large enough to be seen at a considerable distance?—They may be seen at a distance of 60, 70, or 100 fathoms.

35,581. Suppose you see them, do you get out of their way?—We cannot get out of their way sometimes.

35,582. How long does it take you to get your trawl net up?—From an hour or three-quarters to two hours.

35,383–4. Have you ever had any complaint made against you for carrying away the long-lines?—I have.

35,585. What took place; were you summoned before a magistrate for taking the lines?—No; I was never summoned before a magistrate for taking away lines. I have not often done so. Generally speaking, it was their fault. They will shoot their lines across us as we are towing, and we are forced to go across them.

35,586. How are the long-line men to know how you are trawling; does not that depend on wind and tide?—They can see us.

35,587. Do they leave their long-lines down at night?—Yes, sometimes.

35,588. They cannot tell in what direction you may be working at night?—No; but I am speaking of the daytime, and we catch them as much by day as by night. It does not injure them going across them; it is only when we catch one of their buoys that we injure them.

35,589. The long-line fishermen say, why should they not shoot their lines over a particular patch of ground as much as you your trawl net?—I think those who have their fishing gear down should be allowed to fish, and that the others should give way to them.

35,590. If you put your nets down night and day, I do not see how anybody is to be beforehand with you?—We do not have them down all the time.

35,591. But how are the fishermen able to tell when your net is up or down? They do not know when you haul it up?—No. There is no cure for it at night, but in the day they will shoot across us, when there may be 15 or 16 boats all towing up together. They shoot their lines across, and if their lines are caught they must go. There is a certain fishing-ground ahead off Lambay, and if we don't go there we should get no fish. They go there too.

35,592. Practically, does not your working the trawl prevent them from fishing?—No, it does not. If we go across their lines, we do not injure them, except we may take away a hook or so.

35,593. If you go athwart their lines you do not hurt them, further than that you carry away one or two snoods now and then?—No.

35,594. Does not the trawl net haul up the line altogether?—No.

35,595. Does it not become entangled with the hooks?—No; it may break off a snood so, but never more.

35,596. But if you were trawling in the direction of the line you might tear the whole thing up?—We never do that, because we go with the tide, and they shoot their lines just across the tide, and we consequently go over them.

35,597. Then the damage done by the trawlers is not so great as to prevent the long-line fishermen from submitting to it?—No.

35,598. The damage done is not substantial?—No.

35,599. (*Mr. Lefevre.*) You do not carry away the line?—The line is on the ground, and we go with the tide. When our nets are down we can only go the way the tide will drive us, and the tide may bring us in the direction of the buoys, and then we cannot help it.

35,600. But the buoys are on the surface of the water?—Yes, but the line is on the ground, and if we don't get foul of the buoys or the stones attached to the lines we do no injury. If we do get foul of them we tear the lines away, but if we go across we do no injury to them.

35,601. Have your profits much diminished since the disappearance of the haddocks?—I don't think they have, in a general way.

35,602. Did the haddocks form a large portion of your catch?—They did.

35,603. Have the prices of other fish increased since then?—They have been larger for the last four or five years.

35,604. Has the price of soles increased?—Yes, soles and turbot.

35,605. How much has it increased?—Sometimes about one half and sometimes double.

35,606. Is that the case with all fish caught by the trawl?—No; but on the average we get a better price for our fish than we used to do.

35,607. Have the trawlers diminished in numbers during the last few years?—No.

35,608. Are they still increasing?—Yes.

35,609. What distance from the shore do you generally fish?—We fish from four miles from the shore to 40 miles.

35,610. Do you often fish within three miles of the shore?—No, not often within three miles.

35,611. Is there very little trawling ground within that distance?—Dublin Bay is within that distance, but we do not go inside Dublin Bay. We generally go inside Buffer's Bight and from that further out.

35,612. Do you fish off Arklow?—No; there is no fish down off there.

35,613, Do you fish off the Skerries?—Yes.

35,614. What distance from the shore?—Four or five miles.

32,615. Do you fall in with herring-boats there?—Yes.

35,616. Do you ever have any difficulty with their nets?—No, we don't trawl when we see them; we always avoid them; we don't shoot where there are herring nets at all.

35,617. Do you avoid that part of the coast when the herring season is on?—Yes; there is no place out here where we can fish with the herring men.

35,618. How many men have you in your trawl-boat?—Three men and a boy.

35,619. Do you sail your own trawler?—No, I am in a herring-boat now. I am not fishing with the trawl.

35,620. But do you still own a trawler?—Yes, I own three of them.

35,621. Has there been a reappearance of the haddock during the last year?—Not to my knowledge.

35,622. Have you fished round the south-east coast of Ireland?—No.

35,623. You confine yourselves entirely to the Channel?—I have been down in Galway Bay.

35,624. Do trawlers from Liverpool come here at all?—Yes.

35,625. How do you pay your men?—By share.

35,626. What share do they have each?—Each man gets a share of one-eighth, and the skipper gets a share and a quarter.

35,627. And the boy how much?—Half a share.

35,628. Do you fish at all over the Nymph Bank, off Waterford?—Yes.

35,629. Is it a good trawling ground?—Yes.

KINGSTOWN.

J. Edwards.

18 Aug. 1864.

35,630. What do you get there?—Sole, turbot, plaice, cod, and hake.

35,631. Do a great many of the trawlers go there?—No. Generally for five or six weeks there may be 20 sail down there.

35,632. Do any trawlers from Waterford fish there?—Three used to be five or six, but now there are only four.

35,633. What is the season for that ground?—In the winter, from Christmas to the end of January.

35,634. Does it fall off after that?—Yes; the fish go away.

35,635. Has there been any trawling in Dublin Bay within your recollection?—There has.

35,636. It has always been prohibited, has it not?—Generally speaking it has, but at one time it was not.

35,637. Used you to take many turbot and soles there?—No; mostly plaice. It was a very valuable fishing there. I have made a good deal out of it. I have made 6*l.* and 7*l.* in a haul out of it.

35,638. You have done that yourself; how long ago is that?—Ten years ago.

35,639. Since that there has been more care in prohibiting the trawlers from going within the bay?—Yes. I don't think they have been within it now for five or six years.

35,640. (*Professor Huxley.*) Do you think the prohibition of fishing within certain limits on many parts of the coast of Ireland is a hardship, and injurious to your trade?—I cannot say,

35,641. Do you yourself feel in any way aggrieved by it?—I would sooner be outside altogether.

35,642. You do not care about it?—No, I do not; but it would be a benefit to us sometimes if we were allowed to go into the bay.

35,643. You were speaking of catching large quantities of plaice in Dublin Bay?—Yes.

35,644. Is plaice a fish that can be caught by the hook?—Yes; they are caught by the hook.

35,645. (*Mr. Lefevre.*) Are there any soles in Dublin Bay?—No, only two or three.

35,646. Are there any turbot?—I never caught any, except one or two.

The witness withdrew.

G. Johnson.

GEORGE JOHNSON called and examined.

35,647. (*Professor Huxley.*) Are you a line fisherman here?—I am.

35,648. How many years have you been fishing here?—More than 40.

35,649. What sort of boat do you use?—A four-oared skiff.

35,650. What does a boat of that description cost?—About 10*l.*

35,651. How many lines do you have in her?—Four.

35,652. What is the length of each line?—They are about 400 fathoms each.

35,653. How many hooks are there on a line?—Four hundred.

35,654. What does each line cost?—About 14*s.*

35,655. So that you can set up the whole for about 12*l.* or 13*l.*, boat and lines and all?—Yes.

35,656. What fish do you catch generally?—We catch nothing at present but plaice and flounders.

35,657. When you began, what fish did you catch?—We caught plenty of haddocks.

35,658. I speak now of fish you catch all the year round?—For the last six years back we have never caught a haddock. I never thought I should live to see that day.

35,659. But let us go back to the time when you began fishing; what sort of fish did you catch then? Were you in the habit of fishing in Dublin Bay?—Yes; about four miles outside the light ship.

35,660. What were the different kinds of fish you caught?—Plaice, flounders, gurnets, haddocks, and cod.

35,661. Any whiting?—Yes, whiting, but very rarely.

35,662. At that time was there plenty of fish?—Yes, plenty.

35,663. What fish was in the greatest abundance?—Haddock, and every sort of fish.

35,664. They were all plentiful?—Yes, all were plentiful.

35,665. How many boats were there fishing at that time—I mean long-line fishing boats—from this place?—There were about eight boats.

35,666. And how many are there now?—I think there are about 10, when they are all together.

35,667. So that the number has very little increased?—It has very little increased, but a great number of the men have died.

35,668. You say the fishing has fallen off a great deal?—Yes, very much.

35,669. When did it begin to fall off?—For some years past now.

35,670. For how many years?—For 10 or 12 years past.

35,671. What are the fish that have fallen off most?—I cannot say; every sort has fallen off.

35,672. Which has fallen off most?—Haddocks have fallen off "teetotally," both small and large.

35,673. But plaice and whiting remain?—There is no such thing as getting any whiting at all there.

35,674. Do plaice remain?—Yes, but they are very scarce.

35,675. What fish is it you catch chiefly?—Some odd plaice and flounders.

35,676. What is the reason that there has been this falling off?—I put it all down to trawling.

35,677. What damage do the trawlers do?—They take the seed and brood of the fish out of the water.

35,678. You mean the spawn?—Yes.

35,679. Have you been on board a trawler?—I fished for a fortnight on board one.

35,680. Did you see the trawl net come up?—Yes, I helped to heave it up.

35,681. Did you see any of the spawn of fish inside the trawl?—Yes, and plenty of small fish too, about the length of my finger; we shovelled it overboard.

35,682. What kind of spawn?—Small whitings, haddock, and plaice.

35,683. But, besides that, you saw spawn—what sort of spawn was it?—I cannot tell what sort it was.

35,684. Might it not be squid spawn?—I don't know.

35,685. You are not sure about that?—No.

35,686. You say the falling off in the fish began about 10 or 12 years ago?—Yes; they became much reduced about 12 years back.

35,687. But trawling has been going on for many years?—Yes, for about 60 years.

35,688. How is it that they did not begin to do you any mischief until the last 10 or 12 years?—That is so.

35,689. But how was it?—They are catching the seed and brood of the fish in the sea.

35,690. Would it not have shown some such effect before 12 or 12 years ago?—So it did; they may shift from one place to another but they will not get a handful of fish.

35,691. You say the trawlers have been working here and doing all this mischief for the last 30 or 40 years. They have been working here all that time according to the evidence we have heard; but you tell us that the great falling off in your line-fishing has only taken place within the last 10 or 12 years?—It began to be reduced long before that, but we didn't much mind it; it is reduced altogether now, both for the line-hookers and the trawlers.

35,692. Is there any seine-fishing carried on here in a way that will do you any harm—I mean small

KINGSTOWN.

G. Johnson.

18 Aug. 1864.

seines along the shore?—There are a great many of them; there are a great many of them up in Barrowford Lough, which was a channel for Dublin river before. There is a man here with an uncommon net which he uses; he hauls up with it a great deal of the brood of the fish, and he is continually working it in that lough.

35,693. Where does he get a sale for the fish?—He leaves a great many of them on the bank behind him.

35,694. Is there only one of them here?—There is only one to be seen in the river of Dublin.

35,695. Does that one do all the mischief?—It does a great deal of mischief in the way of killing small fish.

35,696. Have you any good reason to complain of the trawlers having carried away your lines?—Sometimes; but if we see them trawling down with the tide we do not shoot our lines.

35,697. Have you had any lines taken away?—Yes, one about 12 years ago.

35,698. Is that the only time you lost your lines?—I have lost them several times.

35,699. How long ago is the last time?—Four or five years ago.

35,700. Was the line carried away altogether?—It was.

35,701. Did you not get it back again?—I did not.

35,702. (*Mr. Lefevre.*) Did you take the number of the trawler who did the damage?—No.

35,703. (*Professor Huxley.*) Was the damage done in the day time or at night?—In the day; he spoke to us and said he would take away our lines.

35,704. But could you not see his number?—No; we were shooting our lines and he was on our weather side.

35,705. Do you think it was an English boat?—Yes.

35,706. Was it because you could not come up to him that he got away?—Yes.

35,707. Is there much damage done to the long-line fishermen in that way?—There is often, especially to the northern men up off Howth.

35,708. Does the presence of the trawlers on the ground keep you line fishermen from shooting upon it? When you see trawlers on the ground do you abstain from going there?—Yes; if we shoot across them they take our lines away, and it is better to keep them in the boat than to lose them.

35,709. Then the trawlers working upon the ground actually keep you out of it?—Yes; they would do so, if they were coming down with the fleet there north or south.

35,710. If you saw the trawlers working over the best ground would you abstain from going there?—We would not go near them at all.

35,711. Do you practise any other fishing besides the line-fishing?—Cod-fishing and eel-fishing.

35,712. Do you catch congers?—Yes.

35,713. Have the congers fallen off?—They are plentiful along this shore.

35,714. Are there as many as there ever were?—They may be scarcer in cold hard frosty weather.

35,715. But, taking one year with another, is there about the same quantity that there was in former years?—Yes.

35,716. How is it with the cod, do you get as many as you used to do?—No, not one quarter.

35,717. What do you think is the reason of that?—I can prove that it is all owing to the habit of trawling.

35,718. Do you get any hake?—Only a few odd ones.

35,719. Do you get as many hake as you did formerly?—No.

35,720. Then the hake have fallen off, like other fish?—Yes; but the trawlers may catch plenty of them.

35,721. How is it about bait,—what bait do you use for your cod?—Herrings and whelks.

35,722. Can you get plenty of bait,—as much as you want?—No; we have to buy the bait, mostly. We use squid-bait often, and good bait it is.

35,723. Is the bait as plentiful as it used to be?—No, it is not.

35,724. What is the reason of that; have you used up the beds of whelks?—It is according to the weather how we catch whelks; in cold frosty weather they will not come to the quays.

35,725. Do you find the herring-bait good for the cod?—Yes.

35,726. Is it one of the best baits you use?—It not as good as squid-bait, because it will not stop as long on the hooks, nor whelks either. If we leave them a night in the water the fish will not touch the other bait.

35,727. Do you fish all the year round?—Yes.

35,728. Do you do anything besides fishing?—Not a ha'porth.

35,729. Is that the case with most of the line fishermen?—Some go in packets.

35,730. They principally get their living by fishing?—Yes.

35,731. They do not cultivate land at all?—No.

35,732. (*Mr. Lefevre.*) How many men make their living by fishing all the year round?—There are about 80 men belonging to this place, but very few fish all the year round. There are five boats fishing at present.

35,733. Do you find that you get a better price than you did formerly?—No.

35,734. Is it much about the same?—Sometimes less and sometimes more. The herring-boats being so plentiful on the coast make the fish cheap.

35,735. Are your earnings less than they were in former years?—Yes, a great deal less.

35,736. What do you calculate your earnings at in the course of a week?—If we work day and night for 14*s.*, that is accounted a good week now. We might earn that, some years ago, in a couple of days.

35,737. But not all the year round?—No.

35,738. Only occasionally?—Yes.

35,739. How many of you go out in the same boat?—Four.

35,740. Do you share your earnings?—Yes.

35,741. Equally between you?—Yes; every man has the same.

35,742. How much is there for the boat?—Not a ha'porth. I myself owned the boat, and didn't get a ha'porth for it.

35,743. Do you own a boat?—Not at present. I fish in another man's boat.

35,744. What is the greatest distance you go outside the light?—About four miles, to the best of my knowledge, to a place called Rockmere.

35,745. You do not go further than that, as a rule?—No.

35,746. Do you often find trawlers trawling within that distance?—Yes; they trawl within a stone's throw of the West Pier, and from there by Dublin light along to Howth and across here.

The witness withdrew.

JAMES GALLAGHER called and examined.

J. Gallagher.

35,747. (*Professor Huxley.*) Are you a fisherman here?—Yes, sometimes in the winter time.

35,748. How many years have you been employed in that capacity?—About 24.

35,749. Do you fish all the year round?—No.

35,750. What do you do in the rest of the year?—Sometimes I take to the boats, or anything I can get, in the summer time.

35,751. But in the winter time you are a fisherman?—Yes.

KINGSTOWN.

J. Gallagher.

18 Aug. 1864.

35,752. Do you ever go herring-fishing ?—Yes.

35,753. The fishing you generally practise is line-fishing ?—Yes.

35,754. Are there many men in Kingstown who fish like you in the winter time, and get other employment in the summer ?—Yes, a good many.

35,755. Is it the case with the greater part of the fishermen ?—Yes, except a few men who, like the last witness, fish the year round. It is not worth my while to stick to it in the summer. I should not be able to get a living.

35,756. Do you agree with the statements which have been made by the witness Johnson ?—Yes.

35,757. About the falling off of the fish ?—Yes.

35,758. And the increased scarcity of it since you have known the fishery ?—Yes.

35,759. And what do you think has been the cause of that ?—The trawlers.

35,760. You put it down to the trawlers ?—Yes.

35,761. Have you ever yourself been trawling ?—Yes, I have.

35,762. Have you seen the trawl net come up and the contents of it ?—Yes.

35,763. What have you found there ?—Turbots, soles, and all kinds of fish ; small fish, about the size of my finger. Sometimes we have been two or three hours hauling it up, and shovelling it overboard.

35,764. What would be the proportion of small fish compared with the rest ?—I have been shovelling out dabs the length of my hand.

35,765. Is there a great quantity of them ?—I have seen two tons weight on the deck, and I have been heaving the fish and spawn overboard after picking the good fish out.

35,766. (*Mr. Lefevre.*) Have they been thrown overboard alive ?—No, not alive.

35,767. Would the small fish be alive ?—Some might be alive, but the shovelling of them overboard would kill them.

35,768. (*Professor Huxley.*) Do you think it is a wasteful mode of fishing ?—I do.

35,769. In what depth of water were they fishing when that took place ?—I dare say it would be from 25 to 26 and 30 fathoms.

35,770. Was that the case ordinarily. Was it usual for there to be so large a proportion of small fish in a haul ?—I was only in the trawler for a short time, but I have often been out in the night looking after squid-bait, and I have seen them doing the same thing, shovelling overboard all the small fish and spawn on to the moles, and the same in the harbour.

35,771. Do you agree with Johnson as to the damage done by the trawlers in working over your lines ?—Yes.

35,772. Have you lost lines in that way ?—Yes.

35,773. Has that frequently been the case ?—It has not happened to me often, only once or twice. Some of the Black Rock men complain that when they are in the habit of leaving their lines out at night, that the trawlers trawl over them. We fish in the day and set our lines in the morning.

35,774. Do you set your lines where you think the trawlers will not come ?—We often go out to haul our lines on the fishing-ground when we find the trawlers there, and we stop on the ground an hour or two waiting for the trawlers to get out of our way.

35,775. Then the presence of the trawlers on those grounds prevents you from fishing there ?—It does.

35,776. What do you think about the effect of seine-fishing on the fisheries ?—It is just as the last witness said. There is one on the Lough which kills all the small fish and spawn, and leaves thousands of them on the bank after taking the good fish out. There is another man down at Killiney, who drags a seine inshore.

35,777. How many are there ?—Only those two.

35,778. How long have they been doing that ?—Those men have been here nearly as long as I can remember ; they have been backward and forward.

33,779. Has no one ever interfered with them ?—Not that I am aware of.

35,780. Have any representations been made to the Fishery Board with regard to the injury they do ?—I do not know if either of the men's names who have the seine nets have been mentioned, but complaints have often been made about the trawlers.

35,781. With regard to bait, do you find any difficulty in getting bait ?—It is just according to the cold weather, which prevents the whelks from coming in ; and then we manage the best way we can. We buy herrings and squid, but we generally take our own bait.

35,782. The scarcity of bait does not interfere with your fishery ?—No.

35,783. If there is plenty of fish, you manage to get bait ?—Yes, we always did. We go to particular places and take the bait. We take our boat across with four, six, or eight men.

35,784. Your boats are not fitted to go out to sea ?—No farther than the Kish Bank, and on that way.

35,785. Do you find that you get better fish further out at sea ?—Sometimes we get better cod and haddock.

35,786. You never take to larger boats, to enable you to find the fish further outside ?—No ; we have always used skiffs with four oars and men.

35,787. (*Mr. Lefevre.*) How long were you on board a trawler ?—Not more than a fortnight or so.

35,788. Where were you fishing ?—Away on the new ground, over at the Isle of Man.

35,789. How far from the shore ?—Fourteen or fifteen miles.

35,790. What made you leave the trawling ?—I don't know. I did not wish to stop in her.

35,791. Did you not make as much money by it ?—At that time they used to make a power of money, but I would not stop in her.

35,792. Why not ?—I would sooner go to some other business.

35,793. What was your reason ?—I had no reason, any further than that I could make more out of the long-lines at that time.

35,794. How long ago was that ?—It is going on for 20 years.

35,795. And I suppose the haddock were then in abundance off this coast ?—Yes, they were very plentiful. We could go and load a boat on the edge of the rough ground off the pier then.

35,796. How many months in the year are you employed in fishing now ?—I go backwards and forwards. I work in vessels. There are many times when I go in vessels.

35,797. On the average, how long have you been employed in fishing ?—Backwards and forwards, about six months.

35,798. Do you find that your earnings are very much less than they were ?—Yes.

35,799. Could you make more by trawling now ?—No ; I do not care to go trawling at all.

35,800. Do you think that they do not make money by trawling ?—No. I was talking to a man to whom I paid two shillings for bait, and he told me that he had not brought as much into his house for his earnings for seven weeks.

35,801. Do the line fishermen make more ?—No ; both parties are begging, as we may say, now. The trawlers have beggared the hookers, that is my opinion, and now they will beggar themselves.

35,802. Their earnings have fallen off in the same proportion ?—Yes.

35,803. Did you observe what the small fish were that you took up in the trawl ?—They were small flukes and little whiting, and there might be some small haddocks among them. I did not look particularly to see what sort of fish they were.

35,804. Have you observed any trawlers fishing within the bay here ?—Yes. It is not long ago, at the time the "Ajax" was here, when there were ten of them fishing off the pier. That is not more than four years ago. I think there were two taken, and the others swung their trawls, and got away, so that the boats of the "Ajax" could not catch them.

35,805. Was that the last time that you observed any trawling in the bay?—Yes.

35,806. Have the fish in the bay fallen off as much as they have outside?—Yes, I think they have.

35,807. Do you think that the prohibition of trawling within the bay has done any good?—They have not prevented trawling at all. When there are north-west winds on dark nights they are continually trawling in the bay, up to this day.

35,808. What makes you think so?—Because I have seen them.

35,809. I thought you said four years ago was the last time?—I have seen them before that.

35,810. But for the last four years they have not been trawling in the bay?—I cannot say they have not, but I have not seen them.

The witness withdrew.

Mr. James Redmond Barry called and examined.

Mr. J.R.Barry.

35,811. (*Professor Huxley.*) You are the Inspecting Commissioner of Fisheries, Mr. Barry?—Yes.

35,812. The 6th clause of the 5th and 6th Vict., cap. 106, runs thus: "And be it enacted, that no net "or other engine covered with canvas, hide, or other "material, by which unsizeable and young fish may "be taken or destroyed, shall be used on the sea "coast or within any estuary, except for the purpose "of dredging for shell fish; and every person offend-"ing by such use of any such net or engine shall "forfeit the same, and shall also, for every such "offence, forfeit and pay any sum not exceeding "10*l.*" It has been put before us in evidence that some persons are in the habit of using seine nets, by means of which large quantities of small and unsizeable fish are taken in Dublin Bay. Suppose a complaint against such persons was lodged before the Fishery Commissioners, would they feel inclined to prosecute under that clause?—The Fishery Commissioners never considered it their duty to prosecute at all.

35,813. What would they do, then, if a complaint were laid before them?—They would recommend the parties to summon the offenders before the ordinary tribunals of the country.

35,814. Then the Commissioners would not feel inclined to interpret the clause as an authority to take action themselves?—It has never been their practice; and, in reference to that clause, I must say the complaints have been very rare indeed.

35,815. You are, doubtless, thoroughly acquainted with the feeling of the Commissioners. Would you conceive that that clause applies to such a seine as that now under discussion?—Clearly, if the size of the mesh is of that description, or the net comes within the description stated.

35,816. The clause, as you observe, is somewhat indefinite. It is a little difficult to say whether the point is the character of the net or the result of using it; whether the net or engine has to be covered with canvas, hide, or other material, or whether any net which takes unsizeable fish is to be forfeited?—Yes.

35,817. Have you ever heard of a net or engine being used covered with canvas, hide, or other material?—I never heard of such a thing.

35,818. Then there is the further qualification, "any net by which unsizeable and young fish may be taken"?—Exactly.

35,819. So that, supposing the allegation made in this case to be true, it would be a case in point?—Clearly.

35,820. And the persons of whom this is stated would come under the operation of the clause?—Yes.

35,821. So that the fishermen who complain would have a remedy at common law?—Yes.

The witness withdrew.

Henry Williams called and examined.

H. Williams.

35,822. (*Professor Huxley.*) Are you a line fisherman here?—I was.

35,823. How many years were you fishing here?—For the last 20 years.

35,824. Have you given it up now?—Yes.

35,825. Did you not find it answer?—No.

35,826. You have heard the evidence of the previous witnesses?—Yes.

35,827. Do you agree with what they have said?—Yes.

35,828. As to the fact of the falling off, and the cause, and everything else?—Yes.

35,829. Is there anything you wish to add to what they have stated?—No.

35,830. (*Mr. Lefevre.*) What are you doing now?—I am pilot to the harbour master.

35,831. Then you have given up fishing altogether?—Yes, for five or six years.

The witness withdrew.

Michael Smith called and examined.

M. Smith.

35,832. (*Professor Huxley.*) Are you a long-line fisherman here?—Yes, in the winter time.

35,833. What do you do in the summer time?—I go yachting.

35,834. How many years have you been fishing here?—About 17 or 18 years.

35,835. Do you do anything else besides line-fishing?—Not in the winter time.

35,836. Have you heard what the previous witnesses have stated?—Yes.

35,837. Do you agree with them?—I fish on a different scale. I go cod-fishing, and use lines for haddock, and at different times I have been obliged to draw up my lines in consequence of the trawlers.

35,838. Have they kept you off the only grounds worth fishing upon?—Yes; and I have lost a great deal of time by them.

35,839. When was that?—About four years ago. I took the number of one of them.

35,840. What did she do then?—She was fined 3*l.*

35,841. How many lines did you lose?—Three out of five.

35,842. You did not get back the value of your lines?—No; I never got them again.

35,843. But the trawler was convicted?—Yes; she got off with a fine of 3*l.* I believe the fine was about 10*l.*

35,844. Were they new lines?—They were, very nearly; but I have lost new and old lines by the trawlers.

35,845. Did the fine go to you or to the Crown?—It went to the Crown; I never saw sixpence of it.

35,846. Then you got nothing by it?—No; only loss of time.

35,847. Then that would be no encouragement to you to bring them up again?—No; the next day I saw 10 of them trawling in the same place.

35,848. This seems to be a great injury to you?—Yes; it is the greatest injury that is done to our class of fishermen. it affects us more than any other men. Our lines are obliged to be out by night. We should not earn fourpence a day if they were not.

35,849. And your buoys are not visible by night?—They are only small dogskin buoys.

KINGSTOWN.

M. Smith.

18 Aug. 1864.

35,850. The trawlers cannot get out of your way then?—They do not care about doing it.

35,851. Did you hear what was stated by Joseph Edwards, that if the trawlers run athwart your lines they do not injure them?—They do injure them; they cannot go over them without tearing them.

35,852. Then that is not your opinion?—No, they cannot go over them without tearing them. Only a fortnight ago I was out with my lines, when it was blowing hard, and we were afraid to stop with them. We only shot half our lines, and the next morning there was half of them gone.

35,853. Then I gather it to be your opinion that trawling and long-line fishing for cod cannot go on in the same place?—They trawl all along the coast.

35,854. But long-line fishing cannot go on where trawling is going on?—No, it cannot.

35,855. And although there is nominally a remedy at law, yet, in point of fact, it costs you more to enforce the remedy than it is worth?—Yes.

35,856. You lose your time and get nothing by it?—Not a halfpenny.

35,857. The practical effect of the present state of things is, that it drives you off your fishing ground altogether?—Yes; we might as well take and throw our lines into the sea at once.

35,858. Is there any other point which you wish to remark upon?—Nothing more than that I cannot live by the fishing in the summer time. When I first went to fish, I could earn 7*s.* or 8*s.* in a day in the summer; now I cannot earn fourpence.

35,859. What kind of fishing?—Long-line fishing and crab and lobster fishing; there are no fish now. The crabs and lobsters have all been destroyed.

35,860. Do you put all that down to the trawlers?—Yes. In Dublin market I have seen two hundredweight of brood.

35,861. That had been trawled up?—Yes.

35,862. Have you ever been trawling yourself?—No; I know nothing about trawling.

35,863. What do you think of the injury done by the seine nets?—I do not understand them either. I know nothing but the cod-fishing.

35,864. Do the trawlers catch many cod?—I cannot say. There are a great many of them, and a boat I went on board had cod and hake, but only a few haddocks.

35,865. Do you think the trawl-fish is as good as fish caught with the hook and line?—I do not think it is.

35,866. Do they fetch the same price in the market?—They do not.

35,867. If you bring a cargo of line-fish into the market, will you put theirs out of the market?—Yes. For good sized hooked cod we should get half-a-crown a piece.

35,868. Have the codfish decreased since you have been fishing?—Sometimes it has and sometimes not; a strong breeze makes the fish dearer.

35,869. Taking an average of one time and another, are codfish dearer now than they were some years ago?—Yes; they are dearer than when I first commenced.

35,870. Do you agree with the other witnesses as to the complete falling off of the haddocks?—Yes.

35,871. And of the whiting?—Yes; I have seen the time when we could get 40 dozen off Black Rock, and we cannot get one now.

35,872. Why do you think the haddock and whiting have fallen off more than any other fish?—The cod have fallen off nearly as much.

35,873. Have the plaice?—They have also fallen off.

35,874. But the haddock has almost disappeared?—Yes; I have been fishing for months in deep and shallow water, and have not seen a haddock.

35,875. But the same thing has not happened to you with regard to the cod and whiting?—Pretty near it.

35,876. What do you think is the reason?—I think that the small fish have been all killed.

35,877. You think that more the case with the haddock than with other fish?—I do.

35,878. (*Mr. Lefevre.*) What was formerly the season for haddock?—From the 1st of October up to the 1st of March they used to be plentiful in the bay; in the summer time the Kingstown men got them out on the Kish Bank.

35,879. (*Professor Huxley.*) Do you know where the haddocks spawn?—I do not.

35,880. (*Mr. Lefevre.*) What distance were you from the shore when you lost your lines?—About two or three miles south-west of the Kish Lights.

35,881. And what distance do you generally fish?—Sometimes seven miles from the shore.

35,882. Would you exclude the trawlers altogether from that ground?—There is one part of the ground where trawlers cannot come down between this and Bray Head.

35,883. Do you catch more fish on rocky ground?—No; we do not fish on rocky ground.

35,884. Do you find the fish best on the clear ground?—Yes.

35,885. On the same ground that the trawlers fish upon?—Yes; the trawlers cannot fish on rocky ground either.

35,886. Do you generally find along the coast that you catch more fish on the smooth ground than on the rocky ground?—Yes; it is all on clear ground that we work our cod lines.

35,887. Is that the case with the haddocks?—Yes, generally it is; whenever a man goes out to shoot his lines he generally sets them on clear sand; it is the same way with the cod; that is a fish that resorts to the clear ground.

35,888. You said the market was well supplied with cod?—No; I said I had seen a great deal of cod sent sometimes into the market by the trawlers.

35,889. Do you think the trawlers catch the cod you formerly got?—Yes, I do; they cannot miss that sort of fish more than any other.

35,890. Then what would you propose?—I would propose that it is through the trawlers that the fish are scarce.

35,891. Would you exclude the trawlers from fishing within a certain distance from the shore?—Yes, I would; no later than last year I saw 10 or 12 trawling in the bay altogether.

35,892. Then do you think that the regulations which now exist have not had any effect?—I do not think that the limits are sufficient.

35,893. Do the trawlers work within the prohibited limits?—Last winter I saw 10 or 12 fishing within here.

35,894. Then the regulation is not enforced?—No, it is not.

35,895. Then if there were any regulation with regard to their fishing, as you propose, there would be still greater difficulty in enforcing it?—I do not know, but I have seen from 10 to 12 and 14 of them regularly in the bay here. I have seen vessels lying off the light ship trawling.

35,896. What fish do they take in Dublin Bay?—Plaice, principally, and some turbot, and an odd sole.

35,897. Do they catch large quantities of plaice in the bay?—Yes, they do. In Dublin Market I have seen the fish jumping alive, waiting to be sold.

35,898. Do you not fish for plaice?—No.

35,899. Then you cannot say whether they have fallen off in quantity?—No.

35,900. You are employed in yachting in the summer?—Yes; I could not live by fishing.

35,901. How long were you a fisherman altogether?—Seventeen or eighteen years.

35,902. When you first began fishing, did you fish all the year round?—Yes.

35,903. Do you find that your earnings have fallen off?—I could not earn five shillings a week all the year round. I have been, last winter, fishing for four shillings or five shillings a week, and I never could make more than 16 shillings.

KINGSTOWN.

M. Smith.

18 Aug. 1864.

35,904. Take the winter through, what do you make?—Not more than 10 shillings a week throughout.

35,905. What did you make in former years?—About eight or nine years ago, four men in a boat would make 22*l.* in a fortnight.

35,906. Was that the average all through?—Thirty shillings a man was about the average.

35,907. Was that a good season?—It was a good season, but I have had as good before that.

35,908. Was it a very unusual thing to make as much?—Yes. We generally did not earn as much as that, but now we cannot earn 10 shillings a week.

35,909. (*Professor Huxley.*) What would you think an average quantity of fish supplied by each boat by the long-line fishing? What weight would there be in a fair day's fishing, before the scarcity began?—I cannot exactly say what the weight might be, but we were generally in the habit of getting from 40 down to a dozen on four lines. In one of the small boats fishing, we might get five or six dozen in a haul. I have seen 13 dozen cod got in the bay in a haul, but generally it would be from 40 down to a dozen.

35,910. You cannot give us a notion of the average weight of the fish?—No; we never sell them by weight, but by the lump.

The witness withdrew.

M. Carroll.

Michael Carroll called and examined.

35,911. (*Professor Huxley.*) You wish to make some statement to us?—I have nothing to say, with the exception that the chief thing we want to protect us in the Bay of Dublin is that the trawlers should be kept a great deal further out at sea, and that there should be a cutter or something to watch in the bay during the winter.

35,912. Do you agree with what the previous witnesses have said?—Yes.

35,913. You think the bay ought to be protected more than it is?—Yes; nothing will save us from starvation but that. They have been coming here these 20 years, ever since the Act was passed prohibiting them. It is all of no use; they still trawl in the bay, on very dark nights, with the wind from the west. On such nights we cannot leave the harbour to go out ourselves, and then they go in and trawl away, and take all that there is in it. If we go out next day, we may come in with fourpence, fivepence, sixpence, or a shilling for our families.

35,914. Can the trawlers fish when you cannot?—Yes.

35,915. Is there much of the winter when you cannot fish?—Yes, a great deal.

35,916. Then at that time, if it were not for the trawlers, there would be no supply of fish at all?—They could go to other ground to fish, where our small skiffs cannot. If they had not taken all the fish away, we could get a shilling or two to support our families.

35,917. But they can fish over the ground in weather when you cannot fish at all?—Yes.

35,918. (*Mr. Lefevre.*) You agree that the regulation prohibiting trawlers from coming into the bay is not attended to?—Not the least in the world.

35,919. You would extend the prohibition still further?—I would put them further out, to where they are limited, outside the light ship, both for their own good and ours.

35,920. Would it be possible to enforce that prohibition?—I think the Board should do it. The trawlers should strike out other lines for themselves. It would be best both for themselves and for us. They could all go out to sea and get a good living outside.

35,921. Has there not been a Revenue cutter here for the last few years?—That is of no purpose, unless you actually go down and point out to them that there is a trawler, then they may go out or not as they please.

35,922. It is on dark nights when you cannot see them trawling that they do it?—Yes. But if there was a vessel properly stationed in the winter season about the bay, then I expect there would be none of it. If they caught some of them and gave them the benefit of the law, I would engage that after that they would stop out of the bay.

35,923. Have you yourself seen the trawlers fishing in the bay during the last few years, or is it only a suspicion on your part that they do fish there?—It is no suspicion; I have seen them and have boarded them, and have done my best to prosecute them, but I could never get any satisfaction.

35,924. How long ago is that?—About 32 or 33 years ago.

35,925. When was the last time you saw trawlers fishing in the bay?—I myself, together with a man standing here and a son of mine, were working for bait last winter, and I happened to go down along the mole, expecting to see some of them. It was blowing hard from the north-west, and I could see them tacking into the bay, to make a shot. We ran round to the Coastguard, and told them, and the Coastguard went out and brought in word that they could not see them.

35,926. Was it a dark night?—Yes, it was pretty dark.

35,927. Could you see that they had their trawls down?—No.

35,928. Then were you sure they were trawling?—Yes, I think they were coming in for no other purpose.

35,929. But when the Revenue cutter went could they not find them?—It was the Coastguard boats.

35,930. The Coastguard did go out, then?—We went round again and told them we had seen another, and they said they could not see them.

35,931. They said they could not see them from the shore?—I think they said they had seen them, but could not meet with them.

The witness withdrew.

J. Cullen.

John Cullen called and examined.

35,932. (*Professor Huxley.*) Are you a line fisherman?—Yes.

35,933. What do you catch principally?—In the winter time I catch cod. I used to catch haddocks, but I cannot get any of them now.

35,934. Is the fishing falling off?—I can hardly get a living by it.

35,935. What do you think is the reason of that?—I think it is the trawling.

35,936. Is it because the trawlers come inside the bay?—Yes; and they are after killing all, both root and branch. They are killing the spawn and everything else, and they will have the whole sea to themselves presently.

35,937. Were you ever on board of a trawler?—No, never.

35,938. Then what makes you think that?—I am sure of it. If a man has any understanding in his head, he knows what a trawler can do.

35,939. But you do not speak from your own observation?—I do. When I was a boy all kinds of fish were as thick as the grass, and a party of gentlemen fishing from the rocks on the foul ground could get half a boatload of fish. Now you may go from Black Rock to the westward of the black buoy, and from that to the Bailey Light, and where formerly we were able to get from 25 to 30 and 45 cod upon a line besides haddocks, we cannot get 5 or 10.

KINGSTOWN.

J. Cullen.

18 Aug. 1864.

35,940. How many years is it since you first began to find the fish fall off?—They have been falling off for the last 15 years.

35,941. But trawling has been going on for 30 years?—Yes; it has been going on longer than I can recollect.

35,942. Then how is it that the fish did not begin to fall off much sooner?—The body of the fish was so plentiful that it took a long time to kill them. Skerries Bay was a great place for the fish to spawn in. When they got sick and would not take the hook they went there to spawn, but the trawl-boats, knowing that, went there and killed them when the lines might be thick on the beach without catching them.

35,943. What is the remedy for that? Would you put down trawling altogether?—Yes.

35,944. You would not allow it at all?—No; and if that is not done we shall very soon not have a mouthful of fish altogether.

35,945. Would you put down trawling everywhere?—I would make them knock it off for 10 or 12 years, and then you would be able to ascertain if the scarcity of fish is their fault or the fault of the hookers.

35,946. Have you anything further to add?—No.

The witness withdrew.

Capt. G. A. Fraser, R.N.

Captain George Alexander Frazer, R.N., called and examined.

35,947. (*Professor Huxley.*) You are a Captain in the Navy?—Yes.

35,948. Have you been employed in surveying on the coast of Ireland?—I have surveyed the whole of the banks, and my charts are supplied to the ships that navigate the Channel.

35,949. Is it long since you were actively engaged in that duty?—In 1853 I was put on half-pay, but since then I have had to report upon the public works of the country.

35,950. Is there any evidence you would like to offer with regard to the fishery question?—Only so far as this, that the fisheries are neglected round the coast.

35,951. Neglected?—So much so, as to render it a matter of general speculation. You will see new speculations getting up every day. I think the fisheries on the coast of Ireland are of great value. I know that to be the fact after 25 or 28 years' experience, and it is amazing to me that the people have not taken the matter up in a way that would have been certain to realize a profit.

35,952. Is it your impression that there is an abundance of fish on the coast?—There is no question about it. My own men have hauled in large quantities on different parts of the coast. In fact, there is no end of fish.

35,953. Have you noticed any falling off in the supply of fish?—The fish here have been greatly falling off within my recollection, since about 1822. They did not diminish all at once, as these men try to make it appear, but they have gradually disappeared since the steam communication commenced.

35,954. Do you think that it has been the result of the establishment of steam?—I think it was, at first. There is no doubt that trawling within certain limits must tend to do a great deal of harm.

35,955. Have you ever observed the trawl net being hauled up?—I cannot say that I have.

35,956. Your impression is, that on other parts of the coast there is an abundant supply of fish?—There is an immense supply of fish, if it is properly worked.

35,957. Is it your opinion that the want of success of the fishermen arises from want of enterprise?—Want of enterprise and proper management. There was a company got up some time back, but it was much mismanaged by working too many places, and the profits were swallowed up.

35,958. (*Mr. Lefevre.*) What was the name of that company?—The London Deep-Sea Fishing Company. There were two of them, I believe.

35,959. (*Professor Huxley.*) Is it not very much the case in all fishery enterprise, that when people do not fish themselves, they do not find it answer?—Evidently, this fishery company was mismanaged.

35,960. Do you think that any local restrictions or regulations enforced here have had any injurious effect on the fisheries?—No, I do not think they are sufficiently protected. The suggestion that was made by a man here just now, that some person should be officially appointed to watch the fishing, I think would be a very good thing indeed.

35,961. What would be the duties of such a person?—The same as on the coast of Scotland,—to watch the oysters, and the fisheries generally. Vessels should be constantly out to detect and catch persons breaking the law.

36,962. To prevent trawling in the bays?—Yes. The Revenue cutters cannot do it. They only go out for a short cruise, or to other stations. But if a vessel were appointed especially to watch these people, it would have a very great effect.

35,963. Do you think that the practice of trawling in bays is injurious?—Yes.

35,964. Would you put it down?—Yes.

35,965. Do you think that the practice of trawling anywhere is injurious?—No, certainly not.

35,966. You do not go as far as the last witness, and wish to put it down absolutely?—No, certainly not.

35,967. (*Mr. Lefevre.*) How far along the coast do the observations you have made apply?—I think to nearly the whole of the coast.

35,968. I mean especially with regard to the falling off in the fishing?—It is only here that I have observed it.

35,969. You do not think the supply of fish has fallen off at Arklow?—No.

35,970. Nor off Waterford?—No; the fishing in those places is outside the bay, and there it is different from what it is inside the bays; we fish further south for cod and haddock; there is a great haddock ground off Youghal, but it is on the rough ground that they fish for them.

35,971. To the southward do you come to ground unworked at present?—Yes, and of the the whole west of Ireland there are vast quantities of fish. Some years ago, I was surveying in the north when some of the Skerry fellows sent out one or two trawlers, who rigged up a hurricane house on the rocks and landed a man and a boy. They caught in a few weeks very large quantities of fish, which they salted and cured, and it was as fine fish as was ever got from Newfoundland.

35,972. Do you think the falling off has been mainly in Dublin Bay?—Yes, and I know it has fallen off here. I have been looking for whiting, and such a thing is not to be found.

35,973. Do you agree with some of the witnesses that the trawlers do carry on trawling within the bay?—I have no doubt of it.

35,974. To any considerable extent?—I cannot say, but I have no doubt they do it sometimes; of course they will take advantage of dark nights.

35,975. Do they take a considerable quantity of fish out of the bay?—It is the small fish they destroy which does the harm.

35,976. Have you observed small plaice in the market?—I never go to the market.

35,977. Do you think it would be possible by introducing a Government steamer to put a stop to the practice?—Yes; a small steamer, if compelled to look out at the proper time, would do a great deal of good; the trawlers would know that they were being watched, and that would put a stop to all improper practices, to any great extent.

The witness withdrew, and the inquiry was adjourned until the 19th of August, at Howth.

Howth, Dublin, Friday, 19th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

HOWTH.

R. Handford.

19 Aug. 1864.

RICHARD HARDFORD called and examined.

35,978. (*Professor Huxley.*) Are you a fisherman belonging to Howth?—Yes.

35,979. How long have you been fishing here?—It is about 17 years since I first commenced, and I have been all my time at it ever since.

35,980. What sort of fishing have you practised?—Haddock-fishing and cod-fishing in the season, in the first of my days, and herring-fishing and cod-fishing principally now.

35,981. You fished for haddock, I suppose, with a long-line, and for herrings with a drift net?—Yes.

35,982. Do you fish for haddock now?—No.

35,983. Do you fish for any other kind of fish with long-lines?—Only codfish in the season of the year.

35,984. Do you pursue any other occupation except fishing?—Not at present.

35,985. When you first began fishing 17 years ago was there a good supply of haddock?—Yes.

35,986. What would be your average catch?—The average catch we formerly got would be sometimes as high as 30 score.

35,987. That would be a high catch?—Yes. Sometimes it would be as low as five score.

35,988. Would 20 score be an average catch?—Yes, about 20 score.

35,989. What quantity of cod did you catch then?—I have seen as low as half a score, and as high as 18 score in one shot.

35,990. Would ten or a dozen score be the average catch?—About that, I think.

35,991. Did you get plenty of whiting?—Yes, we did.

35,992. What would be the average catch of whiting?—It depends upon where you are fishing. I have seen as high as 10 dozen in a day's fishing.

35,993–4. What sort of boat did you use then?—Do you mean the rig?

35,995. What tonnage were they?—From 30 to 40 tons.

35,996. What would a boat of that kind cost?—I do not know exactly; I never purchased one. They would average from 300*l.* to 500*l.* 20 years ago.

35,997. That would be the original cost of the vessel?—Yes.

35,998. With all its fittings?—Yes.

35,999. Lines and everything else?—No, not including fishing tackle. That was the cost of the vessel.

36,000. How many men would there be in a line boat, when you were fishing?—Not less than eight and a boy, and sometimes 11 and a boy.

36,001. They were decked vessels, I suppose?—Yes.

36,002. Did you fish with hand-lines or long-lines?—Long-lines.

36,003. How many lines did you have?—Each man had eight lines; about 40 fathoms on each line.

36,004. How many hooks?—About as many hooks on each line. Each man would have about 200 hooks.

36,005. How far did you go out to fish?—Sometimes in the winter season we went out a mile or two from the shore.

36,006. Did you fish in the bay?—Yes, and off the harbour, and at this season of the year we have to go further, to where we get the herrings now.

36,007. How far is that?—About 25 miles.

36,008. Was there any trawling at that time?—Yes.

36,009. Were the boats working in the bay at that time?—At times they were working in the bay.

36,010. How many trawl-boats were working at that time?—About 50 or 60 sail.

36,011. As many as there are now?—I believe there are more now.

36,012. What is the state of the line-fishing now; is there less fish than there used to be?—Yes, there are.

36,013. What fish have fallen off most particularly?—Haddocks.

36,014. Have the haddocks almost disappeared?—Yes, they have.

36,015. How is it with regard to whiting?—They are scarce too.

36,016. And how about cod?—Cod are not as plentiful as they were in those days.

36,317–8. What would you reckon an average catch of fish?—Codfish?

36,019. Yes, in a day's fishing?—Well, about five score. We generally get more when we are up at Arklow.

36,020. And in former times what would you have thought an ordinary catch of fish?—Ten score.

36,021. There is nothing like the quantity caught now that you caught in former years?—No.

36,022. And the haddock particularly, you say, has disappeared?—Yes, it has disappeared altogether.

36,023. Do you not catch any at all?—We may get one, two, or three for a whole winter season.

36,024. Do you get bait as easily as you did in former years, and the same kind of bait?—Yes.

36,025. When did you notice the haddock begin to fall off?—About seven years ago.

36,026.—Did you have good fishing up to that time?—Yes.

36,027. And then it began to fall off?—Yes.

36,028. Are there more trawlers now than there were formerly?—I think there are.

36,029. What is your notion of the reason that the fishing has fallen off?—Mine is the same opinion as that of the general run of fishermen, namely, that the trawlers are the cause of it.

36,030. What harm do they do?—They kill the spawn in the first place, and heave it overboard when they take the nets in.

36,031. Have you ever been on board a trawler?—Yes.

36,032. Have you seen spawn brought up?—I have.

36,033. What sort of spawn was it?—Spawn of all descriptions, and small fish fit for no use at all. It was all lying dead on the deck, and was shovelled overboard with a shovel.

36,034. Can you say that the spawn you saw was the spawn of fish?—I cannot exactly say that; but there was plenty of small fish fit for no use at all, and it was thrown overboard.

36,035. You think that that has damaged the fishery so much that you do not catch any fish now?—Yes, I do.

36,036. When you were fishing 16 or 17 years ago, did you find that the trawlers did you any damage by driving over your lines?—Yes.

36,037. Did you ever lose any lines in that way?—Yes.

36,038. How often did that occur when you were fishing?—Very often. Very seldom they would trawl over us when we were fishing without taking away our lines from us, and it was very difficult to escape them.

36,039. Did you ever have anybody summoned for that?—No, I never did.

36,040. Could you not tell the number of the trawler that did it?—Sometimes I have been able to get the

HOWTH.

R. Handford.

9 Aug. 1864.

number, and sometimes I have not been able to get close enough to them to get it.

36,041. Suppose you got the number, would you summon them?—I never had charge of the boat; that was generally left to the master.

36,042. Did the master ever do it when the lines were carried away?—Not to my knowledge.

36,043. Sixteen years ago, were you a drift fisherman yourself?—I was.

36,044–5. Were the same vessels used for drift-fishing as were used for line-fishing?—Yes.

36,046. What was the length of the drift nets then; what would be the length of a fleet of nets?—Not quite as long as they are now, but I cannot say the length.

36,047. Did you catch plenty of herrings then?—Yes, at times I did.

36,048. Were there large shoals of fish at that time?—Yes.

36,049. As large as now?—They were larger, and closer to the harbour; we did not have to go half as far for them.

36,050. Have you been fishing within the last year or two?—Yes.

36,051. Have you found large shoals of fish this year and the preceding year?—Yes; but they have not stayed for a constancy, only for a night or two.

36,052. They were not as good as they were in your former days?—No, I do not think they have been.

36,053. Was the number of boats employed in the drift-fishing when you first began smaller or larger than now?—The number is largernow than it was then.

36,054. The number of boats has increased?—Yes.

36,055. Considerably?—Yes.

36,056. Are the boats of the same size and manned by the same crews as formerly?—They do not have as many in the drift-fishing altogether as they had in the long-line fishing.

36,057. But is the same proportion kept up now as was kept up in former years?—Yes.

36,058. Then, on the whole, the number of vessels and fishermen has increased here?—Yes.

36,059. Did you ever find yourself, when a drift fisherman, interfered with by the trawlers?—In those days I did not.

36,060. They did not work down among you?—No; it was in the Bay of Dublin they were drifting in those days, when I first went to sea.

36,061. Did not the trawlers come into the Bay of Dublin?—Not in my time; I saw none there.

36,062. What time was the herring-fishing carried on 17 or 18 years ago?—It commenced generally in July.

36,063. Did you begin when you pleased?—Yes.

36,064. When were the fish full?—In June or July.

36,065. Were they full as early as June?—They were full in July, at all events.

36,066. Was there any winter fishing?—Yes, up to Christmas.

36,067. Was there no herring-fishing after Christmas?—Very seldom; they generally gave up then.

36,068. Did they give up going after the herrings, and go to the long-line fishing?—Yes.

36,069. Were the herrings in Dublin Bay in the winter time after Christmas?—I could not say that.

35,070. You do not know?—No.

36,071. Did you find the herrings good bait for the cod?—Yes, they are very good bait.

36,072. Are they used largely for catching cod?—Yes, every season.

36,073. How do they catch them in the cod season after Christmas?—Some of the boats will be fishing for the cod before the herring season is given up here.

36,074. Before Christmas?—Yes.

36,075. Then it seems to be your opinion that all the fishing has fallen off, herring-fishing as well as long-line fishing?—Yes; we do not catch the herrings as close in as we used to do.

36,076. How is that?—I cannot form any opinion upon it.

36,077. Have you any suggestion to make about it?—No.

36,078. (*Mr. Lefevre.*) When did you first begin to fish for the herrings?—This season.

36,079. Previous to that time were you fishing only with the long-line?—Yes, haddock-fishing.

36,080. Was there no herring-fishing from this port then?—Yes, there was.

36,081. Did you find the long-line fishing more profitable than the herring-fishing?—No; but they had no boats belonging to this place. It was strangers who came principally.

36,082. Are you the owner of a boat yourself?—No.

36,083. Do the herring-boats ever go out any distance, to the Isle of Man for instance?—They have not been to the Isle of Man this last year or two. They can always find enough to satisfy them about here.

36,084. And they have not been to the Cornish coast?—No.

36,085. Has the number of boats coming here from Cornwall and the Isle of Man increased of late years? Yes.

36,086. And the Scotch boats, too?—Yes.

36,087. Seventeen or eighteen years ago were there any Scotch boats fishing here?—No.

36,088. Then the whole number of boats has increased very greatly?—Yes.

36,089. And the take of fish must have increased very greatly, must it not?—Yes, it has.

36,090. Do all those boats bring their fish into Howth?—Principally, all of them do.

36,091. How many nets do you carry in your boat?—Twenty.

36,092. What is the length of them?—They are about 30 fathoms each in length.

36,093. Do the Cornish boats have longer nets than you?—No; they are considered somewhat shorter.

36,094. Are there as many of them?—No.

36,095. Are the Cornish and Manx boats about the same size as yours?—I think the Manx boats are bigger than ours. They are principally all Manx-built boats in this place that are engaged in the herring-fishing, but I believe they are of different dimensions. They are not all of one size.

36,096. Do you buy your boats from Manx men or from Cornish men?—Most of them from Manx men, and some of them from Cornish men too.

36,097. Is there any mackerel-fishing here?—Not here; but there is at Kinsale.

36,098. Do the boats go from here for that season?—Yes.

36,099. Do they land their mackerel here or at Kinsale?—At Kinsale.

36,100. How long ago is it since you were on board a trawler?—I dare say 14 or 15 years.

36,101. Not since then?—No.

36,102. How long were you on board?—Five weeks.

36,103. Where did you trawl?—In Courtown Bay and Wexford.

36,104. Were you trawling near the shore then?—Yes.

36,105. Were there many boats trawling then?—No, only one.

36,106. What depth of water were you trawling in?—From three to six fathoms.

36,107. What was the size of the boat?—It was only a small boat; about 25 tons, I think.

36,108. What made you leave off trawling?—We could not get fish enough.

36,109. It did not pay you well?—No.

HOWTH.

R. Handford.

19 Aug. 1864.

36,110. Did you find that you made more profit by the long-line fishing?—Yes, we did.

36,111. Do you ever sink your herring nets here?—Yes; we sink them about 18 feet from the surface of the water.

36,112. Is that late in the season?—No; since we first commenced up until now.

36,113. Do you never have them nearer the surface than that?—No; when we are in-shore we have to shorten our nets. That is all owing to the depth of water we are in. If they get on the ground they are liable to tear.

36,114. Do you take many fish after they become spent?—Yes, we do.

36,115. What is the close of your herring season here?—The last season did not close until Christmas.

36,116. And it begins about the middle of June?—They can begin earlier. Some go in the middle of May, and some later.

36,117. What time do the Manx boats come here?—We expect them here in the course of next month.

36,118. They are not here now?—There is an odd one or so, but not the fleet generally.

36,119. How many boats go out from here at the beginning of the season?—I think there are about 20 boats that belong to this harbour.

The witness withdrew.

Nicholas Doyle called and examined.

N. Doyle.

36,120. (*Professor Huxley.*) You are an owner of fishing-boats here, are you not?—Yes, part owner and master.

36,121. And you are also a fisherman yourself?—Yes.

36,122. How many years have you been a fisherman here?—Twenty-six years.

36,123. What kind of fishing have you practised?—Every kind of fishing, with regard to deep-sea fishing,—long-line fishing, trawling, and drifting with herring nets.

36,124. Can you describe the boat that is used here for your deep-sea fishing?—Well, when I first went to sea, in my father's time, they were all wherry rigged fore-and-aft vessels.

36,125. That is, schooner-rigged, as we call it?—Something on the same principle as the schooner. There were no square topsails, and no centre stays, but they had a boom gaff just the same as the fore-and-aft schooner rig. That is the American system.

36,126. How are they rigged now?—Principally cutter-rigged.

36,127. Did you find that the mode of rigging adopted formerly was disadvantageous?—Yes.

36,128. What is the average tonnage of the vessels used now?—The general average is from 25 to 35 tons of our long-line vessels.

36,129. Are they completely decked?—They are thoroughly decked.

36,130. How much will they cost when completely rigged and fitted with lines?—From 300*l.* to 500*l.*

36,131. What did they cost in your father's time?—The boats cost from 400*l.* to 700*l.*

36,132. Then they were more expensive boats?—Yes, owing to the style of building. We now use soft wood, but the other was of oak.

36,133. How many lines are required to make up the fittings of a liner?—Do you mean what would be the cost?

36,134. How many lines would be required, in the first place?—We average according to the fishing we follow in certain seasons of the year. In long-line fishing for haddock, we formerly carried eight coil of line each man. The cost of that at the present time would be about 18*s.* Then there is another attached to the buoy—the floating mark; that would cost 2*s.* 6*d.* besides, and the value of the buoy would be from 5*s.* to 7*s.* Every man is supposed to have that amount of material.

36,135. That would be something under 24*s.* or 25*s.* each?—It would run from about 25*s.* to 30*s.* on the average.

36,136. At that cost a boat should be fitted for the line-fishing?—Yes, each man's part.

36,137. Are the same vessels used for the drift-fishing?—No.

36,138. They are not the same vessels?—No, they are all open vessels for the drift nets. The decked vessels do not suit. You will see a portion of them lying on the off side of the harbour now. There is no occupation for them at the present time.

36,139. Then these vessels are only used in the winter in the long-line fishing?—The cause of their not being used at any other time is that there is no practice for them. It would be of no interest to us to send them out to sea when there are no fish for them to catch.

36,140. Well, then, when you are going to take to your drift-fishing, what vessels do you use for that purpose?—The boats we use at present you will see up and down the harbour. They have the general Manx rig and the French rig.

36,141. What tonnage are they?—From 25 to 40 tons.

36,142. Are they partly decked?—Yes, that is all.

36,143. What is the cost of the vessels rigged, but without nets?—From 240*l.* to 270*l.* odd.

36,144. How long will your fleet of nets be for each boat?—Our fleet of nets are somewhere about an eighth short of a mile at the present time.

36,145. What will a fleet of nets cost?—They will cost from 180*l.* to 200*l.* owing to their additional depth and length; some may have four pieces extra and more than another, and may, perhaps, be 100 meshes deeper than others.

36,146. Will you describe the make of your nets here? What is the size of the mesh to begin with?—The mesh generally runs from 32 to 33 rows to the yard.

36,147. Do they never run smaller than that?—No; there are none less than 33 rows to the yard.

36,148. Are they made of cotton?—Yes, principally of cotton.

36,149. Do you find that much better than the old material?—Yes.

36,150. Does it mesh the fish better?—Yes, but we cannot get the old material; it is a new kind that they manufacture now; there is a new species of flax that is used for making nets.

36,151. Are some of the flax nets as good as the cotton nets?—No, they allow that they are not as good; they will not stand as long.

36,152. How many meshes deep will your nets be?—Eighteen score and from that to 25 score is about the general run; some of the Scotch trains are from 20 to 30 score on the average.

36,153. What do you call here the rope that runs along the head of the net?—We call that the back rope.

36,154. How are your buoys made fast?—We have a string attached to the back rope and we make the buoy fast to the end of it.

36,155. Was it ever the practice to have the buoy on the back rope without any string?—Not that I know of.

36,156. Ever since you can recollect you have had them made fast by strings?—Yes.

36,157. What do you find the most convenient length of string?—There are different lengths; we use them from 15 feet or 2½ fathoms to 5½ fathoms, according to the rise and fall of the tide and the moon.

36,158. Do you ever find it advantageous to your fishing here, about the time the fish become full and are spawning, to sink your nets and ground them?—We never ground them on the coast here, but they do

HOWTH.
N. Doyle.
9 Aug. 1864.

at the Isle of Man; they sink them down as far as the ground.

36,159. What time do you find it best to shoot your nets?—With regard to that, at present there is no regulation carried out upon that point; it is very requisite that there should be; sometimes they shoot them an hour and a half before sundown, whereas the proper time is never before sunset, however they may be shot after.

36,160. You say the fishermen here do not observe any rule about that?—No rule is carried out to that effect at all here.

36,161. Are you aware if there is any regulation of the Fishery Board on that subject?—No; they were talking about it five or six weeks ago, but they did not come to any conclusion upon it. You may say that the fishermen might arrange that for themselves, but that is impossible. If you and I were to have a meeting with some others and come to an agreement about the time we should shoot our nets, we should find that others would not adopt our course, and so the whole thing would be knocked on the head. In the Isle of Man they have a vessel which carries a flag, and if any man goes out and shoots before the Commander lowers the flag he is under a penalty.

36,162. Is there no rule to that effect here?—No.

36,163. Has any application been made to the Fishery Board on the subject?—No, none that I know of.

36,164. Then you think it would be advisable to have a rule upon that subject?—Yes, it would be most proper.

36,165. Why do you think so?—Because it is disadvantageous to the fishery altogether.

36,166. How does it hurt the fishery?—We all allow in general, both Englishmen, Irishmen, and Scotchmen, that when the nets are shot before sundown it causes the fish not to rise.

36,167. Does it break the shoal?—Yes; and it keeps them from rising the same evening. They do not come to the surface anywhere where the nets are.

36,168. Do any foreigners fish off this coast besides the Manx men and the Cornish men,—do any Frenchmen come here?—No; there are only Scotchmen, Englishmen, Irishmen, and Manx men.

36,169. Do you ever find yourselves interfered with in drifting by the trawlers?—Yes, very often.

36,170. Do they drift down amongst you?—Yes, very often.

36,171. Are your boats lighted at night?—They are.

36,172. How are they lighted?—By a lamp extending six feet from the centre of the bowsprit bit. It is fixed on a stand, and the lantern is 18 inches square, and there are four panes in it, 14 inches long.

36,173. Then you can be very easily seen at night?—Yes; and when we find these vessels coming into collision with us, we throw out a flare-up.

36,174. Do they drift upon you, notwithstanding?—Yes, very often.

36,175. Is that because they trawl at night here?—Yes; they always did so.

36,176. Has trawling been going on ever since you knew the place?—Yes; as long as ever I have been at sea I have heard of trawl-boats.

36,177. Was your father a fisherman?—Yes.

36,178. Did he talk about them?—Yes.

36,179. Did he complain of their interfering in the same way?—Yes.

36,180. How many trawl-boats were there working when you began fishing, 20 years ago?—From 35 to 45, speaking roughly.

36,181. (*Mr. Lefevre.*) Is that including Dublin?—It includes Dublin, Ringsend, and Kingstown.

36,182. (*Professor Huxley.*) Are there more now?—Yes, one-third more.

36,183. Are the boats as large now as they used to be?—Yes; some of them are far larger. Some are nearly 20 tons larger.

36,184. Have you been pursuing the herring fishery all the time that you have been a fisherman?—No.

36,185. When did you begin herring-fishing here?—Only six or seven years ago.

36,186. Up to that time, was there no considerable herring-fishing here?—Yes, with the Cornish men and Manx men; but we had no fleet out from this place.

36,187. Is it true that, during all the time you can recollect, there were Cornish men and Manx men fishing off this coast?—Yes.

36,188. I thought you told us your father complained of the interference of the trawlers?—So he did, but I meant the Cornish herring fishermen and the Manx men. As long as I can remember, there has been herring fishing carried on here by Englishmen and Manx men on this coast, but not in general by a fleet here, because we had none.

36,189. Your father was an Irishman, was he not?—Yes.

36,190. Then if he complained of the trawlers interfering with his fishing here, that implied that he was fishing?—Yes, he was long-line fishing.

36,191. Then did he complain not of their interfering with the drift-fishing, but the long-line fishing?—Yes, and drift-fishing as well.

36,192. How could he complain if he was not a drift net fisherman?—But he was.

36,193. Then at that time there were Irishmen pursuing drift net fishing here?—Yes, but there were only a few, such as the Arklow boats. There were one or two at this port, another at Malahide, and others at Kilrush, and so on.

36,194. (*Mr. Lefevre.*) What number was there seven years ago?—The number of boats about seven years ago from this harbour was not more than 14, and at the present time they have 35 or 36.

36,195. (*Professor Huxley.*) There were as many as 14?—Yes.

36,196. (*Mr. Lefevre.*) Take 20 years ago. How many were there then?—Not more than two or three out from this port and Baldoyle altogether then.

36,197. (*Professor Huxley.*) Had they as large fleets of nets?—No, the nets were not more than two thirds the size of those used now. They were one-third less than the nets used at the present time.

36,198. Can you tell us why it was, seeing there was an abundance of fish on the coast, that the fishermen of the coast did not pursue it?—Because they were not able. They had not the capital themselves, and those who had it took no interest in the fisheries.

36,199. Then what was it that made them take to it seven or eight years ago so suddenly?—Perhaps, I might be able to master part of a vessel, and I might induce gentlemen to assist me, and pay them interest for the money they advanced. That has most likely been the way in general.

36,200. Did persons who had capital, seeing that the fisheries were likely to prove advantageous, lend money to the fishermen to start them? Was that the way in which it was done?—No, they bought vessels themselves for the fishermen.

36,201. Seven or eight years ago were the additional vessels found by persons who had money in that way?—Yes.

36,202. And fishermen were put in them to work them?—Yes.

36,203. Were the persons who first bought the vessels inclined to let the fishermen become possessors of them themselves if they chose to buy shares?—Some of them were, and some were not.

36,204. Has it been the case largely for the fishermen themselves to become owners?—Yes; the greater part have become part owners.

36,205. Then a good deal of money has been made out of the fishing?—Yes.

36,206. And it has been a flourishing thing altogether?—Yes.

36,207. I suppose, from what you tell me, that if the people had been so inclined 20 or 30 years ago,

in your father's time, they might have done the same thing just as well ?—Possibly they might.

36,208. Were the fish there then ?—There would be more fish then, because there were not so many trawl-boats to destroy the fishing.

36,209. So that if there had been the same public spirit displayed 20 or 30 years ago the fishing might have existed then as well as now ?—Just so.

36,210. And there would have been that development of the fisheries on the coast which has taken place since ?—Yes; in regard to the herrings especially.

36,211. Ever since this increased development of the fisheries took place, has it been very profitable and successful ?—Yes; but it has not been as well as it would have been if the trawl-boats had not interfered on the coast in the night time. They have caught an abundance of herring in the trawl when we have been night after night and could not shoot one net. If we speak to them, all the satisfaction we get is, that they tell us to go here and there and do our best.

36,212. Have you no protection against that ?—We can get no protection.

36,213. Can you not take their numbers ?—We tell them we will, and we get nothing but sauce and abuse.

36,214. If you were to lay an information before the magistrates, would you not obtain redress of some kind ?—Yes, but you feel inclined to drop it, and I feel inclined to drop it, and the thing is allowed to rest.

36,215. Why is it not worth somebody's while to prosecute ?—I have spoken to different parties I have been employed with, and they have always said "wait until another time," and so the thing dropped altogether. I believe there was one man, a Mr. Greaves, of the Isle of Man, who took proceedings against some of the boats under the Scotch Act and got 280*l.* for it, but we never carried that out here.

36,216. Did he lose his nets ?—Yes, 17 nets out of 20, and the fish and all.

36,217. If people will not take the trouble to put the law in force themselves, what is to be done ?—We did put the law in force with regard to our long-lines, and we got no satisfaction.

36,218. How was that ?—Because they were a stronger party than we were, and they were upheld by stronger parties. We are only poor, dependent men, and when we lose our long-lines it is a serious matter for us; they come across us and take away our lines and buoys, and when we speak to them we get nothing but sauce. I should not like to make use of the language they give us. They tell us to do our best and our worst, and that is all the satisfaction we get. If we run foul of them the consequence is that we get no redress. We have taken our case to Mr. Richardson, the proctor, and other parties, but we have got no satisfaction.

36,219. Did there appear to be no law, or was the law not put in force ?—I believe they bribed the parties, and having more capital than we had they carried the case to a higher court. They appealed, in point of fact.

36,220. They beat you by the length of their purse ?—Yes.

36,221. You are prevented, then, from following out your functions by the existence of trawlers on the same ground ?—Yes, and no matter what portion of the sea the long-line fisherman or the drift-net fisherman goes to, the trawler is sure to follow him.

36,222. What do you think would be the best mode of remedying that state of things ?—They should not be allowed to trawl within the limits of the headland at the Mountain foot or Carnsore Point. If they do, then they destroy the spawn. They ought to keep out eastward of the light ship from Lambay Island to Bray Head. I think that is the greatest nursery for fish in any part of Her Majesty's dominions, and yet it is being thoroughly torn up by trawling.

36,223. That would not affect the injury done to you as fishermen for herrings, so far as the trawlers trawling among you and carrying away your nets are concerned, because you are often fishing for herrings outside that line ?—Yes.

36,224. What would meet the injury which you suffer from the trawlers coming among you and carrying away your nets ?—I think the proper thing would be, to have one of Her Majesty's steam-vessels to protect the fleet, and to see that the herring-boats are allowed to drift their nets without any hindrance being placed in their way by any trawl-boat. If that is not done we shall get no satisfaction whatever in the herring-fishing, but they will destroy the fishing altogether.

36,225. There is at present operative in certain parts of the kingdom an Act called the Convention Act, and that provides, among other things, that wherever drift-net men and trawlers are fishing together, the trawl men shall keep at least three miles from the drift-net men; would a regulation of that kind meet your case here ?—That would be better than the present condition of things, because we have now no regulation whatever. A small boat outside, not long ago, was nearly run down, with all hands, by a trawl-boat. They had to haul for life and death in order to get clear of him. As it was, the trawler caught the mizen-mast and knocked it all away.

36,226. It appears by an abstract from the byelaws and orders appended to the Report of the Commissioners of Fisheries, that on the 20th of April 1849, a byelaw was made (as I conclude in consequence of an application from persons fishing on the Wexford coast) by the Fishery Board, "prohibiting trawling "in all places where there are boats engaged in mac-"kerel or herring drift-net fishing, and providing "that trawl-boats shall keep at a distance of at least "three miles from all boats fishing for herring or "mackerel with drift nets, and that whenever herring "or mackerel boats shall commence drift-net fishing, "on any place on or off the coast of Wexford, trawlers "shall depart therefrom and keep at least three miles "distant from the drift-net herring or mackerel boats;" so that, you see, when an application was made to the Fishery Board, and due cause shown, they passed a regulation of that kind, which would at once prevent such interference as that of which you have been complaining ?—Yes; but that byelaw is not carried out.

36,227. Do you mean at Wexford ?—I don't know about Wexford, but it is not carried out here.

36,228. You have not taken the requisite steps here; you appear to have made no application to the Fishery Board ?—I have made none; but I believe there are other parties who have.

36,229. But in Wexford, after due application was made to the Fishery Board, they did their best to prevent the injury of which you complain ?—Yes.

36,230. So that, as far as the power of the Fishery Board goes, the remedy is in your own hands ?—Yes.

36,231. What has been done at Wexford it is possible for you to do here ?—Yes.

36,232. The grievance of which you are now complaining is not the fault of the law; it is possible for you to have that grievance remedied ?—Yes.

36,233. With regard to the injury done to the fishing by the trawlers bringing up spawn, do you think that that injury would be remedied by keeping the trawlers outside certain limits ?—Yes, candidly, I think it would.

36,234. You have no objection to the trawlers fishing out in the open sea ?—No.

36,235. So long as they do not interfere with your drift-net fishing ?—No.

36,236. Have you ever been mackerel fishing ?—No, never; but I have vessels that fish down at Kinsale.

36,237. Is mackerel fishing not much practised here ?—There are only four boats.

HOWTH.
N. Doyle.
19 Aug. 1864.

36,238. Have you ever practised any other fishing than you have described to us?—No; except catching mackerel with hooks in the States of America.

36,239. Is there anything you wish to remark upon, that you think injurious to the fishing?—Yes.

36,240. What is it?—I do not see, when we go out and put our lines down in the water, and the trawl-boats come and take them away, why they should not give us satisfaction. If we ask them to do so; they take no notice of us whatever. They only tell us, in the worst of language, to go away and do our best. Then, on the other hand, when they catch our lines they never return them to us again, but take them away and make a sale of them. Further than that they run their knives through our buoys and make aprons of them. I call it merely robbing the fishermen.

36,241. All these things are offences at common law, and you have a remedy by prosecuting the offenders?—Some will give them up for fear we should take the law against them, but others will not. Further than that, I may say, that within the last 15 years there has been a general and almost total failure, which has lasted up to the present time, with regard to the long-line fishing for haddocks.

36,242. You have had no haddocks?—No.

36,243. What do you think is the cause of that?—It is trawling. I have seen more than 1,000, aye 20,000, score of small haddocks, not that length (*measuring*), packed up here and sent away in hampers. They were so small that it would take 500 or 700 to fill one hamper, and of course the catch of so many small fish must tend to decrease the fishing. In addition to that, there is a vast quantity which they shovel overboard. They were brood, and of course we cannot have the fish when the brood is destroyed. I am interested in trawling as well as in other fishing, but I am prepared to give up my part of it on account of the injury it does to the fishing.

36,244. Are you part owner of a trawl?—Yes; I trawl for fish in certain seasons of the year.

36,245. Do you find when you trawl that large quantities of unsizeable fish are brought up?—Yes.

36,246. In the deep sea, as well as inshore?—Yes; it is more so in the deep sea in the winter time, and in March, April, and May, when the small fish are beginning to come round, they are totally destroyed.

36,247. What fish do you get in the trawl out here?—Plaice, sometimes turbot, but only a very few, and sometimes a few cod.

36,248. Do you get any soles?—Yes, but very few at present. There was an abundance when we first went to sea; all we had to do was to go four or five miles from the harbour, and we could catch as many as a horse and dray could take to the market. Now we cannot catch as many as a man could eat, in comparison.

36,249. Are you speaking of soles alone?—Soles, plaice, or any other kind.

36,250. Do you think the ground has been overfished?—Yes, it has totally run out altogether both of spawn and fish.

36,251. Under these circumstances, how is it that the number of trawlers has increased during the last 20 years?—They go to various parts of the channel, down to Dungarvan, to the Isle of Man, Galway, Holyhead, and Dingle Bay, because they are not able to make a living here.

36,252. Is it your opinion that the trawlers who work round this coast also work in Dingle Bay?—Not the whole of them, but some of them do.

36,253. Then there must be a considerable number who continue to get their living by fishing on this coast?—Yes, there is a great number of them.

36,254. What I cannot clearly comprehend is, that, if they have so completely fished out one patch of ground, they have not fished out the rest, and cleared the whole thing, making it not worth while to fish?—Take it from St. John's Point to Coningbeg light ship, it will be about 130 miles south-south-west, and north-north-east. The whole of that length has been thoroughly fished out. The trawlers have run out all the limits that they trawled on in that direction.

36,255. But yet they are still trawling there?—Yes, but it is generally a failure; when they go there they can get nothing. They run the ground out, and they can get no fish upon it. If they want to get fish they have to go to some part of the channel where there has been no trawling for a number of years. Many of them have been obliged to lay their trawl-boats up, and come here to fish herrings. Others have sent their boats in different directions both to the English and Scotch coasts.

36,256. Are there any trawl-boats laid up in this harbour?—Yes, there are four lying up off the quay which have been generally trawling or long-lining, and there are three on the bank. I knew a time when there were 15 belonging to this harbour, 15 more belonging to Baldoyle, and 10 to Rush, 14 more to Balbriggan, the Skerries and Malahide, and they are all laid up here, and of no use just now. During the winter months they are engaged in trawling, and then long-lining. They trawl from the month of March, through the month of April, up to the 1st of June, and then they go long-lining from that time until the 1st of March again.

36,257. Are there trawlers laid up here because the men have gone herring-fishing?—Not generally upon that account, but rather on the ground that it is of no advantage to keep them out at sea because there is nothing for them to do. They can make no money at it.

36,258. (*Mr. Lefevre.*) Are they laid up altogether, or are they employed in the line-fishing?—They are laid up until the herring-fishing is over for the season. When the weather is too bad to go for herrings, then we go out for codfish.

36,259. Do you not use them for trawling at all?—Yes, we do in March, April, and May.

36,260. From May until the autumn they are laid up altogether?—Yes; they are laid up at the present time, and have been for the last four years, in a general way, unless they go down to the coast of Donegal or Sligo to bring ling up for the Dublin market.

36,261. (*Professor Huxley.*) Your complaint against the trawlers is, I take it, in the first place, that they have exhausted the fishing grounds and damaged the fisheries; and, in the next place, that they have interfered with you both in long-line fishing and in drift-net fishing; in the one case by carrying away your lines, and in the other, by fouling your nets?—Yes.

36,262. And the remedy that you propose is, that they should be excluded from fishing within certain bays, and be kept out beyond certain limits?—Yes.

36,263. And that you should have a Government vessel, to see that they do not take away your lines?—Yes.

36,264. (*Mr. Lefevre.*) Are you aware that trawling is prohibited within a line drawn from Lambay Island to Carlingford Bay?—Yes.

36,265. Is that regulation attended to?—No, it is not carried into effect; it is not attended to in any way whatever. We were herring-fishing last winter, in the months of November and December, in three fathoms water, between Skerries Harbour, Drogheda, and Clogher Head, when the trawlers were fishing there. They came across our nets, and went away with them. We lost our nets out of the water altogether; they carried them away.

36,266. Are the trawlers in the habit of trawling within that line?—Yes.

36,267. Have you taken any means to prevent it?—We reported to the Coastguard, and have tried to prevent it in many other ways, but we never went to such authorities as you.

36,268. Have you taken the numbers of the trawlers?—Yes.

36,269. And have reported them?—Yes.

36,270. To the Custom House authorities?—No, we never went to the Custom House.

HOWTH.

N. Doyle.

19 Aug. 1864.

36,271. Then to whom did you report?—To the Coastguard.

36,272. Has any action followed from that?—No. Only last season we had our nets taken up, on the 12th of this month, by a boat belonging to Dublin. What damage was done, I cannot say.

36,273. Do they only trawl in dark nights, or in the day-time?—They trawl at any time they can get a chance.

36,274. Are they boats from Howth?—No; there are no Howth boats trawling at that time. They are Rush, Balbriggan, Dublin, Kingstown, and Skerry boats.

36,275. When did you trawl?—Last May.

36,276. With your boat?—Yes, down at Wexford.

36,277. Is not winter the best time for trawling?—It is, in general, with the Dublin boats.

36,278. But not with yours?—No; we go long-line fishing in the winter.

36,279. Do you find that more profitable?—Yes, we do.

36,280. Do you make more money by it than the Dublin boats by trawling?—I cannot say that, but we find it better ourselves.

36,281. What is the size of your boats?—From 25 to 30 tons.

36,282. Are the Dublin boats larger?—Yes; some of them are 60 tons, and some of them as much as 100 tons; there are one or two of 100 tons.

36,283. What distance from the shore do you fish for cod in general?—From one mile outside as far as 16 or 18 miles off east-north-east and east-south-east from this harbour. We go up from Carlingford Lough to fish about 12 miles from the entrance to the Lough.

36,284. Then the line you draw from St. John's Point to Carnsore Point would include all the ground you fish for cod?—Yes, in general.

36,285. Where do you find the herrings when the season begins?—South-east from this harbour, at a distance of from eight to ten miles off.

36,286. As the season goes on, where do you find them?—Still in the offing, in the deep sea; there is no want of fish in the offing. Sometimes we find them 15 miles off, and at others about 20.

36,287. What is the greatest distance you go for them?—From 15 to 25 miles from the harbour, due east and east-south-east. We go from that until we get 14 or 20 miles east of Drogheda Bar.

36,288. Is that the furthest point north you go to?—It is the furthest we fish for this market, but we do go further north. When we go further north, we make for other markets, owing to the weather.

36,289. What markets do you go to?—Probably Balbriggan in the fall of the year, but we generally come here in the summer season.

36,290. Do your boats go to Arklow?—None go to Arklow at all. Perhaps there may be one or two that go in the course of the season.

36,291. How long have you been the owner of a boat?—About four years.

36,292. Then you have been able to lay by money enough to buy a boat?—No, I have only bought a portion of it; we are obliged to buy according to our means. If we want a boat, we have to purchase it second-hand first.

36,293. Have the fishermen here been making money during the last few years by herring-fishing?—They have made a little progress.

36,294. As compared with previous years?—Yes, there has been an advance as compared with what it had been for the last eight or ten years. In other kinds of fishing, we have had nothing to speak of at all.

36,295. Are there many of the fishermen employed in agriculture in other periods of the year?—No; we carry the fishing through and through.

36,296. Do the herring fishermen go line-fishing in the winter?—Yes.

36,297. What number of boats go line-fishing in the winter?—From 10 to 14 or 20. That will be about the average.

36,298. (*Professor Huxley.*) What time are the herrings full here?—In the first of the summer they begin to get full now. They are full in the month of September.

36,299–300. When do you get them spent?—We get them spent in December.

36,301. Are they beginning to spawn about September?—Yes, some of them.

36,302. When do the general average spawn?—From September to Christmas month.

36,303. As late as that?—Yes.

36,304. Have you ever noticed herrings here in February?—No; I never caught any in February.

36,305. Do you ever see any signs of them?—Yes, there are plenty of signs, but we don't fish for them.

36,306. But you think they are here?—Yes, they are here.

36,307. Do you get them by accident, or do you catch them for bait?—Sometimes, if we get large hake, or cod, or ling, we find a number of herrings in them.

36,308. Are they full or fat fish at that time?—No, they are very slight; it is then they get smaller.

36,309. (*Mr. Lefevre.*) You said there should be regulations prohibiting the shooting of nets until after sunset?—Yes; I think it would be highly approved of by everybody, and that it would be for the interests of all.

36,310. Do you think half an hour before sunset should be about the time?—I think when the sun is going down is the time to shoot the nets.

36,311. Do you think it would do harm to shoot half an hour before sunset?—It would not do a great deal of harm then; but, at this time of the year, it is not prudent to shoot our nets at 6 o'clock, or twenty minutes before 6.

36,312. When that is done, the principal sufferers are the fishermen themselves?—Yes; there are not many who do shoot as early as that. The practice is, if they get upon a berth, to shoot in order to keep it.

36,313. Do you think that, in shooting their nets so early, they do harm to others as well as to themselves?—Yes; they do harm to the fisheries altogether.

36,314. The principal sufferers are the fishermen themselves?—Yes, the men and the owners of the vessels. Every one who has an interest in the fishery is injured by it.

The witness withdrew.

Mr. J. R. Barry.

Mr. James Redmond Barry called and examined.

36,315. (*Professor Huxley.*) You wish to make some statement to us, Mr. Barry?—Yes; I merely wish to make an explanation in reference to an answer given by me yesterday at the meeting at Kingstown. It may be assumed from that answer that the Commissioners of Fisheries never interfere in prosecutions. Now I can state that, in every case where there has been an infraction of the law, and where the officers in the vicinity,—the Coastguard principally, who are the executive department,—certify that such was the case, we have invariably been in the habit, on their requisition, of furnishing the means, by sending down either counsel or solicitors, of prosecuting before the ordinary tribunals of the country. Further, in reference to regulations that have been made in some places and not made in others, and which do not extend to this quarter, namely, the regulations in reference to abstaining from fishing until a certain hour in the evening, by herring nets, and requiring the trawlers to keep

HOWTH.

Mr. J. R. Barry.

19 Aug. 1864.

lations of that kind wherever we have been called away from the herring-boats, we have made regu- upon, and found, on inquiry, that it was desirable. No such application has ever come from this quarter. On the contrary, in consequence of the great importance of the herring fishery, we have from time to time suggested to some of those persons who have complained of the want of regulations, if it was not desirable to make some; but we found that there was rather an indisposition towards it than otherwise.

36,316. (*Mr. Lefevre.*) Have there been many cases of prosecutions?—A good many. The prosecutions have been at the instance of the parties injured, but we have furnished the law.

36,317. And the prosecutor?—No; the prosecutor does his own work.

The witness withdrew.

C. Rickard.

CHRISTOPHER RICKARD called and examined.

36,318. (*Professor Huxley.*) You are a fisherman here?—I am.

36,319. Are you part owner of a vessel?—Yes.

36,320. How long have you been engaged in the fishing here?—I suppose about 27 years.

36,321. Did you hear what was stated to us by the witness, Nicholas Doyle?—Yes; some of it, but not the whole.

36,322. Were you not here during the whole of his examination?—No.

36,323. But you were here during the first part of it?—Yes.

36,324. Do you agree with what he stated generally?—Well, I did in some of it; but Doyle has not known about the herring-fishing as long as I have. When first I went there were neither Scotch nor English boats.

36,325. How long ago is that?—From 27 to 30 years ago.

36,326. There were neither Scotch nor English boats here then?—No; there were some Carrickfergus boats.

36,327. What boats were fishing then?—Arklow boats, Skerries boats, and others along the shore.

36,328. Was yours the only boat going from Howth?—No, there were a good many small boats; most of the fishermen had boats and nets.

36,329. How many went from Howth at that time to fish for herrings?—I suppose there were about 30. The big boats had yawls for the herring-fishing. They would go out on summer nights and haul their nets into the big boats. They were the long-line fishing boats we have now. The Skerries men did the same.

36,330. How many boats were there at the Skerries?—I suppose there would be 40 or 50 sail of Skerries boats.

36,331. Was the greater number of the 20 or 30 boats which went from Howth, small boats?—They were all large boats, but they had small boats to fish the nets out of the large boats. They were yawls of about six tons. They would shoot the nets, and if a breeze came on the big boats would go out and lay to them.

36,332. The small boats were boats of about six tons?—Yes.

36,333. What was the tonnage of the large boats?—About 35 or 40 tons.

36,334. How many large boats would there be?—About 50 from Balbriggan, Dublin, and the Skerries.

36,335. How many from this place?—About 30 sail.

36,336. And how many small boats?—Each had a small boat.

36,337. Was there a very considerable fishery?—Yes.

36,338. How many men would there be in each of these boats?—Nine men.

36,339. Nine men?—Eight men and a boy; there would be nine hands altogether.

36,340. Then they would get a great deal of fish?—Yes. At that time the fishery was practised all by Irishmen. There were no Scotchmen or Englishmen here either in the winter fishing or in the summer time.

36,341. During what time was the winter fishing practised?—It began in October, and went on for a couple of months till Christmas.

36,342. Did you not fish after Christmas in the winter?—No; I never saw them get any fish after Christmas.

36,343. At that time the fishing was almost entirely in the hands of Irishmen here?—Yes.

36,344. How was it that they did not keep it?—They did all they could to keep it, but the long-line fishing was so plentiful then that they did not mind going after the herring-fishing in the summer.

36,345. They preferred going after haddock and cod?—Yes.

36,346. They neglected the herring-fishing because herrings were cheap at that time?—Yes.

36,347. How many years ago is it since they began leaving off fishing for herrings,—when was it that the Irish boats began to fail?—It is about 15 years ago since the boats began to fail.

36,348. Then, as I understand, there was a very considerable fishing practised here by Irish fishermen?—Yes, there was.

36,349. For a time the Irish seem to have given up the herring-fishing?—Yes.

36,350. Because they found the line-fishing more advantageous?—Yes.

36,351. They did not take the trouble to keep up their nets and boats?—No.

36,352. Was it in consequence of that that the Scotch and English fishermen came in large numbers?—It was; they had finer boats and better nets than we had. Our nets were very light. They would go out from Howth 20 miles in the summer time, and get some good fishing, while we had no boats and nets to go there. Our boats were too large for fishing in deep water.

36,353. Too large?—Yes; and our nets were too light.

36,354. Did the Scotchmen have better boats?—No; the Scotchmen were not here then.

36,355. Were they Manx men?—No, Cornish men.

36,356. They had better boats than you?—Yes.

36,357. Then why did you not get better boats and tackle?—We were doing so well at the long-line fishing. If the haddock and cod had continued, we should not have minded going herring-fishing now.

36,358. Did you fish for haddock and cod all the year round?—Yes.

36,359. And you got them in great plenty?—Yes, they were always plentiful, both haddock and cod, whiting and ling.

36,360. How long did that plentifulness continue?—Always, until about 7 or 8 years ago.

36,361. When you began to be a fisherman were there any trawlers?—They were just coming here a few years before I went to sea.

36,362. How many were working off here before you went fishing?—Thirty or forty.

36,363. Thirty or forty sail?—Yes.

36,364. How many are there now? More than 40?—I counted a score out this year.

36,365. Then the number of trawlers has not increased since you began fishing?—No; there were about as many at that time; perhaps there are about 9 or 10 more now.

36,366. Will there be a third as many again?—Yes; there will be somewhere about 42 or 43 now.

36,367. Were the boats as large and well found then as they are now?—No, nor one half as well;

one boat now is as good as three they had at that time.

36,368. At that time, when you first began working, did the trawlers work every day in the season throughout?—Yes; they could get as much in one haul as they could get now in a month; I was trawling too.

36,369. You were a trawler also?—Yes.

36,370. You got plenty of fish?—Yes; sometimes more than we were able to get on board.

36,371. Then it seems for many years the trawling and long-line fishing went on here and both did very well?—Yes, but continual trawling killed all the small fish; I had an opportunity of seeing them throwing them overboard in Wexford Bay last summer; I saw them throw away more than 30 score of small soles and turbot not bigger than half-a-crown.

36,372. That was in the Bay of Wexford?—Yes; they threw them overboard.

36,373. When you were trawling in deep water did you get the same proportion of small fish?—Yes, a good many more; we got tons weight of it; I have known a trawler throw a ton and a half of small fish overboard.

36,374. Do you get more in deep water than in shallow water?—It is in deep water that we get them; in 30 or 40 fathoms of water.

36,375. In former times, 20 or 30 years ago, when you began fishing, were there complaints against the trawlers for carrying away the long-lines?—Yes; I have heard my father and others who went fishing before me complain that the trawlers would ruin the coast.

36,376. But the two kinds of fishing went on together for some time?—Yes, because the fish were then plentiful, but now they have killed them all; there are no small fish now to catch. I have seen as many as 30 turbot on 10 score of hooks on a long-line, but we cannot get one if we would give a thousand pounds for it on the long-lines now.

36,377. Are they all got by the trawlers?—The trawlers get all kinds.

36,378. Were there many complaints when you began fishing of the trawlers interfering with the drift men?—There were not as many complaints as there are now; the men did not know where to go to complain.

36,379. Twenty or thirty years ago did the trawlers trawl at night?—Yes, they did.

36,380. Do they do so now?—Yes. You were talking about taking their numbers when they do the damage. They took 30*l.* worth of lines from the boat's crew I was with, besides the fish between October and March. I have seen 20 trawlers going over our lines in the course of a day.

36,381. (*Mr. Lefevre.*) Then they go often across your lines without doing you any damage?—If they go between the buoys they will not do us much damage, but they will not do that. If they catch one mark they will take two or three men's shares of lines.

36,382. You said that you have seen 20 trawl vessels go over your lines on the same day?—Yes, but they took our lines away that day, and we spoke to them. The first boat lifted our lines off the bottom, and all the rest coming after it and the lines floating they took them away.

36,383. Did the trawlers take a great number of haddock?—They did; they have occasionally got more than they could get on board; they have had to cut their nets in order to get them on board.

36,384. Did the haddock and whiting form a great proportion of their catch then?—Yes.

36,385. But they do not get them now?—Though you would give 40*l.* for a haddock you would not get one out in this quarter.

36,386. Then the disappearance of the haddock has been a great loss to the trawlers?—Yes, and it has been a great loss to the poor people of Dublin, who would rather see haddocks than herring.

36,387. Was it a very profitable fishery?—Yes; we were able to make a good fishing all through the year out of it.

36,388. In consequence of the disappearance of the haddock you have taken more to the herring-fishing?—Yes; if the haddock had continued we should not have had so many herring-boats.

36,389. Since that time you have done pretty well with the herring-fishing?—Yes; but I would rather be long-lining than herring-fishing. It would pay me better.

36,390. Would you make more money, if the haddocks were here, by long-line fishing than by herring-fishing?—We might not make more, but we should do as well, and we should not have as much work to do for it. It would be all day work, and we should not be at work at night.

36,391. Do you attribute the disappearance of the haddock to the trawlers?—There is nothing else destroys them, only the trawlers.

36,392. How long is it since you observed the disappearance of the haddock?—About seven or eight years ago.

36,393. Did they disappear suddenly?—No; they have been getting scarcer and scarcer every year.

36,394. How many boats are there now that come from Cornwall?—There are about 150 here belonging to Cornwall. This year there are even more; from 150 to 200.

36,395. How many from Scotland?—60 or 70 sail from Scotland.

36,396. And from the Isle of Man?—Not more than three or four this year.

36,397. What number generally come from the Isle of Man in the season?—They are coming now, and in October there will be 150 from the Isle of Man.

36,398. What time do the Cornish boats go away?—They go away in the latter end of July.

36,399. When you recollect the herring-fishing first, 27 years ago, I understand you to say that there were not any of these boats from England?—There might be some, but they would not stop here to fish. The Englishmen would go down to Ardglass and the Isle of Man; they would pass by here.

36,400. Do all the boats you speak of bring in their fishing to Howth?—Yes.

36,401. Then a greatly increased quantity of fish is brought here?—Yes.

36,402. Are they exported from here fresh or are they cured?—They are cured, and also sent to Dublin fresh. There was no market at Liverpool then, the same as there is now, for the winter fishing, but for the summer fishing there was.

36,403. Are they sent to Liverpool direct?—Yes; they are sent to England.

36,404. Do you agree with the last witness, that trawling ought to be prohibited between a line drawn from St. John's Point to Carnsore Point?—I agree that the trawlers should be put outside the long-liners and the herring fleet, and they should be stopped altogether for five or six months in the spawning time of the year.

36,405. What time of the year is it that the fish begin to spawn?—From the 1st of March, and they spawn for about three months, and in three months more the fish come to perfection.

36,406. During that time you would put a stop to trawling altogether?—Yes, I would do so, if I could; if I had my way I would very soon put a stop to them.

36,407. But during March, April and May they catch a good many fish?—Yes; at that time they get the best catches they take, but neither haddock, cod, nor ling is in season then.

36,408. But they catch a good many soles?—Yes, in the month of May they do.

36,409. Then would you stop the supply of soles in those months?—We could live without soles, and if we kill them all, those who come after us will have to do without them.

HOWTH.

C. Rickard.

19 Aug. 1864.

36,410. Notwithstanding the prohibition line drawn from Lambay Island to Carlingford Bay, a considerable amount of trawling goes on within that line? Do you agree with the statement made to that effect by the last witness?—In the winter time they go trawling within there.

36,411. Notwithstanding the prohibition against it?—Yes; I would stand out against it, because it is too close in for trawling.

36,412. You are aware that it is prohibited?—Yes, inside Bray Head and Lambay Island, and yet they trawl there.

36,413. Do not the trawlers pay attention to that prohibition?—Indeed they do not. From next month up to March they will be trawling there.

36,414. Both during the day and in the night time?—Yes.

36,415. Have you ever taken their numbers?—We have taken their numbers and brought them to the law, but we could not get paid for our lines. They brought us to a higher court, and then we knocked it off. There is no use in going to law with them at all.

36,416. Do they get considerable quantities of fish within the prohibited lines?—Yes; all they catch in the winter they catch there. They shoot their trawl outside Kish, and then drag it down to Lambay. That is their continual place of trawling after this month; they take their trawl up to the Black buoy off Lambay, and then drag it back again.

36,417. (*Professor Huxley.*) Is there anything else you wish to remark upon, besides what you have already stated?—No, there is nothing else I remember now, except that I should like to have the trawlers shifted out from where we use our long-lines. They do a deal of damage. There are seven or eight boats in this town and Baldoyle, and seven or eight more from the Skerries, which take a great many pounds away from us in nets and lines, besides the loss of fish.

36,418. The law practically gives you no protection?—No, because if they find the law going against them then they bring the case into a higher court.

36,419. Have you lost herring nets by them?—No.

The witness withdrew.

T. Murtagh.

THOMAS MURTAGH called and examined.

36,420. (*Professor Huxley.*) Are you a fisherman here?—Yes, I am.

36,421. Are you part owner of a boat?—Yes, I am part owner.

36,422. How long have you been engaged fishing here?—About 12 years on and off. I have been about 25 years fishing with the long-line.

36,423. Have you been present while the previous witnesses have been examined?—No, I was not present.

36,424. Have you any complaint to make in reference to the fisheries?—Yes, I have a complaint to make. I have been trawling, herring-fishing, and lining for the last 25 years. I have trawled in every bay in Ireland, except Dundrum Bay, and I can see nothing that the trawl can do except hurt. When I was trawling, we have been shovelling spawn of all kinds overboard by tons weight.

36,425. Spawn of fish?—Yes, of every kind.

36,426. What kind?—Herring, turbot, soles, haddock, and every kind you can mention.

36,427. Are you sure it was fish spawn?—I could swear that it was.

36,428. Did you ever see the fish in it?—No, I never did.

35,429. What kind of stuff was the herring spawn?—It was all matted together, the same as moss.

36,430. Where did you get up the herring spawn?—In Galway Bay.

36,431. What time of the year?—In the latter end of November. I was there trawling on the 23d of November the last time I was there.

36,432. What depth of water was it in?—Twenty-five fathoms.

36,433. Was it on a bank of any kind?—No, in the bay.

36,434. And what sort of ground at the bottom?—It was clean ground,

36,435. Was there any quantity of this spawn there?—Yes, there was plenty of it. Another thing I wish to tell you is, that the trawlers take away all our lines. We cannot fish for them. Years ago, in the deep water, they took away three or four nets from me in one night.

36,436. Was that when you were herring-fishing?—Yes. I lost about 10*l.* worth of herrings, besides the damage done to the nets.

36,437. Could you not get hold of them?—No, it was in the night time.

36,438. That is pretty much what the previous witnesses tell us, namely, that trawling damages the brood of fish, and injures the fishermen by interfering with them?—They have robbed the coast, and they are robbing themselves as well as us.

36,439. You have been a trawler yourself?—Yes; I have trawled in every bay in Ireland except Dundrum Bay.

36,440. You do not seem to wish to continue that calling?—No.

36,441. Is that because you think it is a bad description of fishing?—Yes, it is a bad description of fishing. Here, in the winter time, we cannot shoot our lines because of them, or else we shall have them taken away. They have taken away from me 2*l.* or 3*l.* worth of lines in the course of a day, and how can a poor man stand that.

36,442. (*Mr. Lefevre.*) How long were you employed in a trawler?—Eight months.

36,443. In that time you trawled all over the coast of Ireland?—Yes; in Dingle Bay, in Galway Bay, in Clew Bay, and in every bay you can mention, except Dundrum Bay.

36,444. Did you always shovel the spawn overboard?—Yes.

36,444*a*. As soon as the trawl brought it up, you shovelled it overboard again?—Yes; when the fish fell on the deck they would all be killed.

36,445. But you shovelled it all back again?—Yes.

36,446. Small fish too?—Small fish of any kind.

36,447. Were the small fish alive?—Some would be alive, and some would be dead.

36,448. What time of the year did you begin?—We began in April.

36,449. Where were you trawling then?—Round in Galway Bay; I was fishing with an English company.

36,450. Was that the only place where you found spawn?—I found it in every bay I fished.

36,451. Throughout the eight months?—Yes.

36,452. Throughout these eight months you always took up spawn?—Perhaps not all through the eight months, but in Wexford Bay and Courtown Bay we took up spawn.

36,453. Did you get it in every bay?—Not in every bay.

36,454. Was it the spawn of fish or young fish?—No, not spawn, but small fish. We only got spawn on one occasion, and that was in Galway.

36,455. In the other cases it was small fish?—Yes.

36,456. We must be clear about that point—it was only in one bay that you got spawn?—Only in one bay.

36,457. In other bays it was small fish?—Yes, small fish of every description.

36,458. Is there anything else you wish to remark upon?—Last winter I lost my train of nets down at Skerry Bay with a weight of herrings in them; a trawler picked them up and they had 23*l.* worth of herrings in them. They wanted to claim salvage besides, and 30*l.* worth of damage was done to the nets.

HOWTH

T. Murtagh.

19 Aug. 1864.

36,459. Then they sold your fish, damaged your nets, and then claimed salvage ?—Yes.

36,460. That seems rather hard ; you did not pay them the salvage ?—No.

36,461. Did you get the nets back ?—Yes, but they were worth very little afterwards.

36,462. How many years is it since you began herring-fishing from this port ?—I remember herring-fishing here 20 years ago.

36,463. Was there a large herring fishery here 20 years ago ?—There was plenty, but the boats did not stop here. The Cornish men came here, and then went to the Isle of Man.

36,464. We have been informed that 20 years ago the fishing here was mostly carried on by local fishermen,—Irishmen ?—Yes, in the winter time.

36,465. But in the summer time the Englishmen came also ?—Yes, but in the winter time we don't go off.

36,466. Then there was a time when the Irish fishermen rather left off the herring-fishing ?—Yes.

36,467. Why was that ?—They were not able to buy the materials to enable them to continue it.

36,468. Did they find the other fishing more profitable ?—Yes ; the long-line fishing was more profitable, but the trawlers destroyed all the fish off here, and since then they have begun the herring-fishing again.

36,469. If the long-line fishing was more profitable, how was it that the fishermen could not save a sufficient sum of money to buy nets ?—It is hard for poor men to raise 400*l.*, and it takes that to raise a boat and a train of nets.

36,470. But they seem to have had nets and money years ago ?—There were only five here 15 or 16 years ago.

36,471. Then they seem to have dropped off ?—Yes.

36,472. When did the herring-fishing commence again in great activity ?—That was done in consequence of gentlemen here giving boats.

36,473. Did you have anything to do with starting it afresh ?—I always had a boat.

36,474. You never gave up your herring-boats ?—No, I never did.

36,475. But other fishermen did ?—Yes. It did not pay to sail them, but when we had a boat of our own we had to do something with it.

36,476. The reason the herring-fishing was given up was not because the fish had fallen off ?—No.

36,477. But because you had no wish to follow it ?—It was because the men could not raise the nets.

36,478. If the fish had been in great abundance, could you not have continued to pay for the nets by the fish caught ?—Yes ; I gave 130*l.* for nets in Campbeltown, and I paid for them in a very few weeks.

36,479. Why did not others do that ?—Many of them could not give security, which would enable them to buy a boat and nets.

36,480. But, at any rate, the fish were always there, if the people had gone to catch them ?—Yes.

36,481. The recent activity of the fishermen here seems to be due to an advance of money to the fishermen ?—Yes.

36,482. Do you suppose, from what you know of the fisheries here, that they have been successful, and that the fishermen have been able to pay off the advances made to them ?—Yes.

36,483. They got encouragement in the first instance, and they have paid off the money they received ?—Yes.

36,484. They have become independent again ?—That is all according to the amount of fish they get. Every one does not do equally well.

36,485. So that with steadiness and sobriety the thing may answer in the end ?—Yes ; a little support is necessary perhaps.

36,486. You were saying just now that you did not trawl in Dundrum Bay ?—Yes.

36,487. Why did you not do it there ?—The natives would not let us.

36,488. What did they do ?—They cut our trawl net from the side of the boat.

36,489. Did they come off in force ?—Yes, in yawls, and they cut away the trawl.

36,490. When you were fishing in Galway Bay, did the Claddagh men interfere with you ?—No, they did at first, but not when I was there.

36,491. Were they taking to trawling themselves ?—There were a great many of them that were trawling the year I was there. I think it was about eight years ago.

36,492. There was no vessel there protecting you at that time ?—No.

36,493. At that time the Claddagh men did object to trawling ?—No, they were trawling themselves.

36,494. Were you paid by share ?—No, we had so much per month, 1*l.* 5*s.* a week.

The witness withdrew.

J. Edwards.

Joseph Edwards called and examined.

36,495. (*Professor Huxley.*) We examined you yesterday at Kingstown ?—Yes.

36,496. But you wish to make an addition to your evidence, in consequence of what you have heard here to-day ?—Yes.

36,497. What is it you wish to say ?—These gentlemen say we have destroyed the haddocks, and they wish to put the trawlers out from the fishing. I am not a prejudiced man ; I have a herring-boat, and I wish to fish at the herring-fishing and the long-line fishing ; but I am principally a trawler, and I have been trawling for the last 30 years. As far as I understand, these men wish to put the trawlers out beyond a certain line drawn from Carnsore Point to St. John's Point, and they say that we are an injury to them in the winter time, in the summer time, and at all times. Now, I consider that it is nothing but prejudice on their part, for I do not consider that the trawlers injure them to that degree at all times of the year. The trawlers always give way to them in the winter time when the herring-fishing is going on. There may be an individual occasionally who will catch a man's nets, but if he does he has to pay for it, and very properly too. Generally speaking, I give way to the herring men when they are fishing about this coast. Even on the fishing ground we generally go to there are herring men fishing now in deep water, and the consequence is that the trawler do not visit it when the herring nets are down.

36,498. Then you deny their general statement that the trawlers do them much harm ?—Yes. They talked about the trawlers hauling away the long-lines. I stated to you, on a previous occasion, that we cannot avoid that at certain times. Very often we shoot first, when these hookers come out and frequently shoot across us. There is a certain portion of the ground which we are all forced to shoot upon if we want to catch fish, and we have to shoot our trawls athwart of a tide, and if these men come out and shoot in our headway or under our leeway, why then we cannot help it if we come across them. One fisherman has a right to fish as well as another, and why should the trawlers be put outside for the hooker men, or the hooker men for the herring men, or the herring men for the trawlers. One has a right to fish as well as another. All I say is, that the man who has his net, or his hook, or his trawl in the water first should be allowed to fish, and that the man who comes after him should give way.

36,499. Have you anything to say upon any matter of fact, or upon anything which has been said with regard to the destruction of small fish ?—Yes. They say the trawlers destroy the small fish ; they say we destroy all the spawn and the small fish. I, for one,

HOWTH.

J. Edwards.

19 Aug. 1864.

as an individual, deny that. There are several hookers here belonging to this place; now I will give 5*l.* to any man who will bring me in any kind of spawn that may be trawled up from this time up to this time twelvemonths.

36,500. Then you absolutely deny it?—I deny it altogether. As I told you in Kingstown, I never saw any kind of fish spawn, with the exception of squid spawn and whelk spawn.

36,501. The last witness who was examined stated that he only took spawn up in the trawl once?—Yes.

36,502. You absolutely deny the statement of spawn being taken?—Yes.

36,503. Is there any other statement that has been brought forward which you wish to controvert?—The trawlers are not always fishing in one place; they are fishing over nearly 200 miles of ground, with the exception of the rough ground from Helvick Head to Ardglass. That will be about 200 miles. They fish all along the shore. The trawlers, I suppose, are only about 50 in number, and in the course of the twelve months they are fishing over the 200 miles of ground. Now, is it possible that they could destroy the spawn and the fishing along that length of coast in that time?

36,504. Do you tell us that the trawlers trawl constantly day after day, and season after season?—Yes.

36,505. I think you stated at Kingstown that you were in the habit of trawling upon different patches of the 200 miles throughout the season?—Yes, over different patches.

36,506. You do not go round to the western coast?—No further than Galway. I have been there.

36,507. But you trawl habitually over this length of 200 miles?—Yes, and 45 miles in width.

36,508. Let me ask you a question as to this statement of your getting foul of the herring nets. It has been stated by a number of witnesses, and there is great accordance in the statements, that the trawlers habitually damage the drift nets. What have you to say about that?—I deny it. There have been instances, no doubt, and the parties who have done so have suffered, and I think they have deserved it, because we have no business to be trawling where a lot of boats are engaged in herring-fishing. Where they are, I believe, it is the general rule for the trawlers to leave and go away. I am sure that is always the case where there is a fleet of herring men fishing, but I cannot say whether it would be so in the case of an individual. The trawlers shift about very much in their fishing. We may be five miles or six miles off to-night, and to-morrow night 20 miles away. The trawlers never know where they are going. They are trawling day and night, but where the herring men go the trawlers do not attempt to fish.

36,509. Would you think it any hardship if the rule which exists on the Wexford coast were applied here?—Is that the rule which keeps the trawlers three miles off any of the herring-boats?

36,510. Yes.—I think it is a hardship.

36,511. Why?—Because the herring men are in great numbers, and they will reach somewhere about 50 miles, and if the trawlers are required to keep three miles from any of them, where are they to go to at all?

36,512. Do you think that it practically puts an end to trawling?—Yes.

36,513. How is it possible to carry on trawling where the herring-net men are?—The trawlers fish by night and day, and they do not go where the herring men are.

36,514. Would you be satisfied with trawling in the day-time when the herring-fishing is going on?—Yes.

36,515. (*Mr. Lefevre.*) Does the rule which has been mentioned apply to the fishing off Wexford?—We seldom go there.

36,516. Is there not much ground for trawling there?—No.

36,517. If a similar regulation were extended to this part, would it interfere with you?—Yes.

36,518. I do not understand that this regulation does prohibit trawling in the day-time?—We take care we do not trawl where the herring men are in the night-time. There may be a single individual who would do it; but as a general rule the trawlers will not interfere with the herring men.

36,519. Would you object to a regulation prohibiting trawling in the night in the districts where the herring-fishing is being practised?—Yes, I would. The herring men extend over a long distance, and there is no fisherman, whether a line or a trawl fisherman, who can tell where they are, or the places where they go to. If a regulation of that sort, prohibiting the trawlers from fishing within a certain distance of them, were enforced, the trawlers might as well stop in the harbour altogether; and I think one fisherman should have fair play as well as another.

36,520. You think it would not be easy to carry out that rule with regard to keeping off three miles?—No; it would not be easy to carry it out.

36,521. In the night-time would it not be difficult to tell what distance you were off?—At night we cannot tell what distance we are from them.

36,522. (*Professor Huxley.*) How would the enforcement of that rule work? Supposing, for example, that the men are drifting for herring, and you are 10 miles off, and you begin to trawl. They are comparatively stationary, and you are going with the wind?—They cannot be stationary; the tide will drift them.

36,523. But they do not drift as you do in trawling?—No.

36,524. Then might it not happen that you would drift down within three miles of them?—We might do so.

36,525. In that case you would be obliged to haul up your trawl and go off again?—Yes.

36,526. Would not that put an end to your fishing altogether?—Yes.

36,527. (*Mr. Lefevre.*) You state that the trawlers avoid all collision?—Yes.

36,528. Do they trawl only in the day-time when the herring fishermen are off here?—Yes.

36,529. They do not go out in the night?—No; they do that in order to avoid the herring-boats.

36,530. Are the trawlers fishing off here now?—Yes.

36,531. On the same ground as the herring-boats?—Yes, exactly the same ground.

36,532. But they are only fishing in the day-time?—Yes, when the herring men are out.

36,533. (*Professor Huxley.*) Have you any other remarks to make?—I could have made plenty at the time the examination was going on, but I have forgotten what I wanted to say.

36,534. (*Mr. Lefevre.*) Have you yourself trawled in Drogheda Bay?—I never did.

36,535. Not within the line from Lambay Point to Carlingford Bay?—Yes, I have been trawling from Carlingford Bay to Lambay Island.

36,536. Do you know when the regulation prohibiting trawling between those two points was made?—No, I do not know.

36,537. Has it been attended to by the trawlers or not?—It has mostly been attended to by the Dublin trawlers, but not by the Balbriggan and Skerries trawlers.

36,538. You think the local trawlers have not paid any attention to it?—They have not.

36,539. Are they trawlers from the Skerries, Balbriggan, and Dundalk?—Yes; there may be an odd individual trawling inside, but as a general rule we do not.

36,640. Has there been any application on the part of the trawlers from Drogheda and Dundalk to be permitted to trawl in that district?—Yes; and some of the Balbriggan boats have been caught.

The witness withdrew.

HOWTH.

C. Larkins.

19 Aug. 1864.

CHRISTOPHER LARKINS called and examined.

36,541. (*Professor Huxley.*) Are you a fisherman?—Yes.

36,542. How long have you been fishing here?—About 25 years.

36,543. What have you been fishing?—Haddocks.

36,544. Long-line fishing?—Yes.

36,545. And herring-fishing?—Yes; since the haddock-fishing failed.

36,546. Have you ever been trawling?—Yes; I have been trawling in the English boats.

36,547. What do you want to say to us?—I have seen more spawn, that is, small haddocks, about this length (*measuring*), in Skerries Bay, shovelled off and thrown overboard than I ever saw anywhere else in my life.

36,548. By spawn, do you mean small fish?—Yes, very small haddocks.

36,549. How long is that ago?—It would be about 20 years ago since I saw it.

36,550. Was that when you were trawling?—Yes, in Skerries Bay.

36,551. Was it a common thing when you were trawling?—Yes, a common thing indeed; they were little small haddocks, about the length of my finger.

36,552. Have you ever had your lines fouled and carried away by trawlers?—Yes. A trawler took a line out of my hands when I was hauling it in in Skerries Bay, and when I went to him to get it back again he took up a big hatchet and said he would cut the head off of me.

36,553. How long ago is that?—About 20 years ago.

36,554. Has anything of that kind happened lately?—No, not lately.

36,555. Have you had your lines carried away lately?—Yes; I have been losing my lines often, and I never get any recompense for them.

36,556. Did you take the numbers of the trawlers who did the damage?—I never could get them. It would be generally late at night or early in the morning when it was done.

36,557. Have you ever had your nets damaged when you were drift-fishing?—No, they never took any nets away from me.

36,558. Have you been much engaged in drift net fishing?—Yes.

36,559. But you never lost anything in that way?—No. They have never done me any harm in any boat I was ever in by carrying away my nets.

36,560. Have you heard the evidence of the other witnesses?—Yes.

36,561. Are you disposed to agree with it?—Yes; I think that the English trawlers themselves have cleaned their own coast, and they have left it now to come here.

36,562. Do you agree generally with what the other fishermen have stated?—Yes.

36,563. Is there anything which you wish to add to what they have said?—No; it is all right, what they have said.

36,564. (*Mr. Lefevre.*) Were the small fish you spoke of mainly small haddock?—Yes, small haddock.

36,565. Were the haddock very plentiful off the coast then?—They were as plentiful as I have ever seen them. I could swear that we could get a boatful in one shot of our lines down on the rough here, between Ireland's Eye and Lambay. We could get there as much haddock as we liked in the winter time, and in the summer time we got very large haddock away off in the deep water.

36,566. How long is it since you yourself were trawling?—About five years ago.

36,567. Then you have not trawled much since the haddock disappeared?—No.

36,568. Do you attribute the disappearance of the haddock to trawling?—Yes, I do.

36,569. To the taking of the young fish?—Yes; they have killed the spawn and the young haddock, and they have never multiplied since.

The witness withdrew.

C. Kelly.

CHRISTOPHER KELLY called and examined.

36,570. (*Professor Huxley.*) Have you long been a fisherman here?—Yes; I have been at the fishing these 30 years.

36,571. What kind of fishing have you practised?—Trawl-fishing, hook-fishing, and herring-fishing.

36,572. Have you heard what the previous witnesses have said?—Yes.

36,573. Do you agree generally in what they have stated?—Yes, I quite agree with it. I have seen thousands of small haddocks, whiting, and all kinds of small fish, not three inches long, taken up in the trawl and destroyed. If they had been allowed to remain in the sea and come to perfection, they would have made a great fishing, speaking only of what we have been obliged to throw away.

36,574. Have you yourself ever had your lines carried away?—Yes, scores of times, and I never got any satisfaction for them. They tell you to go to the devil and do the utmost you can, if you speak to them. I have also had some nets carried away by one of the Dublin trawlers about five years ago. When we came out and spoke to him, he told us to do what we could, and seek what remedy we could. We went to the Custom House at Dublin, but we got no satisfaction there. We went then to an attorney to see what satisfaction we could get, and we went down to Ringsend where the trawler was stationed.

36,575. Did you get no satisfaction?—No; they said there was a rule upon the matter in the Scotch fisheries, but that there was no rule for Irishmen.

36,576. Did you appeal to the Fishery Board?—Yes.

36,577. What did they tell you?—They told us they could give us no satisfaction, because there was no Act of Parliament for the Irish fisheries.

36,578. (*Mr. Lefevre.*) How long ago was that?—About six years ago. They took an attorney's letter down to the owner and skipper of the boat, who came up to the attorney's place in Sackville Street, and asked what damage had been done. They promised to come again on the Monday morning, but they never came. The name of the owner of the boat was Morrison. He belonged to the Isle of Man. He would not stop on the coast to be at the expense of being put to a lawsuit, and the matter all dropped.

36,579. Was your boat properly lighted that night?—Yes; I was on the watch myself. I had a lantern up six or seven feet high, and I also lit a flare-up, and called to the boat as it was coming down. Nevertheless; they came down and cut our nets. They said we had no light up, but I can take an affidavit that we had a light which could be seen three miles round the compass; it had four large panes in it.

36,580. Is there anything else you wish to tell us?—No.

36,581. You agree pretty much with the other witnesses?—Yes.

The witness withdrew.

HOWTH.

P. Nangle.

19 Aug. 1864.

PETER NANGLE called and examined.

36,582. (*Professor Huxley.*) You are a fisherman ?—Yes.

36,583, From Howth ?—Yes.

36,584. How long have you been a fisherman here ?—For the last 35 years.

36,585. What kind of fishing have you practised ?—Trawling, hooking, and herring fishing.

36,586. You heard what the other witnesses have said ?—Yes.

36,587. Have you anything to remark in addition ?—I have.

36,588. What is it ?—About 30 years ago, when I was a youngster, the first fishing I went to was trawling.

36,589. Was trawling practised off this at that time ?—No, it was in the English waters that I went trawling first, and during the time that I was in that boat I can lawfully swear that I shovelled tons of spawn overboard, and small fish.

36,590. By spawn, do you mean little fish ?—Yes.

36,591. You do not mean actual herring spawn ?—No.

36,592. Did you see anything like herring spawn taken up in the trawl ?—I could not tell herring spawn from any other spawn ; but I have shovelled the spawn overboard.

36,593. You are speaking now of small fish ?—Yes.

36,594. Did you ever see the eggs of fish in the trawl ?—Yes.

36,595. Was that a common thing to see ?—Yes, it was.

36,596. Did you see any of the eggs of the herring in the trawl ?—I could not say if they were the eggs of herring or other fish.

36,597. Have you been herring-fishing ?—Yes.

36,598. Then you know what herring spawn looks like, do you not ?—Yes.

36,599. You never saw anything of that kind in the trawl ?—No.

36,600. What else did you see in the trawl ; did much dead fish come up ?—Yes, plenty of dead fish.

36,601. Do you think it is a wasteful mode of fishing ?—The fish appear to be so long dragging in the trawl, that there is hardly a scale left on them when they are taken up.

36,602. Do you think it is a wasteful mode of fishing ?—I do.

36,603. Did you get plenty of fishing in those days ?—Yes ; that was the time that fish were right plentiful.

36,604. Have you been trawling lately ?—No.

36,605. How many years is it since you trawled ?—I have not trawled since that time.

36,606. *Mr. Lefevre.*) And that is 30 years ago ?—Yes.

36,607. (*Professor Huxley.*) Have you anything else to tell us ?—I have something else to tell you with regard to what this man Edwards has been talking about. He said that he had not seen any boats trawling inside the headlands. Now, I left this harbour with him last winter, to go with him and shoot our herring nets inside the Skerries, and we saw the trawlers trawling inside, and he could see them inside the boundary as well as I could.

36,608. You saw them inside on that occasion ?—Yes, and he was in company with me ; he was going to the northward.

36,609. Do you assert that it is a common thing for the trawlers to fish inside the boundary ?—Yes, they make a practice of it.

36,610. Do you think the trawlers do much damage to the fishery ?—Yes ; if it was not for the trawlers there would be plenty of fish on this coast ; they would be as plentiful as ever they were.

36,611. Do you think the trawlers do harm when they fish out in the sea ?—I do.

36,612. Would you put them down altogether ?—They should be put down for some time.

36,613. Would you not allow any trawlers to fish ? Not in certain months of the season.

36,614. What months in the season ?—In the spawning time of the season.

36,615. Is it because you think the trawlers destroy so much of the young fish ?—I am certain of that. If I did not see it, I would not say it.

36,616. You would not be satisfied with keeping the trawlers outside certain boundaries, but you would put trawling down altogether for certain months of the year. Is that your view ?—I do not think it will be put down.

36,617. That is another business. I ask what you wish to do. Do you think anything short of that would do ?—We should have plenty of fish off this coast, if it were not for them.

36,618. Do you think that nothing short of putting them down for certain months of the year will save the fisheries. Is that your view ?—Yes.

36,619. What made you give up trawling ?—Because it did not answer, and I had another occupation to go to. I would sooner be at the hooking.

36,620. You liked hooking better ?—Yes.

36,621. Was hooking more profitable ?—Yes, it was.

36,622. Have you anything else to tell us ?—No.

36,623. (*Mr. Lefevre.*) Do you think that trawling does harm to the herring fishery as well as to the other fish ?—Yes.

36,624. In destroying young fish, or what ?—In killing the spawn.

36,625. Have you observed any falling off in the herring fishery here ?—Some years ago the herrings were knee deep here, but now we may be fishing for a good while before we make a week's work.

36,626. But a great deal more herrings are brought into the harbour here than was formerly the case ?—That is because they have a better material for killing them. If it were not for the material, they would not bring so large a quantity in.

The witness withdrew.

N. Doyle.

NICHOLAS DOYLE recalled and examined.

36,627. (*Professor Huxley.*) You wish to add something to the evidence you have already given us ?—Yes ; I wish to say that I would totally abolish trawling altogether, the same as in England and Scotland.

36,628. But it is not abolished altogether in Scotland or England.—Yes, it is. I mean that it is within the limits of the herring-fishing ; summer or winter, it is abolished then.

36,630. Do you mean that you would like to see a regulation established here with regard to trawling, when herring-fishing is going on, similar to that which is contained in the Convention Act ?—Yes ; I would like the same limits and rules and laws as the Scotch fishery, and we should also like to have a steamboat to attend upon the fishery.

36,631. The trawling which is forbidden on the west coast of Scotland is not the kind of trawling we are talking about here, but is seine-fishing. What is put down on the west of Scotland only is catching herrings with the circle net,—it is that which is prevented there, and not beam-trawling.—I understand from different parties that the beam-trawling is totally done away with among the herring fleet.

36,632. The regulations of the Convention Act prevent beam-trawling from going on among the herring fleet,—they must keep three miles off.—But one person here last season had his nets cut away with an axe, and we have known the nets hauled on board of the trawlers and subsequently sold.

HOWTH.

N. Doyle.

19 Aug. 1864.

36,633. That we have already had in evidence. What other point did you wish to remark upon ?—There was a point I remarked upon before, which I hope you will pay some attention to, and that has reference to shooting the nets before sunset.

36,634. (*Mr. Lefevre.*) I understand that you would not wish to put a stop to trawling altogether ?—No ; I have an interest in trawling in a certain portion of the year.

36,635. Do you think it would be enough to put a stop to it in certain seasons of the year ?—Yes ; and in the winter time it is more injurious to us than at any other time. When the English and Scotch fleet are off here our boats are unable to live in the offing, because they are few in number and the fleet is so powerful. They have such heavy vessels that they do not care for us at all.

36,636. Do you see any objection to the trawlers trawling in the day-time off this ground ?—There is no objection here, but the cutter at Balbriggan, the Skerries, and other places, has stopped them.

36,637. That is, within the line of prohibition ?—Yes.

36,638. Have you any objection to the trawlers being allowed to trawl in the daytime off the ground that the herring-boats were in the habit of fishing ?—They should not be allowed to trawl there either day or night, because they are the total destruction of the herrings.

36,639. What harm do they do ?—The herrings often rise in shoals and play on the surface, and when the trawl comes among them it will send them down again and make them go off the ground ; it drives them into some other limits.

36,640. Do you think that the trawl frightens them away ?—I am certain that it does so.

36,641. Do the trawlers trawl among the herrings in the day-time ?—Yes, and the night time also. I saw them last Wednesday and Thursday nights, trawling among the fleet.

The witness withdrew.

CHARLES HUGHES called and examined. *C. Hughes.*

36,642. (*Professor Huxley.*) You are the chief officer of the Coastguard here ?—I am inspecting officer of the Coastguard.

36,643. Are you acquainted with the fisheries here ?—A little ; but I have been here only 14 or 15 months.

36,644. Are all the boats registered ?—Yes.

36,645. Whatever their tonnage may be ?—Yes, they are all registered.

36,646. What is the total number of fishing boats here now ?—The number in existence now is 31 boats of the first class, and 8 of the second.

36,647. How do you distinguish the class ?—It is according to the size.

36,648. What would be the first class ?—Anything over five tons.

36,649. And what forms the second ?—Anything under.

36,650. It is independent of rig or fitting ?—We do not care about the rig.

36,651. You merely go by the tonnage ?—Yes.

36,652. Does your experience extend sufficiently far to enable you to say whether there has been much change in the number of native boats here ?— I believe they have increased.

36,653. Will the records show that ?—No ; we have none.

36,654. Are there not returns of that kind made every year ?—There are, but we do not keep a copy here.

36,655. Can no copy be obtained of them ?—I think there might be from the Fishery Board.

36,656. Do you find that many complaints are made here by the drift-net fishermen against the trawlers, or *vice versâ* ?—The drift-net men are constantly making complaints against the trawlers, but I never had a definite complaint or anything I could take hold of. I never had a vessel identified by her number, so that I could make a report of it to the Board, but there have been constant complaints against the trawlers for taking up their nets and for taking away the long-lines.

36,657. Does that arise from the practical difficulty of identifying the trawlers at night ?—Yes, I think so.

36,658. They cannot see their numbers ?—No.

36,659. Are the drift-boats properly lighted at night ?—Yes.

36,660. So that it is possible for the trawlers to see them ?—Yes.

36,661. Have you ever had any practical experience of trawling yourself ?—No, I have not.

36,662. You have not been on board a trawler ?—No. I have seen the trawlers come in the harbour of Brixham, in Devonshire, and there they used to bring in small fish, and there was a manufactory for turning them into manure ; the small fish used to be brought in there in enormous quantities.

36,663. Have you many complaints from the long-line fishermen against the trawlers ?—Yes ; they say the trawlers cut up their lines a great deal.

36,664. Does it never happen that the damage takes place during the day-time ?—No ; I never had any complaints in which I was told the name and number of the boats which did the damage.

36,665. Might it not be for the reason that the trawl-boats are unable to observe where the lines are at night—they cannot see the buoys ?—Of course that may be the cause.

36,666. And at night, when the drift-boats are properly lighted, is it always possible for a trawler to know on which side it is that the fleet of nets is drifting ?—No.

36,667. Then a trawler might fancy that he was going up well outside the nets and yet be in the middle of them ?—Yes.

36,668. So that the damage done is not necessarily wilful ?—No ; as long as they have their trawls down, I do not think they can help themselves very well.

36,669. You are aware that it takes a considerable time to take a trawl up ?—Yes, of course it does.

36,670. Does anything occur to you which might remedy the evil complained of,—have you considered this subject with a view to suggest any remedy for the evil that exists ?—I think the herring fisheries are of sufficient importance for the Fishery Board to have a cutter of their own to see that the law is attended to. The Revenue cutter has no interest in it, and it gets no credit for making seizures when the law has been infringed.

36,671. Would there not be some practical difficulty in a cutter superintending the fishing ? For example, if there are 40 or 50 herring-boats drifting with their nets out, the cutter would not venture to go within two miles of them ?—No, but a cutter would prevent the nets from being shot before sunset.

36,672. But after they were shot, she could not exercise any effectual superintendence over the fishing ?—Not at all.

36,673. Does your practical experience suggest any way in which a cutter, if she existed, could exercise a superintendence over the fishing at night ?—No, but she could keep the trawlers outside the limits.

36,674. Could she keep them altogether outside ?—Yes.

36,675. Supposing they were forbidden to come within three miles, for example ?—Yes.

36,676. But might not this happen,—it is a case I put to one of the fishermen just now,—namely, that a

HOWTH.
C. Hughes.
19 Aug. 1864.

trawler might have begun to fish 10 or 12 miles outside the drift men and either by setting down upon the drift men or the drift men setting down upon them they might fish within the specified limit?—Just so.

36,677. And then would it not be somewhat of a hardship probably, on one side or the other, to have to get out of the way?—Yes, it would, but I do not see how it is to be avoided, unless you make them raise the trawl at sunset, and allow them to trawl only through the day-time between sunrise and sunset.

36,678. (*Mr. Lefevre.*) Do you hear many complaints with regard to the trawlers fishing within the prohibited line?—Yes, constantly.

36,679. Do you ever do anything with them?—No; I have no means of getting at them.

36,680. If a Revenue cutter was employed, would she do any good?—I think her presence would tend to keep them out.

36,681. I presume you mean a small steamer?—Yes.

36,682. The Revenue cutter would not do?—No, she has plenty of other things to attend to. Unless there is a small steamer especially detailed by the Admiralty for the work, you would probably not get it done.

36,683. I suppose that the greater portion of the herrings are caught outside the prohibited line?—Yes.

36,684. So that the enforcement of a line would be of no advantage to the herring fishery?—Not much.

36,685. Would it be necessary to have some further regulations?—Yes.

36,686. Is this abstract which has been handed to us prepared by you?—By my assistants.

36,687. Do you take the number of boats every week?—Yes.

36,688. And the quantity of fish caught?—Yes.

36,689. Can you make out a complete return for the last five or six years?—I cannot; but I think that might all be done by the Fishery Board.

36,690. Since when have these returns been made by the Custom House?—Only last year and this.

36,691. Can you give it then for those two years?—No, I do not keep any copies.

36,692. The number of fishing boats is given at 90?—Yes.

36,693. Does that include boats coming from other places?—Yes; Arklow, Wexford, and other places.

36,694. There are only 30 belonging to this place?—About 30.

36,695. Has this been a very successful season so far?—I think it has. There have been more fish caught about here, and there have been more boats.

36,696. Has the price of fish been good this year?—Yes, very good.

36,697. Is the greater part of the fish sent off direct to Liverpool?—Yes.

36,698. Are the fish cured?—No, they are sent away fresh.

36,699. Is there any curing of herrings here?—No curing of herrings at all.

36,700. Do the Cornish and Scotch boats also send their fish from here?—Yes; most of them go across the water. The Cornish men in general seem satisfied with the fishing they can have here.

36,701. They have not gone to the Isle of Man?—No; one or two may have gone.

36,702. Usually they go to the Isle of Man?—Yes.

36,703. This year they have not done so?—No.

36,704. (*Professor Huxley.*) Is the fish caught by the trawlers brought in here?—No.

36,705. Where is their market?—It mostly goes to Ringsend.

36,706. Do the line fishermen bring their fish here in the winter?—Yes.

36,707. Is it sent to Dublin?—Yes.

36,708. Is there any return kept of the line-fishing?—No. It is not of much importance now, and no return is kept of the quantity brought in.

36,709. (*Mr. Lefevre.*) Is any return kept of the number of boats that go out every week?—No, not every week. We know the number in the season employed in the line-fishing, that is all.

36,710. (*Professor Huxley.*) Is there any observation you wish to offer to us with regard to the fisheries, that occurs to you?—I think not.

36,711. (*Mr. Lefevre.*) The Manx boats come later in the year?—Yes. We have only had eight or ten yet.

36,712. The number put down here is 14?—Yes.

36,713. What number will there be later in the season?—There may be 60 or 70.

The witness withdrew.

T. Montgomery.

THOMAS MONTGOMERY called and examined.

36,714. (*Professor Huxley.*) You are a boat owner here, Mr. Montgomery?—Yes; I own some boats.

36,715. Have you been a boat owner for many years?—This is the third year.

36,716. So that your experience in that way does not extend over a very long period?—No, not very long.

36,717. Are you only engaged in drift-fishing?—Only in drift-fishing for herrings and mackerel.

36,718. Is there much mackerel fishing off here?—No, not here, but at Kinsale.

36,719. Do you send your boats to fish for mackerel?—Yes, about the 1st of March, and they return here the 1st of June for herrings.

36,720. Do you find the supply of herrings pretty good, and that it has kept up?—I think this has been about as good a season as last. It has been about the same. For the last three or four weeks it has been light, but up to that the season was as good as it was last year.

36,721. Is there any subject which you wish to bring before the Commission as a matter of complaint?—I should like to see a cutter or a steamer out amongst the fleet, so as to prevent any little disputes from arising. They sometimes shoot foul of each other's nets, and that leads to disputes and differences of opinion. A cutter or a steamer, to attend the fleet when they go out upon the fishing ground, and to be here to settle disputes, would be of considerable advantage to us.

36,722. Do you mean disputes among the drift-net fishermen themselves?—Yes. There are sometimes a few little collisions among the different classes of fishermen, and with different boats from other places.

36,723. Have you, as a boat owner, suffered much damage from the trawlers?—No, I have suffered none.

36,724. Have you never had any nets carried away?—No, never.

36,725. Neither in the herring-fishing nor in the mackerel-fishing?—No; there are no trawlers on the coast where we fish mackerel.

36,726. Then you have nothing to remark upon with regard to the trawlers?—No, I have nothing to say about the trawlers.

36,727. Is there any point upon which you think it desirable to offer a suggestion?—No, indeed there is not, except what I have just mentioned. I think a steamer is the proper thing to station here. I cannot conceive that a cutter could attend to the whole fleet, so as to see that the regulations about shooting before sunset were enforced. The fleet are generally spread over a distance of 30 or 40 miles, and no cutter could go among them all.

36,728. Do you think that is a very important regulation?—I do; and I should like to see a vessel attending the fishery with authority to settle disputes

and differences when the men get foul of each other's nets. Some men complain of others handling their nets roughly when they get foul, and there ought to be some proper authority here to settle disputes of that kind.

36,729. Would it not be necessary under those circumstances for a steam-vessel to detach boats, because she dare not go among the nets herself?—She might go up between the nets. They are generally lying in a direct line, and she could go between the buoys.

36,730. Could she do that at night?—No, not at night.

36,731. Would not the nets be apt to get foul of the paddle-wheel?—Yes, there might be some injury done in that way; but I think the effect of a steamer being among them, and their knowing that there was such an article, would deter them from breaking the regulations.

36,732. You would like to have a fishery vessel, in fact, as they have on the coast of Scotland?—Yes, I would.

HOWTH. T. Montgomery. 19 Aug. 1864.

36,733. (*Mr. Lefevre.*) How many boats do you own?—Three.

36,734. Have you the whole of them?—No; they are owned by my cousin and myself.

36,735. Have the fishermen any interest in them?—No, never.

36,736. Are the fishermen gradually obtaining boats themselves?—There are a few instances, but only very few.

36,737. Are they all paid by shares?—Yes.

36,738. Are there many disturbances between the fishermen of this place and those coming from a distance?—No, except a man may occasionally take to his beer on a Monday morning.

36,739. There are no disturbances on the sea?—I do not think there are.

The witness withdrew.

NICHOLAS MAY called and examined. *N. May.*

36,740. (*Professor Huxley.*) You are a fish buyer here?—Yes.

36,741. Have you been engaged in that occupation for many years?—Yes, a good many.

36,742. How many?—About nine.

36,743. What kind of fish are you in the habit of buying?—Herrings,

36,744. Only herrings?—Not herrings only, but herrings chiefly. Sometimes I buy cod and conger eels, and so on; but herrings and mackerel are the chief things I buy.

36,745. Do you buy from all persons who come in here?—Yes.

36,746. Whether Manx men, Cornish men, or anybody else?—Yes, it makes no manner of difference.

36,747. Was there a considerable quantity of herrings brought in here by the Manx men and Cornish men before any extensive Irish fishing began?—Eight or nine years ago, and even five years ago, the herring-fishing was slack here.

36,748. Did numbers of boats come here to fish for a certain period until the time for fishing at the Isle of Man came on, and then leave here at the latter end of June? Was that the case until four or five years ago?—Yes.

36,749. When did they begin it?—About the 1st of June.

36,750. Were the herrings in good condition then?—Not as good as they have been of late years.

36,751. But they were saleable?—Yes, but they were a scarce article at that time of year.

36,752. When was it that the considerable supply came in?—This was the fourth year.

36,753. Is it some six or seven years since the number of boats increased largely here?—Within the last four years, as far as my experience goes.

36,754. What is the chief market for fish here?—The chief market is Liverpool, because that is the head-quarters for the English buyers, but at present we work all the English markets,—London, Birmingham, Liverpool, Manchester, Shrewsbury, and others.

36,755. Do you use cutters?—Yes.

36,756. And steamers?—Yes.

36,757. I suppose the fish are sent away with salt interspersed between the layers?—Yes.

36,758. But practically they are fresh fish?—Yes, we call them fresh herrings.

36,759. Do you not do any curing here?—Very little. Last winter there was a little done for the Scotch market.

36,760. Do you cure in the same way that they do on the east coast of Scotland?—I believe so. I believe the process is the same.

36,761. Do you find a ready market for your fish?—Not always.

36,762. Have you any desire to have the branding system here which is in use on the east coast of Scotland?—My opinion of it is, that if it did no good, it would do no harm. It would be an advantage on the whole. The herrings, however, command so good a price when they are fresh that we should never cure them properly, unless they became very scarce in Loch Fyne, and then they might give such a good price that we should have an inducement to send them to the Scotch markets. When we cure them, we send them to Scotland, on account of the superior quality of the fish; but it is only when they chance to be scarce in Loch Fyne that we do that.

36,763. There is a very considerable quantity of Scotch herrings imported into Ireland every year?—Yes, of a very bad quality. They are coarse herrings.

36,764. Your herrings, if cured, would make a superior fish?—Yes, equal to the Loch Fyne herrings.

36,765. The reason you do not cure them is that you think that is not an economical way of disposing of them?—There is no inducement to cure them. When potatoes here are good and plentiful, we have always a good price for the herrings; but the only time when we can get a large price for them to cure is in the Scotch markets, when their own fish fail.

36,766. The reason you do not cure the herrings is that you can do better with them fresh?—We get a smaller profit, but we obtain it readier and easier.

36,767-8. And you prefer to do that?—Yes, and we have got a standing market for them. There is no brand attached to them, and when they go to Berwick or Glasgow, they are sold as Loch Fyne herrings.

36,769. Do you get a better price for your herrings than the east country herrings?—Yes; we could buy those a hundred or two hundred per cent. cheaper.

36,770. If you were to cure your own herrings, would they fetch a much higher price?—I do not think, where the herrings are to be had cheap, considering the class of people who use them in the winter time, that our herrings would be able to compete with the Scotch herrings here in regard to price. Ours are very valuable, and must go to a better market, where the people can afford to give a better price for a good article.

36,771. Is that the reason why you import fish; is it, in point of fact, because your own fish fetch a much better price?—Yes; we are realizing a much better price for ours; but, at the same time, I think if the herrings, when they were cured, were branded it would give them a standing in the market, and would be an advantage, not only to the buyer, but to the fishermen, and that it would greatly enhance the value of the fish in exceptional years, when there is a demand for them for curing.

36,772. The herrings that are branded go principally to Central Europe?—Yes; and a great many go to the Baltic.

HOWTH.

N. May.

19 Aug. 1864.

36,773. If your herrings, when cured, are like the Loch Fyne herrings, would they be of superior quality to the ordinary east coast herrings?—The Baltic trade is worked in the early part of the year, but I think if we had the same facilities for working the north of Europe as they have in Stornoway, that a trade might be opened from Arklow, where the herrings are acknowledged to be of superior quality. It is, however, a trade that has never been tried from this coast. Not a single barrel of herrings has been cured and exported in that way. It is in the winter time of the year that we try the Scotch market with herrings, namely, in October and November.

36,774. Is there anything you, as a dealer in herrings, have to suggest in the way of regulations?—I cannot say there is. As a trader in herrings, and speaking on behalf of some of the boat owners, I would suggest that some improvements should be made in the harbour at Arklow, and that a Government protection should be given to parties going to fish there in the early season. It would be of great advantage for the boat owners and buyers.

36,775. What sort of Government protection?—A cutter or steamer.

36,776. Are strangers there interfered with?—It is universally acknowledged that no stranger goes to Arklow to fish for herrings.

36,777. Is there any considerable local fishery at Arklow?—There has been a very fine fishery there for the last three years, and they get the herrings before we do.

36,778. If strangers go there, what happens?—I believe they have tried to go there, and they have come away faster than they went.

36,779. Are they attacked?—Even our men dare not go, although there are large quantities of herrings to be had there.

36,780. Are they fairly assaulted and driven off the coast?—I cannot speak to that, but I know the herrings are there, and they dare not go after them.

36,781. Would not the Irish fishermen go there?—No, they dare not; not to shoot a net in those waters.

36,782. Do the Arklow people believe in Arklow for the Arklowites?—Yes, and all the world for them.

36,783. How far do they consider that their jurisdiction extends?—At that time of the year we are of opinion that the herrings come from the southward; and in the early part of the season, in the second week of May, they get considerable takes of herrings there, while we think we are doing well if we get 400 or 500.

36,784. At that time, are the herrings in good condition?—Yes, they are very fine.

36,785. Are they fat fish like the Scotch fish?—They are not quite as oily.

36,786. (*Mr. Lefevre.*) What distance north and south of Arklow do they get the fish?—To the southward. I attend much to the south fishing, and I have remarked for the last three years that the night after they have missed the herrings at Arklow we get them at Howth.

36,787. Have you yourself any personal knowledge of the fishing at Arklow?—Yes.

36,788. Then you speak of what you know, and not from hearsay?—Most decidedly.

36,789. Have you, as a dealer in herrings, any wish to see a close time enforced here for herrings?—No; I see no necessity for it. I have never seen any young herrings caught here.

36,790. You are a boat owner?—Yes.

36,791. Have you bought herrings yourself at Arklow?—Yes.

36,792. Did you ever spend a season there?—No, I was never there for a season. I have gone there on three occasions when herrings were rather scarce here, in the early part of the year. On one occasion, a man and myself stood in as partners. I was here, and he went there. I have as thorough a knowledge of the Arklow fishing as if I had been there every season.

36,793. Is the season over there before it begins here?—I have noticed that when they lose them at Arklow we get them here the next night, or at any rate in two nights after. It sometimes occurs that the fish strike down to the southward again, but never in the same abundance. Their season is practically over when we get them here.

36,794. Then their season is comparatively a short one?—Yes, and then we get them here, and they keep moving north. Then they move north and south during the whole season.

36,795. Do you purchase a good many fish from the Scotch and Cornish boats?—Yes.

36,796. Do you observe any difference in the take of those boats, as compared with the Irish?—I think our Irish boats have proved very successful. They have got very fine boats, and a great number of them, and very fine gear, and I consider that on the whole they have been almost, if not quite, as successful as any men who frequent this coast.

36,797. Have they been improving of late years?—Yes.

36,798. Was there a time when they were not equal to what they are now?—When I came here there were no boats belonging to this place.

36,799. Are there many herrings sold about the country here?—About this time of the year there are a good many herrings sent into the interior, but in the early part of the year the Irish people do not take them there to dry.

36,800. Are they sent then as fresh fish to Liverpool?—Yes; that is the head-quarters; but they are sent direct to Manchester, Birmingham, and London also. They are repurchased by salesmen in different parts of the country, who have curing houses for making bloaters and kippers.

36,801. Are the herrings here nearly as good as the Loch Fyne herrings?—I believe the only herrings in the world that can compete with them are the Loch Fyne herrings, and nine times out of ten we are superior to them.

36,802. The east coast herring cannot compete with you?—No.

36,803. Do the fish become indifferent as the season goes on?—This fishing is very early after the Stornoway fisheries, or even while they are on. That is the only fishing that can compete with this fishing in the early part of the season. If you leave the Stornoway fishing out of the calculation, this is the only fishing in Europe for a number of weeks, and, in consequence of that, the herrings make a large price wherever they are sent.

36,804. When are the herrings best in quality here?—In June or July.

36,805. Is it then that they are making the best price?—Yes, the very best price. They make, on the average, from 6*s.* to 6*s.* 6*d.* a hundred in the month of June. On one occasion, I paid 10*s.* 3*d.* a hundred for herrings, and I filled 32 barrels in one day's buying.

36,806. How long does the season last here?—It gets slack in the first week in September. It is pretty well done then.

36,807. What is the average price then?—About 1*l.* or 18*s.* a maze then. There is another fishing after that, a winter fishing, which comes on six weeks or two months after. There is then plenty of fish on the Yorkshire, Lowestoft, Yarmouth, and Scarborough coasts.

36,808. Is there a fresh fishery here at that time?—Yes.

36,809. Is it a different quality of herring?—It is rather smaller, but it is still rich. That is the time they are put up for the Scotch market.

36,810. Are they different shoals?—Yes, they are quite different, but they are an oily herring, clean and rich. They are put up then for the Scotch market.

36,811. Do you catch at that time any of the spent fish of the former shoals?—No, not as a rule; not what are properly called spent fish.

36,812. What time do those herrings spawn that are caught in September?—I believe that shotten herrings here are the exception, and not the rule. It is very seldom that we see any shotten herrings here; and we seldom see any herrings come in here with spawn amongst them as they do at Douglas.

36,813. When do those fish spawn,—at what time of the year?—I do not know.

36,814. Do they spawn on the coast here?—If they do they spawn upon some ground to which our men do not go with their nets.

36,815. (*Professor Huxley.*) Are the fish getting full now?—As a rule we never get the fish really full here; we never see such a thing on the coast as a real full herring; neither, as a rule, do we get shotten herring. They are always something like half and half, between the one and the other. We never get full herring.

36,816. In the early part of the season are they fat fish?—Yes, like what the Scotch people call mateys.

36,817. Do the mateys become fuller towards the end of the season?—Yes, but we never get them.

36,818. Do the shoals leave the coast when they are full?—Yes, there is a continuous change here.

36,819. The herrings you get in September, are they mateys again?—Yes, but of a younger brood; you will only observe in one case out of ten either the milt or the roe.

36,820. Will those be fish that get fuller somewhere about February?—I should say so; but I have seen large takes of herrings in this harbour both winter and summer, and we never find any spawn mixed up with the herrings, the same as they do on other fishing grounds, such as Douglas. At some of those fishings the fishermen have to shovel the spawn out of the boats, but we never have that here, and we never, therefore, see a real full herring or a real spent one.

36,821. Is the herring you get now a much fuller fish than the herring you get in November and December?—Yes.

36,822. Can you state if any real acts of violence have been committed by the Arklow fishermen?—Not to my knowledge. I have heard it stated, but I never witnessed it.

36,823. Or any actual intimidation?—I cannot give you an actual case. Perhaps there are persons present who can; but, in point of fact, the thing is generally acknowledged.

36,824. It is a matter of common notoriety?—Yes, it is notorious; it is generally admitted by all parties. People are most anxious to try that fishing not belonging to this place alone, but to others, who are of a more enterprising and speculative turn in regard to fishing. I know several individuals who are anxious to try it, because it is earlier in the season, and they are held back by no other consideration than fear of the Arklow men.

36,825. But the Scotch and the Manx men and the Cornish boats come here in great numbers?—Yes.

36,826. They would be able to hold their own?—It is a serious thing to lose a train of nets without getting any satisfaction for it. A train of nets will cost from 160*l.* to 180*l.*, which is a great consideration.

36,827. What is the number of boats fishing from Arklow?—Perhaps a couple of hundred.

36,828. All belonging to the place?—Yes.

36,829. And the number of the Cornish boats is about 200 also?—That is at the height of the season.

36,830. I presume they would wish to stop at Arklow on their way here?—I do not know if the Cornish men would care about it; but if it were made a free port they would. I do not think they are desirous of trying the experiment, but there are a number of people here who would, if they got anything like a chance or a promise of protection.

36,831. Have those persons who felt aggrieved ever brought the matter before the Fishery Board?—I cannot say.

36,832. (*Mr. Lefevre.*) Would it be of considerable advantage to the fishermen of this place if they were able to fish there?—Most decidedly; there is no question about that.

36,833. Would it give them another month at the herring-fishing?—It would give them a fortnight or three weeks; and, if they gained nothing by it, I think a man ought to have the option of going there if he chooses.

36,834. Do the Arklow men come here at all?—Yes.

36,835. There is no objection to them here?—No, they take French leave.

The witness withdrew.

James Rigby called and examined. *J. Rigby.*

36,836. (*Professor Huxley.*) Are you a fish buyer, Mr. Rigby?—Yes.

36,837. Have you long been buying fish?—I have been here about four years.

36,838. Did you hear what Mr. May told us?—Yes.

36,839. Do you agree generally in what he stated?—Yes.

36,840. Is there anything you wish to add to that?—No, I do not think there is. He has stated the case plainly.

36,841. Do you buy from the long-line fishermen?—Yes.

36,842. Have you found, during the last four years, that the supply of white fish has fallen off?—Yes.

36,843. Has it been falling off year by year?—Yes; it has been worse this last year than in any former year.

36,844. Your experience does not extend to 10 or 12 years?—No, only four years.

36,845. Is the amount of fish brought in now very considerable?—No, it hardly pays them.

36,846. Do you buy haddock?—I have not done so, because there has been none.

36,847. Do you buy cod?—Yes.

36,848. Whiting?—They do not catch many whiting; not more than a dozen or two now and then.

36,849. Have you been present while the fishermen were giving their evidence?—Yes.

36,850. Do you confirm and corroborate what they stated with respect to the falling off of the fish?—Yes.

36,851. All the other fish taken by the line seem to have fallen off?—Yes, codfish especially, and haddock altogether.

36,852. Do you buy trawled fish?—There is scarcely any that comes in here.

36,853. How is it that the trawlers do not come in here; it is a convenient port, is it not?—They say there is not enough water at the mouth of the harbour; they run to Kingstown; it is handier for them.

The witness withdrew.

Peter M'Callum called and examined. *P. M'Callum.*

36,854. (*Professor Huxley.*) You are a boat owner here?—Yes.

36,855. Have you been so for many years?—Fourteen years.

36,856. Are your boats herring-boats or long-line boats?—Herring-boats.

36,857. Exclusively so?—Yes.

36,858. Have you any long-line boats?—No; they would answer for long-lines, but we do not use them.

36,859. Is that because you do not think they would answer in the winter?—We do not think it is profitable.

HOWTH.

P. M'Callum.

19 Aug. 1864.

36,860. Have you many herring-boats?—Six.

36,861. Do you find that the supply of herrings keeps up pretty well?—For the last four years the average has been nearly the same. Formerly it used to be very dull for about ten years.

36,862. When you began to fish here it was dull?—Yes.

36,863. Nevertheless, there were many boats fishing off here?—Yes, but not so many as at present.

36,864. Does that arise from the increased number of native boats coming into the fishing?—Partly so; but there have been a good many strangers who have come here also.

36,865. But the number of native boats has increased?—Yes, 56 per cent. since I came here.

36,866. (*Mr. Lefevre.*) Are your boats manned by Irishmen or Scotchmen?—Principally by Scotchmen, with a few exceptions.

36,867. (*Professor Huxley.*) Are they from Campbeltown?—Yes, and from the Isle of Skye.

36,868. Have you to complain of the trawlers for carrying away your drift nets?—Yes.

36,869. Is that a matter of frequent occurrence?—No, it is exceptional.

36,870. Do you think it is done by the trawlers wilfully, or is it the result of accident?—I do not think it is an intentional thing; it is the result of accident.

36,871. Is it difficult for the trawlers to get out of the way of the drift nets?—I believe it is when the fleet is heavy.

36,872. Do you think that the damage you suggest is done in that way?—Yes, it has been. There was one case in which Charles Wright, from Penzance, about four years ago, lost two-thirds of his nets. He asked me if there was no way to get redress, or to recover satisfaction. I said it was a little difficult, but I went up to Dublin and called on the Fishery Board with him. When we went up, Mr. Barry gave us a warm reception; he used his influence, so that we recovered two-thirds of the loss. If it had not been for that, Charles Wright would have been literally ruined. Mr. Barry gave us every assistance, and seemed to be anxious to put an end to this sort of thing, as far as possible, so much so, that a meeting was called down at the pier on that occasion, and we had several trawlers examined from Ringsend and Kingstown, and the conclusion arrived at was, that the injury done was very great when the trawlers came within certain limits. The limits of the fishing since that time have much extended; the boats now go to a distance of from 30 to 35 miles; unless they go that distance they need not expect fish. I was the first to come down with Scotch nets to the Isle of Man, but there were some here before me. We found the fish when we came to the Manx and Irish coasts at least 10 or 15 miles nearer the coast than they are now. The reason we assign for their having gone further off is, that there is so large a fleet working upon them and so large a number of trawlers. I believe there is no use in fixing three miles as a limit beyond which the trawlers shall trawl from the herring fleet. The proper shooting time is when the sun is setting, but sometimes the boats have to run on until it is nearly 12 o'clock, because if they do not get their distance they need not expect the herrings; then if the trawlers are shooting outside of them they come in contact with them against their will. So long as the herring-fishing is being carried on, I do not see that the trawler has any chance of success without doing injury both to himself and to the drift-net fishermen.

36,873. Do you think the two modes of fishing incompatible?—Yes.

36,874. Then it becomes a difficult case indeed for any legislative action?—Yes.

36,875. What do you think would be the best and fairest measure to adopt in a case of that sort?—That is a matter of opinion altogether.

36,876. Well, we want your opinion?—I think this trawler here (the witness Edwards) is a very candid man. There was one of my boats coming in about 12 o'clock one day last season, and they had some large rope coiled on the forecastle. I said to the master "Where did you get that." He said "We had a very heavy job to get it in this morning; a trawler left his rope and net behind; we got the rope, but I think the net is sunk." I handed the rope over to the harbour master and he took charge of it. We could easily have found the trawler, but we thought it desirable to let the matter pass over. We sustained considerable damage that night, and got nothing for it. You ask me now what is the best remedy to remove that. It is very difficult to suggest a remedy, without being very detrimental to the trawlers. If there was a steamer in connexion with the Fishery Board here, and the Commissioners were to have influence over that steamer, it might answer both parties. If the herrings were at the north side of Ireland's Eye or Lambay, as at the present time, the trawlers might work to the south of it, but it would require a steamer or some vessel to keep a look out to see that that was done. That is my view of the case.

36,877. Does it not occasionally happen that after a fleet of herring-boats has gone out for a fortnight and found no fish, they take their nets in and try another place?—Yes.

36,878. Suppose that they had made up their minds to try one locality, and then took it into their heads to try some other nearer the trawlers, would you oblige the trawler to get up his net and go off?—No, I would not; but we always fix on our ground before we leave the pier-head. If we propose to stop at the south corner of the fleet, we take that side. We always make for one point, and we know our ground before we leave the pier.

36,879. Do you not leave that ground, and fish somewhere else that night?—We leave it, if there is a necessity for it, or if we are driven from it.

36,880. On the same night?—Yes, if anything occurs to render it necessary. There is a steamer lying at the pier here. We have had occasion to hire her, and if we do not get her, we go to Dublin for one. I had one on Monday last. In the month of July and up to the middle of August the weather is very fine and dead, and it is quite impossible to get the boats and nets to the fishing ground without the aid of a steamer.

36,881. Does the steamer tug them out?—Yes. There is a little steamer, called the "Sea Mew." She was enabled to get to the fishing ground last night by the aid of steam, when I believe two-thirds of the fleet could not get there for want of wind. She brought in 14 maze of fish, at 1*l.* 15*s.* a maze. That arose from the fact of the fishing-boats not generally being able to get out,—to get in and out to the fishing grounds. That will show you the advantage of steam when the weather is dead.

36,882. Does it pay to use a tug in that way?—It is profitable to use a tug now and then; but I do not know how far it would be profitable to charter them during a season.

36,883. She is here for general purposes, and you use her when you want her?—Yes; we use her to convey the fish to market. She is waiting for the fish, and whenever it is necessary she can take out the fishing boats as well.

36,884. (*Mr. Lefevre.*) How many will she tow out at once?—On one occasion, I think she had 29 or 31 after her.

36,885. (*Professor Huxley.*) You said that you make up your mind as to what ground you will fish upon before the boats leave the pier?—Yes.

36,886. By what principle are you guided?—I hardly think it desirable to explain that on the present occasion.

36,887. Not to go into the nature of the principle upon which you act, you believe you have some means by which you can form a judgment as to where the herrings are?—We think we have. If

everybody knew the principle, we should be no better than the rest.

36,888. But you consider you have some means ?—We calculate the tides and moon, and one thing and another ; and if we neglect doing that very little is done. Sometimes we make a great mistake, and at other times our principle acts very well. If I could get a good situation under the Government, I would have no objection to explain the matter more satisfactorily.

36,889. Is it your opinion that, by proper arrangements, the trawlers and drift-net men might work, if not on the same ground, in different parts of the sea at the same time ?—With regard to trawlers, it appears to me that it would be to their interest to give up trawling for some years. My reason for saying that is, that one of the trawlers has been fitted out with a train of nets for the last two years, and I believe he finds it equally as profitable for that vessel to follow herring-fishing as trawling. I have had men from those trawlers in my boats, and they seem to think it would be well to allow the fish time for breeding, as they did formerly.

36,890. Do you think the trawling has destroyed the breed of fish ?—I think there is not two opinions about it. It destroys the brood of all kinds of fish.

36,891. How do you explain the fact, then, which has been brought before us elsewhere, that trawling goes on in a particular district (as, for example, Brixham, where it has been practised for, at least, 60 or 70 years) every year, and they continue to make a living out of it ?—Is it exposed to the westward ?

36,892. Southward and westward.—Is it an open sea ?

36,893. Yes.—There is one thing evident, that wherever there are bays, land-locked, in a few years the fish will be drained out ; but if it is an open communication, then there is a strong probability that the shoals of fish will not be interfered with as they are going up.

36,894. Then your objection applies to trawling in the bays, but not to trawling in St. George's Channel ?—My objection is against trawling altogether, because I think it is detrimental to all fishing, particularly in the Channel. The deep-sea fishing is 30 and 40 miles off, and I believe it will affect that in the course of time. They may have a good year or two, but if it slackens the same as it has done here for the last 10 years, they will have to look after something else. I think that Wexford, Dunmore, and Kinsale ought to produce herrings, as well as this place, if it were properly followed out.

36,895. Have you ever desired to send your boats to Arklow ?—I cannot say that I have.

36,896. Do you agree that any foreigners would be put down there, if they did ?—I have heard a good deal of reports to that effect, but I do not know whether there is any truth in them.

36,897. You never send your boats there ?—No, never.

36,898. Your opinions incline to putting down trawling altogether ?—I think that trawling has as good a right to exist as the hook and line or the drift-net fishing ; but the question is, whether it is detrimental to all kinds of fishing, and, I think, there is but one opinion upon that. I think that nine-tenths of the trawlers are themselves satisfied that it is injurious to the fisheries.

36,899. (*Mr. Lefevre.*) What is your opinion as to shooting nets before sunset ?—The principle laid down is, that the nets should never be in the water until sunset. If I had my will, I would not put them in until an hour after, because the fish are coming up to the surface of the water just in the shade of the evening, and it is a well known fact that if the nets are set before sundown, it is nine chances to ten whether you get many fish. I have known several instances of that this season. I have frequently directed my boats to keep clear of the rest of the fleet, even if they were an hour later in shooting. Last season they got heavy fishings by keeping clear of the fleet altogether, and being later in shooting their nets. I attributed that principally to the fish lying on the surface of the water, and to being disturbed by the fleet shooting too early. Even if the glare of the light is seen, acting upon the fish before the nets are shot, there is a probability that the body of fish will go down, whereas boats that were an hour later in nine cases out of ten would get fish clear of that water altogether.

36,900. But if you shot before sunset you would not catch many fish ?—I think not.

36,901. Would you not leave each person to decide for himself whether he would undergo the risk or not ?—If you did that, the supply of fish would be limited very often.

36,902. Would not the fishermen soon find out that they would be only gaining a loss ?—They find it out very often too late. They will have their nets out, and they find it takes them too long to haul them in to be of any service to them.

36,903. Why do you think that trawling is detrimental to the herring fishery ?—Wherever there is any motion going on under the surface of the water, it has a tendency to put the fish either to the bottom or further off to sea, and I think the fish are at present so far from here from the very fact of the fleet having driven them off to sea. You might ask how I ascertain that, and my answer is, we know that if there is coarse weather the boats are obliged to refrain from fishing, perhaps for a week, and then after that the fish will be 10 or 15 miles closer in than they are generally.

36,904. For the last four years have your boats done very well here ?—If anything, there has been an improvement these two last years.

36,905. You have not observed any loss to the herring fishery from trawling ?—Nothing further than the damage I have explained.

36,906. You think it would be better if there were no trawling ?—I myself think it would be an improvement, and a very great improvement to the herring fishery. I think it would be very hard to suppress the trawlers altogether, but if we could put them in a position to become herring fishermen, or make them believe it was to their interest to do so, I think it would be much more profitable for them.

36,907. Do you pay your men by shares ?—We pay them generally by wages ; but if any of them are taken unwell and obliged to go home, then we take men from here.

36,908. (*Professor Huxley.*) You were discussing trawling with reference to the interests of the fish just now. Did you ever consider it in relation to the interests of the consumers of fish in England, particularly where very large quantities of soles are consumed? In fact, that forms one of the largest items in the fish market, does it not ?—Yes.

36,909. Supposing trawling were put down, or ceased to be followed, how would the market be supplied with this fish ?—There is no doubt it would be a very great hardship, and it would be difficult to supply the market if you were to take away these trawlers. I quite grant that.

36,910. As to the mere quantity, I dare say you know that the quantity of fish supplied to England, particularly by trawlers, is exceedingly great ?—Yes.

36,911. There are 300 sail of trawlers coming into Hull, and 60 or 70 into Brixham, and each boat will supply a third of a ton of fish per diem ?—Yes.

36,912. From your knowledge of long-line fishing, do you think that any development of long-line fishing would supply that quantity of fish ?—I do not think it could do so in this channel. My impression is, that the long-line fishermen and the trawlers in a short time will have to take up new ground, and go to more extended waters than they have at present.

36,913. If the long-line fishermen had it all to themselves, could they supply the enormous quantity of fish now consumed in our English fish markets ?—I do not think they could from this coast, but I have

HOWTH.

P. M'Callum.

19 Aug. 1864.

no doubt that the increase in the supply would be very great if they applied themselves to develope the fisheries as they ought to be developed.

36,914. But they could not supply soles at all?—No.

36,915. And that is one of the principal items in the English fish market?—Quite so.

36,916. So that in putting down trawling you would put down one half or more of the fish supply in England?—Yes.

36,917. Have you turned your attention to the probability of establishing a January and February fishing?—I have, in the way of curing herrings a little.

36,918. You spoke of a winter fishing before Christmas?—Yes, a fishing in October and November.

36,919. Is there no fishing after Christmas here?—No, there is none that is followed.

36,920. But the herrings are here, I believe?—I believe they are in the Channel, but the distruction of material in following the fishing then would be very great.

36,921. On account of the bad weather?—Yes.

36,922. You are aware that the fishing has been developed in Wick in the winter lately?—Yes, particularly in the winter season.

36,923. And has been practised on the east coast of Scotland, in Anstruther and that region for many years?—Yes.

36,924. And very profitable also?—Yes. One reason why there should be more of it at Anstruther than Wick is that it is more convenient to the market and the fish are of a better quality than the Wick fish.

36,925. Would not the herrings be equally profitable here if they were caught at that time of the year, in January and February?—I have not seen them in February, and they are not as good in quality in October and November. They are young fish, which come to maturity in those months. They would do very well for curing if they could be obtained at a price, but the market is good, and it is more desirable to send them fresh than to cure them. I sent them to Scotland cured two years ago, and they took exceedingly well when they were properly handled.

36,926. Would there not be a sufficient market for fresh fish to make it worth while?—The material is very expensive, and I do not think it would pay for the wear and tear.

36,927. (*Mr. Lefevre.*) Do you know of any banks off here where the herrings spawn?—I do not know of any particular banks here where they spawn. I never saw any spawn in the nets the same as we do in the Isle of Man. The fish are caught there from the 24th to the 28th of August. That is when it commences. They let their nets down and take the fish on the ground.

36,928. You never sunk your nets to the bottom here?—No; but they do in the Isle of Man, and, consequently, they take the spawn with the fish whenever their nets are on the ground.

36,929. You do not know where they spawn here?—No, we do not know exactly.

The witness withdrew.

Capt. W. Brabazon.

Captain Wallop Brabazon called and examined.

36,930. (*Professor Huxley.*) You are interested in the fisheries here, Captain Brabazon, I believe?—I have been connected with the fisheries. I have had fishingboats, and, in conjunction with a number of Irish gentlemen, I have felt strongly upon the subject of trawling. In point of fact, I have almost foreseen the certainty of having the coast fishermen expelled from the country altogether, if trawling is to be allowed in the bays. Sir Richard Levinge asked me to attend this meeting, and to give you any evidence in my power upon the subject.

36,931. Have you been present at this meeting, and have you heard the evidence which has been given to us?—Yes, I have.

36,932. Did you hear the statements that were made to us by the fishermen—the line fishermen more particularly?—Yes.

36,933. Do you agree with those statements?—I do. In olden times my father had property on the seacoast; he had fishingboats there, and the fisheries were a regular succession of harvests to the coast fishermen. There was the cod and ling fishery, the haddock fishery, the herring fishery, and also mackerel-fishing and trawling. I had a trawl-boat at that time, and I was anxious to keep that trawl-boat continually at work, but the skipper of the trawler came to me, and said, "Sir, this is a thing that can "last only for a very short time; the destruction of "the fish occasioned by the use of the trawl-net is so "very great, that it will more than consume the "produce of the sea."

36,934. Was that the result of your own observation also?—Yes, it was. I found, when I happened to be on board a vessel when the trawl-net was brought up, that only 25 fish out of 100 taken on board were fit for the market.

36,935. Were the rest small fish unfit for the market?—Yes. The rest were very small fish. They were shovelled overboard. When the net was hauled up, I found them packed in the purse of the trawl.

36,936. Were they alive?—No, they were generally dead when they were shot out, or nearly so. When they were shot overboard, the sea, for, I suppose, 40 or 50 yards was strewn all over with this small dead fry.

36,937. Did you see any spawn brought up in the net?—With regard to the spawn, said to have been taken in the trawl-net, I think the fishermen are mistaken in the term they apply to it. I do not think that they mean spawn, but rather the small fry.

36,938. It is quite clear that they mean the fry.—The net drawn along the bottom of the sea is pretty heavy in itself, but in order to save it, they attach aprons to it, and make it twice as heavy again. The sand being volatile, these nets harrow into it, and they tear up the spawn, and crush it so much that it never can come to maturity. They crush the spat and spawn of the crustaceous fish, such as shrimps, crayfish, and whelks; very large whelks, horse-cockles, and all kinds of shell-fish of that description are destroyed by them. I may say that beds over which the trawl-nets are used are alive with animalculæ, which is the reason why the fish resort there. It is, in point of fact, the great feeding ground for the fish. There are also spawning grounds in 20, 30, and 40 fathoms of water. Ground of this description forms the spawning ground of the round fish generally, such as the haddock, ling, cod, and hake.

36,939. Do you think that any injury has been done to those spawning grounds by the use of the trawl?—Yes, I think that the whole of those spawning grounds have been destroyed, and that by degrees the fish are becoming extinct on the coast.

36,940. With respect to the crustaceous animals, do you think the trawl destroys the spawn of lobsters and crayfish?—I do not think that the lobsters go there, but the crayfish do.

36,941. But do not lobsters and shell-fish of that kind carry their eggs underneath them, attached to their bodies?—Yes, they do; but I specially exclude the lobster.

36,942. But do not the crayfish do the same thing?—The crayfish which are taken upon these grounds are generally she-crabs and others which hide themselves in the sand. I think that some of these crustaceous fish form, in a great measure, the food of the fish outside. You will very frequently see the

broken shells in the sand when it is brought up, evidently showing that it has been the food of some of the fish.

36,943. The damage which you say is done to the spawn is, I take it, rather a matter of calculation than of actual observation. You think that it must be so?—Yes; I believe it is allowed that the fish, to save their spawn, bury it in certain places in shoal water. This is done by the turbot, plaice, sole, and other fish. The fishermen, at low-water spring tides, have shown me the stuff which has been turned up by them when they have been digging for sand eels and lug worms to use for bait, and it was evidently spawn.

36,944. Was it the spawn of soles?—It was spawn, but I did not know what it could be the spawn of, except in the case of turbot.

36,945. I suppose you are aware that many things pass under the name of spawn among the fishermen which have nothing to do with fish at all?—Yes; such as the swalter and the jelly-fish, but that which I have seen was, I think, fish spawn. We could see the egg pretty perfectly, especially in the spawn of the turbot.

36,946. Have you been in the habit of distinguishing between the eggs of squid and those of fish?—That is a matter that I have not paid any attention to.

36,947. That would make a great difference in considering a question of this sort. There are great masses of squid spawn brought up, which are assumed to be the eggs of fish, and the whole of it is put down as spawn. Of course, it is unnecessary to tell you that any catch of the eggs of squid would not affect the productiveness of fish?—No; but I have seen the fish, when I have been on the water, taken up with a string of spawn hanging out of them, when they have been disturbed in the spawning season.

36,948. Then is it your opinion that trawling does a great deal of harm to the fisheries?—Yes.

36,949. Does that opinion extend to trawling out in the deep sea, as well as to trawling in-shore?—I think not. I think the heavy breeding fish become buoyant in the spawning season, and come nearer in-shore to deposit their spawn. I do not think that any fish could live in 100 fathoms of water, except perhaps the whale.

36,950. But no trawling goes on in 100 fathoms of water?—No, I am aware of that.

36,951. The trawlers generally fish in about 35 fathoms of water?—Yes.

36,952. Do you not think that the fish spawn in water 35 fathoms deep?—No, I think not.

36,953. Why?—I think the pressure would be too great upon them. In my opinion very few flat fish go into more than 35 fathoms of water, unless it is a large turbot or sole.

36,954. Then you are not disposed to prohibit trawling in deep water?—No; I should say that that is the proper place for the trawler, but he ought not to be allowed to fish in less than 30 fathoms of water.

36,955. The fishermen here seem to think that trawling is quite as injurious in the deep as in the shallow water; indeed, some of them have stated that they are more interested in the deep water than in the shallow water; I gather from what you have stated, that that is not your opinion?—Where seine nets are used in Dundalk Bay and other places, I have seen immense quantities of fry—sole, plaice, and flounders—brought in and carted upon the land, where, I believe, pigs have been fed upon them by the farmers on the coast.

36,956. Have you ever been in a trawler on the deep sea?—I have not been in one that was trawling in more than 20 fathoms of water.

36,957. Have you seen the trawlers working in 25 fathoms?—No; I have chiefly seen them about Clogher Head. I have seen them working there, and, I believe, it is generally in from 9 to 15 fathoms of water that they work off that Head. The coast there is pretty shallow all round; there is no great depth of water. I consider that the reason the herrings have not decreased is, that they spawn in those bays which the trawlers are prohibited from going into. By that means the stock of herring is kept up. At Clogher Head I have repeatedly seen the edges of the rocks covered with immense shoals of the herring fry.

36,958. But the herring fry might come in although the spawn was deposited in much deeper water?—Yes, no doubt they might.

36,959. Is there any other matter that you are desirous of bringing before us?—No.

36,960. (*Mr. Lefevre.*) I believe you were asked to come here in reference to some application which has been made in regard to trawling?—Yes, in regard to trawling in the bays.

36,961. Was it in reference to trawling in Drogheda Bay?—No, in Dundalk Bay, but I think it arose from what has been done in Galway Bay. When trawling is first commenced, there is an immensity of animalculæ and small fish displaced and thrown up, which is left on the ground by the trawl; other fish come there to feed upon it, and the consequence is, that as long as that lasts the fish are more numerous than they were before.

36,962. Are you acquainted with the fishing in Dundalk Bay?—Yes.

36,963. Are you aware whether any application has been made on the part of the people there to be allowed to trawl in the bay?—Yes, an application has been made.

36,964. It is now pending, I believe?—Yes; it has been resisted by the whole of the coast fishermen who supply the town from their long-lines. They say that if the trawlers are allowed to come into the bays, the whole of the fish will be cleared out, as it has been on other grounds. They allege that the trawlers have exhausted other grounds, and that the supply of fish comes from the breeding of fish in the bays along the shore. Having exhausted the grounds upon which they have hitherto been accustomed to work, they are trying to follow the breeding fish close in-shore.

36,965. Did the application to allow trawling in Dundalk Bay come from the trawlers?—No, I believe not.

36,966. From whom did it come?—From the merchants and shopkeepers of Dundalk, who expect to buy trawled fish for little or nothing. The fish are very plentiful in the bay, and they were under the impression that the trawling in the bay would be limited to a few boats belonging to Dundalk. Mr. Barry, however, explained to them, that if trawling was allowed in the bay at all, the bay must be thrown open to all the trawlers on the coast. I told them that in ten days the trawlers would clear the bay of every tail of fish. After hearing that, they thought it advisable to reconsider their application, and they have not pressed it since.

36,967. Are there any trawlers belonging to Dundalk?—No.

36,968. Has there ever been trawling there?—No; trawling has not been practised from Dundalk.

36,969. Do you think that the prohibition of trawling within the limits of Carlingford Lough and Lambay Island has been effectual?—Yes, to a certain extent it has. I know, however, that some of the local fishermen,—some of the fishing-boats at Skerries and Balbriggan, have several times gone trawling within the prohibited line; but I believe they have all been of opinion that trawling will ultimately obliterate every trace of fish off the coast, and that they may as well go on now and take what they can out of the bay at the present moment.

36,970. Is Dundalk Bay at present full of fish?—Yes.

36,971. Do you think that that is the result of the prohibition of trawling?—Yes.

36,972. How has the bay been protected from trawlers?—The coast fishermen protect themselves as at present the men in Claddagh are trying to do. They are trying to protect themselves against the

HOWTH.

19 Aug. 1864.

evil effects of trawling in Galway Bay, and to keep them in terror the Board of Works at Dublin have had a man-of-war steamer, the "Geyser," there for some time. That has been blockading Claddagh, and I believe they have lost one of their gun-boats there, worth 25,000*l*. That has been the result of blockading and starving these poor fellows, while the fisheries are being destroyed by the trawlers.

36,973. Do you think that, if trawling is allowed in Dundalk Bay, it will injure the fisheries there?—If you will look at the chart of Dundalk Bay, you will find that the soundings are so very shallow that the bay, in point of fact, protects itself.

36,974. Is it too shallow for the trawlers to go into?—Yes.

36,975. Then where was it that the people of Dundalk wished to have trawling allowed?—They were desirous of having trawling sanctioned in the bay from Clogher Head to Ballagan Point, at the mouth of Carlingford Lough.

36,976. Is there no trawling at present carried on within that distance?—No. Some of the ground is foul, and on account of there being no trawling that is the only district in which there are any haddocks to be had on the coast. They have been taken in considerable numbers off Carlingford Lough.

36,977. But we have heard a good deal with regard to the trawlers going within the prohibitory line?—That is the line from Carlingford Bay to Skerries Point.

36,978. (*Professor Huxley.*) Are you a magistrate?—No, I am not.

36,979. You are aware that it is the duty of the State to support the law as it exists?—Yes, certainly.

36,980. When a law has once been framed, until it is altered, it is the duty of the magistrates to maintain that law?—Yes.

36,981. At the present time, by the existing law in Ireland, persons are permitted to trawl, and have been for some years in Galway Bay?—Yes.

36,982. The vessel which was sent down by the authorities was not sent down for the purpose of assisting in the starvation of these Galway people, but was sent down to protect the rights the trawlers have as subjects of the Queen. It is hardly right, therefore, that a statement publicly made, similar to that which you made just now, should go forth without some explanation.—No doubt there may be a good deal to be said on both sides. It seems that, in the first place, there were two Fishery Commissioners appointed, who understood the fisheries better than any other persons, and they always prohibited trawling in Galway Bay. After acting for a short time, they became merged in the Board of Public Works, and people began to think that it would be better to introduce a little of the principle of free trade. Here was a fishery which had existed for years, and had supported a large colony, the Claddagh. It was originally, I believe, a Spanish colony, and the fisheries of Galway Bay have been almost their sole support for nearly 300 years, when all of a sudden these trawlers are sent down into it.

36,983. The trawlers were not sent down by the Board of Works?—No, but permission was given to them to fish in Galway Bay.

36,984. But permission having been given to them, they had a perfect right to fish there, like all the rest of the Queen's subjects?—No, I think there had been a prohibition against trawling.

36,985. There was no prohibition at that time, and the trawlers were only exercising a right which they undoubtedly possessed as subjects of the Queen. Until the law is altered, it is obviously the duty of the State to protect them in the exercise of their rights. Under these circumstances, it is most undesirable that a public statement should go forth uncontradicted, that vessels have been sent down to Galway for the purpose of injuring or oppressing any class of fishermen. I do not say whether trawling was expedient or not; but it was permitted by the law at that time, and the trawlers had a perfect right, as well as any other persons, to be protected in the exercise of their rights as citizens. Is that not the case?—No doubt. There is a general impression that the trawlers have been enabled to use greater influence than they were entitled to use in any way. In the first place, they employ fewer men than those who follow other modes of fishing. They also destroy much more fish than they can bring into the market, and of course the coast fishermen are the persons who suffer from it. At Clogher Head, in my younger days, there was a very thriving population. Every person was in good circumstances, and the district was altogether free from crime. But after the trawlers had been at work for a short time, they lost the haddock and cod and ling fisheries, which they had been accustomed to, and the result has been, that almost the whole of them have emigrated.

36,987. We wish you to understand that we do not express any opinion as to the expediency or otherwise of trawling; but as long as trawling is not against the law of the land, it is obviously improper that any particular class of men should take it upon themselves to prohibit that or any other lawful operation. Is there any other matter that you wish to bring before us?—No, there is nothing further, I think.

The witness withdrew, and the inquiry was adjourned until the 20th of August, at Dublin.

Dublin, Saturday, 20th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

Mr. JAMES REDMOND BARRY called and examined.

DUBLIN.
Mr. J. R. Barry.
20 Aug. 1864.

36,988. (*Professor Huxley.*) You are Inspecting Commissioner of the Fisheries here?—Yes.

36,989. You have occupied that post or a similar one, namely, that of Inspector of Fisheries, for a number of years?—My official connexion with the Fisheries commenced in the year 1819. I was then appointed, during the existence of the old Fishery Board, Inspector-General of the Province of Munster, there being four officers in that capacity—four Inspectors-General.

36,990. That was under the old Fishery Board?—Yes.

36,991. What office did you succeed to after that?—I continued connected with that department until it was broken up in the year 1830, and from 1830 to 1835 I was the officer, though not absolutely in office, referred to by the department to whom the management of the concern was deputed—first, the Board of Inland Navigation, and afterwards the Board of Public Works.

36,992. And then you were appointed by the Board of Public Works one of the Inspectors of Fisheries?—In 1835 I was appointed one of the Commissioners of Inquiry, whose report you will no doubt have seen. Two reports were published in 1836, together with very voluminous evidence, and they have, I believe, been furnished to you.

36,993. Yes. Was the Act of the 5th and 6th Vict. mainly based on that report?—It was presumed to have been based upon it, but the principal recom-

mendations contained in that report, and which were concentrated in what were called the Eighteen Suggestions, were not all adopted.

36,994. By whom was the draft of that Act made?—By Mr. Mulvaney and Sir John Burgoyne. Sir John Burgoyne was at that time Chairman of the Board of Works.

36,995. Was it originally drawn up in accordance with the suggestions of the report?—The object of the bill seemed to be more to promote the inland than the sea fisheries. The 5th and 6th Victoria, as you will see on examining it, has but few sections relating to the sea fisheries.

36,996. But such sections as there are give unlimited powers to the Fishery Board?—They give powers to the Fishery Board to make regulations, to make byelaws, and to do several acts.

36,997. When that Act was passed, was power given to the Board of Works to appoint Inspectors of Fisheries?—No; to the Government.

36,998. You became one of those Inspectors?—Mr. Mulvaney and I were appointed Inspectors of Fisheries—he for the inland, and I for the sea fisheries.

36,999. You had the inspection of the whole sea fisheries at that time?—Yes.

37,000. After that time a further change was made?—Yes.

37,001. The title of Inspector was changed to that of Inspecting Commissioner?—Yes; Mr. Ffennell and I were then associated with the Board.

37,002. That was by the Act of the 11th and 12th Victoria?—Yes.

37,003. As Inspector you merely reported to the Board?—Yes.

37,004. Were your reports published as such in the reports of the Board?—Yes, generally.

37,005-6. But the Board had a discretion by which they could suppress any report if they thought fit to do so?—They did exercise that discretion generally.

37,007. So that the opinions expressed in the reports as published are not always your entire and complete opinions?—Distinctly not.

37,008. Then you would not consider it fair for us to appeal to these reports as the expression of your opinion in all cases?—They contain nothing important that I dissent from, but they do not contain a great deal that I would have advocated.

37,009. Will you tell us why the change of name was made from Inspector to Inspecting Commissioner?—I think it was in order to associate us, and to make us more thoroughly part of the Board, and also to give us more ample powers to hold public meetings, and so forth.

37,010. Then again, as Inspecting Commissioner, you had, as a member of the Commission itself, the power of voting upon your own reports?—Distinctly.

37,011. And the power of controlling their publication?—Yes.

37,012. Whereas formerly you had no such control?—There was none which was ever exercised by us. The subject was never discussed in our presence. The determination as to what portion of our reports should appear was invariably the act of the Chairman, was not communicated to us, and of course was submitted to.

37,013. After you became Inspecting Commissioner you had no more control over your reports than you had as simple Inspector?—Certainly not.

37,014. Will you define the functions of Inspector or Inspecting Commissioner of the sea fisheries? What were his duties?—That is a difficult question to answer. We had generally to carry out the directions of the Board. Their policy was to do as little as possible, but to preserve the peace, if possible. In urgent cases they held public meetings, in order to ascertain the correctness of statements made to them in memorials. No positive act was done in the shape of establishing a byelaw or order without a public meeting having been previously held.

37,015. Did you inspect the principal fisheries annually?—No.

37,016. Did you visit them?—Sometimes. There was only a kind of desultory visitation.

37,017. There was no methodical visitation?—No. I should observe that a vast portion, more than an ordinary portion of our time, was occupied by the inland fisheries.

37,018. Were you occupied by the inland fisheries?—Yes, and most actively too.

37,019. (*Mr. Lefevre.*) Was that the most important part of your duties?—It was considered so.

37,020. (*Professor Huxley.*) So that although you were appointed Inspector of Sea Fisheries you generally gave much of your time to the inland fisheries?—It was clearly understood that I was also to act in regard to the inland fisheries.

37,021. Did you then only inspect the sea fisheries by direction of the Board; did you visit particular places only by the direction of the Board?—It was so understood. No travelling expenses were to be incurred without the special order of the Board.

37,022. And there was no standing order that you should make a periodical series of visits at any times or seasons of the year?—No.

37,023. Nor did you visit the different stations when the fishing was going on?—I generally visited them at periods when some interesting information could be obtained. If there was anything like a disturbance in any particular quarter, or a matter to be arranged, I went down and endeavoured to tranquillize the fishermen as much as possible.

37,024. Did a year ever elapse without your visiting a fishery at all for a formal inspection?—Without anything like a regular inspection, but it seldom happened that I did not go to some important place.

37,025. Suppose that, in your inspection of the sea fisheries, you became acquainted with a practice which appeared to you to be injurious to the fisheries, was it your duty to bring that practice under the notice of the Board, and would they take action upon it?—It was my duty to bring it under the notice of the Board, and I invariably did so, but they did not at all times take action upon it.

37,026. What would be their course of proceeding?—The truth is, their hands were so full that it was with extreme difficulty that those who were engaged in the management of the inland or sea fisheries could obtain their co-operation. They had a very great pressure upon them of important business, and sometimes we have waited for a considerable time to get a Board.

37,027. That is to say, to get a Board which should pay attention to the fishery business?—Yes.

37,028. What was the number of persons on the Board?—The number of Commissioners of Public Works was three.

37,029. There were only three to master that enormous diversity of business?—Yes; and two Inspecting Commissioners of Fisheries.

37,030. And at the early period of the history of the Board of which we are speaking, the Inspecting Commissioners were simply Inspectors?—Yes.

37,031. Then there were only three persons to attend to all the work?—Yes.

37,032. Were the members of the Board, or any of them, persons who were practically conversant with the fisheries?—One of them was—Mr. Radcliffe. He ceased lately to be a member of the Board. He was a member of the Commission of Inquiry.

37,033. After the Inspectors became Inspecting Commissioners, supposing any important fishery business, or any matter which they considered important, came under their notice, had they not power to suggest a meeting, or to call a meeting?—Not without the authority of the Board.

37,034. The authority of the Chairman?—Generally of the Chairman; but it was formally put before the Board in most cases, and approved of. Indeed, I am bound to say that on most important occasions, where any suggestions were made by the Inspecting

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

Commissioners, and they appeared to be well founded, they were sanctioned either by the holding of a meeting, or by taking other important steps. Meetings were generally held when the object was inquiry.

37,035. The First Annual Report of the Commissioners, published in 1843, defines very clearly the nature of the policy to be pursued by the Commissioners ?—Yes.

37,036. Was that policy defined by the Commissioners themselves after a conference with the Inspectors, or upon their own view of the matter ?—It was not after a conference, but by themselves, and the course they pursued was often a course dissented from, by myself particularly.

37,037. You were at that time then inclined to have adopted some more active interference ?—A more active interference.

37,038. They have put forward here under four heads the great principles of their policy. The first of the statements, or rather principles, which they lay down is, "that the greatest caution should be "used in applying restrictions on any mode of fishing "in so vast a field as the open sea, and that it should "only be done on very certain grounds." Do you object to that ?—Certainly not.

37,039. The second article is, "That the extent to "which the trawls and trammels are used prove that "they are productive and profitable modes of fishing, "and consequently should meet with encouragement "on public grounds." What do you think about that article ?—Under qualifications.

37,040. How far would you qualify that as the result of your own experience ?—There being several localities where proofs were given of injury done by trawl nets.

37,041. Had these proofs been submitted to the Commissioner at the time they drew up this statement ?—They had had before them the result of the examinations—of a most laborious examination—made by the Commission of Inquiry in 1836, and recorded in their report. The whole evidence is recorded.

37,042. Then do you think it is to that they refer in the third article, where they say, "that the argu- "ments put forward for an absolute prohibition of "them are founded on prejudices and vague theories, "not by any means confirmed by facts"?—No, there were no such arguments put forward in the report of the evidence I have alluded to.

37,043. There were no arguments in favour of absolute prohibition ?—No; nor was there anything, that I am aware of, connected with the department which was in favour of absolute prohibition.

37,044. They go on to say, "that although it would "be greatly to be regretted, that the extension of the "use of these, or any other improved modes of fishing, "should injure the interests of any other class, by "increasing the produce and lowering prices, particu- "larly if that should be a poorer class, such reason "cannot be admitted as an argument for their being "suppressed." However, you state that nobody had advocated the suppression ?—No, that never was advocated.

37,045. They go on to say, "at the same time, there "are cases where we have considered that a certain "degree of restriction ought to be applied, such as of "small bays of comparatively shallow water, or the "narrow entrances of deep inlets; the indiscriminate "use of trawls or trammels in such confined waters "might tend to prevent the fish from congregating "in these sheltered spots (where they can be most "easily followed) and partially from entering them; "it would be, therefore, tantamount to reducing, by "so much, the available extent of coast, while, at the "same time, a restriction in such places is of no great "consequence to the parties using those implements, "and has a great incidental advantage of protecting, "for a great extent, the poorer class of line fishermen "who have only small boats, from the injurious effect "of trawls on their lines. The use of trawls in Dub- "lin Bay has been restricted on this principle by bye- "law, which, having been made the subject of appeal "to the Privy Council, was confirmed." Does that paragraph embody your view of the amount of restriction ?—Yes; I have not the slighest objection to anything in that paragraph.

37,046. So that, in fact, you are in perfect accordance with the paragraphs laid down here ?—Not with all. My objection was to alter the general tone of the principle of non-interference. To the details I assent fully, such as the restraint upon the modes of fishing under peculiar circumstances, provided it be necessary.

37,047. But I think you assented to these *seriatim*, as I read them ?—I suppose I did. Strange to say, I have not for a long time read them, but the impression on my mind is, that the tone adopted in that first report, was one to which both myself and my late colleague, Mr. Ffennell, took exception.

37,048. Perhaps it may be, that your recollection now does not at all relate to these details, but to a paragraph in the earlier part of the report, in which the Commissioners state, "by a reference to the Act it "will be perceived, the principle adopted has been "one of non-interference by the Government, to make "the provisions as definite as possible, to the effect "that the public in general might have the power of "causing it to be enforced, the intervention of the "Commissioners being only admitted as an authority "for deciding matters that are of a nature varying "according to localities or circumstances, and that, "consequently, could not be defined by the Act"? —Precisely.

37,049. It is that broad statement—that broad principle of non-interference, that you object to ?—Yes. With regard to that broad statement of absolute non-interference, I always urged, and so did my colleague, that it was our duty, not only to act in cases such as are minutely detailed there, but to be upon the alert in affording every species of encouragement to the promotion of the fisheries—of the sea fisheries.

37,050. On what principle would you base your view of the propriety of Government interference or Government promotion of this particular branch of trade ?—I would refer to the suggestions of the Report of 1836, and I think that amongst them will be found certain propositions which, if acted upon, would have been greatly calculated to improve the sea fisheries of Ireland, and would, as I firmly believe, have prevented a great many of the scenes that followed after the famine year. To be candid, I have at all times considered, that our department was a species of delusion. We were supposed to be the persons having charge of the sea fisheries of Ireland. Our duties, though strictly observed, according to the instructions given in the Act, were mistaken by the public. It was believed that we were to be the encouragers of the fisheries, and many persons who, perhaps, felt that that duty would have devolved upon themselves, as proprietors, looked to us as the parties whose duty it was to do that which we thought we had no right to do.

37,051. Do you not think that that is very often the consequence of Government interference with particular branches of trade ?—It may be so.

37,052. That persons who should exert themselves to promote particular branches of trade look upon the Government to do it for them ?—Yes.

37,053. (*Mr. Lefevre.*) These reports were always made public ?—Always.

37,054. And the same line was followed throughout all the reports ?—Yes.

37,055. We may take it, also, that there are no passages in these reports which have led the public to understand that the Government would interfere with the fisheries ?—Certainly not; but a vast number of persons entertained that opinion, who did not take the trouble to read the reports at all.

37,056. (*Professor Huxley.*) The mere fact that a Fishery Board existed led to the inevitable conclusion that that Fishery Board was to help them in some respect or other ?—Clearly so.

37,057. That delusion existed in the minds of the public ?—I think it is rather unfortunate that there existed any department at all.

37,058. As leading to that impression ?—Yes; even the very Coastguard, who are our executive department, in their reports and returns, in answer to queries, invariably complained of the want of any species of encouragement. They have said, "Here is a place "where there are a poor distressed people, whose "boats have been destroyed by bad weather and by "storms, they have no means of restoring them; a "little aid given now would be very well paid for "afterwards by the produce of the fish," but our answer always was "We have no means."

37,059. In fact, you had the command of no funds ?—No.

37,060. Is it the first or the second report to which you refer ?—The first.

37,061. There are 17 heads ?—Yes. The discussion of those 17 propositions occupied, perhaps, more time than the remaining portion of the whole inquiry, there being, I am bound to say, some dissentients among the Commissioners.

37,062. I see that, in the first article, you recommend the consolidation of all the Acts relating to the sea fisheries of Ireland into one statute ?—That is done by the 5th and 6th Victoria.

37,063. There have been a number of Acts since, have there not ?—They were passed afterwards, but at that time the Acts then existing were consolidated by the 5th and 6th Victoria.

37,064. Then that has been done, in fact ?—Yes.

36,065. You then recommend "That the chief "superintendence and control of all matters con- "nected with the fisheries be vested in some public "department, which shall make an annual report of "its proceedings, to be laid before Parliament." That recommendation has been carried out also ?—It has.

37,066. But the effect of that, judging from your answers just now, does not seem to be good, inasmuch as it raised that sort of false hope which you mentioned ? Would you be disposed to think still that the recommendation should be carried out, so that the fishermen should trust themselves to private enterprise, like all other branches of trade ?—I am decidedly of opinion that it would be better to leave them to private enterprize, and to the ordinary tribunals of the country, than to let the shadow of encouragement even exist in the public mind; but I am thoroughly persuaded that it would produce sad disappointment.

37,067. Disappointment, from the prevalent impression of the Irish public that they are to be helped by the Government ?—From the belief that still exists, that that branch of industry is more subject than perhaps any other to reverses. It will be remembered that the parties who pursue it are, in fact, not tenantry, generally speaking. They are a poor class of persons, occupying hovels upon the coast, and they are not an object to encouragement so much by the landlords. The benefit to the landlord not being direct, they take little trouble about them. Then again, as an encouragement to a naval force. It is perfectly clear that seamen were very much wanted at a critical period by England, and that if the same encouragement had been given to the fishermen in Ireland that had been given in France, there would not have been the want of a marine.

37,068. (*Mr. Lefevre.*) Are you speaking the views of the public in what you are now saying, or your own ?—I am speaking my own views.

37,069. (*Professor Huxley.*) Our own experience on the sea coast does not go quite so far as that. We have not been able to discover that the fishermen will take service in a man-of-war. It is a very rare thing indeed for them to do that ?—Not in men-of-war. But they go into the merchant service. They supply the commercial marine, and from that they very often go into men-of-war. It is an intermediate stage.

37,070. We do not find that on the English coast. They do not go much into the merchant service ?—When you reach Dungarvan, you will find that nearly all the men that are worth having have gone into the merchant service.

37,071. We may pass over the third and fourth articles here. The fourth says "That agreeably to "the enactments of the 48 Geo. 3. cap. 110. sec. 8., "of the 55 Geo. 3. cap. 94., and of the 59 Geo. 3. "cap. 109. sec. 51., a Government vessel be fur- "nished, at the requisition of the superintending "body, at such times and places as may be deemed "necessary for the protection and assistance of the "fishermen, and that a competent authority for the "preservation of the peace accompany such vessels." That clause provides that a vessel shall be placed at the disposal of the superintending body, for the assistance and protection of the fisheries, and for keeping the peace ?—Yes.

37,072. Was that ever done ?—Only occasionally, and not on our recommendation so much as upon that of the constituted authorities, the magistrates and authorities who wish to preserve the peace.

37,073. Has any vessel been placed at the disposal of the Irish Fishery Board, in the same way that one has been placed at the disposal of the Scotch Fishery Board ?—No, never.

37,074. Do you attribute any of the outbreaks and difficulties which have occurred at Galway and elsewhere to the absence of such a restraining force ?—I think it has at all times proved to be a very great check when disturbances have occurred.

37,075. We have been given to understand that there have been serious disturbances on different parts of the coast of Ireland, and particularly in Galway Bay. Have representations been made to the Fishery Board on such occasions ?—Sometimes.

37,076. What action would the Fishery Board take upon it ?—If the representation was accompanied by a suggestion for an alteration in the regulations, there generally was an inquiry.

37,077. But would they take any active steps to put down such disturbance ?—Sometimes the matter would be referred to the Castle and the Executive Government, and if the intervention of the Admiralty was required, in all probability a vessel would be sent.

37,078. Was that ever done ?—Yes.

37,079. The fifth article recommends, "That the "superintending body be empowered to institute, or, "on requisition after public notice from persons "interested in the fisheries of any particular district, "to adopt and confirm any local legislation which "they shall consider as decidedly salutary, either for "the due conduct of the fishermen, for the preserva- "tion of the peace, or for the protection of the "fisheries." Was that recommendation embodied in the Act ?—Yes, in the 91st section, which gives power to make byelaws and orders.

37,080. Then the sixth article recommends, "That "such further pecuniary aid be given for the con- "struction and maintenance of any piers, harbours, "and other public accommodation as may be deemed "requisite for the service of the fisheries; that pro- "vision be made for the repair and maintenance of "all those which have been provided entirely or "partly at the public expense, and may be thought "worthy of being preserved; and that they should "be declared public property; and that power be given "to enforce such rules and regulations as may seem "desirable, in order to render them as generally useful "and desirable as possible" ?—That, to a certain extent, has been done, with considerable benefit, in a distinct Act, passed after the 5th and 6th Vict., commonly known by the name of the Piers and Harbours Act.

37,081. What was the general purport of that Act ? Under what conditions could the fishermen obtain subsidies ?—They were not the fishermen, but any applicants who came forward. The Act was the

DUBLIN.

Mr. J. R Barry.

20 Aug. 1864.

9th Vict., cap. 3, and it was an Act to encourage the sea fisheries of Ireland, by promoting and aiding with grants of public money the construction of piers, harbours, and other works. There is a very short explanation of the Act, and an epitome of it given by me as an instruction to parties asking for information.

37,082. It is here stated, that no grant for any one work shall exceed 5,000*l.*, and the proportion of the contributions to be found shall in no case exceed three-fourths of the total cost of such work ?—Yes.

37,083. How much money has been granted under that Act ?—A great deal.

37,084. And have many harbours been built ?—Several have been.

37,085. And are many kept up in repair by that Act, or rather by those grants ?—The Board of Works, having been overwhelmed with business, with the sanction of the Treasury transferred to the grand juries of the several counties the duty of preserving and keeping in order the piers that were formerly built, as well as the piers that have been built under the Act. There are several piers which had previously been built under the old Fishery Board, and ever since that they have been going into rapid decay.

37,086. Do the grand juries not take much interest in the matter ?—They do not take the interest in it that they should. The maritime members—those who have resided on the coast, have sometimes sought for aid ; but those who lived in the interior have said, "This is no affair of ours, we derive no benefit from it." And the consequence has been, that the works have been neglected. However, there is a power given to the Board of Works which, I think, they have sometimes exercised, in the event of an application being made and refused by the grand juries, of laying out the money themselves, if they judge it expedient, and there is an imperative obligation upon the grand juries to raise it from the counties.

37,087. Is there any limit to the amount of contributions made in that way from the public funds ?—Yes, a certain sum was granted under the Act.

37,088. (*Mr. Lefevre.*) Has that sum been exhausted ?—No, there remains some portion of it still.

37,089. (*Professor Huxley.*) Was it a grant of one sum ?—Yes.

37,090. How much ?—50,000*l.*

37,091. There is a further recommendation contained in the fourteenth article, "That loan funds "shall be established to assist fishermen in procuring, "repairing, and fitting out boats." Was that recommendation ever carried out ?—No, never. Here is a document which I intended to submit to you. It is a document which will show you the feeling—and perhaps it is a feeling in which you will to a great extent concur—entertained by the other members of the Board on the subject of loans. In the year 1844, a proposition was made by the Treasury to place at the disposal of the Commissioners a certain sum of 5,000*l.*, with, I believe, some additional funds, to be applied to the purpose of loans. The proposition was submitted to the Chairman, who disapproved of it. I had several conferences with him on the subject. I, on the contrary, thought it was a very critical moment, and that the plan would have been very beneficial. He requested that I would place upon paper my views on the subject. I did so. They were submitted to him, and here are his minutes and his objections to them. They were then submitted to another member of the Board, and subsequently to the junior member, and their views are also given on the subject. I should hardly consider myself at liberty to give the document to be made public. At the same time, I will give it to you for your guidance. It sets forth their views fully, with all the pros and cons—perhaps my absurd and injudicious views, and their wise ones.

37,092. (*Mr. Lefevre.*) But was not a sum of 5,000*l.* afterwards advanced by way of loan ?—There was a sum of 5,000*l.* given at the time of the famine. It was employed in the construction of curing houses. Some good followed from it, for there was a system of cure introduced into some places in the country where it was not understood. We had some Scotch curers sent over to us, and their instructions were of considerable value.

37,093. (*Professor Huxley.*) The fourteenth article of these recommendations does specially recommend that loans shall be made by the Board of Works to parties desirous of erecting curing houses, fishery yards, salt stores, or fishermen's houses ?—Yes.

37,094. That recommendation was carried out ?—No, it has not been.

37,095. I understand you to say that it was during the famine ?—No ; what was done then by the Board was done on a different principle. It was a mere desultory thing, done at the pressure of the moment, in order to rouse the fishermen from the apathy into which they had fallen, and in remote districts to teach them a better mode of curing. In that respect there is no doubt that considerable good was done.

37,096. Have the effects of that been permanent ?—Yes ; in those localities.

37,097. Are there curing establishments there still ?—No, they were broken up in the course of a short time. It was found that the establishment, as every Government establishment of that kind is where they take upon themselves to operate, was altogether too expensive, and would not pay. Consequently, they were broken up, and the balance of money still in hand was returned to the Treasury.

37,098. Did anybody in the neighbourhood set up a curing establishment ?—Yes, for a short time, and some of the curing establishments were handed over to individuals who were known to be enterprising men. Amongst others, to Mr. Andrews and his Company, on the Island of Valentia, in the county of Kerry.

37,099. Have they continued to work ?—Not at all.

37,100. Then has all trace of the Government operations been wiped out ?—Yes.

37,101. (*Mr. Lefevre.*) Were there not several private curing establishments set up at the same time ?—Very few.

37,102. (*Professor Huxley.*) The last article is, "That a practical education in the manufacture of "nets and in reference to fishery operations shall be "adopted in the schools." Was that recommendation carried out ?—No.

37,103. However, it would seem that most of these recommendations, with the exception of that to erect curing houses and that to furnish a guard vessel, were pretty fairly carried out, were they not ?—The most important were those which related to the loans, and they were not at all adopted, nor was any authority given with that object in the 5th and 6th Victoria, which was the Act which immediately followed. I can put into your hands a copy of a bill which was read twice in Parliament. It was brought into the House of Commons by the present Lord Lieutenant of Ireland, who was then Chief Secretary, and Chief Baron Woulfe, who was then Attorney General for Ireland. It was a bill directly founded upon these recommendations. It was read twice, but before it was committed there was an outcry raised against it from Scotland.

37,104. From Scotland ?—Yes. At that time there was a strong jealous feeling, and the impression upon the minds of many persons, and upon my own among them, was that the break up of our establishment in 1830, with the continuance of a large establishment in Scotland, was altogether the effect of Scotch influence. I am happy to state for the memory of one individual belonging to that country, that that was utterly and completely forgotten and extinguished during his management of the Scotch fisheries. I allude to the late Sir Thomas Dick Lauder. He died Secretary to the Fishery Board. He took, I have reason to know, during the latter years of his life, as deep an interest in the fisheries of Ireland, as a man of humanity and universal benevolence, as he did in those of his own country.

37,105. During his lifetime was no such adverse influence exercised ?—No, none at all.

37,106. I think we are now pretty well informed of the history of the Board and the legislation which has taken place on the subject. Will you be so good as to tell us what your opinion is respecting the trawling question. You have had a great deal of experience and information upon that subject. What do you think about trawling inside the bays ? What is the effect of it ?—I am decidedly adverse to trawling inside the bays.

37,107. On what ground ?—On the ground of disturbing the fish, and taking vast quantities of very small fish ; disturbing also the settlement of shoals in places where the herrings fall into the bays.

37,108. By driving the shoals away ?—Yes.

37,109. Can you point out any particular cases where trawling in the bays has led to a falling off in the supply of fish in those bays ?—All the evidence which we have received tends to leave upon my mind the full conviction that it has done so in Galway Bay.

37,110. During what period was trawling permitted in Galway Bay ?—Trawling commenced in Galway Bay, as near as I can remember, about the year 1840 or 1841. One of the first meetings that were ever held in Ireland after the passing of the 5th and 6th Victoria was at Galway. On that occasion there was objected to but a single solitary trawler, belonging to a respectable individual, a gentleman of fortune in the neighbourhood, Mr. Pearce. Mr. Pearce was not judicious in his dealings with these ignorant people. He is said by them to have been in the habit of trawling among their boats, and a very angry feeling was produced in consequence. The people of the Claddagh, most especially, had most unreasonable notions in reference to their rights over the Bay of Galway. They conceived that nobody could exercise any description of fishing there without their authority, and they had a decided objection to trawling. That objection was founded, I believe, not upon the notion that it would injure their fishing, but upon the unreasonable idea that it would increase the quantity of fish in the market, and thus diminish their profits. I believe that at that time such was the predominant motive of their objection. But that has since ceased with the facilities for transport, and yet the objection continues. There was a period during which, by the influence of some very intelligent men who lived in the immediate vicinity,—the gentlemen of the Dominican Convent of the Claddagh,—they were prevailed upon to yield their objection and themselves to become trawlers for a short time, but that very soon ceased, and they expressed themselves thoroughly convinced that the experience they had had only confirmed them in their belief that it was a mischievous practice. The result of the meetings which were held in Galway was that a line of demarcation was fixed by the Board within which there should be no trawling. I have here a map of Galway Bay. You will find, and I have it accurately stated upon this small scale, the present line of demarcation. You will observe, however, that it is shown there to be an oblique line. Every successive Inspecting Commander of the Coastguard who came to Galway objected to the obliquity of the line as rendering it exceedingly difficult to enforce the regulations. The people themselves sought for very little more. Instead of having the line from Barna to Gleninagh Castle they wished to have it from Black Head to Spiddle, and that has been the bone of contention up to a recent period. One of the motives with the Claddagh men was, that it would give them an additional preserve.

37,111. But that is a very small difference ?—A very small difference indeed. It was originally my recommendation that a line should be drawn from Spiddle to Black Head, and I still entertain the belief that that would have tranquillized the public mind on the subject of trawling in Galway Bay, if it had been adopted.

37,112. Had the Galway men no objection to trawling outside that line ?—Not until a recent period.

37,113. Is the ground outside as good for trawling as the ground inside ?—Yes, in fair weather.

37,114. What were the grounds which determined the adoption of the other line ?—I really cannot tell, further than that it was adopted, and that being adopted it should not be changed. I think it was a very groundless objection.

37,115. How many trawlers were there engaged at any particular time in Galway Bay ?—I do not suppose there were ever 20 at a time.

37,116. Never more than 20 ?—I do not suppose there were more than 20. It varied very much.

37,117. We have been told that after having trawled out one particular place, they go to another ?—You were truly told that. A ground may be trawled out.

37,118. Then you are of opinion that they really do sweep the fish out of the bay ?—I think they do a great deal of mischief.

37,119. Are there any returns of the catch by the line fishermen during the time the trawlers were there ?—No.

37,120. So that there is no precise data on which to form a judgment ?—Nothing more than the evidence of the several witnesses taken at the different inquiries.

37,121. Those being fishermen, of course ?—Yes. There were persons in the neighbourhood, owners of boats and respectable shopkeepers in the town, whose evidence was also taken.

37,122. As you are aware, fishermen are apt to make somewhat broad and incautious statements ?—Yes, exaggerated statements.

37,123. It would have been desirable, if possible, to obtain accurate returns of the quantity of hooked fish caught before trawling commenced, while it was going on, and after it was over. That is the only way to form a safe and accurate judgment upon the question. Does anything of the kind exist ?—No. Upon one occasion we employed an intelligent member of the Coastguard, a chief boatman of the Coastguard, who was strongly recommended to us by his principal officer, to give a return of that sort. We put him on board a trawler, and requested him to keep an accurate account of the result of the proceedings on board. He did furnish us with reports and evidence on various occasions. All of them were decidedly opposed to trawling. His name was O'Flaherty. He is still in Galway, and may be examined before you.

37,124. Was he opposed to trawling on account of the great quantity of small fish taken up ?—He had a general objection to the destruction of small fish. I should mention that the common name they give to all small fish is spawn.

37,125. From what you have heard or known of this matter, do you think that they have taken spawn, in the proper sense, in the trawl, namely, the eggs of fish ?—There were sent to me by that man what appeared to me, as far as I could judge, to be the eggs of fish intermixed in a mass.

37,126. Are you not aware that, very often, fishermen confound the eggs af other animals with those of fish ?—I could not tell what fish it was.

37,127. What is your opinion as to what should be done with regard to this vexed question at present ; what do you think ought to be done, if there is to be any legislation at all upon the general question of trawling in the bays and within the headlands ?—I cannot give a general opinion upon the subject. It is impossible. I am convinced that there are places where it is quite innocuous.

37,128. Will you instance some of those places ?—Galway Bay is one place where my last recommendation would probably have been adopted by the Board, had it not been for the approach of this Commission. We determined to do nothing until after the result of this Commission was made known. But the recommendation was made upon the suggestion of some

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

very intelligent persons in Galway, that there should be a trial made, a three years' jubilee, as we call it. There was to be a total interdict of trawling in Galway Bay for three years. But it was clearly understood that it was to be experimental, in order to see what effect it would produce on the fisheries.

37,129. There is this difficulty about the matter, that one has to consider what would be regarded as a satisfactory result. I suppose that, if, in consequence of such a jubilee, fish should become tolerably abundant for the long-line fishermen, it would be considered that the experiment had been successful?—I presume so.

37,130. Yet, looking at the question from a consumer's point of view, that does not exactly follow; because, although the trawlers sweep the fish out of the bay very speedily, and exhaust the bay for a time, it is quite possible that the quantity they furnish to the consumee may be equal, in the long run, to that furnished by the long-line fisherman. I do not say that such is the case; I only put it as being possible?—Yes, it is quite possible,—excluding the consideration of brood.

37,131. Then it would not exactly follow, from the apparent success of a measure for suppressing trawling, that in the interest of the consumer, which is the principal question the public have to consider, trawling should be put down. It would scarcely matter, if the same quantity of fish were obtained, whether it was obtained once in three years, or in small quantities spread over the three years?—The question is surrounded by difficulty. I am aware of the injurious effect it would produce in the supply in some of our most important places.

37,132. (*Mr. Lefevre.*) What is the number of trawlers that are owned in Galway itself?—I should think there are not more than seven or eight.

37,133. What would be the effect of a three years' jubilee on the owners of those trawlers?—I suppose they would go somewhere else to trawl.

37,134. Are there any other bays in which they can trawl with convenience?—They can trawl outside.

37,135. From Galway?—Yes, from Galway. Lately the trawling has been outside the Arran Islands, and there has been some good trawling there. My notion of the application of the trawling system is, that it should always be practised in the deep water and outside headlands.

37,136. But is there not frequently bad weather, when it is impossible to trawl outside the Islands of Arran, when they could easily trawl inside?—Yes; and that is the time they commit breaches of the regulations in most places.

37,137. Might not a jubilee of three years in the bay practically destroy the trade of trawling from Galway?—There are periods in the winter when with great facility they may trawl there and in other places in the deep sea.

37,138. Have you formed any opinion as to what portion of the year it would be possible to fish out in the open sea?—The season is precarious. Very often we get fine weather in the months of September, October, November, and even December. Then January, and February, and March are very bad. For a long time there was an impression on the mind of our Board in favour of a close season. But if a close season is to be established, then the question arises, what the close season ought to be.

37,139. A close season for trawling?—Yes.

37,140. And all kinds of sea fishing?—No, only for trawl fishing. You will find that the different descriptions of fish spawn at different periods. We took a great deal of trouble to get answers to querries as to the periods of spawning for fish, but they have only embarrassed us the more.

37,141. (*Professor Huxley.*) At any rate your opinions do not go further, in any case, than a local limitation of trawling?—No.

37,142. You do not recommend the putting down of trawling altogether?—Unquestionably not.

37,143. And do you recommend this local limitation on the supposition that trawling tends to extinguish the fish in that locality, or that it tends to take away the livelihood of different classes of the people?—Certainly not. It is simply because of its effect upon the fisheries, and not of its effect upon production. I look upon it that that objection is completely extinguished by the facilities of transport. In all places within reasonable distances of railways, no matter what may be the quantity of fish taken, it will find a market. It was not so always. When the conflict commenced, if it had been so, it is very possible that that conflict would not have existed, for I admit that the spirit of monopoly was the first and main foundation of the hostility to productive fishing.

37,144–5. You go on the principle that the sea is a great common ground, producing fish for the whole nation, and that it is of importance that it should not be allowed to be fished destructively?—Yes.

37,146. Have you any reason to recommend any restriction upon the herring fishery, or any particular form of legislation to suggest?—The herring drift-net fishing has gone on very fairly, without any complaints being made to us in reference to it. In Galway Bay, again, there are certain local regulations among the fishermen, which have been greatly complained of as being amongst their unfounded prejudices. But in my visits to Scotland, and England, and the Isle of Man, I have found that amongst the most civilized communities those regulations do positively exist.

37,147. Such, for example, as shooting at sunset?—Yes, and also, when there is an influx of what is called bay fish coming into the bay, allowing them a short and reasonable time to settle in the bay before the fishing commences, and then fairly starting together. The Claddagh men, who are no doubt unreasonable in many respects, but whose want of common sense is greatly exaggerated, I believe advocate the necessity of some regulation of that kind. That is considered to be one of their prejudices, and they are censured because they will not go out to fish the moment they find the fish present in the bay. Considering what their fishing is, and that they are not in the habit of going far to sea to fish, and that they have not adequate gear to enable them to do so, I think there is great reason in their wishing to allow the fish to settle in the bay before they commence fishing. Therefore I am not one of those who think that an unreasonable regulation.

37,148. As the law stands at present, I apprehend there is no general regulation of any kind whatsoever applying to the herring fishery throughout the coast of Ireland. The Act of the 5th and 6th Victoria overrides all other Acts, and the Convention Act, by an order in Council, does not apply. Under those circumstances, unless your byelaws in any locality prohibit a man from fishing for herrings in any way he thinks best he can do so?—Clearly.

37,149. He can shoot his nets before or after sunset, and in fact there is no restriction on any mode of fishing, as a general rule, throughout the whole of Ireland?—None.

37,150. Have there been any localities in which the Board has been moved to make byelaws in reference to the herring fishery?—None, except where you were yesterday, at Howth. There the herring fishery is conducted in a more judicious manner than in any other parts of Ireland, and some parties there have complained that it is the practice to shoot nets before sunset. It is said that they do not observe those conventional arrangements among themselves which exist in other places, and that the Scotch are the most remarkable for breaking the arrangement with regard to net-fishing before sunset. That is the only place where a complaint has been made to us incidentally, and without any formal application for an order on the subject.

37,151. With respect to the complaints of the drift men as to the interference of other vessels, there are certain localities in which applications have been

made to you to make byelaws. Wexford for example? —Yes.

37,152. An application was made to you from Wexford on the 20th of April 1849?—Yes.

37,153. And in that case you enacted a byelaw which is a repetition of the Convention Act?—Yes.

37,154. That byelaw which you enacted was one prohibiting trawling in all places where there were boats engaged in herring or mackerel drift-net fishing, and provided that trawl-boats should keep at a distance of at least three miles from all boats fishing for herring or mackerel with drift nets; that whenever herring or mackerel boats should commence drift-net fishing, in any place on or off the coast of Wexford, the trawl-boats should depart therefrom, and keep at least three miles distant from the herring or mackerel drift boats?—Yes, exactly.

37,155. Are there not some other parts of the coast where applications have been made on account of the interference of the drift-men?—Yes, at Dungarvan Bay. Under the head "Trammel nets," you will find a very complex byelaw; in point of fact, it is so complex, that it has been found utterly impossible to carry it out. My son is the resident magistrate of that district, and he writes to me, in a private letter, "for mercy's sake, make this byelaw intelligible to us."

37,156. Then there is a byelaw here with regard to Galway Bay keeping the trawl-boats three miles from the drift nets when large shoals of herrings set into the bay?—Yes. That is another byelaw that has not yet been defined. One class of persons—the anti-trawlers—say, that as soon as any herrings appear in the bay, the trawlers should desist altogether from fishing in the bay, under that byelaw. The trawlers, on the other hand, say that they are not restrained from fishing by the mere influx of a small quantity of fish, but that it is only when there is a large herring fishery. They say that it was not established in order to stop them from trawling; and they add, that as the herring fishermen only fish by night, they ought not to be restrained from fishing by day. Between them both, the contentions have rather increased than diminished.

37,157. (*Mr. Lefevre.*) Has there been any decision under that byelaw with respect to fishing by day?—No.

37,158. (*Professor Huxley.*) Have you, anywhere, a byelaw permitting seining for herrings?—No, but the 5th and 6th Victoria interdicted the use of seines, by daylight; but that was so completely opposed to what was the practice on parts of the coast, that it was judged expedient, in a subsequent Act to get it altered.

37,159. By the 7th section of the 7th and 8th Vict.?—Yes. The use of the seine nets was not lawful for herrings.

37,160. Was a special application made to the Board to permit seining for herrings?—Yes.

37,161. Where is that practice pursued in Ireland?—Upon the south coast, particularly in Bantry Bay and the shores above Glandore Harbour; and in several of the small inlets you will find on the southern coast.

37,162. Is that a very productive mode of fishing?—Yes, very productive.

37,163. Did the people of those localities apply to the Board to be permitted to use that mode of fishing?—Yes, and in consequence of that application, this section was introduced into the Act of the 7th and 8th Victoria.

37,164. Then the Board, on the evidence that was offered to them, found that there was nothing wasteful or destructive in that mode of fishing?—There was no objection to it. There has been no objection, except an objection raised sometimes to the capture of the small and young fry of other fish. That has been complained of in Kinsale Harbour, Strangford Lough, and other places.

37,165. But not catching small and unsizeable herrings themselves?—No.

37,166. You have a good many regulations apparently regarding oyster dredging?—Not a great many. We have not deviated from the statute law in reference to our oyster fisheries, except in two or three cases.

37,167. The 33d section of the 5th and 6th Victoria gives the power of changing the close time?—We have exercised that in favour of the fisheries of Arklow, and that immediate coast.

37,168. On what ground have you done that?—Upon the ground that the harbour is a very bad one, and very inaccessible. The coast is an open wild coast, and there was an anxiety on our part to afford facilities for the sale of the oysters to English boats which come over from the coasts of Kent and Essex, and other parts of England. 7,000*l.* or 8,000*l.* have been received by these people in the course of a few days for the oysters taken away. But the boats could not come as early as the last month of our open season, the weather being often very boisterous. It became necessary, therefore, to add the month of May to the open season, and the change has produced the greatest advantage and great wealth to the people of Arklow. It was confined to purposes of brood.

37,169. How long has that permission been given?—I think since 1846.

37,170. Has it gone on ever since?—Yes.

37,171. Has it been attended with any injury to the oyster beds?—I think not, because they are very extensive sea beds. I have devoted a good deal of attention to the subject, in order to ascertain how far that relaxation of the close time has done any injury, and it is positively alleged, although I must say the allegation came from interested parties, that it has increased the supply of oysters.

37,172. By weeding them out?—Yes, by working on the beds. That statement, which I considered at the time to be an absurd statement, has been in a great measure confirmed on the east coast of England, at Whitstable, most particularly, where I found that the principle of working on the beds is considered indispensable in order to render the oyster beds profitable.

37,173. (*Mr. Lefevre.*) Do you mean dredging all the year round?—Yes, cleaning the beds.

37,174. (*Professor Huxley.*) Is there any restriction in regard to the size of the oysters which may be taken at Arklow?—No.

37,175. Are they mostly small oysters that are taken, to fatten on the English coast?—The English buyers would prefer small oysters, but they take them as they come.

37,176. They take them indiscriminately?—Yes.

37,177. (*Mr. Lefevre.*) But they would prefer the small ones?—Yes; they are most suited for their purposes.

37,178. (*Professor Huxley.*) Then you have the power of suspending the oyster fishery. That is given to you by the 7th and 8th Victoria?—Yes; we have the power of suspending the oyster fishery for any term not exceeding three years.

37,179. Why was that clause inserted?—Because there were some places where the oyster fisheries were over-wrought, and consequently utterly destroyed, more especially Lough Foyle, Lough Swilly, and Carlingford Lough.

37,180. Were they over-fished, notwithstanding the observance of the close time?—Yes.

37,181. The open months were sufficient to enable the fishermen to overdo them?—Yes. The demand for oysters has become so great since the facilities for transporting them to the interior have been supplied. People in England are now eating oysters who never dreamed of it, and also people in Ireland. In point of fact, the demand is without limit.

37,182. It was found absolutely necessary to suspend the oyster fishery altogether?—No; we have not done that in any case.

37,183. Then the power was sought for, and has not been exercised?—It has never been exercised. We were desirous of exercising it, particularly in Lough Foyle, and we held important meetings upon

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

the question; but we were overpowered by the popular cry against it, and by appeals from the gentry of the neighbourhood, who said "There is a "class of persons deriving sustenance from the "trade; you will throw them on the world, and "destroy them."

37,184. But if the beds were exhausted, their case would be just the same?—No; they were still getting a little.

37,185. (*Mr. Lefevre.*) Was that in 1846?—Yes.

37,186. (*Professor Huxley.*) Then, as a matter of fact, the beds were not exhausted?—No, not thoroughly exhausted.

37,187. Has there been sufficient to give these people a livelihood since?—I don't think there has, but the increase of price has compensated them in some degree for the diminished quantity.

37,188. But if the gentry of the neighbourhood represented that the stopping of the fisheries would throw the poor people upon them, they evidently thought that keeping the beds open would keep them off?—They admitted that injury was being done, but they said, "It is an embarrassing question, "like the trawling question, and we cannot bring "ourselves to recommend you to make a byelaw."

37,189. Would not the fishing check itself? If there was a scarcity of oysters, would not the people be led to seek a supply elsewhere?—They were local people, who fished for the purpose of bringing oysters into Londonderry, where they were sold to the dealers, who shipped them off to Liverpool, generally for export.

37,190. What is the condition of the beds now?—I am told they are very poor.

37,191. (*Mr. Lefevre.*) Are they worse than they were in 1846, when that inquiry took place?—Yes, and every year they are becoming worse.

37,192. (*Professor Huxley.*) The power thus given to you has never been exercised?—No.

37,193. The 16th and 17th sections of the Act give you the power of granting licences for making oyster beds?—Yes.

37,194. Has that power ever been exercised?—Yes, to the extent stated in the list of licences.

37,195. From this list it appears that 34 licences have been granted between 1846 and 1864 inclusive?—Yes.

37,196. And the total area of new beds thus formed is 7,796 acres?—Yes.

37,197. These licences give a certain right over the fishery, I suppose?—Yes; to the owners of the land, or to the occupier, or to any other person getting permission of the owner or occupier.

37,198. And the oysters then become the private property of the person who lays them down?—Yes.

37,199. Has that practice resulted in the establishment of profitable oyster beds?—No, I am sorry to say it has not generally.

37,200. Have the beds which have been formed been used merely as the oyster parks of Colchester?—I am sorry to say that in most cases, up to last year, the only effect that followed the granting of these licences was a little preservation upon the beds, and by that means there may have been a slight increase.

37,201. No new beds have been formed?—Very few. A small quantity of oysters has been dropped on some of the beds, but the only instance in which there is really an active operation in progress is in Clew Bay, near Westport, by Captain Austin, who is the owner of a large oyster fishery at Whitstable. He came over to this country, and took a lease from a lady, who had obtained a licence for establishing an oyster bed upon the shore. He paid a rent for the bed, and has since applied for an extension of the ground. He is really working now upon the English system,—upon the Whitstable system,—and I am sure he will do so profitably.

37,202. What he is doing, I presume, is to dredge the oysters out of the deep water, and lay them down in parks?—Yes. He buys them from the people, and has afforded immense employment to the poor people in the neighbourhood, who fish in all parts of the bay, and bring to him the oysters they obtain, which he purchases at a fair rate, and lays down on ground previously prepared for the purpose.

37,203. Has he, or any other person who has sought for power to make oyster beds, attempted the multiplication of oysters on the French system?—I don't think he has, because at Whitstable I find they do not appreciate the French system. They deny the efficacy of it, which has embarrassed us a good deal, because we have published M. Coste's report, and other information upon the same question, and the people ask us if the statements there given are not exaggerated. We, of course, cannot say, but we tell them they must find that out for themselves; we give it as we get it.

37,204. At Whitstable they merely preserve the oysters in parks?—Yes; all the year round they are dredging on the open grounds for the supply of their parks, in contravention of the existing statute law, which is the same with us. But they act under the authority of orders in Council, which I think are very judicious.

37,205. A great portion of the shores of the inland bays on the west coast of Ireland must be admirably adapted for oyster beds?—I think they may be rendered a source of great wealth.

37,206. Does anybody think it worth while to try the French system?—Public attention has been much directed to it.

37,207. But nothing has been done yet?—No. They wait for something like certainty. It is an expensive undertaking, one involving considerable expense.

37,208. Still it has been carried out by many poor communities in France?—Yes.

37,209. And has been attended with success?—Yes; I believe that in the Isle of Re it has been attended with great success.

37,210. (*Mr. Lefevre.*) Are most of the beds below the line of low water?—Almost all of them. Our original power did not extend further than low-water mark, and it was found not at all sufficient,—that the tendency of the shore being to incline, and of the oysters to fall into deep water, the effect was that the individual who obtained a boundary on the verge of low water found his oysters getting out into deep water, and then they became an available bed for the public. Our powers were then extended by the 13th and 14th Victoria, and we have since been enabled to go as far as we judge expedient, without a limit.

37,211. Have licences been given in places where oyster fishing already existed?—We have been a good deal embarrassed in that way. We have viewed the question liberally, wherever there was anything like a really productive oyster fishery that could be considered an object of commercial profit to the community. In such cases we have never granted licences. But where there were only a few scattered oysters in a locality, their existence rather furnished us with a proof that it was a favourable spot for the purpose, and, everything else being favourable, we should in such cases have granted licences.

37,212. The only occasions, you say, where there has been any success, are where oyster fisheries have existed before?—Yes, where a few oysters have been remaining, and perhaps where a small quantity have been scattered upon the ground.

37,213. In such cases, then, the effect of granting licences has been to give a monopoly, and to restore the fisheries which originally existed?—Yes, in the expectation of improved cultivation and protection.

37,214. Have any rents been charged in such cases for the licences?—Never; the whole is done without expense to the individual applying.

37,215. Then to what do you attribute the small success of the operation?—To the apathy of the individuals who get the licences, and to their igno-

rance. In truth, we have ourselves been exceedingly ignorant on the subject up to a very recent period. The movements in France, and the efforts which have been made there, have roused us very much, and have induced me to suggest the publication of a little collection of matter for which we do not profess to be accountable, but which gives suggestions from other quarters, and amongst others M. Coste's reports, and reports from the Isle of Re, translated from the French.

37,216. Have there been any complaints from the fishermen with regard to the restrictions of their rights of fishery?—We give no licence without holding a public meeting, and in some cases, we have been obliged to give up the idea altogether, in consequence of a public outcry against it. In other cases, we have been obliged to limit considerably the ground sought for by the applicant. There have also been cases in which some of the landed proprietors have been concerned. Lord Sligo and Lord John Browne have applied for licences in Clew Bay. In the first instance, they claimed to have an exclusive right; but, finding they could not sustain it, they applied for licences. We, after holding a meeting,—and a very troublesome and turbulent meeting it was,—came to the determination of excepting from the applications certain portions which proved to be ground resorted to by the public for oysters, and we proposed to give them only those places where there were scarcely any oysters at all, but which were favourable for being formed into oyster parks.

37,217. In the cases you mention, where the effect of the licences has been to restore the fisheries by the application of capital on the part of the licensee, have there been subsequent complaints on the part of the fishermen?—No, but I do not think there has been any increase worth naming anywhere, except where a small quantity of oysters were deposited. That has generally been done for the purpose of establishing a right. Some small deposit has been made, and after the oysters have been left there, no more trouble has been taken about them. Deposits have often been made on portions of the ground which have been very injudiciously selected in some cases.

37,218. With the exception of the case you mention, you have not thought it necessary to visit the grounds?—No. We did that in the case of Clew Bay. If you visit Kenmare, you will find an important station there. On the north shore of Kenmare we granted licences to a Mr. Mahony. He is since dead, and the property has been sold. Not only Mr. Mahony himself during his life, but his successors, have devoted some capital to the improvement of the beds, and with considerable profit. He told me, a short time before his death, that the result of what he had done was more profitable to him than the cultivation and improvement of any land that he had ever held to the same extent. He was, however, a most intelligent gentleman.

37,219. Was that under a licence granted by you?—Yes. It was one of the earliest licences. It was granted to Mr. John Mahony, and another licence was granted to the Rev. Dennis Mahony. I believe that in the latter case nothing has been done at all. Mr. John Mahony did a good deal; and Mr. Matthews, who now holds the beds, is following his plans, and is doing a great deal of good.

37,220. How far does the power of the Fishery Board extend out at sea?—I do not know.

37,221. Has it ever been tried?—No.

37,222. How far does the authority of the Commissioners or of the Board of Works extend over the Scotch or English fishermen?—Not at all, I should say. In any case where there has been a deviation from the rules, as, for instance, in the mixed fisheries we have at Howth, we have called on the parties to observe the regulations of their own respective countries, and when we have found them obstinate in not doing so, we have communicated with the authorities on the other side.

37,223. Suppose that a Brixham trawler took it into his head to put into Galway Bay and trawl there, has the Irish Fishery Board any authority over him?—I really cannot tell. Such a case has never occurred, but I should think not.

37,224. Then with respect to foreigners. Suppose the French or the Dutch thought fit to fish for herrings on any part of the Irish coast, would the Fishery Board have any jurisdiction over them. The Convention Act is suspended for Ireland, is it not?—It is suspended for Ireland.

37,225. Or is that conditional on the absence of foreign vessel?—It is conditional on the absence of the mixed fishing of French and other boats. If French boats were present, then the restrictions of the Convention Act would come into operation under the Order in Council. Such is my construction of the Order.

37,226. And be operative on all the fishermen?—Yes.

37,227. So that from the mere fact of a single French vessel fishing upon the Irish coast, the Irish fishermen would become subject to all the minute regulations of the Convention Act?—It might be so construed.

37,228. Have there been any cases in which bait beds have been licensed?—No.

37,229. Have you heard any complaints of the want of bait?—Yes; more especially at Kinsale. At the special instance of the fishermen of Kinsale, I induced the late Judge Jackson (then Attorney General), when in London discussing the 5th and 6th Victoria, to introduce that section into the Act; but under that section no beds have been formed.

37,230. Are there portions of the coast which are favourable for that?—Yes, particularly in the harbours.

37,231. And yet no action has been taken upon it?—No.

37,232. With regard to the number of fishing boats in Ireland, I should like to ask you a question as to the number of fishermen at different periods on the coast. Can you tell me what were the numbers in 1830, 1836, 1845, 1848, and 1864?—The following return will show the numbers:—

——	Number of Vessels of all classes.	Number of Men and Boys employed.
1830.—Fisheries under stimulus of bounties or loan funds.	13,119	64,771
1836.—Fisheries under depression, caused by withdrawal of bounties.	10,761	54,119
1845.—Fisheries immediately before the famine.	19,883	93,073
1848.—Fisheries after the famine.	15,932	70,011
1864 - - -	11,748	50,692

Classification of Boats and Men, 1864.

1st class Vessels, above 15 tons -	- 1,141
2d class Boats - - -	- 10,607
1st class Men - - -	- 4,740
Ditto Boys - - -	- 692
2d class Men - - -	- 41,390
Ditto Boys - - -	- 3,870

37,233. Up to 1864, there has been a considerable decrease?—Looking at these returns, you will see that there was a considerable decrease in 1836, when the fisheries were under a depression in consequence of the withdrawal of the bounties.

37,234. When was the next decrease?—From 1845 to 1848.

37,235. Was that decrease in consequence of the famine?—Yes.

37,236. From that year up to the present time has there been a progressive diminution in the number of men and boys?—Yes.

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

37,237. To what do you attribute that diminution?—To the diminished population, in consequence of the famine and emigration.

37,238. Has not the diminution been even in a larger proportion than the diminution of the general population of the country?—I think it has. Other causes have operated, more perhaps on the coast than anywhere else.

37,239. Is it to be observed more on the west and south coasts of Ireland than on the east coast?—Distinctly.

37,240. Has the proportion of the diminution been the same with regard to first-class vessels and second-class vessels?—I should say that the diminution has been more in the second-class vessels, in those boats which have been worked by the very poor people.

37,241. What is the class of vessels that is included in the first class?—Boats of 15 tons and upwards.

37,242. Carrying a sail?—Yes, sailing boats.

37,243. Then the whole number of vessels carrying sails in Ireland at present is a little over 1,000?—Yes.

37,244. Is there a great proportion of these boats on the east coast, or are there as many on the west coast?—They are stated in detail in the reports. I am, however, obliged to repudiate the accuracy of the returns. Our own executive are the Coastguard, and although I find among them zealous men, anxious to do their duty, they have so many things to attend to, and they get so little for performing this particular duty, that the returns they give us are very unsatisfactory.

37,245. In what respect are they deficient?—In not taking the trouble to ascertain the accuracy of the returns.

37,246. Do they give more than the true number of fishermen?—We sometimes find one return precisely identical with the number given in the preceding year, which can scarcely be the case, proving that all attention to the subject has been totally disregarded in such instances.

37,247. I presume that a considerable number of the men registered as fishermen are fishermen for but a short portion of the year?—Yes.

37,248. During the rest of the year they are working at other occupations?—Yes, they are employed as agricultural labourers.

37,249. Can you tell us at all what proportion are fishermen throughout the year?—No, I cannot.

37,250. Is there no means of ascertaining that fact?—There are no possible means of ascertaining it by our returns, otherwise than by considering that those men who are stated to be in sail-boats are generally fishermen throughout the year, whilst those who are employed in row-boats are occasionally employed otherwise.

37,251. Have any means been taken by the Board to ascertain the quantity of fish taken off the coast?—No, there have been no means of ascertaining that. We have put several queries to the Coastguard officers, but have not had satisfactory returns.

37,252. We were shown an abstract of a return, with reference to the quantity of herrings brought into the port of Howth; is that exceptional?—Yes, that is completely exceptional. It has been done for the last two years most satisfactorily, a special reward having been given to the Coastguard officer for preparing it.

37,253. What payment has been made to the Coastguard Officer?—It is something very trifling.

37,254. Would there be any difficulty in ascertaining the same facts from other parts of the country?—I think it would be difficult to do so. The work is more concentrated at Howth. The sales there are public sales. The officer is an intelligent man, and he has had the opportunity of being present and of obtaining returns of the quantity, which he furnishes every week.

37,255. From the evidence you have already given, I think we may take it that the policy of the Board from its first formation has been to interfere as little as possible with regard to the question of trawling and other matters relating to the mode in which the fish are to be caught?—Yes.

37,256. When you say that their policy has been to do as little as possible, do you mean that it was founded on an intention to interfere as little as possible, entertaining an opinion that it was desirable not to do so?—Yes.

37,257. Notwithstanding that policy, the Board have from time to time made regulations prohibiting trawling in the different loughs on the coast of Ireland?—Yes.

37,258. And it is prohibited now in a considerable number of the loughs on the coast?—Yes.

37,259. Have any steps been taken to ascertain what has been the effect of this prohibition?—In some cases we have been called upon to repeal some of the prohibitions.

37,260. I believe there is one appeal pending now?—Yes.

37,261. That is in the case of Dundalk?—Yes; and in the case of Dingle it has been repealed.

37,262. Have there been any other applications?—There has been one from Lough Swilly, and one from Dundalk. The Bay of Dundalk constitutes a portion of the interdicted district. The people there ask for exclusion, and for permission to trawl within the bay.

37,263. Do you mean exclusion to the public, and permission to themselves?—Precisely, such would be the effect; but, being told that that could not be done,—that, if the bay was thrown open it could not be thrown open exclusively to them, they have discontinued the urgency of their application.

37,264. Have inquiries taken place on the part of the Commissioners, in consequence of these applications?—Yes, and they have resulted in nothing being done.

37,265. From the evidence collected on that occasion, have you reason to believe that good was done by the prohibition?—We only know that it would be highly injudicious to except a portion of the district that was restricted, which would have been the case in Dundalk Bay, and for Lough Swilly we saw no valid reason why the application should be acceded to.

37,266. Did you find that there had been an increase in the quantity of fish taken there?—It is a good while since the meeting was held, but I believe that was so. The meeting was held by our then Chairman, Sir Harry Jones.

37,267. Have there been any cases in which accurate statistics have been taken since the prohibition, with a view of ascertaining whether it has had a tendency to increase the quantity of fish?—No, never.

37,268. Have you any reason to believe, from the increase in the number of fishermen fishing in these bays, that the prohibition has been good?—On the contrary, I believe there has generally been a diminution.

37,269. Take the case of Dingle Bay, where you say the prohibition has been repealed; that bay was closed for a period of ten years, and at the end of that period was re-opened?—Yes.

37,270. Did you find that, during that time, the fish had increased in the bay?—I have not been at Dingle lately or since the repeal; but it has been alleged that they are now taking a great deal of fish there.

37,271. Was the prohibition removed in consequence of the increase of fish, or because there were complaints that the take had not been as great as it had been?—The prohibition was removed in consequence of there being persons there who were desirous of being permitted to trawl in the bay.

37,272. You say that the 5th and 6th Victoria gives power to the Coastguard to carry into effect any prohibitions which are made by the Board of Commissioners?—Yes; they are called the executive department of the Fishery Establishment.

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

37,273. For that purpose they are constituted constables?—Yes.

37,274. Have they been effective in maintaining the prohibitions?—As far as they well could, they have. They have had other heavy duties to perform, and their instructions are, when it does not interfere with their other duties, to act. But I am bound to say they have been much less effective lately than they were formerly, inasmuch as they are almost a differently constituted department now, since they came under the direction of the Admiralty.

37,275. Do you think that trawling has in effect been prohibited within the districts laid down?—There have been several breaches in many cases.

37,276. But, on the whole, do you think the prohibitions have been effective?—In many cases I think they have; but it has been alleged that in all cases there have occasionally been breaches of the regulations.

37,277. Can you suggest any other mode in which the prohibition might be made more effective?—I cannot, at present. It would involve a long discussion upon the management of the department with which it rests, which I cannot venture into. They are for other and more important purposes.

37,278. They could not devote more time than they already do to these purposes?—I believe not.

37,279. Have there been any cases in which applications have been made for the prohibition of trawling in which you considered that trawling was injurious, and in which the Commissioners have not thought it right to prohibit trawling?—I cannot remember. I was not a consenting party, except formally, to the total abolition of the restrictions in Dingle Bay.

37,280. But with regard to any bays in which trawling is carried on, and an application has been made to prohibit it?—No; I remember our having had an inquiry some time ago, at Kenmare, in reference to the Kenmare river, and, although it was ascertained that it might, perhaps, be desirable to have some restraints, yet the number of trawlers was so exceedingly small, and there was so little probability of their increasing, that it was judged unnecessary to take any action in the matter.

37,281. Then any difference of opinion between you and the Board has been with regard to the limits in particular bays within which the prohibition should be enforced?—Yes; but only in one case.

37,282. The case of Galway?—Yes.

The witness withdrew.

Sir James Dombrain called and examined.

Sir J. Dombrain.

37,283. (*Professor Huxley.*) You are Inspecting Commander of the Coastguard?—I was Inspector-General. I first introduced the Coastguard in Ireland in the year 1819.

37,284. Have you been Inspector-General ever since that time?—Up to the year 1848.

37,285. So that for more than 20 years you were engaged in examining all parts of the coast of Ireland?—Yes; and, since that period, I have been attached to the Lighthouse Department of Ireland, and I have every year gone round the coast as I had done before.

37,286. Then you are pretty intimately acquainted with the condition of the coast and the coast villages?—Yes, thoroughly.

37,287. Have you had occasion to pay attention to the coast fisheries?—I have at different periods, and I have assisted in the formation of companies on two or three occasions for the purpose of developing, if I could, the deep-sea fisheries on the west coast of Ireland.

37,288. What is your opinion with regard to the abundance of fish on the west coast?—I think it is very much exaggerated.

37,289. Is there a good supply of fish to be got by the long-lines there?—There is at certain places and on certain parts of the coast, but the fish are very uncertain in their habits.

37,290. What are the practical difficulties in the way of the fishing? The west coast is extremely stormy, is it not?—Yes. That is the great difficulty we have to contend against. No vessel you can construct as a vessel for the purpose of fishing, within a moderate size, is capable of contending with the heavy seas we get on the west coast of Ireland.

37,291. Is the weather so much worse than in the North Sea? Could not trawl-vessels like those which frequent the North Sea keep the sea on the west coast of Ireland?—No.

37,292. Are the seas on the west coast much more boisterous?—Yes. As a proof of that I may mention this fact. There are two lighthouses on an island off the coast of Mayo, called Eagle Island. About two years ago, a heavy sea broke 24 panes of thick plate glass in the lantern of one of those lighthouses, at an elevation of 240 feet above the level of the sea, and the tower was so filled with water that the united force of ten men could not open the door. They had to bore augur holes in the door to let the water out. There was not a particle of stone or anything in the sea by which the damage was done. It was a pure green sea. The extraordinary fact is, that it should have travelled up a column of 80 feet with such force as to be enabled to break the glass in the lantern.

37,293. In fact, I suppose that a few miles out from the shore on the west coast of Ireland you have the regular ocean wave?—Yes.

37,294. And you feel the full force of it?—Yes.

37,295. On the other hand, there are a great many sheltered bays on the west coast to which vessels can very readily run?—Yes; there are a great number of very good harbours indeed, but the misfortune is, that if a fishing vessel gets into a port of this kind the expense of the maintenance of the men is so great that she can make no profit when she gets a take of fish.

37,296. And again, very few of these harbours have anything like a market or a quick communication with the markets?—No.

37,297. As harbours, they are of no use in enabling the fishermen to get their fish to market?—Not for general consumption, but they are for local consumption. There are not, however, any great quantities taken in-shore. The moment the boats can get out, they do so.

37,298. Is the average of the weather on the west coast so bad that fishing vessels will often be confined for many days together in these harbours?—Yes, and for weeks together.

37,299. For weeks together?—Yes.

37,300. During the summer season?—No, during the winter season; but even in the summer season it is often with extreme difficulty that vessels can keep at sea.

37,301. Is the fishing ground mostly well out at sea?—Yes, off the headlands.

37,302. What you are saying now refers to vessels thoroughly well found and fitted, as the trawlers are on the coast of England?—Precisely.

37,303. So that, even supposing a person were to be found with capital to fit out such vessels, and public spirit enough to set them going, you think the badness of the weather would render the speculation a bad one?—Yes, and the uncertainty of the fish. I can mention an instance which occurred with regard to Colonel Latouche. Some years ago, he hired a small steamer for the purpose of ascertaining if there did exist on the coast the enormous quantity of fish we were led to suppose did exist, and I believe he lost a very considerable sum by it. He had the vessel fitted out in the most excellent manner in every respect for fishing. He brought over some English fishermen who understood long-lines, and so

DUBLIN.

Sir J. Dombrain.

20 Aug. 1864.

on, and yet he gave up the business a considerable loser.

37,304. You have been yourself concerned in some of the fishery companies which formerly existed on the west coast?—Yes, in two or three.

37,305. Can you give us the history of one of these companies as an illustration of what you have been saying?—One company was called the North-West Fishery Company. A friend of mine, Lord George Hill, was one of the parties who originated it. I joined the company for the express purpose of seeing whether the wealth which we were told was in the ocean really did exist or not, and we found, as I tell you, that even when they took any quantity of deep-sea fish, when they brought it in there was a very poor market for it.

37,306. On account of the difficulty of communication?—It was at a very low price, and there were no railways to take it off. There was also the uncertainty of the cadgers or curers coming down and finding that a vessel had no fish. That was a disappointment again. So that there were various causes operating. We lost our money, and wound up the concern.

37,307. Has that been the case with every company established for fishing on the west coast of Ireland?—Yes. One was started a few years ago; Captain Symonds had the management of it. That has been all broken up with great loss to the originators, who fitted out very fine vessels indeed.

37,308. Then if a private company, able and willing to put plenty of capital into the business, and to superintend it themselves, with a view to their own interests, were not able to do anything for the fishermen on the west coast, is it not quite chimerical to think that the Government could do anything?—I cannot say what means could be devised for improving the fisheries on a large scale. There are places so circumstanced locally that where a few people go into the fishery on the spot, and have the control of the thing themselves, they do very well. There is a man from whom I gave you a letter yesterday, named Savage, of Birdhaven, who got up a fishery here, and sent two cargoes to Spain, and did very well.

37,309. What kind of fish did he send to Spain?—Ling, hake, and that kind of fish.

37,310. Is it at all probable that such a development of railways will take place on the west coast as will tend to get rid of the difficulty now existing in regard to the want of proper markets?—I do not see any railway that goes to a fishing ground, except to Westport, off the coast of Mayo, and in that direction. That may be of advantage.

37,311. Is the poverty of the country so great that there is not likely to be traffic enough to reward a railway company?—Yes. For instance, at Broadhaven, Belmullet, Killybegs, Connemara, and Clifden, there is not likely to be such a traffic.

37,312. The neighbourhood of Tory Island is one of the best fishing stations?—Yes.

37,313. It is hardly likely to expect a railway in that direction?—No. At Inishtrahal, an island which lies off the coast of Donegal, there is a successful fishery carried on, principally in turbot, and so on. They send their fish off from that place to Glasgow and Liverpool, which they can easily do on account of the prevailing wind being westerly. They generally run into Moville, meet the steamer, and put their fish on board.

37,314. From the north side of the island?—Yes. The last time I was there, we could go and choose any number of turbot we liked.

37,315. Do they keep them alive there?—Yes, and we could go and pick out any fish we chose.

37,316. How are they caught?—By long-lines. They keep them alive in their boats, and put them in ponds until they have a sufficient number to take off to the steamer.

37,317. Would your objection apply equally to the herring fishery?—I have been concerned in that also.

37,318. What is the result of your experience?—The result was that, when we thought we had everything fully prepared and likely to succeed, the fish deserted the place, and there have never been any since.

37,319. Where was that?—At Killybegs. For 20 years there have been no fish there.

37,320. Were there fish there formerly?—Yes, for years there was a great fishery. It was the same at Rutland. The Government, in former times—in the time of the Duke of Rutland—made a large grant to the Conyngham family to build stores there. I believe the year after they were built the fish deserted the place, and they did not make their appearance again for 40 years. They then set in for a year or two, and now they have deserted the place again.

37,321. (*Mr. Lefevre.*) Do you think the herrings are more capricious on that coast than on the east coast?—I think they are. I think it arises from the sudden storms that come on, which often break the shoal of fish, and when it is once broken in that way and the fish are frightened they go off into deep water.

37,322. And do not come again?—No.

37,323. (*Professor Huxley.*) Would your objection apply to oyster-fishing? Do you think the coast, and the bays around the coast, are well adapted for oyster preserves?—Yes, very well adapted.

37,324. Then the objections you mention are not applicable to oysters?—No, because they would all be in smooth water.

37,325. Have any of the companies you have mentioned turned their attention to oyster culture?—No.

37,326. You think that is likely to be profitable?—I think it would be very profitable indeed, and, a little time ago I advised some persons to go into it largely.

37,327. With the present great demand for them, and their high price, the cost of railway carriage would not be too much to prevent a good market?—No, and oysters would keep a long time. If we had a small steamer to run with them they would soon be got to market.

37,328. The demand for oysters is very great for the oyster parks on the coast of England?—Yes.

37,329. It is so great that the people who have oyster parks would be likely to avail themselves of the supply from the Irish coast?—Yes.

37,330. That does not seem to have occurred to any great extent?—No. There are in Broadhaven as fine oysters as any in the world, and they are totally neglected.

37,331. (*Mr. Lefevre.*) Are they fished? Is there anybody to dredge for them?—Nobody seems to care about them, and it is a remarkably fine bay, and exceedingly well sheltered.

37,332. (*Professor Huxley.*) Have you formed any opinion about the trawl question?—Indeed, I have not given any attention to it. I know there are a variety of opinions about it, some believing it to be injurious, and others not.

37,333. Is there any point you wish to bring before us which occurs to you with regard to the fisheries, other than those which we have been discussing?—I think not.

37,334. (*Mr. Lefevre.*) Is Galway an exception to what you said with regard to the west coast? That seems to be well adapted for a fishing station?—There is no great fishery up the bay itself.

37,335. Do the fishing boats go a good way out?—Yes, 15 or 20 miles before they find fish.

37,336. There is one point, upon which your long experience in connexion with the Coastguard, will enable you to give us some information. Do you think it possible to combine with their ordinary duties that of a fishery police, or collectors of fishery statistics, or have they too much to do already?—When I was in the Coastguard, in all the ventures which I made with other people in trying to form little companies, I obtained, in the first instance, the sanction of my superiors, to give all the aid and assistance

I could, and I stated fairly that I was concerned in the speculations myself. It was the object of every Government to promote the fisheries as much as possible. All that I did, I did with their sanction and concurrence. We were at all times, on all parts of the coast, anxious to render every aid and assistance we could.

37,337. Did you find that it interfered with other duties?—Not in the remotest degree. I always undertook it with the stipulation that it should not interfere with our more immediate duties. But we were expected cordially to assist when our duties were not interfered with; and I believe that every officer and man around the coast were anxious and willing to do all in their power.

37,338. Would it give much trouble to calculate the number of fishermen and boats in their different neighbourhoods?—O dear, no; I always was in the habit of making returns to the Inspector of the Fisheries regularly. I was frequently consulted as to the boundary lines for trawling, and matters of that kind. Here, at Dublin, there was frequently an apprehension of disturbance among the fishermen, and I sent down a Revenue cutter to keep them in order.

37,339. Is it at all practicable to obtain from the Coastguard officers such information as would give us a notion of the yield of fish in the fisheries in their localities?—That might be more difficult, but still they would have the advantage of consulting all the old experienced fishermen on the coast.

37,340. It would be an extremely useful thing with regard to any discussion which may take place respecting the increase or falling off in the supply of fish, that accurate statistics should be got together?—Yes.

37,341. That has never been done yet?—No.

37,342. Have not the Coastguard greater facilities than anybody else for collecting such statistics?—Yes.

37,343. And they might do it without much interference with their other duties?—They are supposed to guard every foot of the land, and the fish must be brought into the district of one or another of them. Where they have to travel, I think some allowance ought to be made for their expenses; but, otherwise, I think there would be no difficulty. They must know where every boat is kept, and I could tell you, almost without looking at the map, every place where a boat is kept on the coast of Ireland.

37,344. From your knowledge of the fishing population, what proportion of the so-called fishing population are real fishermen, who live by fishing?—Very few indeed. At the same time, at places, such as Waterford, Dungarvan, and Kinsale, there are people who live entirely by fishing, but almost all the rest are fishermen and farmers, and probably at the very time they would have more chance of success than at another they are mostly attending to their farms.

37,345. Do you think that any scheme of encouragement by the Government, by a direct subsidy, or any other means, might tend to divert the people from their other occupations, and so, on the whole, rather tend to the impoverishment of the country than to its advancement?—I am myself opposed to any scheme of bounty, and I think the Government were very wise in abolishing it.

37,346. In fact, Government aid of that kind created an unnatural stimulus in a particular direction, not warranted by the circumstances of the country?—Yes.

37,347. In cases where the prohibition of trawling has been adopted, has it added much to the duties of the Coastguard?—I think not.

37,348. Have they been useful in carrying out that prohibition?—I have known very little of them of late.

37,349. Then you are not aware whether there have been any informations laid by the Coastguard at all?—No.

37,350. With the exception of the island of Inishbofin, is there any other station on the coast from which a regular supply of fish is sent to the English market?—I think at Dingle they have established some communication with Tralee and Killarney.

37,351. And from thence to Dublin?—Yes; I believe there is a small supply from Galway.

37,352. And from Sligo?—There is no great fishery there, except the salmon fishery. There is no deep-sea fishery.

37,353. How is it at Donegal?—There is nothing there.

37,354. Then all the fishing along the west coast, with the exceptions you have mentioned, is for the local demand?—Yes, to meet the local demand. The last time we were round off the coast of Kerry we fell in with the fishing boats there, and they were up to the thwarts almost with fish.

37,355. Was that merely for the purpose of local consumption?—It often happens, when they can get out, that they have good takes of fish; but there is no harbour there, and they have to haul up their boats on the island.

37,356. Take the case of Donegal, in which it has been represented to us that there are a considerable number of fishermen. Are they nearly all of the class you mention?—In Donegal they are all fishers and farmers, except at Inishtrahal, where they really are fishermen.

37,357. Is there any considerable consumption of fish in the interior of the country, or is the supply consumed merely by the fishermen themselves?—There is a considerable consumption when they can get a good take.

37,358. Is it hawked about the country?—Yes, it is hawked about the country, and they get a very small price for it.

37,359. Does it form a large proportion of the food of the people?—I think it does. I think the fishermen sell the most part. They keep the coarse fish for themselves, and sell the rest. I have frequently seen that done. At Malin, in Donegal, I have seen codfish brought in, and I have taken my choice of a dozen for 5*s*. In Broadhaven, five years ago, I bought five turbot for 4*s*.

37,360. (*Professor Huxley.*) Were they fine turbot?—Yes. If they had taken and hawked them about the country they would not have got more than 1*s*. or 1*s*. 6*d*. each for them, at the outside; so that it was better for the fishermen to sell them to us on the spot.

37,361. (*Mr. Lefevre.*) The poor people in the country would hardly afford to give 1*s*. for a turbot?—No, the poor people cannot. They might take them at Ballynahow, but they would only give 2*s*. for them there.

37,362. (*Professor Huxley.*) It was stated, at the time of the famine, that the people had an objection to a fish diet?—Yes.

37,363. (*Mr. Lefevre.*) In many cases they were starving, although they had plenty of fish on the coast?—Yes.

The witness withdrew.

Mr. James Redmond Barry recalled and examined.

37,364. (*Professor Huxley.*) You wish to add something to the evidence you have already given, Mr. Barry?—Yes. I wish to state that, up to the period when there was a resident Inspector in Dublin, and when the practice of fixing an Inspecting Commander in each of the districts was adopted, we made our Fishery district co-extensive with the Coastguard district, and it is utterly impossible for anything to have gone on more admirably than the whole machinery. The system was afterwards changed. We had to correspond with London, and I think the appointment of Inspecting Commander may be said to

DUBLIN.

Mr. J. R. Barry.

20 Aug. 1864.

have been only temporary. By the time one man became acquainted with his district, he was transferred to England, and there has been such an interchange and such an alteration altogether in the system, that we certainly have not had the same advantages from the Coastguard that we formerly had. But, generally speaking, I think they are very well disposed to do all they can to aid us. I now present to the Commission a kind of form, which we forward annually to each Inspecting Commander or Inspecting Chief Officer, as the case may be, for answers to certain printed queries.

37,365. Then is it the case now, that if you want anything done by the Coastguard in Ireland, you do not make your application to the head of the Coastguard, but to the Admiralty?—No; we now make our application to one of the two vessels,—to Captain De Courcy, or to Captain Heathcote.

37,366. The guard-ship?—Yes.

37,367. But I think you said there was a period when you had to correspond directly with London?—There was; but the period when we had Sir James Dombrain to apply to was a period of unexampled correctness in the execution of anything we wished. We found him one of our most efficient coadjutors, and immediately after an order was made it was sent to his department and carried out. That, however, has ceased to be the case.

37,368. (*Mr. Lefevre.*) We were told yesterday by some of the fishermen that the fishermen of Arklow endeavoured to prevent fishermen from other ports, not only of Ireland, but of England and Scotland, from fishing off their coast. Can you tell us anything with regard to that?—It was a revelation which quite amazed me. I never heard anything of it before.

The witness withdrew, and the inquiry was adjourned to Ringsend.

Ringsend, Dublin, Saturday, 20th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

RINGSEND.

J. Good.

JOHN GOOD called and examined.

37,369. (*Professor Huxley.*) You are the owner of trawl-vessels here, I think?—Yes.

37,370. Have you been the owner of trawl-vessels for many years past?—Yes, for more than 30 years.

37,371. Was trawling in full operation when you first took to that occupation here?—I think it was; I suppose there were more than 30 boats.

37,372. How many are there now sailing from Ringsend?—I went to count them over within the last day or two, and I think we have of established trawlers belonging to the port 50, and there will be at sea fishing and in full working order in the course of the month from 44 to 46. These are trawlers from Ringsend and Kingstown.

37,373. Then does your previous statement, with regard to the number of trawlers which existed 30 years ago, apply also to Dublin and Kingstown?—Yes.

37,374. When you began fishing, what was the tonnage of the trawlers employed?—From 36 to 40 tons, old measurement.

37,375. Were they decked boats?—All were decked boats.

37,376. What was the rig?—They were cutter-rigged, as at present.

37,377. What is the average tonnage now?—The average tonnage, builder's measurement, is rather over 60 tons than under.

37,378. Do you recollect what was the average cost of a trawler in old times?—I do.

37,379. What was it?—It was from 420*l.* to 450*l.*

37,380. Is that with the net fittings and everything complete?—Yes.

37,381. What is the cost of one of the modern trawlers?—From the 700*l.* to 1,100*l.*

37,382. Then the number of trawlers has increased more than 50 per cent., and the cost nearly 100 per cent.?—Yes.

37,383. Should we be far out in saying that the capital invested in trawlers within the last 30 years has doubled?—No; you might rather say that it has trebled.

37,384. When you began fishing, where did the trawlers fish?—They fished on the ground that they frequent at present, with the exception of Waterford and Dunmore. We never went south of the Tuskar light at that time.

37,385. Did you work inside Dublin Bay?—Only occasionally.

37,386. Was there any prohibition?—No.

37,387. What was the length of the trawl-beam you used then?—From 34 to 36 feet.

37,388. Is it of the same length now?—It runs from 40 to 45 feet now.

37,389. Then you found a larger beam necessary for the larger vessels?—Yes.

37,390. If there had been any restriction in regard to the size of the trawl, would that have prevented you from using vessels of a larger tonnage?—I think it would.

37,391. What was the size of the trawl mesh that you used when you first began?—Precisely the same size as that we use at present. We have a seven-inch mesh in the square of the back; it is the same in the wings, and diminishes down to the pocket. There has been no alteration in that respect at all.

37,392. How do you measure the mesh?—It will be three and a half inches from knot to knot, or seven when extended.

37,393. Do you trawl over the same limits?—Yes.

37,394. And you work with the same mesh?—Yes.

37,395. Then the only great difference is, that your vessels have doubled in tonnage, and pretty nearly doubled in number?—Yes.

37,396. And the capital invested in them has largely increased?—Yes.

37,397. What fish do you get with your trawl?—Soles, plaice, turbot, hake, conger, ling, bream, whiting, and skate. We take those in the largest quantity, and then white soles, meagrims, a very few dories, and a great many gurnards. In fact, the description of fish varies very much according to the fishing ground.

37,398. Do you get codfish?—Yes.

37,399. In great quantities?—No, in no great quantities.

37,400. And haddock?—Not in very great quantities.

37,401. Was the quantity of haddock and cod greater when you began fishing than it is now?—Yes, very much greater.

37,402. Does that decrease apply particularly to cod or to haddock?—More particularly to haddock. The haddock increased during my recollection of trawling. I should state I had been trawling for 20 years from Dublin, and there were some who had been trawling nearly 45 years, and during all that time, up to within the last seven years, the haddocks rather increased. About seven years ago, the haddock was

never known to be so abundant in the Irish Channel as it was in that particular season.

37,403. Seven years ago?—Yes, about that time. I have had several conversations with the long-line and hook fishermen belonging to Howth, and they have declared that when they were boys, 60 years ago, haddocks were then vastly less abundant and inferior in quality to those that were caught seven years ago.

37,404. They were larger and finer fish some years ago?—Yes.

37,405. We are informed that about six or seven years ago the haddocks suddenly fell off?—Yes; they disappeared, as if they all went through the bottom.

37,406. Did that take place after the great abundance?—Yes, the next season or shortly after.

37,407. Has there been any similar change in the abundance of the cod?—They have diminished in quantity.

37,408. As taken by the trawl?—Yes, and by the hook, too.

37,409. Then does the sole constitute any large proportion of the supply of fish taken by the trawl?—It does.

37,410. What proportion of your haul is formed of soles?—There is one particular ground we fish where soles are the prevailing fish. That is off the Calf of Man.

37,411. Is the sole a fish in great demand in Dublin market?—Yes.

37,412. Do you supply the Dublin market principally here?—Yes, exclusively, for many years.

37,413. Have you yourself been a practical trawler?—No, I have only been out occasionally with them, but I have been continually superintending the fitting out and building of them.

37,414. As a trawl owner?—Yes.

37,415. Have you owned a large number of trawlers?—Yes, the largest number in this country, I think.

37,416. How many?—I have got 11 at present. I remember when I had 13 within a year and a half.

37,417. Have you ever, as a trawl owner, been summoned into the magistrates' court in consequence of your trawlers having carried away the lines of the long-line fishermen?—Not in Dublin.

37,418. Have you been summoned elsewhere?—Yes, in Galway.

37,419. But not in Dublin?—No.

37,420. During the 30 years you have been working here you have never had a summons?—No. If I thought there was a bad case of that sort, and that the poor men had suffered, I have always thought it more prudent to give them compensation than to have any litigation in the matter.

37,421. Do you work over the same ground as the long-line men work over?—Yes; we work over Rockmere.

37,422. What is the range of ground the Ringsend trawlers work over—how many miles north or south?—There is a variety of not very large grounds.

37,423. What length north and south do they stretch over?—Some 20 miles along north-east and south-east. I have a map with each of the fishing grounds mapped upon it.

37,424. Do your trawling grounds extend as much as 100 miles from north to south?—Yes, more than that.

37,425. About 150 miles?—Yes, about 150 miles.

37,426. How much east and west?—The only eastern ground we have is the Isle of Man ground. The deep-water ground is the most eastern of the whole grounds.

37,427. How much east and west have you to work upon?—Forty or fifty miles.

37,428. Taking the whole of that large run, is the greater part of it soft ground over which you can trawl?—A great deal of it is mud, on which we never trawl.

37,429. Is much of it rocky ground?—Yes, barren ground over which we do not trawl; we never trawl from Wicklow Head to the other side of Tuskar light. That is outside ground. It is all barren ground, where there is no food for the fish, and is never trawled over.

37,430. Do the long-line men set their lines over all that area?—They do not.

37,431. Over how much of it do they set their lines?—From Skerries Bay and Rockmere and on the south sands.

37,432. If you did not work your trawls over that large space, would a considerable part of it remain unfished?—A great portion of it would.

37,433. Does it happen that occasionally you send your boats to trawl over one of the patches in this area of ground for any considerable time?—Rarely more than for two months.

37,434. But not unfrequently your trawlers have been working over a limited space for two months?—Yes.

37,435. How many other boats will be working there?—Nearly all.

37,436. As many as 15?—Yes, from 15 to 20, and probably all sometimes. During the whole of the season there is no other fishing ground for them. The last two or three seasons we have all been on the southern fishing grounds.

37,437. How long will the piece of ground be over which they work,—20 or 30 miles on the average?—Not 10 miles in width.

37,438. Then they work in pretty close order?—No.

37,439. Do the whole of those 20 or 30 boats work over that ground for two months?—Yes, during the fishing days, but they are not out often on the Monday, and never on the Sunday, and during the summer months they do not fish on the Saturday. There is only a short time of the year that they fish on the Saturday, when the fish will keep well, so that they may be sold on the Monday.

37,440. Then there are two or three fence days in every week?—Yes. I may say that there are often three or four fence days in a week now.

37,441. When the boats are working over a piece of ground of that kind for a week or a fortnight, do you find any diminution in the quantity of fish they can take?—Not in the slightest.

37,442. What makes you leave one patch of ground and take to another?—Sometimes the buyers get tired of that kind of fish and want a variety, and occasionally the fish shift of their own accord. They will leave a particular ground and come again next year in the proper season.

37,443. Then they leave at a regular time?—Yes. As regards catching all the fish the whole of our 40 or 50 trawlers will be out next month on this very deep-water ground we were speaking of, and they will make a haul on Friday. Every boat out of the whole 40 or 50 will get from 3 up to 10, 12, or 15 turbots, and sometimes they get as many as 20. Perhaps they may go out next week and the week after and find that there is not one turbot to be got amongst the rest of the fish they take.

37,444. You do not mean to say they are all caught in the last haul, although they are all gone?—No, the boats will be three or four miles apart, and it would be impossible for them to take all. It is like a man drawing a bit of string over a street or two here in this town. We may have been catching turbots in great abundance on the Friday, and then next Monday or Tuesday we go out and there is not a turbot to be caught. They have shifted with the herrings, sprats, or whatever fish may have been in.

37,445. What will be the average yield of a single trawl-boat per day,—what weight of fish will it catch?—Taking the year over, three tons will be rather over than under the average.

37,446. Three tons a day?—No, three tons a week.

RINGSEND.

J. Good.

20 Aug, 1864.

37,447. That is half a ton a day?—That will be about the average taking one time with another. They don't get that, however, of prime fish.

37,448. When you commenced 30 years ago how much would be the average?—The boats were smaller and the beams were shorter, but probably the quantity of fish caught was much about the same. There were more haddocks and cod then. Turbot would be about the same, plaice a little scarcer, and hake about as abundant, although there are sometimes more now than ever there was.

37,449. How would it be with whiting?—They have altogether disappeared, with the haddock. There used to be an enormous quantity taken by little boys in the river with rods. Two or three cart loads would be caught by these small boys with rods, showing that there was an enormous quantity outside. They would never have come into the river here if they had not been there. As for catching them in the trawls we would often see the little ones flying through the meshes. For each one taken, ten escaped through the meshes of the trawl.

37,450. How many years ago was that?—About the time that the haddock disappeared.

37,451. Within the last seven years?—Yes.

37,452. There seems to have been a great plentifulness of haddock and whiting, and then suddenly they all went away?—Yes. As regards the supply, I have known a hamper of whiting, containing perhaps two and a half hundredweight sold at from 1*s.* to 2*s.* a hamper. Two and a half hundredweight would frequently be sold for 2*s.* and the cartage we should pay upon them would be 1*s.* 6*d.*, so that often in reality they were not worth the labour of obtaining.

37,453. Then the abundance was rather a misfortune than otherwise to the trawlers?—At times, but at another time, when they would be scarce, probably only a short time before they were so plentiful, we should get 3*s.* 6*d.* a basket for them, so that upon the quantity we sold we should have a profit of 2*s.* a basket, and might make 40*s.* or so. At another time, when there are plenty of herrings, fruit, and salmon, people don't care to buy them.

37,454. If the average yield of fish has been the same since you were a trawler, you would see no reason for saying that the fish have fallen off on this coast?—Haddock and cod have.

37,455. But apart from them?—No, not to any great extent.

37,456. Have they fallen off at all?—I think they have.

37,457. To what do you ascribe that?—I cannot tell.

37,458. Do you think they have been over-fished?—I don't think we catch one in a thousand.

37,459. During all this time the long-line fishing has been going on here?—Yes.

37,460. Has it been to your interest to attend the markets?—Yes.

37,461. You do attend the markets?—I did for 30 years. I have sold all the sorts of fish sold in the Dublin market during that time.

37,462. Did you ever see soles brought up by the long-line fishermen?—No, not with any regularity.

37,463. What would be the average proportion brought by the long-line fishermen?—I can give a pretty good guess at it. I have not often seen more than 10 brought by them.

37,464. What would be the average of all kinds?—They never fished all the year round. There was a fence time with them, and they gave up altogether for a certain time. After the cod spawn, about the 1st of April, they start off into deep water. The haddock disappeared from them, and they went round to the north-east to cure fish.

37,465. Take one day with another when they were fishing, would they supply 10 tons to the market on the average?—Yes, they would, and perhaps sometimes more. There is a large space where they alone can fish in the lower part of Skerries Bay. It is rough ground, where we could never trawl, but the fish have also disappeared from them, although a trawl was never shot there. The whole coast eastward is covered with boulder stones, upon which it would be impossible for us to trawl.

37,466. Where is that?—By the Mountain's Foot.

37,467. That is ground on which the trawlers never come?—No; owing to these boulder stones.

37,468. Do they fish outside?—Yes; in the spring we have got large haddocks from that very ground; there are very few small ones at all. The cod there were at one time very large and fine, and they were more in quantity. We got 20 or 30 per day. Turbot also were very abundant, and the cod and hake were enormously large. In fact, I have seen hake caught there fully 6 feet long.

37,469. There seems to have been a certain falling off, apparently, although it has not been very great, in most kinds of fish?—Yes, with the exception of hake; they come in prodigious quantities still, and turbot were as abundant last year as ever they were. There have also been more soles caught off the Isle of Man than there have been for a number of years previously.

37,470. At the time trawling in Dundalk Bay was permitted, was it your interest to have your trawlers trawling in the bay?—Yes, I think it was. At particular times in the winter, we have to go a great distance down to the Waterford coast, but owing to the prevalence of southerly and south-westerly gales, we have not been able to get there. Our men are sometimes then very badly off, whereas, if they were allowed to fish for some two or three months in the winter time in Dublin Bay, they would be able to take some 7,000*l.* or 10,000*l.* worth of fish. That money would be distributed among the people and the owners of the boats, and I don't think the hookmen would suffer in the slightest degree, because we catch large plaice in our trawl, which they never take on their lines. They are very small plaice which they get, but we get them 18 or 20 inches long.

37,471. Do you mean to say, that the long-line men do not get the big plaice?—Yes, they don't take the hook.

37,472. (*Mr. Lefevre.*) Do your observations apply also to Drogheda Bay, and other parts?—Yes, and to Dundalk Bay. Some persons there applied to the Commissioners of Fisheries to rescind the byelaw prohibiting fishing in Dundalk Bay; I do not know whether it was the gentry in the neighbourhood or the boat owners, but they asked, whether, if it was rescinded, the Dublin trawlers would be allowed to fish there. The Commissioners said that of course they would if the byelaw was rescinded. "Oh" said they, "if the Dublin trawlers would be allowed, then we don't want the byelaw rescinded." In point of fact, they wanted the fee simple of the fishing in Dundalk Bay for themselves. The poor people are sadly mistaken with regard to us; in fact there is no water in that bay sufficient to swim our boats, much less to enable us to fish there.

37,473. (*Professor Huxley.*) What is the greatest depth of water you trawl in in St. George's Channel?—From 45 to 50 fathoms. There are deep spots where it rises up to 60 fathoms.

37,474. When you are trawling in that depth, what proportion of unsizeable fish do you get in the trawl?—Scarcely any in deep water.

37,475. Does the quantity increase as you come into more shallow water; is it greatest in the shallow bays?—Yes.

37,476. Is it your impression that the destruction of fish that takes place in the bays is injurious to the fisheries?—I don't think when the trawlers are drawing 13 feet of water, they would fish where there would be any destruction that would be injurious to the fishing. In my experience, there are zones or belts where the fish come in. They come in certain distances, until they actually come into two feet of water, and then you will see little plaice and turbot

not larger than a sixpenny piece, and as they increase in size they go off into deeper water.

37,477. Do you think that the catching of those small fish, not more than the width of a sixpence or shilling, would be injurious to the fisheries ?—I fancy that it would.

37,478. Do you think it would be destroying fish that would grow up to be larger ?—I think it might be the case, but then instinct leads them to go further out. Fourteen years ago, I have seen herring fry caught up in hoop nets at Essex Bridge, mid-way to the wall of the Phœnix Park.

37,479. Were they herring fry ?—Yes ; they have been here ever since.

37,480. Are they being sold in the market ?—No, but I think a few of them have been caught and sold as whitebait. I have not been attending the market here for the last 10 or 15 years.

37,481. Did you ever see sprats here ?—I never saw sprats here but once.

37,482. There is a further statement made, that the trawlers are in the habit of catching up and destroying a great deal of spawn and the eggs of fish ; what is your opinion about that,—did you ever see any in the trawl ?—I have been on the deck of the trawlers, as a constant habit, for years until lately. It was my custom to go on board all our boats as they came in; I have been out a few times with them; and at all times I inquired minutely of the masters and crews what had been going on. I can state with confidence, that what you call ordinary fish spawn—the ova of the fish—was never taken in the trawl. The only matter we have got in the trawl, which we knew to be spawn, was sea grape and sculsh, "pounds of candles" as they are called. We get the spawn of the whelk occasionally. I noticed a short time ago, upon the Wexford coast, inside where the oyster men dredge, there was strewed a great quantity of that kind of spawn, like honeycomb in large masses.

37,483. Was that after a gale ?—Yes; but I don't think that they were driven ashore until the young had escaped from the cells. There was nothing but empty cells, and you might have blown them from your hand.

37,484. Do you know the thing they call in England "dead-man's fingers" ?—Yes.

37,485. Do you get that ?—Yes, in great quantities; they call it here "thumbs."

37,486. There is a further statement respecting the action of the trawlers upon other fishermen, namely, that they are very apt to get foul of the drift-net men; do you work over the same ground that they do ?—In the day-time we work over the ground that they work over at night.

37,487. Do you not trawl at night ?—Not always. We could not catch fish in deep water at night; but in Skerries Bay the hauls are best by night. It is muddy ground, and I don't think the fish see the trawl. I have seen the deck covered with brown lobsters at times, whereas one of them has not been known to be taken by a trawl in the night-time.

37,488. Then you do not practise trawling at night? —Not in deep water.

37,489. Then, in that case, you would never get foul of the drift men ?—I have heard of two cases in which trawlers have been foul of them.

37,490. Have you ever had complaints made to you on that point ?—Last year a trawler was prosecuted for cutting a drift-man's net, and he had to pay for the nets. There was a similar case the same year, and a collection was made to pay for the drift nets, Whether the damage arose from the drift-net man having the ropes to his nets defective I can't say, nor will I undertake to say whether the nets were not cut by the drift-net men themselves.

37,491. Those trawlers must have been working at night ?—Yes.

37,492. Are there many of them that do that ?—They are almost too lazy to heave their trawl up, and if they don't heave it they cannot catch fish.

37,493. (*Mr. Lefevre.*) Do they remain out all night ?—If they catch no fish they do.

37,494. If trawling at night were forbidden, would it be any serious loss to you ?—Not at that particular place.

37,495. Would it be anywhere ?—Yes.

37,496. Where ?—In Skerries Bay, the Mountain's Foot, and on the Dunmore Grounds.

37,497. Do you catch much fish there?—Yes.

37,498. Are those places where the herring-fishing takes place ?—No ; there is no herring-fishing in Skerries Bay.

37,499. If your trawlers are at a little distance from this spot do they stay out at night ?—If there is little wind and they have little fish to come in with, they do not take the trouble to come in. They heave to, but they don't fish.

37,500. Do they fish as far south as Wexford ?—Not on the Wexford coast, but in Wexford Bay.

37,501. Is there a byelaw prohibiting trawling where the herring-fishing is going on ?—That is in the bay and in the harbour. There are 30 small trawlers there, and the small drift-net boats fish for herrings there.

37,502. Does not that byelaw affect you in any way ?—No. I think there must have been some error in one of the witnesses stating that the Commissioners refused to assist them in putting down trawling. I was present when the complaint was made. Mr. Barry held an inquiry, and the conclusion come to was, that the fellows were more frightened than hurt. Not one of them could state that they had sustained any injury.

37,503. Would it be injurious to you, as a trawl owner, if your boats were prohibited trawling during the herring season, on the ground frequented by the herring-boats ? — During the herring season we scarcely ever fish at night. It is actually out of the trawling season that herrings are got there. For the last two or three months scarcely any trawlers have been to sea, owing to the want of hands.

37,504. What is the ground you fish on off the Isle of Man ?—There is a large patch of ground there. There is no herring-fishing going on there.

37,505. Do you fish over the coral beds there ?—No ; that is off Douglas Bank and we do not trawl there.

37,506. Do you meet many trawlers from Liverpool ?—I have seen a few off the Isle of Man, but they never come on this coast. I never saw them here.

37,507. Is there much ground in the Irish Channel that you have not tried ?—I don't think that would make one per cent. difference.

37,508. Have you ever been summoned in consequence of your trawlers having fished within the prohibited districts ?—Yes, some of our men have.

37,509. Do you think that prohibition is observed by the trawlers on the whole ?—I think it is.

37,510. How many cases have occurred ?—Not more than six.—If I said six, I should exceed the number of prosecutions for fishing in the bays.

37,511. Have the summonses been taken out by the Coastguard officers or by the fishermen ?—The fishermen have become informers to the crew of the "Ajax," who brought the trawlers in. One case occurred which I think was a great hardship. They got off Wicklow Head and towed in for shelter; they were caught there and fined, and half of the fine had to be paid.

37,512. What did the fine amount to ?—Twenty pounds and the forfeiture of the net.

37,513. Does any portion of it go to the informer ? —A portion of it does.

37,514. What number of men have you in your boat ?—Three men and a boy. I imagine that oftener they have three boys and a man.

37,515. Are they mostly Irishmen ?—Yes, except a few. I have only one Englishman, and he is part owner, but his sons have been born in Ireland. Englishmen certainly came here to colonise the place, when the fishing was started by boats from Devonshire. Up to that time they only trawled when they chose—one month out of twelve, and it must have been fine weather, or else they would not go out.

RINGSEND.

J. Good.

20 Aug. 1864.

They would never go out at all, unless they were sure to get back the same night.

37,516. Has the disappearance of the haddock made any difference in your profits?—It has.

37,517. Do you find that you get a better price for other kinds of fish?—The price fluctuates.

37,518. Has the number of trawlers increased?—It has increased within the last few years. Four, five, or six have been added within the last few years back. Notwithstanding the disappearance of the haddock, I still live in the hope of seeing them return. I have heard of the herrings going away for 20 years, and remaining away for that length of time, and then coming back again. I have the greatest faith in seeing the haddocks come back again. I think we have neither caught nor destroyed them, but that they have taken a change. After the disappearance of the trawlers from our coast, I was frequently at Liverpool on business. I have seen some trawlers land enormous quantities of the same description of haddock which we caught in our smacks here. They caught tons of haddock where haddock formerly was never known. I think, until the last 10 years, the haddocks were never known upon the Liverpool coast.

37,519. Where are they got?—To the east side of of the Isle of Man, on the coast off Fleetwood, and on the Cumberland coast.

37,520. Are your men paid by share?—Yes.

37,521. Have you ever sent your vessels round to the west coast?—Yes, to Galway and Dingle.

37,522. How long ago was that?—About 13 years ago.

37,523. How long did they remain there?—For one season. They allowed them to remain at Galway for one season, until the Claddagh people turned out, and compelled them to put their trawls on the deck. They would not allow them to fish.

37,524. Were they intimidated?—Yes.

37,525. Did they make good hauls when they were there?—Almost equal to anywhere in the country, at a certain time.

37,526. What time was that?—In the spring months, March and April. It was inside the Arran Islands. They call it the Ailladie Ground. The soles are very abundant and fine.

37,527. Was that outside the prohibited line?—It is, a long way.

37,528. Were your boats there before the prohibition was enforced?—No; subsequent to the prohibition.

37,529. What other fish do they catch there in abundance?—Turbot were pretty abundant; plaice hake, and turbot were very abundant.

37,530. Did you catch any haddock?—Very few; but fine and large whiting. Very good in quality, though not many in quantity.

37,531. You were obliged to recall your boats, in consequence of the intimidation?—Yes; I despaired of doing any good with them.

37,532. During the time your vessels were there, did they do better than on the east coast?—Yes. They determined, however, to put the trawling down, at all hazards; they would set their lines right in your way, and they did not care if you meddled with them or not; they rather liked the pleasure of going to law with you.

37,533. Did you confine yourselves entirely to fishing within the islands?—Yes. There is one remark I ought to make. In the latter part of the year 1847, the Society of Friends chartered a vessel from my father, for the purpose of fishing the west and south coasts. It was one of the largest and best trawlers which could be obtained. They commenced their operations in Clew Bay. I was bound to supply nets and all fittings. No matter how many nets they lost, I was obliged always to keep them in good order. We were well paid for the work, it is true, but the risk of the nets was solely my own. We tried all the fishing grounds outside the headlands, from Clew Bay round to Cork Harbour, and I never made a clear haul, not even for an hour, in any part of the coast. We spent, in the time, large sums of money. They chartered the vessel for a year and a half, and a good able man, Mr. Tottington, Secretary of the Society, remained on board himself. The result of those operations was, to convince me that there is no fishing ground whatever outside the headlands on the west coast.

37,534. On what kind of ground did you fish?—It was a rough bottom, all rocky. Sometimes they would heave the lead down on the top of a flat rock, and it would come up with a little bit of sand in it, but it was no use fishing there. They had also the whole force of the Atlantic to contend against.

37,535. How far did this vessel explore?—From Clew Bay to Cork Harbour, and the only patch of ground they got was a little patch of ground west of the Cape, where there are about five miles of ground in length, by one and a quarter miles wide. Donegal Bay, Galway Bay, and a few of the minor bays, Dingle and Bantry, were the only places where they could get the fish in any quantity. They gave away all the fish they caught, although they paid so well for catching it.

37,536. Is the ground in Galway Bay, which you speak of, as good for fishing between the islands to a line drawn from Black Head to Corrahowna Point?—It is.

37,537. That is, the line drawn as it is at present?—I think so. Any extension of the line in Galway Bay would be equivalent to depriving them of Galway Bay. I would rather recommend them to push in the line to five fathoms of water, instead of extending it outwards.

37,538. If it were extended further out, do you think it would be injurious to the fishery?—Yes; and I do not think the Claddagh men would avail themselves of one atom of the benefit.

37,539. How many trawlers might be employed there?—I do not think any number of trawlers would be able to injure the fishing during the season. During certain winds the bay is full, and then, probably next week, there will not be a fish in it; they clear out at a certain time. I think they fill up in the bay in certain winds, and if they are not caught they will go away. There is an enormous area of coast, which must produce a prodigious amount of fish. They do not work the long-lines there the same as the Skerries men. The whole coast, in point of fact, is lost to them. They only fish about the bay for herrings in the shallow water.

37,540. (*Professor Huxley.*) Do you consider that there is a good long-line fishing outside, although there is no fishing for trawlers?—Yes.

37,541. Then you might apply to have the law reversed, and let the long-line men go outside and the trawlers come in?—Yes, precisely.

37,542. You spoke just now about the trawlers not fishing for the last two or three months?—They have not.

37,543. Why is that?—Because they have had other employments. They make more money in the herring-boats and yachts.

37,544. (*Mr. Lefevre.*) Do you ever fit out your trawl-vessels for the herring-fishing?—Yes. Last year they were not successful, but this year they have been.

37,545. Do you find the boats convenient for the purpose?—There are some advantages and some disadvantages. In the first place, they are large fine-built vessels, and there is no fear of drowning the people in them. They can go out and get in in safety, whereas there is great risk of an open boat getting swamped.

37,546. They can fish at times when the other boats cannot venture out?—It is only in the summer months, when they can get no trawling, that they go out. We never consider June, July, and the first of August profitable for trawling; the ground is soft and the water deep, there is no wind, and the fish are not in demand. They may as well bring paving stones to the market as trawl-fish then. At that

time there are plenty of herrings, salmon trout, mackerel, and fruit, and a variety of other things.

37,547. Do you know the ground where the soles spawn ?—We fancy that we do.

37,548. Where is it ?—We know they are full of spawn when we come on the Isle of Man ground. I have heard the masters of the vessels say that they never miss them off that ground until the latter end of the season, when they get them without the spawn.

37,549. When are they full of spawn ?—At the first of the season. We fancy that they go upon the rough ground. We lose them on the rough ground, but we are not able to catch them where they spawn. If we were to manufacture the cable of the "Great Eastern" into a trawl-net, we should not be able to fish where they go to spawn.

37,550. In what depth of water ?—Forty-five fathoms. They evidently spawn there, although they sometimes spawn in shoal water as well. There they are on the ground, at all events, and they are a long way from any other ground on the Irish coast.

37,551. When you fished in Dublin Bay, was the proportion of small fish you caught greater than elsewhere ?—There was always a small average of small plaice. The plaice we caught in that way were exactly the same as those they take on the long line.

37,552. Were there many small soles or turbot ?—No, very few ; very little of that indeed.

37,553. Did you catch any turbot in the bay ?—Yes, a few.

37,554. Or soles ?—A few small soles, but we got prime plaice in the bay, which would not have been caught by anybody else, nor could we ever find out where they go to when they leave the bay. The bay has been cleared out clean ; although we do not catch them, they clear out.

37,555. (*Professor Huxley.*) Are you acquainted with all the trawl owners here for the last 30 years ?—Yes.

37,556. Are you aware whether any of the trawlers have given up their vessels, and sold them and gone out of the business on account of not finding it successful ?—Like all other trades, there are some people who enter it who are not prudent enough to manage their business properly. Perhaps they may have entered it in the expectation of making a rapid fortune. I know a time when it was like coining money, and some who went into it thought that all they had to do was to take a summer residence, and wind up.

37,557. Was it always easy to get trawled fish ?—Yes, it was easy to get it then, and it is easy to get it now.

37,558. There is not such a demand for trawlers as there was, is there ?—No, they do not appear to be in favour.

37,559. Are persons who are engaged in fishing afraid of being interfered with by any legislative enactment ?—Not here.

37,560. That is not the reason they abstain from going into the business ?—No.

37,561. Is it because money is tight here that they do not think it will pay ?—I do not know. Some persons think there are fortunes to be made out of the herring trade. There is a tremendous rush at present to get into the herring trade, and I am convinced that there will very soon be a greater rush to get out of it. There was the same rush to get into the trawling trade, and there was as great a rush to get out of it again. There was a company started here ; I am happy to say that most of them were Londoners. They were coaxed into investing 40,000*l.* down at Galway, and they sunk the whole capital in 18 months. When they wound up, the liquidator did not get his costs out of them. I never got anything of them until they wound up, and then I went to the auction. If such a company were started every year, I think I should make a fortune out of their work. There are six rather inferior vessels at Waterford, and there are also six tolerable good vessels at Galway. I think Mr. Sweeney, of Galway, has five or six as good vessels, taking them on the average, as you would get anywhere, even at Hull.

37,562. (*Mr. Lefevre.*) With those exceptions, are there no other trawlers ?—No.

37,563. (*Professor Huxley.*) It is stated that the trawlers, working by day over the same ground that the herrings frequent, frighten away the shoals ?—I do not believe it. We have been fishing for 40 years over that very ground. It is a particular ground, which is most profitable to us as trawlers. In the deep-sea season it is our only standing profit, and it is on that very ground where the herrings are caught in large quantities.

37,564. Are you working upon that ground now ?—Yes, that is where we have been fishing.

37,565. Do you not find that your heavy trawl-boats drift too fast for your nets, if there is a little breeze ?—I do not. There is a way of adapting the length and depth and weight of the trawl to the size of the vessel. We fished last season during eight or ten weeks and made a haul of 60*l.*

37,566. You are speaking now of the herring-fishing ?—Yes. Our nets were not deep enough, or there was something wrong with us—a screw loose somewhere. This year we profited by the experience of last year, and the first week we made 60*l.*

37,567. Did you have much larger nets ?—No ; they were the same, but we added five score to the depth. The Cornish men are not successful, because their nets are too shallow—they rely on the length and not on the depth. The deep net will keep steady in the water, whereas the shallow nets keep dipping and washing about, and will not catch the herring.

37,568. Then your heavy boat becomes rather an advantage than otherwise in the fishing ?—Yes ; and we heave up with a spring back and carry our nets on deck.

37,569. Your trawl-boats are not bigger than the Dutch busses, are they ? Do you know the Dutch busses on the east coast of England ?—Yes, I have seen them.

37,570. Are your trawl-boats about the same size ?—Yes.

37,571. You do not think that the trawling frightens the herrings away ?—I am sure it does not. There have been herrings here from time immemorial. The first day they fished for them, there were some Cornish men returning from Ardglass ; seeing herrings, they shot their nets and they got them there. They told their countrymen what had happened, and next year they stayed at Howth, and got money hand over foot. After that they went away, and Scotch men, and Manx men, and other people came here. It is only lately that the people here commenced getting herring nets themselves.

37,572. You were trawling all the time over the ground ?—Yes. Our people knew very well that there were plenty of herrings there, on account of the enormous quantity of hake and turbot they got there.

The witness withdrew.

THOMAS PILE called and examined.

T. Pile.

37,573. (*Professor Huxley.*) What is your occupation ?—I am a fish factor.

37,574. A buyer of fish ?—No, a seller of fish.

37,575. You buy fish from the fishermen ?—I sell for them on commission.

37,576. Then you are a commission agent for the fishermen ?—Yes.

37,577. Have you been long engaged in that occupation ?—Yes, about 16 years.

37,578. Have you found that the supply of fish remains stationary, or has it increased or diminished ?—Do you mean at certain seasons of the year ?

37,579. No, altogether, taking one season with another ?—I am not aware that the fish have de-

RINGSEND.

T. Pile.

20 Aug. 1864.

creased to any great amount, with the exception of haddock and cod.

37,580. In those fish has there been a considerable decrease?—There has, decidedly.

37,581. When did you first observe that?—I agree with the evidence you have had just now, that it is about seven or eight years since. About that time we had very good takes, so good, in point of fact, that I was investing in new trawlers, and other persons were doing the same, when shortly afterwards we found the haddocks and cod dropping away.

37,582. Do you sell all the different kinds of fish?—Yes.

37,583. Herrings?—No herrings. None come into Dublin to be sold by commission; they are sold at Howth.

37,584. You have heard the evidence of Mr. Good?—Yes.

37,585. Do you agree with it?—I do. Mr. Good has stated the matter very fairly.

37,586. (*Mr. Lefevre.*) Are you a trawl owner yourself?—Yes.

37,587. How many do you own?—Two.

37,588. (*Professor Huxley.*) Supposing trawling were put down, what effect would that have on the fish market?—I am not aware how the market would be supplied, if trawling was put down. Certainly not by the hook and line fishermen.

37,589. The last witness said the liners could supply 10 tons a day; how much is required for the Dublin market?—A large quantity; I can scarcely say, but a very large quantity is brought into Dublin and exported to Liverpool.

37,590. How much will there be a demand for at Dublin?—Perhaps from 10 to 20 tons. Those fish Mr. Good mentioned are cod, ling, and conger eel, a heavy description of fish, a heavier class of fish than we send into the market.

37,591. From your knowledge of the markets here, are you able to say with what kinds of fish the market would be supplied if trawling was put down?—The only fish then would be conger, ling, cod, and pollack. We should never catch plaice by the hook, except in small quantities.

37,592. Do you think they could not supply the market with plaice?—The men in smaller boats might, but the Kingstown men catch flounders.

37,593. How would it be with regard to turbot?—They would only catch a turbot very rarely.

37,594. Have you heard of instances in which the turbot has been caught with the hook?—Yes, but it is not common; it is entirely exceptional.

37,595. What is most in demand?—Turbot, haddock, and soles, if we had them.

37,596. Is there a large and good demand for cod?—Yes, in the season.

37,597. Is there much demand for conger?—Yes, from the poorer classes.

37,598. Is there much demand for pollack?—Not as much as for conger and hake.

37,599. What will the great demand be for the middle and upper classes; will it be soles and plaice?—Yes, and brill, if we had them.

37,600. Those are fish caught by the trawl?—Yes.

37,601. And for the middle and upper classes the market would be emptied, if it were not supplied by the trawlers?—Yes.

37,602. Do the poorer classes buy large quantities of conger and hake, and so on?—They do. They give high prices for them. They seem to lay great stress on them.

37,603. What are the fish most in demand for the English market?—Cod and soles, haddock and turbot.

37,604. Is it trawled fish that are more in demand, or the hooked fish?—The trawled fish. The hook fishermen can only supply them with cod.

37,605. You heard an estimate made of the quantity supplied, at half a ton a day by each trawler?—Yes, that would be a fair average. Sometimes more, sometimes less.

37,606. It would be half a ton a day for each trawler among the whole body of trawlers?—Yes that would be a fair average.

37,607. That will average 15 tons a day?—Yes, some of the trawlers may be out, and some may not. It would be very rarely that we should have 40 boats fishing at one time.

37,608. Have you any notion as to what the total quantity of fish supplied to the Dublin market is, by all kinds of fishing-boats; will there be 30 tons?—Perhaps there may be sometimes, but at others there may not be as many hundredweights.

37,609. Taking one day with another?—Ten or twelve tons would be a fair average.

37,610. How much fish would the market be deprived of, if the trawling were stopped?—I can hardly say that.

37,611. How much per cent.?—I fear the greater quantity.

37,612. Fifty per cent?—Yes, and more than that.

37,613. Sixty?—I should say eighty. But it is only for some few months that they are out at sea; at present they are sending none in.

37,614. Do they find the herring-fishing more desirable?—Yes.

37,615. The great demand now in the market is for herrings?—Yes.

37,616. Supposing there were a great demand for long-line fish, would the supply meet that demand?—Yes, if the men went to it; but that is not the habit of the men during the summer season. They go on shore, and go to other things. They go to the west coast for the curing.

37,617. What would be the effect on prices if trawling was stopped?—It would increase them very considerably.

37,618. Are the trawled fish, as a general rule, cheaper than the line fish?—The fish obtained by trawl-fishing is quite a distinct class of fish.

37,619. You cannot compare them?—Not very well. We sometimes catch cod and hake, and trawled cod is always preferred to the hooked. They are always firmer and better fish.

37,620. How is the money value of the two kinds of fish? I gather from you that the fish consumed by the higher classes is mainly supplied by the trawlers?—Yes.

37,621. Then is it not altogether a more expensive fish?—Yes.

37,622. Then is the money value of a trawled cargo, weight for weight, greater than that of a lined cargo?—Yes.

37,623. Then the stopping of trawling would, in reality, stop a large proportion of the wealth brought into Dublin?—Yes; 90 per cent. of the wealth brought into Dublin by fishing.

37,624. Is there anything you wish to add to the evidence we have received from Mr. Good?—No.

37,625. (*Mr. Lefevre.*) Comparing the prices now with what they were 10 or 15 years ago, is there much difference?—The prices have advanced.

37,626. Take the price of soles?—It has advanced.

37,627. How much?—In some cases nearly 100 per cent., and 50 per cent. in others. The price depends very much upon the supply.

37,628. Is that increased price due to a diminished supply?—No; but to an increased demand for fish from England.

37,629. And also from the country districts in Ireland?—Yes, around Dublin.

37,630. I suppose an increase in railways has produced a considerable difference?—It has made a certain demand, but not in Dublin so much as in other places. It has rather brought the fish into Dublin, instead of supplying the interior from Dublin.

37,631. Is there much fish brought in from the westward?—There is some, but not a very large quantity.

RINGSEND.

T. Pile.

20 Aug. 1864.

37,632. What sort of fish is it?—Turbot, from Galway, and soles.

37,633. Does that form a large proportion of the fish brought into the market?—In the Galway season they send us large quantities.

37,634. Is the supply kept up now?—No, it has quite stopped.

37,635. Is Galway the only place from whence the fish come in in large quantities?—No, from other places,—from Ballyheighe and other places.

37,636. Is there any supply of haddock obtained now from the west coast?—I do not think they ever had any large quantities of haddock there.

37,637. Was there any difference of price in the haddocks caught by the trawl and by the hook?—The same rule holds as with the cod. The hooked haddocks will sometimes be brighter, but as a rule the trawled fish, whether it is that it is caught in deeper water or not, I cannot say, is considered best. I think the hooked fish are caught on the spawning ground. At any rate, we always find that ours sell for the best price.

37,638. Setting aside the haddock and cod, is there as large a supply in the market as there was 10 years ago?—I think not.

37,639. Not as large?—No.

37,640. Setting aside the haddock and cod?—There has been some falling off in the supply of fish, but the boats themselves are not properly worked and kept at sea. The men have left them, and that has interfered and led to a diminished supply.

37,641. You are speaking now of the line fishermen, not the trawlers?—No, of the trawlers.

37,642. But the number of trawlers has not fallen off?—No, but the boats have been hauled up, and not been worked.

37,643. The Dublin boats?—Yes.

37,644. Has it not paid to work them?—It has not paid in the summer, and the men have left them, as a rule, and gone to the herring-fishing, where they think they do better than if they kept at the trawling.

37,645. Do you think that the increase of the herring fishery has operated on the supply of trawled fish?—It has taken the crews from some of the trawlers, and there are now only a limited number of men here. They have gone to the herring-fishing. One or two have made a good deal of money, and perhaps they have been the means of drawing off 20 after them.

37,646. During the time the trawlers are at work, do they supply as much fish to the market as they did formerly?—There is not much difference.

The witness withdrew.

CHARLES BURNHAM called and examined.

C. Burnham.

37,647. (*Professor Huxley.*) Are you a trawl master?—Yes.

37,648. How long have you been working at it?—I have been a skipper 35 years.

37,649. You are an Englishman?—Yes, but I have been 45 years here.

37,650. Where did you come from in England?—Brixham.

37,651. Were you engaged in trawling there?—Yes.

37,652. Then you know all the ways of the Brixham trawlers?—No, I was young when I left it.

37,653. Have you been fishing here for 35 years?—Yes, for more than 40 years.

37,654. Did you come here to establish trawling on this coast?—I was brought here an apprentice.

37,655. What made you come here?—I came in one of the trawlers.

37,656. Did the Brixham men take it into their heads to come and fish here?—Some Dublin gentlemen bought some of the boats, and the men followed them.

37,657. They bought Brixham trawlers?—Yes.

37,658. And engaged crews to come here?—Yes.

37,659. To teach trawling?—No, to benefit themselves, not to teach trawling.

37,660. Was there no trawling before you came, upwards of 40 years ago?—There was; the boats of this coast were trawling.

37,661. How many trawlers were working here when you came first?—About eight or ten.

37,662. Were they small vessels?—They were vessels of about 40 tons. They were a great deal smaller than they are now.

37,663. How many Brixham boats came here?—They were coming by degrees.

37,664. Were they large boats?—About the same size as the others.

37,665. What made them come, if there were plenty of people trawling here?—They came in the expectation of making more money. Those which were here were doing well.

37,666. Are you a part owner now?—Yes.

37,667. I suppose you were not part owner when you began, 40 years ago?—No.

37,668. Then you have fished your way into it?—Yes.

37,669. Then you have not found trawling turn out so very badly?—We do not complain. There are some disappointments in trawling itself, and we have had great disappointments.

37,670. You get plenty of fish?—Yes, as long as we are at it, we can always go ahead.

37,671. Where are you trawling principally; on all the grounds round this coast?—All round Ireland, from St. John's point to Dungarvan.

37,672. Along the east coast?—Yes.

37,673. You heard what Mr. Good said?—Yes.

37,674. Do you agree with what he said?—There were a few things in which I did not agree, but I have forgotten what they are now. I do not think the trawlers catch half the fish he says they catch.

37,675. You do not think the average of the catch is so great?—Not more than half of it.

37,676. Do you think they do not catch more than a quarter of a ton a day?—Yes, five hundredweight a day; they do not catch more than that.

37,677. Taking one day with another?—Yes.

37,678. What do you think about the catch of small fish; have you noticed that many small fish are caught when you are trawling?—Yes, we catch plenty sometimes, when we are fishing where they are.

37,679. Where do you find them mostly?—Generally in the bays and in shoal water, when we are allowed to go there.

37,680. Not so much in the deep water?—No.

37,681. What proportion of small fish do you get to a haul, when you are fishing in the bays?—That depends on the quantity of all kinds.

37,682. What would be the proportion of the whole quantity; will you get half?—Not a quarter.

37,683. We heard yesterday of people being seen up to their knees in small fish?—I never saw it.

37,684. Have you ever had complaints made against you for getting foul of the long-lines?—I do not think I ever have.

37,685. Does not that happen sometimes?—Yes; but I have not had complaints against the boat of which I own a part more than twice in my lifetime.

37,686. Was that in trawling at night or in the day-time?—I think it was in the day-time.

37,687. When the long-lines are down in the day-time cannot you see the buoys?—We can, and we try to go between them. If we can do that, we can go across without injuring them.

37,688. Can you trawl over a long-line without bringing it up?—I have done so hundreds of times.

37,689. Now and then you bring it up?—Not if we go clear of the buoy. In that case we go clear of them altogether. Sometimes we may have taken off a few hooks.

RINGSEND.

C. Burnham.

20 Aug. 1864.

37,690. Does it depend upon which way you trawl, whether you go lengthways or athwart ?—The more we go across the line the more likely we are to be clear, except we catch a hook or two.

37,691. When you are trawling at night, are you apt to get foul of the buoys and lines at all ?—They do not put the lines down much at night.

37,692. When you have been among the herring fleet, have you ever got foul of the nets ?—Yes, I think so, but I do not remember more than one instance.

37,693. Were you trawling at night then ?—Yes.

37,694. Were not the boats lighted?—I do not remember whether they were lighted or not, but if they were you could not tell where the nets were, they are such a distance from the boats.

37,695. But most likely you would find the nets somewhere to the windward of the boats ?—We should always do that ; the trawlers have frequently been stopped from trawling on account of the herring nets.

37,696. They cannot trawl if the herring nets are down ?—No, they are obliged to give it up altogether.

37,697. As much damage would be done to the trawlers as to the herring men ?—Yes.

37,698. If they were to turn in among them, they would get entangled with them ?—Yes.

37,699. The labour of getting the trawl clear would be very great ?—Yes, and there would be a great loss of time.

37,700. Should you like to be kept three miles off the herring fleet ?—Yes ; I would keep off altogether when the herring men are out, but there is hardly a trawl shot now at all when the herring men are fishing.

37,701. Is it of importance to you to trawl at night ?—We should make something out of it, if the herring men were not there.

37,702. Do you not get enough fish in the day-time ?—No, nor half enough, day and night.

37,703. Could you get more when you first began ?—Very much more ; the fish were more plentiful then.

37,704. Has it diminished much ?—Yes, a good deal.

37,705. All kinds of fish ?—Yes.

37,706. Do you refer now to deep-sea fishing, as well as to bay fishing ?—Yes.

37,707. They have all fallen off ?—Yes.

37,708. What is the reason for that, do you suppose ?—I cannot give any account of it at all.

37,709. It cannot have fallen off very much, if all the fishermen have been saving money and buying shares in boats, and so on ?—That is not the case now. Everybody is nearly sick of it now, or nearly all.

37,710. We hear that the boats have increased in size?—Yes, but there is a sudden diminution in trawling now. Five or six years ago there was a sudden change, and since then, as Mr. Good has told you, those who were previously anxious to get into it have been trying to get out of it.

37,711. (*Mr. Lefevre.*) The loss of the haddocks has made a great difference, I suppose ?—Yes.

37,712. Do you not earn as much as you formerly did by fishing ?—No.

37,713. You have not been making money during the last few years ?—No.

37,714. When did it begin to fall off ?—About six years ago.

37,715. When the haddocks disappeared ?—Yes.

37,716. Do you think it is due mostly to that ?—I think that is the chief cause.

37,717. Are there many fishermen like you who have got money in the boats ?—There are a few here present ; there are one or two who have.

37,718. Not more than one or two ?—Not in the room now.

37,719. But taking the fishermen altogether ?—There are not many who have shares in the boats. Many are sole owners ; few have shares like myself.

37,720. Do many of the owners of boats fish themselves ?—Yes ; there is one here who owns a boat and goes out fishing himself.

37,721. (*Professor Huxley.*) Does nobody look after your trawl nets here ?—No.

37,722. Have you no regulations over you ?—No, I think not.

37,723. Would you like to have somebody to regulate the size of your beam, and that kind of thing ?—I think every one should regulate his own.

37,724. On some parts of the coast of England there is an Act in force which is called the Convention Act. That Act does not apply here, but I should like to know if you would wish to have regulations of that sort established here. Would you like that the beam of your trawl should not be more than 38 feet long ?—No.

37,725. Would that positively put a stop to fishing with large vessels ?—No ; we could increase the weight of the beam.

37,726. But is it not necessary in hauling in the beam that it should be of a certain size ?—We could get over that, I think.

37,727. You would add to the weight ?—Yes.

37,728. But suppose this rule were in force—"The "total weight of the two irons or head-pieces of a "trawl shall not exceed 287 pounds"?—That would be nearly in proportion to the 38 feet beam.

37,729. Would you be able to use as large vessels as those which you have now ?—Yes.

37,730. With the weight of the head-irons no greater than that ?—Yes.

37,731. I thought you said just now that you would have to increase the weight of your beam, if you had a heavy vessel ?—I do not think so ; there are ways in which we can make up for that deficiency.

37,732. Would it be of any advantage to you to have that regulation ?—No, I do not think so.

37,733. Would you have found any hardship in this regulation—"Trawl-boats shall always keep at a "distance of at least three miles from all boats fishing "for herring or mackerel with drift nets"?—I have no objection at all to that.

37,734. You have no objection ?—Not a bit.

37,735. Suppose you got your nets down and were trawling, and a fleet of drift nets came and shot within half a mile of you, would you like to have to get up your nets and be off ?—It would be to our interest not to be there, if the herring men were there.

37,736. But if they come to you ?—We know they will be there every night, and we know what to trust to.

37,737. Do you have your boats all lettered and numbered ?—Yes.

37,738. Who looks after that ?—The Coastguard.

37,739. Do you have the number painted on the sail ?—Yes.

37,740. Do you find that the paint does any harm to the sail ?—No.

37,741. (*Mr. Lefevre.*) Do the Coastguard ever come out to you, if you are fishing within the prohibited line ?—Yes ; that has been done in Skerries Bay and Balbriggan, but not often.

37,742. And have they warned you to go outside the prohibited line ?—Yes, but we must have fine weather to do that.

37,743. Is there much trawling within the prohibited line ?—Yes, at certain times of the year.

37,744. By Dublin boats ?—Yes, Dublin boats and all kinds of foreigners.

37,745. Do you think they go there on a dark night ?—Yes, and in the day-time too, quite frequently.

37,746. Is there anybody to prevent you ?—If it is blowing a gale off the land, there are none of the Coastguard who can come out ; they know that they are safer ashore.

37,747. Then you do not think the prohibition has been of much use in preventing you from going into the bays ?—The trawlers do not continue it

RINGSEND.

C. Burnham.

20 Aug. 1864.

as a practice, although they will get in now and then.

37,748. (*Professor Huxley.*) Do you care about coming into the bays in fine weather, or only in coarse weather?—If we were allowed to go into the bays, we should go whenever there was fish to be got there.

37,749. But are the fish as good in the bays as they are outside?—Sometimes; there are certain seasons when they are in good order, and in others they are as bad.

37,750. Did you ever see any fish spawn taken up in the trawl?—No; I do not know what it is. I do not know that I ever got an ounce in my life. I do not know any thing about it, no more than if there were no such thing in the world.

37,751. (*Mr. Lefevre.*) Do you catch many small soles in the bays?—No, there are never many got there.

37,752. Not even small ones?—Not in Dublin Bay; there have been a good many got in Wexford Bay.

37,753. But off Dundalk and Drogheda do you get many there?—No, we never do.

37,754. Then what are the small fish you speak of?—Small plaice, crabs, and the like of that.

37,755. Do you get young turbot?—Yes.

37,756. In Dublin Bay?—I never knew many in Dublin Bay; we should not catch five in a week, if we were trawling all the week.

37,757. Where have you caught young turbot?—In Skerries Bay, at Balbriggan, and in Drogheda Bay.

37,758. Have you caught them in any great numbers?—No.

The witness withdrew.

J. Good.

John Good recalled and examined.

37,759. (*Professor Huxley.*) You wish to make a statement with regard to the earnings of the trawlers?—Yes. The gross earnings of 12 months, seven years ago, were nearly 400*l.*, being 398*l.* odd. That is clear of cartage, commission, and other expenses connected with the fishing. Then we had half of that to keep the vessel out of, and for profit, so that out of all we should have about 100*l.* I do not take the last two seasons, because the vessels have been lying up for two or three months; but last year we fished throughout, and there were 78*l.* of a falling off.

37,760. How long did that average of 400*l.* last?—That average continued, I think, for seven years.

37,761. And when did it begin to fail?—About three or four years ago.

37,762. (*Mr. Lefevre.*) What was the falling off attributable to?—I think to the disappearance of the haddock and cod.

The witness withdrew.

W. Bartlett.

William Bartlett called and examined.

37,763. (*Professor Huxley.*) Are you master of a trawler?—Yes.

37,764. How long have you been engaged in that business?—I think about 31 years.

37,765. Always from this port?—No; I have fished in the English Channel, and the Bristol Channel, and in other parts of Ireland, for a short time.

37,766. Have you heard what the previous witnesses have said?—Yes, I have.

37,767. Do you agree with what they have stated?—Not with the whole of it.

37,768. Do you recollect any point upon which you do not agree with it?—Mr. Good stated that the average quantity of fish caught by each trawl was half a ton per day. I do not believe that. I do not believe that the average is more than was stated by Mr. Burnham.

37,769. You agree with Mr. Burnham rather than with Mr. Good?—Yes.

37,770. That the average is not more than a quarter of a ton?—Yes.

37,771. You think that that is a fair statement?—Some will catch that, and some not.

37,772. With regard to the catch of small fish by the trawls, do you agree with what has already been said, that the quantity of small fish caught by the trawlers is much greater in the bays than outside in deep water?—I do not fish in any bays. I never desire to go into the bays.

37,773. Why is that?—Because I can find more profit by fishing in deep water.

37,774. Do you think that, if the trawlers were kept out of the bays altogether, it would be any loss to you?—It would be to some.

37,775. Why to some more than others?—For myself, I do not fish except in Skerries Bay. In Dublin Bay and Wexford Bay, I have given it up altogether.

37,776. Why?—I do not like fishing in shallow water.

37,777. Is yours a particularly heavy boat?—It is a heavy boat, but not heavier than other people's.

37,778. Do you agree with what has been stated about getting spawn; did you ever see spawn in the trawl?—I think if I had a canvas trawl I might catch spawn, but I do not see how I could with the trawls we use now. I think spawn would pass through them.

37,779. Did you ever have spawn drawn up by the trawl?—I cannot say that I have not seen it.

37,780. Are you sure it was fish spawn?—I cannot say.

37,781. You are not sure what it may have been?—No; but it is very rarely that ever we get any spawn.

37,782. Has the quantity of fish you have taken remained pretty steady?—It has been better of late years with me.

37,783. Better in the deep water?—Yes.

37,784. What have you to say with regard to the supply of haddocks, has that fallen off?—Yes; but I am in hopes every day I go out to find that they have come back again.

37,785. What makes you think they will come back again?—I believe they will, because we used to get such a number, and we got a few the other day.

37,786. Where?—In the deep water.

37,787. Have you been fishing on the English coast?—Yes.

37,788. Did you get them there?—They were very scarce.

37,789. One of the witnesses speaks of their being got by the Liverpool trawlers?—I have not been fishing there.

37,790. Have you ever got into disputes with the long-line fishermen, in consequence of trawling over their lines?—Yes.

37,791. Was it in trawling in the night-time?—Yes, and by day-time too.

37,792. Could you not see the buoys?—We could; but a strong tide was running, and we could not get clear. The work was too hard for us to get the trawl up.

37,793. Would it not take you an hour and a half or two hours to get it up?—Yes, and sometimes more than that.

37,794. If it blew hard, it would take more?—Yes, it would sometimes take four hours to get it up.

37,795. Does it occasionally happen that the distance of the vessel from the buoys is not sufficient to

RINGSEND.

W. Bartlett.

20 Aug. 1864.

allow you to get the trawl up in time ?—Yes; sometimes the tide and wind will drift us foul of the lines.

37,796. When the trawl is athwart of them, do you carry away many hooks ?—If we pass between the buoys, we may take a hook or so.

37,797. But you do not bring up the lines ?—No, the trawl will pass over them.

37,798. Are you much in the way of the drift men, or are they in your way ?—I was trawling last year, and they came out an hour before sunset, and put down their nets all around me, and it was with some difficulty that I could get my trawl up. I was afraid that they would take the law of me, and the law is all in their favour.

37,799. Was it before sunset ?—An hour before sunset.

37,800. Is the state of the law such that, under those circumstances, they would be able to recover from you ?—I believe that, if I had got foul of their nets, they could do as they liked with us. I might just as well say, "I am guilty."

37,801. But if it was not your fault ?—They would not listen to that.

37,802. (*Mr. Lefevre.*) Have you ever had to pay anything for getting foul of their nets or carrying them away ?—No, I never damaged their nets, that I know of.

37,803. Do you know of any trawler that has had to pay anything ?—Yes, one had to do so a little time ago.

37,804. For carrying away nets ?—No, for cutting them.

37,805. (*Professor Huxley.*) Is there anything you would like to add to the evidence you have already given ?—No, nothing more.

37,806. (*Mr. Lefevre.*) Are you yourself the owner of a trawler ?—Yes.

37,807. How long have you owned her ?—I have been part owner for 13 or 14 years.

37,808. Your profits have not fallen off of late years ?—I have not observed them do so.

37,809. Do you agree with Mr. Good, that the haddocks were in great abundance seven years ago ?—Yes.

37,810. Previous to that, did they fall off as much as they have fallen off now ?—They did fall off greatly. I have got some in and out.

The witness withdrew.

A. Blackmore.

ALEXANDER BLACKMORE called and examined.

37,811. (*Professor Huxley.*) You are the master of a trawler ?—Yes.

37,812. Are you part owner of one as well ?—No.

37,813. How many years have you been engaged in fishing ?—For 30 years or more; ever since I was a child.

37,814. Have you always been fishing from this place, Ringsend ?—No, I served part of my time in Brixham.

37,815. Are you a Brixham man ?—Yes.

37,816. Did you come the same time as Mr. Burnham ?—I was not born then, I believe.

37,817. What made you come here fishing ?—I thought I could make more of it than in England.

37,818. Have you been trawling over this ground ever since ?—Yes.

37,819. How many years altogether have you been trawling here ?—Twenty-six or twenty-seven.

37,820. How do you find the supply of fish now, compared with what it used to be ?—I think it was scarcer 20 years ago than what it has been for a few years past.

37,821. That is with the exception of haddocks ?—Haddocks and everything were scarcer then.

37,822. Twenty years ago ?—Yes.

37,823. Was there a scarcity of haddocks 20 years ago ?—Yes.

37,824. Did they come back again ?—Yes, more plentiful than ever.

37,825. Was cod scarce too ?—Yes; all fish were scarce.

37,826 Do you recollect in what year that was ?—About 22 years ago.

37,827. 1842 ?—Yes.

37,828. Was that scarcity of fish general ?—Yes, with every one.

37,829. Was trawling going on then as much as it is now ?—Yes, but there were not so many boats as now; and at that time we never went down to Dunmore to catch fish. We never went to the southward.

37,830. Is the ground you trawl over now more extensive than it used to be ?—Yes; we never went off to Dunmore or Dungarvan, or to those places where we get the greatest quantity of fish now.

37,831. Is there much fish caught by trawling in the bays ?—In Wexford Bay there is a good deal of fish, and in Skerries Bay, but that is out in the ocean. It is not a bay at all.

37,832. Would it be a great detriment to the trawlers, if they were forbidden trawling in the bays ?—Not for what they trawl in the bays. They do not trawl at all in the bays at present.

37,833. Mr. Burnham did not seem to agree with that ?—In Wexford Bay they trawl sometimes, but they are allowed off there.

37,834. Is it not an advantage to trawl in the bays when the weather is coarse ?—Yes, in the winter time. Now, nobody would trawl in them. If they did not catch fish, they would leave it. In Wexford Bay the bay is full of fish one week, when, perhaps the next week, they are all gone away, and they will not catch them until the next season comes again.

37,835. Do you think it is the trawling that drives the fish away ?—No; if the trawlers did not go at all the fish would go away.

37,836. Do you agree with the previous witness as to the catch of small fish ?—Yes, in shoal water.

37,837. But there are very little in deep water ?—Yes.

37,838. What have you to say with regard to the taking up spawn in the trawl ?—I do not know much about spawn. I do not know that ever I saw spawn that I could say was spawn.

37,839. Do you got squid spawn sometimes ?—Yes.

37,840. It is like bunches of grapes ?—Yes, we get plenty of that.

37,841. Did you ever see any anything like herring spawn ?—No.

37,842. Is there anything that occurs to you to say about the average quantity of fish taken ? What do you think is about the average quantity per boat ?—I think the last statement was the most correct. Mr. Good went too high.

37,843. There is not half a ton taken by each trawl-boat ?—Our boats never catch as much as that. One boat may get it, but it is not a regular thing to get it.

37,844. Is there any other point that occurs to you, which you wish to bring before us ?—I do not think we could work with beams only 38 feet long. Our vessels are too large for that.

37,845. You think there ought to be a certain proportion between the length of the beam and the length of the vessel ?—Yes. Our beam is 45 feet long, and that it is the shortest length we could work properly.

37,846. In a vessel of the size of yours ?—Yes.

37,847. If you had a smaller beam, you would require a smaller vessel ?—Yes, or we should have to cut a piece of the vessel off.

37,848. Why is that ?—It would be in the way. We should have to go to the aft side of the rigging. We should have no way of getting it in.

RINGSEND.

A. Blackmore.

20 Aug. 1864.

37,849. It would be very inconvenient?—Yes.

37,850. At present there is no regulation at all about the size of the mesh or beam?—No, a man may have a beam 50 feet long, if he likes.

37,851. And you think you get on very well without any regulation?—Yes; we could not work a short beam in any way.

37,852. (*Mr. Lefevre.*) Have you been trawling all the season?—No; I have been carrying herrings to Liverpool.

37,853. Have you found any difference in your earnings for the last three or four months?—The boats have done as well as they could the last season.

37,854. Are you paid by share?—Yes.

37,855. What is the skipper's share?—Thirty shillings out of 8*l*. A share and a half we call it. The vessel takes half, and the crew half. The skipper gets a share and a half and the boy half a share.

37,856. (*Professor Huxley.*) Is there anything you would like to add to what we have heard?—No, I think not. I was down at Kinsale trawling there this season, and I got nothing at all. I never saw a trawl shot there before. We carried our gear with us, and when we had spare time we went out and shot the trawl.

37,857. (*Mr. Lefevre.*) Is the ground good for trawling?—We got soft muddy ground for an hour.

37,858. Were you not there during the season for the fish?—No.

37,859. You might have been trawling at the time when the fish were not on the ground?—That might be so.

37,860. Do you find that the fish often change their ground?—Yes. Wherever we go, if we do not catch the fish we leave the ground. We shift in every way.

37,861. After a time you learn to know the places where you will find the fish?—Yes; we follow the fish round each season in the year.

The witness withdrew.

ALEXANDER AUSTIN called and examined.

A. Austin.

37,862. (*Professor Huxley.*) Are you a fish-curer?—Yes.

37,863. Have you been occupied in fish-curing upon the Irish coast for many years?—Yes, for 20 years.

37,864. Where have you been curing?—Mostly in Dublin, except for three months, when I was in Valentia and Dingle. I have generally been in Dublin, but I have occasionally been in Scotland for a month or so.

37,865. Do you cure herrings, or cod and ling?—Haddock was my principal business up to four years ago. I used to cure for the Irish trade, and I exported a good deal.

37,866. How was it that it ceased to be your principal trade?—I could not get the fish. The supply was very good for seven years, and then it began to get scarce, about seven years ago, and it gradually got scarce until about four years ago, when they disappeared entirely. I think it will be five years, next winter, since I bought haddocks in the Dublin market for curing.

37,867. Do you agree with some of the previous witnesses, that just before they disappeared there was a great abundance of them?—The previous witness must be under a mistake, because the haddocks were my sole business, and no scarcity of haddocks took place 20 years ago.

37,868. None took place?—No. From the time I commenced business in Dublin there was no scarcity for the first five years I was engaged in that business. Any day that I wanted haddocks, I did not require to wait long for them, either at Dublin, the Skerries, or Kingstown. I got as many as I wanted. But about five years after that they got scarcer in the season up to January. There were no haddocks to be had all that winter up to January, and then I bought some, but for about three months I could not get any.

37,869. Was that because they were not to be caught?—They were not to be had in the market. There might be trawled haddocks, but I was not looking for them. The hooked haddocks I bought for curing, and so far I disagree with one of the witnesses, who said he thought the trawled haddocks were decidedly the best.

37,870. What is the reason of that?—When they are caught in the trawl, the haddocks are mauled and knocked about, and they become very soft. The hooked haddocks that I have been in the habit of buying have just been hauled up, and they have been got in a very fine condition.

37,871. Does that depend on the state of the weather?—In hard frosty weather, and with light hauls, they would get good trawled haddocks, but in warm weather and heavy hauls the fish would be too much knocked about.

37,872. Do you agree that, just before the scarcity seven years ago, there was an unusual abundance of haddocks?—I cannot say that there was. There was not an unusual abundance of them. The most plentiful year for haddocks was 18 years ago. The little skiffs going out at Kingstown had very fine hauls. I was down there one day myself, and I saw many people buying them by cart-loads to carry them away. There were no buyers for them. I saw one man who had brought in a boat's load of fish, and had his lines ready to go out again. He said, however, that he was going home, as there were no buyers. I told him that I would buy from him what he could catch. I went out with him in his boat, as I knew that if he had a good take of fish, after selling them at a price, he would be hanging about the steamers and selling them again. I was two hours out with him, and he took 40 score of as fine haddocks as were ever taken. There were a great many of them too large for me. I sold three dozen of them on Monday morning for the price of the whole 40 score.

37,873. All that time trawling was going on?—Yes; but I never used, I think, to get many haddocks before March. When the haddocks begin to get full of spawn, the fish become sick, and will not take the hook.

37,874. When is that?—There has been a great deal of contradictory evidence given about that at your different meetings. I have made a memorandum, which gives my experience in gutting the fish. That has enabled me to judge of these matters.

37,875. Will you read it for us, so that we may have it on our notes?—I wrote it out for the Commissioners of Fisheries here:—

"*April. Haddocks.*—Fish after spawning are very much spent and in poor condition, with nothing inside but entrails and unhealthy looking blood.

May.—Nearly the same, but they have a healthier appearance, and are firmer inside. They are also cleaner and healthier looking, and their stomachs are full of gravelly sand and minute shellfish.

June.—There is a visible improvement. The fish are firm and healthy looking, and their liver is beginning to show.

July.—Still improving, and liver getting larger.

August.—In prime order, and liver still growing.

September.—At their best; liver full grown, and all oil

October.—As good as last month, but can observe the pea; the liver still good and oily.

November.—Still good. The pea enlarging; liver full grown, not so oily, but healthy and in good condition.

RINGSEND.

A. Austin.

20 Aug. 1864.

December.—Fish full and in good condition, but not so rich. Pea full grown, and liver getting small and dry.

January.—Still good. The pea of a healthy red colour; liver getting smaller and no oil.

February.—Fish getting poor. Pea soft and pale; liver nearly gone and bloody and unhealthy looking.

March.—Fish at the worst. Pea of pale, soft, and glutinous appearance; each globule appears to be separating previous to spawning; no appearance of liver. The inside of the fish has an unhealthy bloody appearance."

37,876. They spawn about March?—You will see the state of the pea and the liver; when the pea is gone after spawning, the liver begins to show; when the liver is at full growth the pea gradually begins to show. It appears as if the nourishment of the young brood is taken from the liver.

37,877. Have you any idea of the cause of the falling off the haddock-fishing?—I cannot form an idea, but I have a strong hope and faith that they will appear again; they are a migratory fish.

37,878. Do you think they have been trawled out?—No, I am not under that impression at all. I think the Clontarf and Kingstown yawls will get as many fish as they could wish to have. It was the custom in Clontarf and Kingstown for the yawl men to sell their fish by the lump, and not to reckon them by the score. If you paid them by the score, you would get a dozen of them so small as to be scarcely worth having.

37,879. Were they caught by net?—Yes; the large hookers did not catch them, but the little yawls were in the habit of getting them, and they had an equal quantity of small fish with the trawlers, so that unless it was in lifting the spawn, the trawlers did no more injury to the fish, as regards the taking of small fish, than the hookers.

37,880. Do you think that fishing with lines and hooks is quite as destructive as trawling?—Yes, as far as regards the haddocks. If the trawlers were prevented from trawling, it would be necessary to prevent the fishermen from fishing with lines within a certain distance of the shore.

37,881. Would it be of advantage to the fisheries to keep both sets of people from fishing in the bays?—No; I think it is wrong to interfere with anybody's business. It strikes me forcibly that in Dublin Bay, when the haddocks were so plentiful, any injury that was done by the trawlers was in taking the haddocks when they were full of spawn in the month of March. At that time the fish will not take the hook; they were sick at that time, and all the haddocks we got were trawled haddocks.

37,882. (*Mr. Lefevre.*) Do you agree with Mr. Pile, that the trawled cod fetch a better price than those caught by the hook?—From the experience of the last few years, I should say that hooked cod would always bring the best price as a rule. I should say so. There may be an exceptional case where a particular cod will get as good or even a better price.

37,883. Do the trawled fish and those caught by the hook and line come into the market at the same season?—Yes, but in the hooking season the greater portion of the cod is all hooked cod; there will be cartloads and cartloads of hooked cod, and it is very rare to see a full hamper of trawled cod. There is only a very small proportion of trawled cod sold in the market.

37,884. Do you agree that there has been a falling off in cod?—I cannot speak to it for a certainty.

37,885. Have you not cured the cod?—No; all the fish I cure is salmon, sprat, haddocks, and herrings.

37,886. Is there any sprat-fishing here?—I had some sprats from Mr. Pile, which he got from Waterford. The supply was not very large, and as he could not succeed in getting more, I was obliged to get fresh sprats from Scotland and to cure them here.

37,887. Is there any curing of herrings here?—Yes, herrings are cured to a considerable extent. I supply pretty nearly all the cured fish in Ireland, and in the fine way the bloater and kipper herring. The Irish people like the big Stornoway herrings; they do not like the over fine herring.

37,888. Is there also a large importation of cured herrings?—There is a great importation of cured herrings from Scotland, but there is double the quantity of Dublin Bay herrings exported. I myself have sent to the London and Liverpool markets monthly, from the 1st June, from 30*l.* to 50*l.* worth of cured herrings. We get a good return and a ready market.

37,889. Do the Dublin cured herrings fetch a larger price than the Stornoway herrings?—They are a different class of goods. There is as much difference between the Dublin and the Stornoway herring as there is between a chicken and a tough cock. The Irish people throughout this country prefer the big herring; they are no judges of fish. The English and Scotch people like a good fish. They, therefore, prefer exporting their bad herring here, and the Glasgow people get our good herrings there. Here they cry out that what is imported is injurious to the country, but I can assure them that there is more than double the quantity exported from Ireland.

37,890. We were told at Howth, that a great quantity was exported fresh from there?—Not quite fresh, but sprinkled over with salt, and great quantities are bought for the English curers. One curer will buy 100 barrels a day for curing, and it undergoes the process of curing in transit. If they are going to Liverpool, Manchester, or London they are salted here. They are salted enough, and they are cured very like bloaters and kipper herrings. They require merely to be washed and dried.

37,891. Do you cure any herrings from Arklow?—Yes, as soon as we can get them. That is the only chance we have, because when the herrings are taken in Arklow, about May, there are none got anywhere else. We get a high price for them, but as soon as they are taken in other places they get lower in price.

37,892. What time is the season over at the Arklow fisheries?—It does not last more than two or three weeks, and then the winter fishing commences in October.

37,893. (*Professor Huxley.*) After the famine, were there not some curing stations set up on the west coasts of Ireland through the agency of the Fishery Board?—Yes.

37,894. Were you not concerned in that?—Yes, I was there for six months at the three different stations.

37,895. What were the stations?—I went to Castletown in Bear Haven. I received a letter from Mr. Radcliffe, and I went there. I was received somewhat cavalierly by Captain Lyster, who had a curing station two miles from Baltimore. He showed me his curing house. I asked him why the curing station was not at Baltimore. He said he could not find a house convenient to the harbour there. I took a house there, which I said would suit me very well, at 20*l.* a year. I asked where his curing place was, and he told them to take me to the curing stables; he had a curing house above the stables.

37,896. Was that gentleman employed in superintending the Government curing station?—Yes.

37,897. And the station had been set up in that way?—Yes.

37,898. I suppose it is not necessary to ask whether that curing station failed?—Yes, of course it did.

37,899. Then let us take the next?—I went next to Castletown, in Bear Haven. I was there three weeks, and I discharged a cargo of salt. That is all I know about it. The place was then getting in order. I then went to Valentia, and I stayed there three months, and fitted up a splendid curing house there, which was a model of a place.

RINGSEND.

A. Austin.

20 Aug. 1864.

37,900. What became of that?—I was there for a good while, but there were no fish to cure. I then thought I could do much better at home, especially as I had my own business to attend to.

37,901. Had curing stations been set up at a place where there were no fish?—At that time there were not. There were only two boats there.

37,902. What induced the people to set up curing stations there?—There was an impression that the fishing boats would come with their fish from Dingle when they found they could get a price for the fish, but nobody came all the time I stayed. After I left, Captain Bennett, an Englishman, went there, as a matter of speculation. Mr. Fowler was his agent, and some boats collected there, and the fish were carried in, but it was a bad job altogether.

37,903. What has become of those curing stations now?—I do not know. I have not been in that part of the country since.

37,904. From what you saw of the country and the prospects with regard to fish, do you think that money invested there would have answered in those places?—No.

37,905. In no one of those places?—In none of them. There was not a class of fish to be had in either of those places fit for curing, and there was no way of conveying it to the market. The way in which I was employed was this: Mr. Radcliffe knew I was supplying all the first-class shops in Dublin, and he asked me to go down to the Custom House. He told me that such a thing was to be, and he asked my opinion upon it.

37,906. Was that before the curing stations were set up?—Yes, after the grant had been voted.

37,907. Who was consulted as to the parts of the coast where they were to be set up?—I do not know. The matter then went into the hands of the Commissioners of Fisheries.

37,908. Did any practical person examine the coast, with the view of ascertaining its fishing capabilities, before the stations were set up?—I am not aware. Colonel Jones and the Chairman of the Board of Works made an inspection in a Government steamer. They came round to Valentia, and gave us great credit for the curing house we had set up, but there were no fish in it.

37,909. (*Mr. Lefevre.*) Was this after the famine?—Yes. An English boat went there. Captain Bennett was a partner in the concern, and he cured the fish on his own account. I do not know how he got on.

37,910. (*Professor Huxley.*) Have you any reason to think a curing establishment might be set up with profit on the coast?—No.

37,911. Why not?—The less interference there is on the part of the Government with the fisheries and the fish-curing the better, and the less any Company has to do with it the better. Neither of them will do any good. The expense of Government officers, or of officers belonging to any Company, would consume all the profits upon the fish they would cure, and would leave nothing for the shareholders.

37,912. It is a trade that will answer very well, if the persons concerned in it work it themselves?—Yes. If poor people lay their heads together, and make up their minds to work it well, they will make money, but not a Company. There have been two Companies in Ireland. Mr. Andrews' Company was one. I gave them six months, and, I believe, they lost a good deal of money; Mr. Good was more cute than they were, and got some of their boats when they gave it up.

37,913. That Company has failed?—Yes.

37,914. From your experience in dealing with the fish, do you think that is sure to be the fate of most Companies?—Yes, sure to be.

37,915. Because a fish Company would require the interest of individuals to be embarked in it?—Yes. I know something of boats myself, and I have had some thought of setting up a boat—a herring-boat. Perhaps I might do so, if I had a man, a skipper in it, who had some interest in it himself, but I have no notion of buying one, and sending it out with somebody else.

37,916. (*Mr. Lefevre.*) Did you go to the west to set up these curing stations in 1847, during the famine?—Yes. It was a desperate effort on the part of the Government to provide some means for staving off the effects of famine. There was a grant, I think, of 5,000*l.* given by the Government, and rules and regulations were laid down by the Lords of the Treasury for the expending of that 5,000*l.* Nothing could have been better than those rules, but the people who were appointed were very inferior.

37,917. In any case, you seem to think that it could not have answered?—I do not think it could have answered.

37,918. Could it not have given temporary relief to people who were starving?—It might have given temporary relief, but as it was, it did no good whatever. I think it was a waste of money, so far as the three stations in which I was concerned went.

The witness withdrew.

Captain Robert Williams, R.N., called and examined.

Capt. R. Williams, R.N.

37,919. (*Professor Huxley.*) You are practically acquainted with the fisheries?—Yes, I have fished a great deal.

37,920. Have you heard the evidence of the witnesses who have been examined before us already?—I have.

37,921. Is there anything you wish to add to their statements?—I think that, so far as accounting for the fish being diminished in the bays is concerned, that the bait has very much diminished. I think that is one reason. With respect to the haddock being migratory, I know that perfectly, but four or five years ago I caught a number in one single haul on my lines.

37,922. Is there any comment you wish to make in regard to the trawling question?—Only in respect to the spawn. I have been trawling for 35 years, and I never saw an ounce of spawn taken up in the net.

37,923. Do you use the trawl?—Yes, I have a trawl now.

37,924. Do you find that it works well?—No, because I cannot work athwart the tide; it collapses.

37,925. You disagree in the statement that spawn is brought up in the trawl?—Yes, and also with regard to the number of small fish taken up. I have once or so in a haul a dozen or 15 brought up and left on the deck.

37,926. Do you agree with the witnesses, that more small fish are brought up in shallow than in deep water?—Yes; they are different fish that are taken up in deep water from the fish that are taken up in shallow water, and they are much firmer fish.

37,927. Is there any suggestion which occurs to you, apart from what we have heard, or in corroboration of what the witnesses have said?—The largest haul I ever had was about three hundredweight or four hundredweight, and that was fish taken in a whole tide.

37,928. (*Mr. Lefevre.*) What is the size of your trawl?—It has a 60 feet beam. I fish in a Revenue cutter.

37,929. And in the bays?—I have not fished further south than Bray Head, and not further north than some distance outside of Lambay. Not on the west coast or eastward. I have trawled at Cork, however.

37,930. Have you observed a greater proportion of small fish in the bays than in deep water?—Yes; there is the greatest possible difference, and it is a different class of fish. With regard to the take of plaice, I have seen 50 or 60 taken in a haul some-

RINGSEND

Capt. R. Williams, R.N.

20 Aug. 1864.

times. They take all plaice and flounders with a hook, but I never saw a turbot or sole taken. I fished in this bay 35 years ago, and I never saw a turbot taken in the bay at all, nor did I ever see a sole taken in the bay.

37,931. Have you taken small soles in your trawl in the bay ?—No.

37,932. None about an inch in length ?—No, not at any time. I never saw a sole or a young turbot taken in a trawl.

The witness withdrew, and the inquiry was adjourned until the 22d of August, at Arklow.

Arklow, Wicklow, Monday, 22d August 1864.

PRESENT :

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

ARKLOW.

Rev. J. Redmond.

22 Aug. 1864.

The Rev. JAMES REDMOND called and examined.

37,933. (*Professor Huxley.*) You are the parish priest of Arklow, Mr. Redmond ?—I am.

37,934. How many years have you held that position ?—Since October 1839.

37,935. You are doubtless well acquainted with the occupations of the inhabitants here ?—Perfectly.

37,936. Are you able to tell us what kinds of fishing are practised by the fishermen belonging to Arklow ?—It is mainly herring-fishing and oyster-fishing. They also take codfish, but the principal and staple fishing is herring and oyster-fishing.

37,937. Can you inform us how many boats are engaged in the fishing ?—That is a question that could be better answered by those concerned in the fishery than by me. I can only give you general views with regard to statistics. With respect to details, I should prefer that you ask the questions of those who are more immediately interested. I am not conversant with these matters personally. All I know is, that there has been a great increase in the building of boats. There has been a vast increase in every sense of the word. There has been a very great improvement in the appearance of the men and in the condition of the town, and upon those points I am prepared to give you quite satisfactory statistical proofs, if it is the proper time to do so. When I commenced my services here, even before the famine, such was the state of the town that in the course of seven years the Rector of Wicklow and the Rev. H. Brownrigg, who went hand in hand in charity, had to raise 4,000*l.* during that time for the benefit of the population. The necessity for raising such a large amount of money will show what must have been the distress existing at that time.

37,938. In what year was that ?—We commenced in the year 1839. The 4000*l.* was expended altogether or mainly in food for the people of the town.

37,939. Was that between the years 1839 and 1846 ?—Between 1839 and 1847. Seven years after I came here we had the famine. We endeavoured to turn the people's attention to the state of the country. We endeavoured to show that there was nothing for them but to have recourse to those sources of employment which had been given by Almighty God, and that the sea was the only place they could take to to obtain support for themselves and their families, and that if that failed they had no other resource than to go to the poorhouse. I felt it my duty to bring the matter before the public here, and they at once turned their minds to the sea, and since that time, in place of being a burden to others, they have been able not only to live themselves and to support their families, but my own community resolved upon building a new church, and they have been enabled to build that church by their own exertions. They got very little outside the parish, and inside of it I found none so constant, so liberal, and so untiring in their contributions as the fishermen of Arklow. I bring this fact before you for the purpose of showing that, in place of depending upon charity or upon gratuitous donations for support, they have been able to support themselves, and likewise to contribute towards other objects. More than that, at the time when there was a want of sufficient food they had only one hospital in the town. That hospital was quite full, and we were compelled to get an additional house and open it as a hospital. Now, thanks be to God, we have arrived at a much more healthy state of things. The people have become more happy and comfortable. They now adopt habits of greater cleanliness, and get more wholesome food, and, from all I can learn, I do not know a more healthy town in Ireland. There are nearly 6,000 inhabitants in the town now, and we are sometimes for two months without a patient in our fever hospital. In point of fact, there is a less per-centage of death in Arklow than in any town I know of. The best mode I can adopt to bring before you the condition of Arklow is by comparing the two states of things,—namely, the state of things before the potatoes failed and since. At the time of the potatoe famine, the people were in very distressed circumstances, owing to the want of their usual means of support. In 1834 we had a population, I believe, of only 1,400. In Arklow and the neighbourhood connected with it there is now a population of 6,000, and with that increased population we have an increased supply of food, increased comfort, and largely increased morality. Again, in Arklow and in other places, I may refer to the proceedings of the Assistant Barrister. He comes here to dispose of criminal cases only once in every six weeks, and I believe he is generally able to complete his business in the course of two or three hours. Again, I may say, that although the law permits all the public-houses to be open on the Sunday, I do not know that there is an instance of a single drunken man or other discreditable person being found in the streets of Arklow on the Sabbath-day. I may be permitted to say, that I read with very great pain a charge made last week by one of the witnesses examined at the meeting held by you at Howth against the people of this town, as implying that they were lawless and used intimidation in order to prevent free trade. I am able to give that charge the flatest contradiction. I almost considered it my duty to contradict it in the strongest terms when I saw it at first, but the feeling of indignation which I experienced dwindled down in the end to pity for the men who made it. It was stated that the Howth men did not dare to come to fish at Arklow, because they were afraid of being driven off the ground by the Arklow men. There were no proofs given of that intimidation, and the reason was that it was impossible to bring any proofs of it. My own opinion is, that if they could not bring forward any proofs of the intimidation, they ought not to have made the assertion. I think it is clearly one of the ground works of the British constitution that no man should be permitted to make charges without being able to substantiate them, and that every man who is accused should be presumed to be innocent until his guilt is proved. The charge has been made against a whole community, and I think if we had Mr. May, who made it, here, we should soon be in a position to make him eat his own words. I would appeal to the authorities—to Captain Balfour, to the Coast-guard, and to the police, whether there is a community throughout the whole of Her Majesty's dominions who hold themselves more amenable to the laws of the land and are more desirous of observing them

than the fishermen of Arklow. I have seen here as many as 200 sail of boats from all parts of the kingdom,—from the Isle of Man, and from the whole coast along here, from Ballahoun, the Skerries, Howth, Bray, Greystones, Courtown, and Wexford. They all come here with perfect liberty.

37,940. Were they here this summer ?—Yes.

37,941. Then is it a matter of fact that every year a considerable number of foreign boats do come here? —Yes, every year.

37,942. Has that number fallen off of late years ?— No, it is increasing in the herring fishery. There was one great reason before for the fishing being defective. We had a very defective bar. It was a drifting sand, and the channel was very small. It was not always that the boats could get out. I have seen the boats jammed in the river for six weeks at a time, when they could not get out to fish at all. We have now an increased size of boats, and the energy and skill of our fishermen have also been increasing. The size of our boats is naturally commensurate with the depth of the water upon the bar. All we want is to have water in the river sufficient to allow us to get boats of the same size as other people, and in that case we should not be afraid of competition with anybody. Having this bar at the entrance to the river has been a great misfortune to us.

37,943. Is there any record kept here of the number of strange boats which frequent the port ?—There is a Custom-house officer here, Mr. Storey, and a harbour master, Mr. Meagher, but I am not sure whether they keep any record or not.

37,944. If they do keep a record, it would be quite sufficient to produce it, in order to contravene the assertion that people from a distance are kept away from fishing at Arklow, in consequence of the intimidation of the Arklow fishermen ?—If I wished, I could allow myself to be flooded with letters from various agents in France, and other parts, who are anxious to come here for our oysters. Knowing a little French, they correspond with me, and I am thus brought into contact with them. I have also received communications from several English merchants, and other persons have applied to me, through Mr. Brady, to know if I could by any means arrange matters for them, so that they might be in a condition to obtain oysters from this place, I am prepared to say, from what I have heard from these Englishmen and foreigners, that, so far as their assurances go, they have never been in a place where they found the law better observed, or where they found themselves better and more properly dealt with than in Arklow.

37,945. If we rightly understood the complaint it was not with reference to the oysters, but with regard to the herring-fishing ?—I am talking now in a general way.

37,946. The assertion was that the strange drift men were interfered with. There was no statement that the oyster men were meddled with ?—First of all, I wish to state that, wherever there is any kind of grievance, it is reported to me before it is reported to the authorities, because I frequently find that my influence with the men here is sufficient to enable me to correct the abuse wherever it exists, and I must say, that I have never known an instance of a complaint made to me by a stranger. There is what is called a buoy and light ship out here. Nets have often drifted there. The greatest destruction has been occasioned amongst them, and amongst none so much as our own poor people here, who have had hundreds of pounds' worth of nets destroyed. Now if strangers were here, and suffered the same damage, they might say that it was done wilfully, if they did not know the cause of it. If any person lost his nets, he would be very apt to say that it was done by design, but it is no such thing. So far from the Arklow men being the sinning parties, they have been the severest sufferers. Sometimes the destruction is occasioned by other vessels. I recollect having occasion to write to Wexford, and I got compensation from a man who drove his vessel through a fleet of nets and destroyed them.

37,947. Was that a trawler ? No, a coaster. There was another case in which a Jersey man did the same thing, and he had to pay for the nets he destroyed.

37,948. Specific cases were not brought before us, but a statement was made that strange fishermen did not resort here, because they were afraid of something happening to them. Now you state that they do come here ?—Yes, quite freely.

37,949. And in large numbers every year ?—Yes.

37,950. So that is a direct answer to the statement ?—Yes, I contradict it in the strongest terms, and I am enabled to speak satisfactorily of the improved tone of the morality of the people here. There have been great improvements in the comfort of the people, and in the course of comparatively a few years my congregation has increased by 1,000 people.

37,951. Was there any considerable fishery here between 1839 and 1846 ?—The state of the bar and the passage into the sea was such, that it was necessary that the boats should be of a very poor and low class. They were often kept in the river jammed up, unable to get out to the fishing.

37,952. What led to the building of the harbour ? —That was done by the Mining Company.

37,953. When did they commence their operations? —About 14 years ago.

37,954. (*Mr. Lefevre.*) That would be after the famine ?—Yes.

37955. (*Professor Huxley.*) Is it not also probable that the operations of that Mining Company have contributed much to the improvement which you say has taken place amongst the people here ? —It has to some extent, but they have followed the principle of supply and demand, and have had increased benefits for themselves. They have found, since the railroad came in here, that by taking the ore direct to Kingstown, and discharging it by means of trucks into the transporting vessels, they can do it at a less expense, and we understand that they are going to take away all the ore from us altogether.

37,956. But, as a matter of fact, the Mining Company has contributed to the increased prosperity of Arklow ?—It has, positively and collaterally.

37,957. Then it is not all owing to the fishing ?— No, not altogether. The Mining Company have specially contributed to that, by improving the harbour. We had a shifting sand on a lee shore, but since the harbour has been formed and the channel deepened, the fishermen here have been able to increase their boats both in number and in size. In consequence of the shifting sand, it has been very difficult to keep the harbour open. On one occasion about 20,000*l.* were lost here in the course of two or three nights. The sea was alive with fish, but there were south-easterly winds, which jammed all the boats up in the river. There were 130 or 140 boats waiting to go out to catch the fish, and they sustained a loss of between 10,000*l.* and 20,000*l.* in not being able to do so. The bar has been greatly improved since that time. The Mining Company, although they were at the same time advancing their own interest, have served us most materially. They have given us a nucleus of improvement, and there being now a free passage for our boats by which they are able to get in and out, the quality of the boats themselves has been improved from poor little fishing barks to large smacks ; and this population, I am satisfied, will yield to none in Her Majesty's dominions in point of enterprise, or in anything which can enhance the well-being and prosperity of the people.

37,958. Has the improvement of the harbour been a considerable step towards that improvement in the condition of the fisheries ?—Yes.

37,959. And if the harbour could be further improved, the boats would improve ?—Yes ; I am satisfied that there is not a class of fishermen in England who would exceed the Arklow men in the

ARKLOW.

Rev. J. Redmond.

22 Aug. 1864.

size of their boats, and the skill and enterprise which they would bring to bear upon the fishing.

37,960. Supposing the Mining Company had not come here, would all these improvements in the fisheries have taken place?—Not a bit of it.

37,961. They could not have taken place, because you had got no harbour?—No; I can give you a proof of it. At that time we had only one vessel which was a two-master, and it was a matter of wonder to find that vessel coming to this shore. Now, look at the number we have inside our harbour.

37,962. (*Mr. Lefevre.*) Is the Mining Company constantly at work dredging the harbour?—No; but there is this peculiarity in our harbour. We have occasionally a great back-water coming down from the mountains. If there is rain to any extent, it creates a regular flush, and a flood comes down which sweeps away all obstructions. There is only one tide that specially injures us, and that comes from the south. A south and south-easterly wind will put that tide in motion, and that has a tendency to fill up the bar at the mouth of the river with sand. Then we have to wait until we get plenty of rain and a flow from the mountains to carry it off.

37,963. Is that since the erection of the harbour?—Yes; we find even yet that that is the principal complaint we have to make. It is much to be lamented that there is not a steam barge in the river, of sufficient power to carry off such an obstruction. I have already mentioned a case in which the fishermen lost from 10,000*l.* to 20,000*l.*, in consequence of not being able to get out at a time when the sea was alive with fish. The wind came in very strong, and they were altogether unable to get out. Some say, that if there was a wall put out towards the south it would keep the sand from coming down so as to cross the action of the river, and there is a strong impression that that ought to be done; but it would require a great deal of engineering skill to be brought to bear upon it, in order to place the river in a proper position. As it is, we have already effected a vast improvement. If it were possible in this river, I can assure you that the fishermen here would only be too glad to employ the very finest vessels which could be found in the Isle of Man or along the whole of the coast. If we had a fair ingress and egress, the class of fishing vessels would be much superior to what they are now, and they are already greatly superior to what they were some years ago. The tonnage of the vessels is mainly influenced by the state of our harbour.

37,964. Would it not be to the interest of the Mining Company to keep the harbour open?—They have found that by bringing the ore direct into Kingstown they can carry on their operations at a less expense, and they are therefore deserting this harbour. Of course, that is only in accordance with the great principles of commerce. They have found that, by going to Kingstown, they can make more money than they can get by shipping their ore here, and therefore they are going to Kingstown.

37,965. Has that been done already?—They are doing it now, and they are taking off a great quantity in that way. At the time of a storm here, wherever there is shallow water there is great danger. The outer water throws the sand up, the inner water meets it again, and that forms a bar in the form of a pyramid. There is thus a difficulty experienced by the boats in getting in and out.

37,966. (*Professor Huxley.*) Would it not be worth while, under those circumstances, supposing the Mining Company has ceased its operations, for the town itself to set up a steam barge or to erect a sea wall?—This Mining Company has an Act of Parliament. It was nearly one of the last Acts passed by the Irish Parliament, and it grants to them the ownership of the river, and the commerce in and out. They have power under the Act to levy harbour dues.

37,967. Was the whole property of the harbour vested in them?—Yes, by Act of Parliament.

37,968. It is taken from the town?—Yes; we pay harbour dues the same as if we had been strangers. The Hibernian Mining Company have got the harbour now.

37,969. To whom are the harbour dues paid now?—To the Wicklow Mining Company.

37,970. If they chose to send their ore elsewhere, and to leave the quays and wharves to go into decay, would the harbour dues still go to them?—I am not aware of that; but I am sure that so long as they keep a surveillance over the works they will look for the harbour dues.

37,971. Suppose the town chose to exert itself and were to provide for an extension of the sea wall, would there be any obstacle thrown in their way on the part of the Mining Company?—I am quite sure that the Mining Company would stick to their control over the harbour. They would allow no one to interfere with it. They claim it as a matter of their own private property and right, and they insist upon levying harbour dues. It is a great pity that the bar cannot be made better. I think that if something was done in that respect, this town would be one of the best fishing ports upon the Irish coast. The best proof of that is, that the town is at present emerging from a state of downright distress into one of comparative independence; everything around us shows the presence of comfort, and of all those things which tend to make a people happy. Sickness and distress are disappearing, and good order, cleanliness, morality, and everything distinguishing a contented and prosperous people, is being substituted in their place.

37,972. That depends upon two causes, the establishment of the Mining Company and the increase of the fisheries; now the increase of the fisheries is the great point we have to direct our attention to?—I believe that the increase of the prosperity of the town is mainly due to the fisheries, but the fact that the river has been improved and placed in a better state for the working in and out of the vessels has resulted from the efforts of the Company.

37,973. Do you think the fisheries have had as great a share in improving the condition of the town as the commerce which has been brought here by the Mining Company?—The commerce brought here by the Mining Company is quite an insignificant thing. The oyster trade and the herring trade are the things which have mainly benefitted the town. We have also had a great increase in the schooners; they bring in coal and other things, and they have only been enabled to come here in consequence of the increased harbour accommodation.

37,974. Do you find among your parishioners, that it is customary for the fishermen to pass from the condition of fishermen to that of part owners, and finally entire owners, of vessels?—Yes.

37,975. So that the money really comes out of the fishing?—There is no doubt of it.

37,976. And you are not of opinion that any impediments are placed, by the people here, in the way of strangers who desire to fish off this coast?—I indignantly and emphatically reject and deny that charge, which has been made against the people of this place.

37,977. (*Mr. Lefevre.*) At what period of the year do the boats from a distance come to this port for the herring fishery?—They come at the time we are fishing ourselves. They come at the time that they hear of the herrings being caught upon this coast.

37,978. When is that?—I believe that they come generally at the latter end of May.

37,979. Do they land their fish here?—They bring in their fish here.

37,980. And sell it?—Yes. One thing that has tended to advance and improve the condition of our herring-fishing, is the construction of a railway. At the time of a calm there would be considerable delay, but in consequence of having had a railway brought here, we are enabled to send our fish fresh into the market at once.

ARKLOW.

Rev. J. Redmond.

22 Aug. 1864.

37,981. Do they spend any money in the town?—Yes, they stop in it, and are of great benefit to the town.

37,982. Is there any autumn fishery?—Yes.

37,983. And do the boats from a distance come then?—Not so much as to the early fishing; there are not so many herrings to be found here then. The herrings in the winter time go from the north to the south to deposit their spawn. They come down towards the south, in the direction of Courtown and Wexford, but in the early season they drift towards Howth and the north. There is a slight sprinkling in the autumn, but in November the winter fishing commences. It commences below at Howth, and the fish come regularly down along the coast.

37,984. Is there room in the harbour for a considerable number of boats, besides those belonging to the place?—Yes, I should say that 250 or 300 boats could find a resting-place in the river, if they could get in.

37,985. Do the fishermen here fish throughout the year, or are they employed in other occupations?—They get their living purely on the sea.

37,986. How many fishermen are there here?—There are 3,000 people who are living upon the sea here; there are about 700 able-bodied men who get their living from nothing else.

37,987. Do they follow the herrings to other ports?—Yes; they go to Howth, and from Howth to Ardglass and to the Isle of Man, and from there they go to Dunbar, on the east coast of Scotland, and back again.

The witness withdrew.

THOMAS COLVIN called and examined.

T. Colvin.

37,988. (*Professor Huxley.*) Are you a fisherman here?—I am.

37,989. For how many years have you been fishing here?—For about 44 years.

37,990. What kind of fishing have you practised?—Herring-fishing and oyster-fishing, and I have also been in the cod-fishing.

37,991. Is there any other sort of fishing practised here, besides herring-fishing, oyster-fishing, and long-line fishing?—No, they do not follow any other kind of fishing.

37,992. Are there no trammel nets set along this coast?—Not now. The fishermen were in the habit of earning a great deal of money by that means when I was young. Many of them lived by it in the summer time.

37,993. Where were the trammels set?—They were in the habit of setting them on the shore; they had long seines and draw nets.

37,994. Were they in the habit of using those nets constantly?—Yes, there were some thirty men and boys engaged upon about three or four seines.

37,995. How many seines were there altogether?—I think there were three in this town, and 15 men and boys to each of them.

37,996. Is the beach along here well fitted for that kind of fishing?—Yes, very well indeed.

37,997. What kind of fish did you get mainly in those nets?—Small salmon and white trout.

37,998. Did you get many fish?—Yes, a good many.

37,999. In the seines that were used in that way?—Yes, and in the nets too.

38,000. Was it the same kind of fish you got in the seines as you did in the trammel nets?—Yes, but we got large salmon in the seines, which we did not get in the trammel nets.

38,001. How long has this kind of fishing been done away with?—Since the mines were opened, the seine-fishing has been done away with.

38,002. Have you been in the habit of using the seines all the time you have been speaking of up to last season?—I have not seined for this long time past.

38,003. How long is it since you used the seine?—Twenty years ago.

38,004. You have not seined for 20 years?—No.

38,005. Why did you leave off seining?—Because I could get no fish.

38,006. How was that?—The sulphur water drove them all away.

38,007. The mine water?—Yes, the fish were not able to get up further than the bridge.

38,008. Then it was not because you had fished out the fish, but because the mine water drove them away?—Yes.

38,009. Do you recollect how many boats were fishing from this port 40 years ago?—Forty years ago we could number 48 boats for catching oysters, and nearly 100 herring-boats.

38,010. Were the boats you used for dredging different from those which are used in the herring-fishing?—We had a smaller size for herring-fishing.

38,011. What was the size of them?—The smaller fishing boats were about six or eight tons.

38,012. Were they open boats?—Yes, they used to lower their masts down and row the boats.

38,013. Those small boats were used for the herring-fishing?—Yes.

38,014. What kind of boats did you use for dredging for oysters?—They were smack boats.

38,015. Larger boats?—Yes, they were a size bigger.

38,016-18. What size were they?—From 15 up to 16 tons.

38,019. What is the number of boats belonging to the place now?—There are about 150 boats belonging to Arklow now.

38,020. How many were there 40 years ago?—There were about 40 fishing-boats, and about 40 or 50 other boats.

38,021. About 100 altogether?—Yes.

38,022. And now there are 150?—Yes, somewhere about that number.

38,023. Then there are now half as many boats again as there were 40 years ago?—Yes.

38,024. And your boats are larger than they were at the time you speak of?—Yes, they are double as large, and more than that, some of them are three times as large.

38,025. What is the size of your large fishing boats now?—Some of them are 36, 37, and 38 feet keel.

38,026. Are they decked boats, or only half-decked boats?—Some of them are half decked, and a few of them are whole decked. There are some of them up to 20 tons.

38,027. Are they cutter-rigged?—Some of them are lugger-rigged, and more of them are smack-rigged.

38,028. Are they good boats?—Yes.

38,029. And can they keep the sea?—Yes.

38,030. Do they cost more money than the boats that you were in the habit of using 40 years ago?—Yes.

38,031-2. How much more?—Five times as much.

38,033. Are they still increasing?—Yes, they are building them every day,

38,034. Was the kind of boats you used in the fishing, when you were a boy, such as you could beach?—Yes, we put them ashore on the strand very often.

38,035. Was that because you had no good harbour?—We had no place except the river to go to.

38,036. How many years ago is it since the present harbour was made?—I think it is about 14 or 15 years.

38,037. I suppose before the harbour was made here, you could not have used the large boats which you have now?—No, we could not.

38,038. You could not have got in and out of the river?—No.

ARKLOW.

T. Colvin.

22 Aug. 1864.

38,039. Have they all been bought and built during the last 14 or 15 years?—Yes, they have all been built during that time, and they are enlarging them now every day.

38,040. When you were a boy and went drift-net fishing, how long was the fleet of nets you used?—The fleet of nets consisted of 24 nets, 18 fathoms to the back.

38,041. How deep were they?—They were about four or five fathoms deep.

38,042. What were they made of then?—Hemp.

38,043. What are they made of now?—We make them now of cotton and flax.

38,044. Do you find that cotton and flax are much better than hemp?—Yes, a great deal better.

38,045. How long is the fleet of nets you use now?—We have 30 nets, 18 fathoms to the back, now.

38,046. How deep are they?—Between seven and eight fathoms deep.

38,047. What is the size of the mesh you use here?—Something better than one inch.

38,048. About 32 or 33 to the yard?—About 33 or 34.

38,049. If you were inclined to make them smaller, could you do so without anybody interfering with you?—We should not care about making them smaller; nets of a smaller mesh than that would not be required.

38,050. Do you find that you catch bigger fish?—Yes, and we get a better price for them; small fish would be of no use to us; we should be able to get nothing for them.

38,051. Then you find it of advantage to you to use a mesh of the size you have mentioned?—Yes, and when we use that mesh we do not kill the small brood.

38,052. What is your season for herring-fishing here?—It generally begins at the latter end of May or about the 1st of June.

38,053. How long does that fishing last?—Sometimes we have a month of it, and sometimes we have only a fortnight or three weeks, and so on.

38,054. What condition are the fish in at that time,—are they fat fish?—Yes.

38,055. Young fat fish?—Yes, fine fish.

38,056. Without any milt or roe?—There is no roe in them; they have only a fine gut.

38,057. Then does the fishing break off?—Yes, for a while, and we then go to the Channel fishing.

38,058. Where do you go to?—To the Isle of Man or to the Channel, wherever we can get them.

38,059. You follow the fish?—Yes.

38,060. I understood you to say that you go as far as the east coast of Scotland?—Yes.

38,061. Which way do you go round to the east coast of Scotland? Do you go by way of the north?—No, through the Clyde and the Firth of Forth.

38,062. When do you come back to Arklow?—We come in the latter part of August, up to the 1st of September.

38,063. Are there no herrings to be found about Arklow between the end of June and the beginning of August?—No, only very seldom.

38,064. Do not the fish which are sold here in the latter part of May and the early part of June become full fish on this coast?—They go away up the Channel to the Isle of Man.

38,065. Do they become full fish there?—They spawn somewhere in the Channel.

38,066. And come back in August?—Yes, at the latter end of August or the beginning of September.

38,067. Do you find the herrings here at the beginning of that time?—Some will go fishing then, and some will go back again.

38,068. You are speaking now of the herring-fishing?—Yes; some will go away and some stop.

38,069. Do you find herrings here in the beginning of September?—Not here; but we get them along the north coast about Ardglass, and along from there to Dublin Bay.

38,070. When do you begin to get herrings here again?—About October; sometimes they come earlier and sometimes later.

38,071. What condition are they in then?—They are not in good condition when they come here.

38,072. Are they got full or spawning?—No; we get clean fish in the fall of the year; we never get any full herring here.

38,073. Do you never get any full herrings here at all?—No.

38,074. Not in October or November?—No; they do not spawn here.

38,075. They do not spawn at all here?—No.

38,076. Are they ever like those you get in May and June?—No.

38,077–8. Are they not as good?—No.

38,079. How long do they remain here?—Until the bad weather beats them off; about Christmas we cannot go out, owing to the bad weather, to look after them.

38,080. What time of the year do you think it is that the fish become full?—They are full in the month of September, I believe.

38,081. I thought you said you did not get full fish here at all?—No, but we do at other places; we get no full fish here at all.

38,082. They seem to go somewhere else to spawn?—Yes.

38,083. Do you get any herrings here in January or February?—No, not in those months.

38,084. Is the weather at that time of the year too bad to enable you to go out after them?—We generally knock off before Christmas.

38,085. What do you take to then?—We go to the oyster-fishing.

38,086. What fish do you get with the line here?—Mostly cod, hake, and pollack.

38,087. What sort of lines do you use here?—We fish with hand-lines here.

38,088. Do you not fish with the long-line at all?—No; there are men who come here in the winter time with long-lines, but they are a great annoyance to us.

38,089. Where do they come from?—From Howth, and about there.

38,090. How do they injure or annoy you?—They shoot their lines at the time we are engaged in the herring-fishing.

38,091. Do they carry away your nets?—Yes; we lose a great deal of nets from that.

38,092. Do you come foul of the buoys?—Yes, we drift on them and cannot help it.

38,093. Does that line-fishing you practise yield plenty of fish?—We come to anchor sometimes and fish with the hand-line, and we fish when we are drifting after the nets.

38,094. Do you get any haddocks here?—No.

38,095. When you were a boy fishing did you get any?—Only very seldom.

38,096. Do you think the hand-line fishing has fallen off since you first knew it?—Yes.

38,097. Have the fish been diminishing?—The fish are dying away very much here now, as compared with what we got in former times.

38,098. Is there any trawling carried on on this coast?—There are some odd little boats which trawl up in the bay of Courtown, but there are none here.

38,099. (*Mr. Lefevre.*) Is there no trawling on the banks outside?—No.

38,100. (*Professor Huxley.*) Is that because it is not good ground for the trawlers?—No; I think it is because there are no codfish to be got here.

38,101. Now, with regard to the oyster-fishing here, where are your oyster beds?—They extend about four miles from the shore.

38,102. They extend from the shore four miles out?—Yes.

38,103. Do you find oysters all over that ground?—No, there are places where there are none.

38,104. How far south can you find them?—From Mizen Head away to the north as far down as Wexford.

38,105. In what depth of water do you find them?—In from 10 to 11 fathoms of water.

38,106. When do you begin dredging for oysters?—We begin on the 1st of September.

38,107. Until what time do you go on?—We knock off in May; we don't dredge at this time of the year; we go to the herrings again now.

38,108. Then do you take the oyster-fishing up again afterwards?—Yes, we go to the oyster-fishing about Christmas.

38,109. Has that dredging for oysters gone on here ever since you were a boy?—Yes.

38,110. Is the number of boats greater now than it was in your early years?—Yes.

38,111. Are there many more boats?—There are double as many, and more than that. I remember the time that there were only 23 boats here dredging, and now there are nearly 100.

38,112. Then it is more than four times as many?—Yes.

38,113. Do you take oysters of any size you like?—Yes.

38,114. You are not obliged to throw back the small ones?—No, we take all before us.

68,115. Do you sell them all?—Yes, we sell them to the buyers who come here—Englishmen, Frenchmen, or any one else.

38,116. You take them of all sizes?—Yes.

38,117. Has that always been the practice here?—Yes.

38,118. Are there plenty of oysters to be found here?—Yes, there is a good supply, indeed.

38,119. Does the supply keep up?—Yes.

38,120. Is it as good now as when you first knew it?—Yes.

38,121. There has been no falling off?—No, I don't think there has been any falling off.

38,122. Has there been any increase in the supply?—I rather think the oysters have been scarcer in former times than they are now.

38,123. So that you have had from 40 to 50 boats working for 30 or 40 years, and working in every season, and the supply of oysters has kept up?—Yes, I have seen a time when we could not get 100 shot in a fishing, and now we get sometimes 3,000 shot.

38,124. How long is it since there was that scarcity?—I have not seen any scarcity for the last 10 years.

38,125. Are you able to tell us what was the reason of the falling off?—The oysters did not spawn very well in those years, I think.

38,126. What time do the oysters spawn here?—We see no spawn in the oysters here until about the latter part of May, or the 1st of June. They begin to get black then.

38,127. When do they get clean again?—Not until the latter end of August.

38,128. Is there any law here with regard to the fishing for oysters—are there any regulations enforced here in reference to the oyster fishery?—The regulation is that we should not dredge for oysters from the latter end of May until the 1st of September.

38,129. Who sees that that regulation is carried out?—The Coastguard.

38,130. Do the English merchants come here to buy oysters?—Yes.

38,131. Do they buy them to lay down on their own beds?—I believe they take them mainly to supply the artificial beds there with them.

38,132. Are there no oyster beds formed on the shallow part of the coast about here?—There are about Dublin, I believe.

38,133. But are there any which have been formed about Arklow?—No.

38,134. Why is that?—We cannot form any here on account of the fresh water.

38,135. You have too much fresh water?—Yes.

38,136. But is it not thought that a little fresh water is good for the oysters, rather than otherwise?—Yes, but there is too much of it here.

38,137. Has the water from the sulphur mines at all affected the oysters?—Yes; I believe that it has affected every kind of fish in the river. It has killed the eels and everything in it; nothing is able to live in it.

38,138. Does the influence of the mine water extend far out to sea?—I don't think it does much injury outside. The principal part of the injury it does is confined to the river. It discolours the top of the water outside, but I don't think it does much injury in destroying the fish there.

38,139. (*Mr. Lefevre.*) With regard to the oyster fishery, I understand you to say that you can catch as many oysters as you like?—Yes.

38,140. And of any size that you like?—Yes, but we measure them in barrels to the buyers that come here for them.

38,141. Buyers from a distance?—To Englishmen, Frenchmen, and our own home buyers.

38,142. Is there anything here which injuriously affects your interests as a fisherman, of which the fishermen generally complain?—Yes.

38,143. What is is?—We very often complain of the Jersey men.

38,144. What harm do they do you?—They come here and dredge Sundays, Christmas-days, and every day before them.

38,145. Do they come here dredging for oysters?—Yes.

38,146. Do they come here in addition to your own boats?—Yes.

38,147. Then you have foreigners always coming here?—Yes, but they fish on days when we do not. We knock off on the Friday and come home.

38,148. How many boats will there be fishing on the oyster grounds, taking the boats from Arklow and the foreign boats as well?—There will be from 90 to 100 of our own boats.

38,149. How many foreigners?—There are about 16 or 18 foreigners dredging here in the season; there were that number here last season. Then there are also Wexford men.

38,150. How many of the Wexford boats are there?—There were somewhere about 26 or 30.

38,151. Were there any other boats?—Yes, the Courtown boats.

38,152. How many of them?—There would be about 20 Courtown boats.

38,153. Then in the oyster season there will be as many as from 150 to 160 vessels dredging here?—Yes.

38,154. How many years ago is it since the harbour was made?—About 15 or 16 years ago.

38,155. Have you ever seen a steamer dredging for oysters here?—No, I never saw a steamer dredging.

38,156. Do you dredge for oysters in the month of May?—Yes.

38,157. How long have you done that?—We have had that liberty ever since 1856.

38,158. Do you sell the oysters you dredge then?—We sell them to stock the artificial beds.

31,159. Do any of them go in the month of May to Beaumaris?—Yes, to Beaumaris, round to London, to Falmouth, and to many other parts also, and to our home beds.

38,160. Does the greater number go to Beaumaris, or to the Thames?—I think the greater number goes to Beaumaris.

38,161. Do you find any difficulty in selling them for Beaumaris in the month of May?—No difficulty at all.

38,162. Have you had any difficulty with regard to oysters being seized in Beaumaris in the month of May?—I believe there were two boats that were taken, but I think it was in June, and not in May.

38,163. Has that not been the case of late years?—No; we have not been stopped in May of late years, I think.

38,164. Do you recollect the time when you fished for oysters here all through the summer?—Yes.

ARKLOW.

T. Colvin.

22 Aug. 1864.

38,165. When did you leave off that practice?—We did not leave it off until the Act of Parliament was passed.

38,166. When you were allowed to dredge in the close month, did you get as good a price for them as you do now?—Yes, and better too. We got 7*s.* or 8*s.* a thousand for them.

38,167. They were not got for eating at that time, were they?—Not for eating, but they were quite as good for laying down.

38,168. Laying down on the artificial beds?—Yes.

38,168*a*. Were they in a foul condition at that time?—Yes.

38,169. Are the oysters which are taken here sold for laying down on beds, or taken for eating?—They are all taken from here for laying down on artificial beds.

38,170. But not for eating?—No, not in Ireland.

38,171. Have you had a good spat for the last two or three years?—Yes, we have had a very good spat indeed.

38,172. You have observed no falling off at all in that respect?—No, none.

38,173. Have you found that you can get a large price for oysters during the last two or three years?—Yes.

38,174. Do you get a larger price for the young oysters than for the large ones?—Yes, the English buyers like small oysters. They want them for improvement.

38,175. What is the difference in price between a barrel of small oysters and a barrel of large ones?—The English buyers do not like the large oysters.

38,176. Do you sell them by the barrel?—Yes.

38,177. You do not sell them by the thousand?—No.

38,178. What do you get for a barrel of small oysters?—We sell them small and large together.

38,179. Then you do not size them?—No, we shovel them all together.

38,180. But the English and French buyers would rather have small sized oysters?—Yes.

38,181. What is the price of oysters per barrel now?—We got from 7*s.* to 8*s.* a barrel for them last spring.

The witness withdrew.

M. Doyle.

MICHAEL DOYLE called and examined.

38,182. (*Professor Huxley.*) How long have you been a fisherman?—Nearly 50 years.

38,183. Have you practised all the kinds of fishing that are practised here?—Yes.

38,184. Have you ever done anything else besides fish?—Nothing. I have been engaged in the coasting trade for some odd times, but very seldom.

38,185. Then the way in which you get your living is by fishing alone?—Yes, by fishing altogether.

38,186. Now, with regard to the herrings, at what time do you get them full here? or rather, do you get full fish here at any time?—Yes, in the winter time, from about Michaelmas to Christmas.

38,187. From harvest up to Christmas?—Yes.

38,188. At that time are they full of milt and pea?—Yes.

38,189. Do you ever get spent fish?—Occasionally we get some odd ones.

38,190. But you do not get many spent fish?—No, only very few.

38,191. Do you never fish for herrings in the months of January and February?—No.

38,192. Were you present when the last witness was examined?—Yes.

38,193. Did you hear all that he stated to us?—Yes.

38,194. Do you agree with what he said?—Yes; I think he said a good deal of truth.

38,195. Was there anything in his evidence which struck you as not being correct?—Only about the fish not being full.

38,196. Have you ever seen fish full in that sense in June and July?—In June and July they have had milts.

38,197. Are they full then?—They have not milt or pea, but a large fat gut.

38,198. Did you ever see them with milt or roe in them at that time?—No.

38,199. But only in the latter months of the year?—Yes.

38,200. What is about the size of the herrings you get here?—They are very fair fish, quite of the average size.

38,201. Is there any curing carried on here?—No, unless by the fishermen themselves.

38,202. Do they cure any quantity of the fish?—They sometimes salt a few, when they go to the market with them.

38,203. There is no extensive curing carried on here?—No, none.

38,204. Are there no curing establishments?—No.

38,205. Where do your fish go?—The buyers come here, and they carry them off in their carts.

38,206. To what market do most of the herrings you catch here go?—They are carried away through the country to almost every place round about.

38,207. Do they go to Liverpool?—The salt herrings do not go to Liverpool.

38,208. Are any of the fresh herrings sent to Liverpool?—Yes, fresh herrings go to Liverpool.

38,209. Do any fresh herrings go to Dublin also?—All the fresh herrings go to Dublin and Liverpool.

38,210-1. Then the majority of the fish caught by the fishermen are sent away fresh?—Yes.

38,212. Principally to Liverpool?—To Liverpool and Dublin, unless a gentleman here takes a fancy to salt his share.

38,213. Can you get rid of as many herrings as you can catch?—Yes.

38,214. There is always plenty of demand for your fish?—Yes, there is.

38,215. Are they sent away in smacks?—Yes; in smacks, by railway, in carts, in barrels, and in every way.

38,216. Did you hear what the previous witness stated in regard to the oyster-fishing?—I did.

38,217. You heard what he said with regard to there having been oyster-fishing, with a great many boats, on the oyster beds for the last forty or fifty years?—Yes.

38,218. And that the supply of oysters upon those beds is as good now as ever it was?—Yes.

38,219. Do you agree with that?—Yes, I do.

38,220. Do you think it is of use to you to have a close time, when you cannot fish for oysters?—We are not allowed to fish them from May until September.

38,221. Do you think that is a good rule?—Yes.

38,222. Why do you think so?—I think, from the first of June until the month of August, it is much better to let the beds rest, and to allow the fish to spawn.

38,223. Do you think it would be of any advantage to prevent you from catching oysters in the month of May as well?—No; I think it would be a very great loss to the town.

38,224. Is it a great source of profit to you to be allowed to take oysters in May?—Yes, to all the people of this place together.

38,225. Would you not be able to sell your oysters, if you caught them in June and July?—We would rather not catch them, but allow them to stop in the beds, in order that they may spawn, and have young ones.

38,226. Do you go to the herring-fishing then?—Yes; we go after the herrings down the Channel, and then we come home again to the oyster-fishing.

ARKLOW.

M. Doyle.

22 Aug. 1864.

38,227. Is there anything else that occurs to you which you wish to tell us?—There is one thing upon which I should like to make a remark. I heard a remark made about it by one of the other witnesses. It affects us very considerably. We have here a fleet of only 30 nets, which are 18 fathoms to the back, and from 7 to 8 fathoms deep. We are fishing now with these nets in the Channel, and we are placed under great disadvantages, as there are other people fishing in the Channel who have fleets of 60 nets, 18 fathoms to the back, and 12 fathoms deep. They are sweeping the ocean with those nets, and banishing the herring from the shore, and the result is that we cannot get the fish from the great number of the large nets now used.

38,228. Why do you not have big nets also?—Bedad, I think we have them big enough now.

38,229. What was the length that your father used?—Perhaps there would be 20 or 25 nets, 18 fathoms to the back, and 4 or 5 fathoms deep.

38,230. Then the nets which you use are bigger than those which he used?—Yes.

38,231. You use 30 nets, that are 8 fathoms deep?—Yes, from 7 to 8 fathoms deep.

38,232. Would you like anybody to prevent you from using them as big as you do now?—No, not at all.

38,233. Then if your son wanted to use bigger nets still, would you like to see him prevented?—I should not like to see the herrings banished from the coast altogether.

38,234. You have been getting plenty this year?—Yes.

38,235-6. Then up to this time you have not had much to complain of?—No; but I think that using too many nets, of too large a size, is of no use.

38,237. But, as a matter of fact, you have had capital catches of fish during the last 10 years?—Yes, middling.

38,238. Then the size of the nets has not hurt the catch yet?—There is not half as much caught as there ought to be, according to the fleet of nets.

38,239. Do you mean that the larger nets do not catch a proportionably increased quantity of fish?—They banish the fish off the shore. Formerly they were caught in from 8 to 10 fathoms of water, but now we have to go out to 40 fathoms. Their nets are deeper than ours, and the consequence is that our nets get foul of theirs, and we lose our season.

38,240. What boats are you referring to now?—The Scotch boats.

38,241. Are their boats bigger than yours?—They are somewhat larger, but they are all full of nets, and if something is not done to prevent them, they will destroy the whole Channel together.

38,242. If the boats they use are of the same size as yours, I do not understand how it is that they prevent you from fishing, because they cannot drift faster than you?—They have twice as many nets, and their nets are much deeper; and when the tide sweeps them, they go contrary ways, and come one against the other.

38,243. Then why do not you make your nets bigger?—I think that our nets ought to be big enough for anybody.

38,244. But it appears that they do not think so?—Perhaps they are covetous.

38,245. Do you wish the Government to say that nobody shall use nets larger than yours?—I say that nets more than 18 fathoms in the back and 8 fathoms deep will injure the fish, and will prevent the fish from growing and increasing. They will scrape the bottom and tear the spawn up, too.

38,246. (*Mr. Lefevre.*) At what distance from the shore do you find the herrings?—Four or five miles, and some 7, 8, 9, and 10 miles.

38,247. On the other side of the banks?—Yes.

38,248. Do you ever find them inside the banks?—We did before the large boats came.

38,249. Now do you find them further off?—Yes, we find them further off now; they have been banished into deeper water. I think it would be much better if the nets were all of equal size.

38,250. Do you think that more money is made by the oyster-fishing than the herring-fishing here?—I cannot say, but I am inclined to think that the oyster-fishing is the chief support of the town.

38,251. The oysters are the chief support of the town?—Yes, but sometimes from the herrings we get a very good season also.

38,252. You are allowed to take oysters of all sizes?—Yes.

38,253. What is the smallest size of oysters you dredge?—About two inches is the smallest.

38,254. Do you ever dredge up any as small as an inch?—Whatever happens to be in the dredge when it comes up we put into the boat.

38,255. Do you ever dredge up any as small as an inch?—The small are dredged up along with the big.

38,256. Then you must have noticed what size the oysters were?—Yes, about two inches is the smallest size.

38,257. What is the cost of your dredge?—About 1*l.*

38,258. How many of them do you use?—We use six.

38,259. Is that the same number used by the other boats which come here?—I suppose so, but we don't mind the other boats.

38,260. Do you catch as many oysters as they do?—I don't suppose that we do.

38,261. Why not?—They dredge night and day and every night in the year.

38,262. What is the size of your dredge?—About three feet where it scrapes.

38,263. Are you much interrupted in the winter time by bad weather?—Yes, we have a bad harbour, and we cannot often get out. The sand silts up and forms a bar.

38,264. Are there many days you lose in that way?—Yes; we are sometimes a fortnight together on the river without going so sea.

38,265. You cannot get out?—No.

The witness withdrew.

JAMES KAVANAGH called and examined.

J. Kavanagh.

38,266. (*Professor Huxley.*) Are you a fisherman of this place?—Yes.

38,267. How many years have you been fishing here?—About 30.

38,268. Has that been your only occupation?—I never followed any other.

38,269. Have you practised all the sorts of fishing practised here?—Yes.

38,270. Have you heard what the other witnesses have said?—Yes.

38,271. Do you agree with what they have stated,—do you think it is perfectly correct?—Why, of course I do, but I disagree in one thing.

38,272. What is that?—What I would wish to say is, that we don't take all the big and small oysters together. We have a regular sized ring, about two and a half inches across, and anything smaller than that we do not take up.

38,273. The other witnesses seem to think that you take all of them?—Anything that comes up in the dredge smaller than that size we do not take.

38,274. Do you mean to say that you do not catch any oysters small enough to go through the ring of the dredge?—No.

38,275. But anything the ring of the dredge does bring up you do take?—Yes, but the ring of the dredge is of such a size that we cannot take the brood off the ground.

38,276. In that case you mean pretty much the same thing as the other witnesses?—Yes.

ARKLOW.

J. Kavanagh.

22 Aug. 1864.

38,277. What is the range of size you get up,—what is the smallest oyster you get up?—About two and a half inches across.

38,278. But do not the small oysters cling to the others?—Yes, of course they do, but we cannot help that.

38,279. Do you not take the trouble to pick them off, and throw them back again?—No, because they are not reckoned.

38,280. But they are measured?—Yes, but the like of them will not help the measure much.

38,281. Do you sell by measure?—Yes, but those oysters are of no value to us, and we don't care to hurt our fingers by taking them off.

38,282. Is there anything you would like to add to what has already been stated?—I have the same complaint to make against the Scotch fishermen for having too large nets.

38,283. Do not you think it would be better to increase the size of your own nets?—I don't think it would be valuable to us. Taking the size together with the depth, I think the nets of the Scotch fishermen, in sweeping along, do a great deal of harm. The size is even worse than the depth. They shoot in 12 fathoms of water, and having their nets 12 fathoms deep, they clear everything away, so that where they have been fishing it is of no use for us to go on the following night.

38,284. Do you mean that where the Scotchmen fish, you never get fish?—I mean that we cannot stay there.

38,285. What do you mean by drifting down,—do they get entangled with your nets?—The tide runs stronger aloft than it does underneath, and by running stronger aloft our nets do not reach down as deep as theirs; in the course of a few hour's drifting we get foul.

38,286. You swim on the top of the tide and go faster?—Yes.

38,287. You drift upon them?—Yes.

38,288. And the result is that you get foul of them?—Yes, and so do the English fishermen also, as the English generally have about the same nets that we have.

38,289. Would you like always to be bound to use the same size of net? Suppose you thought it desirable to increase the size of your nets, would you not consider it a hardship if you were not allowed to do so?—The English have the same complaint to make.

38,290. How many Scotch boats will there be here engaged in the fishing?—There are not many. They don't fish here; they could not sail their boats, there is not water deep enough; there are scarcely any men who can, except ourselves.

38,291-2. Then where do they interfere with you?—At Howth, Balbriggan, and Ardglass.

38,293. Are there many Scotchmen fishing over that range of sea?—Yes, some hundreds of them.

38,294. Do you find everywhere that those extra long and deep trains of theirs interfere with you?—Yes.

38,295-6. Is there anything else you have to mention?—I have no complaint against anything else whatever; but concerning the month of May, if we did not get the month of May for oyster-fishing it would do us very considerable harm. There is no injury done to the fish until the last week in May, at any rate.

38,297. We will come to that by and by. Is there any regulation here about the shooting of your nets before sunset?—I never heard of any.

38,298. What time do you shoot your nets?—Generally about sunset.

38,299. Do you shoot them half an hour before sunset?—Sometimes that may occur, but generally it is about sunset.

38,300. You do that of your own accord?—Yes.

38,301. Is there anybody here to interfere with you, if you do not?—No.

38,302. Then you have no complaint to make on that score?—No.

38,303. Would it do much damage if you were to shoot your nets before?—I think not, because the fish are not aloft then.

38,304. Do you think that some of your fishermen are inclined to shoot their nets before then?—No, I never saw any of them shoot before sunset. Perhaps they might be put in the water a few minutes before sunset, but not more, except when the Scotch boats are there. On account of the long size of their trains, the Scotch boats begin an hour before sunset. It takes them an hour to get out their long trains, but we do not begin until shortly before sunset. We are not so long in getting our trains out.

38,305. With regard to fishing for oysters in May, what do you say about that?—I never saw any injury done to the oyster, unless, perhaps, an odd one in the last week of May. I never saw one taken that was not in good condition. They are in better condition and fitter for eating than in any other part of the year.

38,306. Do you think that dredging oysters in May cannot hurt the beds?—It does them no injury whatever.

38,307. Do you agree that the supply of oysters has not fallen off at all?—Where 20 years ago we could not get 100, we now can get a barrel, or 3,000.

38,308. Although you have been dredging ever since?—Yes, backwards and forwards, but we only dredge, perhaps, two or three days a week. We are as much inclined to give the beds a rest as any other people. Still, there are a great many boats dredging during the season, and when we had a less number of boats, I did not see the oysters more plentiful than they are now.

38,309. (*Mr. Lefevre.*) Do you get as good a price for the oysters in May as at any other season?—We get as good a price then, if not better; generally, we get more for them then than before.

38,310. They are bought for the purpose of laying down on other beds?—Yes, for the purpose of stocking other beds. They are glad to get them here, when they cannot get them elsewhere.

38,311. During the month of May they cannot buy them in England?—No.

38,312. And so they are obliged to come here?—Yes, they come here and buy them of us for England.

37,313. What is the length of ground over which you fish for oysters?—About 36 miles. There may be a few spots where there may not be any, but the beds run for about 36 miles. If you get off them, on one spot, you will be on them again in a few minutes.

38,314. I believe the oyster here is a large one, compared with the oysters in other places; is that not so?—Yes, on some parts of the bed here oysters are far larger than elsewhere, but I have seen some elsewhere which are as large as those we get here.

38,315. Is an oyster two and a half inches across a small oyster here?—There are some two and a half inches across and some a great deal more.

38,316. But is the oyster two and a half inches across a small one compared with the generality?—Yes.

38,317. Is it only the Scotch boats that use large nets?—Only the Scotch boats; but across about the county of Dublin, I am told that they are setting up large boats, which are to be compared with the Scotch boats.

38,318. Do any of the Scotch boats come into port here?—No, none come into the river; they would not be able to get their boats in and out readily; they are too large and long, and with our great fresh water they would not know how to come in and out. I believe that is the reason that they do not trouble us much.

38,319. Do they land their fish here?—No.

38,320. Where do they land their fish?—I don't know. They do not come here to fish in our bay at all.

ARKLOW.

J. Kavanagh.

22 Aug. 1864.

38,320*a*. Do the Manx boats come here?—Some few do.

38,321. How many?—Four or five in the course of the year. One had like to be lost when coming in here. Her rudder was unshipped, and she went adrift. I and my crew helped to save her.

38,322. Then the entrance to the harbour is dangerous for the boats?—Yes, there is a considerable amount of fresh water running down. There is always fresh water running, and there is not sufficient water to enable them to come inside.

38,323. How many Cornish boats come here?—A good many, backwards and forwards, but they do not try here constant for fish.

38,324. How many have you seen?—Sometimes seven or eight altogether.

38,325. Do they land their fish here?—They do sometimes, in their small boats.

The witness withdrew.

PATRICK KELLY called and examined.

P. Kelly.

38,326. (*Professor Huxley.*) Are you a fisherman here?—Yes.

38,327. How many years have you been fishing?—About 44.

38,328. You heard what the previous witnesses have said?—Yes.

38,329. Do you agree with what they have stated?—I do.

38,330. Is there anything you wish to add to what they have said?—No; I think the men you have had before you have spoken to the purpose very much.

38,331. Is there anything you think you could add to what they have said?—There is one thing which I think obstructs us in our fishing, and that is a buoy on the bank. It frequently does a very great injury to our nets.

38,332. That is rather a matter for the Harbour Commission. Is there anything else that occurs to you?—Our oyster-fishing about the month of May wants looking to.

38,333. In what way?—If we get the month of May the same as usual, it will serve our turn very much; but if is taken from us, our people will be very much distressed,

38,334. Nobody has taken it from you?—No; but notice has been given to that effect.

38,335. When was notice given?—I do not know when it was given; but there is a notice placarded all over the streets.

38,336. Is it by the authority of the Fishery Board?—I think it is.

38,337. (*Mr. Lefevre.*) Has there been any application for an inquiry with regard to it?—I think not.

38,338. (*Professor Huxley.*) You are of opinion that shutting up the month of May would be a great injury to your fishing, and no advantage to the fish?—Yes.

38,339. Is there anything else you wish to remark upon?—No; I think the other men have stated all that I should wish to say.

The witness withdrew.

The Rev. JAMES REDMOND recalled and examined.

Rev. J. Redmond.

38,340. (*Professor Huxley.*) Are you aware whether there has been any application for an inquiry here with regard to taking away the month of May from the season for oyster-fishing?—I have seen a notice stating that the oyster-fishing was to be closed from the 1st of May to the 1st of September, which, I presume, will be carried out, unless they make a byelaw here in favour of this town. I may state that there is an immense population here depending entirely upon the sea, and it has been found, upon a scientific examination of the temperature of the coast of Ireland, in comparison with England, that the temperature here in May is no more than the temperature in England in April, and the oysters here are as well preserved in May as they are in April in England. Owing to the great demand there was at that time for oysters as food, and as it was considered that, scientifically, no harm would arise from taking them, and, as a matter of humanity, it was necessary that the people should have food, both things were allowed to be combined, the fish were caught, not being deteriorated in condition, and the people were supplied with food.

38,341. When was that regulation enforced?—Subsequent to the passing of the Act.

38,342. The 5th and 6th Victoria?—Yes.

38,343. That is the Act which enforces close time?—Yes; but the month of May was given to us by a byelaw.

38,344. By the 5th and 6th Vict., cap. 106, and sec. 32, it is enacted that it shall not be lawful for any person, between the 1st of May and the 1st of September, to dredge for, take, catch, or destroy any oysters or oyster brood?—Yes.

38,345. In consequence of that clause, did the fishermen of Arklow make an appeal to the Fishery Board?—Yes.

38,346. And in consequence of that appeal the Fishery Board made a byelaw?—Yes.

38,347. Is there anybody trying to take that byelaw away now?—There has been a notice printed and circulated through the town. It appears that there is a new Act of Parliament, and that notice has reference to it. It was posted up as if it came from some authority, and the object of it seems to be that the old law shall be enforced, namely, that there shall be a close time from the 1st of May till the 1st of September.

38,348. That can only be done by the Fishery Board. There is no other power to regulate the Irish fisheries except the Fishery Board?—The notice purports to be signed by the Secretary of the Fishery Board.

38,349. Has there been no inquiry here?—No.

38,350. (*Mr. Lefevre.*) Has there been any application from any person?—Not that I am aware of.

38,351. Has there been any inquiry here, within the last few years, on that point, by the Fishery Board?—No, not one. There was an inquiry in Wexford a couple of years ago, in order to determine whether there had been any deterioration in the fish here, or any scarcity of the brood, and I believe they considered at that time how it would be best to prevent the catching of oysters below a certain size. But it was found, upon a rigid inquiry, that, so far from the fishing suffering from the amount of working upon the beds, the fish were found cleaner and of a more uniform size. In every way the inquiry tended to show that the fish were in excellent condition, and that they had much improved in quality. It was considered for a time, that if the mine water which we get in the river here went out over the beds the fish became sick, as if there was something poisonous in it. That was so much considered to be the case, that the Arklow oysters at one time were looked upon as a kind of drug in the market. There was a kind of animalcule which got upon the oysters and formed like a crust, and they developed gas, which in the course of a few days destroyed the fish. I once knew a whole cargo lost of very beautiful fish from that cause. But instead of the mineral water having anything to do with it, it happens to have become a regular antidote, and has prevented the settling down of these animalculæ upon the shells. The fish, which were formerly despised on account of their greenish hue and their coppery taste, are now consi-

ARKLOW.

Rev. J. Redmond.

22 Aug. 1864.

dered the very best fish in the market. The French and English buyers, I believe, prefer the small oysters to the large ones; they are much better for laying down upon their beds. I think this will show the value of a constant regular action and working upon the oyster beds. It is only since the beds began to be worked with anything like regularity that the oysters have got into that healthy state, and they now have a very fine clean shell. Besides this, the constant action tends to scatter the spat and spawn over the beds, and to cover places where otherwise there would be no oysters at all. A new bed was discovered only this last season, and I never saw such oysters in my life. They were like the hoof of a great London cart-horse, and that arose, I believe, from their not having been worked. The regular working of the oysters over this immense extent of ground, 36 miles long I believe, very much improves them. One of the witnesses stated that the oyster beds are four miles from the shore, but he meant the outer edge. The beds are only from about two to three miles in breadth across, and about 36 miles in length. By regular working the oysters have become much better in quality, and they are more distributed over the beds; they are more healthy in every way, and much more valuable for every purpose.

38,352. (*Mr. Lefevre.*) Do you also think it would be of advantage if the close time was done away with here, in order that there might be dredging throughout the year?—No, I would look upon it as a most injurious thing to have the three months of the year which are now set apart as close time, interfered with.

38,353. The three months' close season?—Yes; I look upon June, July, and August as necessary for the recovery of the fish, but in the month of May, instead of being in an unhealthy state, the fish are peculiarly fitted for being taken away and transplanted to other beds. There are 3,000 persons in this town interested in the fisheries here, and I look with terror upon what the consequences would be, if the fishing in that month were taken away from them. For some weeks the people here have nothing else to live upon, and if the month of May was made a close month, the same thing which compelled the Commissioners to pass a byelaw, and relax the rules in reference to that month, would occur again.

38,354. Are there more oysters taken in the month of May than in any other month of the season?—Yes, and I think a very good reason was given for that sometime ago. In other parts,—in England and France, for instance,—the people there are not allowed to catch oysters for their own country at that time. That being the case, the local men here have the supply to a great extent in their own hands. The buyers come over here from a distance, and they find the oysters here just in a proper condition to lay down upon their beds in Beaumaris and elsewhere, and along the coast about Dublin. So that, in reality, in that month there are more oysters here beneficially applied, and without doing a particle of injury to the fish itself, than at any other time. I can assure you, that it has been an incalculable benefit to humanity.

38,355. Are the oysters that are taken in May sent as far as the oysters that are taken earlier in the year?—No; people from a distance generally take them in the month of April, and the local buyers buy more extensively in May.

38,356. That is on account of the difficulty of transport during the hot weather, I suppose?—No, it is because it is the time for the local buyers to stock their beds. There is a gentleman here, Mr. Doyle, a boat owner, who will give you the fullest information upon that. He is both a producer and a merchant, and I think he will be able to give you a clear exposition of the whole case, with regard to the value of the month of May.

38,357. Is he here now?—Yes.

The witness withdrew.

J. Doyle.

JOHN DOYLE called and examined.

38,358. (*Professor Huxley.*) Are you a boat owner here?—Yes.

38,359. And a fish buyer?—I buy largely at all times.

38,360. Are you a native of this place?—Yes.

38,361. And you are well acquainted with all the fisheries?—Yes, oysters, herrings, and everything.

38,362. Do you agree with what has been stated with regard to the increase of the plant of the fisheries here?—Yes.

38,363. The boats have become larger?—Yes, larger, and there is more room in every way.

38,364. So that it is quite certain that a very considerable amount of capital must have been put into the fishery business here during the last 20 years?—Yes.

38,365. And it has all been derived from the fisheries?—Yes, mostly.

38,366. Are you aware if any regulations have been adopted here which are injurious to the fisheries?—No, I believe not, with regard to the oyster fishery. As to catching herrings, I believe the long and deep trains which are sometimes used here will injure the fishing in the end, and that they will drive the fish from the shore altogether.

38,367. Has any injury been done yet?—Yes; I consider that injury has been done, because the herrings are getting further out of the way.

38,368. Are they further off now than they were formerly?—Yes, they are further off a great deal, I believe. The fishermen tell me that they are 40 miles off now.

38,369. Are you yourself a buyer of oysters?—Yes, and of herrings too.

38,370. Do you find that there is a great demand for oysters during the month of May?—It is in the month of May that I and others belonging to the town supply our customers. The foreign men get all their oysters before then.

38,371. In what condition are the oysters then?—I have never found any harm in them.

38,372. You are, I think, in favour of a close time in the months of June, July, and August?—We do not want June, July, and August. We commence herring-fishing on the 1st of June, and that is more beneficial than the oysters then; but without having the month of May, we should not be able to do at all.

38,373. June, July, and August you think might properly be left as a close time?—Yes, I think so.

38,374. Are the fish sick then?—Yes, they are spawning then.

38,375. But during the month of May you are quite clear they are not spawning?—No, they are not; but they are fit for transplanting to the artificial beds.

38,376. Are you aware whether there has been a public meeting here with regard to the month of May being open or closed?—No, I think not. There was a Commission here, when we got liberty to dredge in the month of May.

38,377. How long is that ago?—About 18 years ago.

38,378. But there has been no meeting since then?—Not that I know of. We had a meeting since, which was attended by Mr. Barry and others from Dublin. It was in consequence of a memorial to prevent us from fishing south of Cahore Point.

38,379. When was that meeting held?—Six or seven years ago.

38,380. Have you seen the notice which has been posted up here with regard to enforcing the close time during May?—Yes.

38,381. What is the tendency of it?—It maintains the close time altogether, and states that it is from the 1st of May until the 1st of September.

ARKLOW.

J. Doyle.

22 Aug. 1864.

38,382. (*Mr. Lefevre.*) Is that notice directed especially to Arklow?—It is posted with the other notices. It does not mention the town of Arklow specially, nor any other town.
